P R E F A C E .

THE ANNUAL CYCLOPÆDIA has always met with an appreciative reception among the American public. Its still extending use and demand approve the fitness of its plan. Few annual publications in the world have as successfully stood the ordeal of time. First started in 1861, the volume for 1880 is the twentieth of the series. The largest and most comprehensive general year-book printed in any country, no pains or research are spared to make it complete and trustworthy.

The "Annual Cyclopædia" aims to give a record of political events, of legislative action, of the judicial interpretation of the laws, and of the condition and workings of the public administration of the General Government and of each of the State governments, with an impartial review of political questions as they arise, and of the aims and sentiments of party organizations. It thus places before the citizen all the information which is necessary for the understanding of the public affairs of the nation, and the intelligent exercise of the rights and duties of citizenship.

Coördinated with the political knowledge given in the "Annual Cyclopædia" is as large a body of authentic and systematized information as can be collected relating to the development of the agricultural, industrial, and commercial interests of the country; and every important subject of public comment and concern is treated in its appropriate connection. The religious statistics and denominational records are presented as an important part of the social history of a Christian people. The political and social history of each nation in the world is given with equal comprehensiveness as, though less detail than, that of our own country. The "Annual Cyclopædia" is also a record of science, literature, and art.

In 1880 the quadrennial election occupied the attention of the American people more than all other considerations. In the articles on the UNITED STATES and the several States the developments and questions of the campaign are fully presented. In Europe the Irish land question is the most important subject of the year. The conditions of the problem are clearly explained in a special article on IRELAND, by the late Professor A. J. Schem. The developments of the Nihilistic conspiracies are recounted in RUSSIA. In Afghanistan and South Africa troubles excited by the British imperial policy are still fermenting. The developments are recounted under their proper headings. In MONTENEGRO, GREECE, TURKEY, BULGARIA, RUSSIA, and the AUSTRO-HUNGARIAN MONARCHY, the

sequels of the Eastern Question are detailed. A lucid analysis of the policy and operations of the United States Treasury and of the financial condition of the country is presented in FINANCES OF THE UNITED STATES, by Assistant Secretary J. K. Upton. Biographical accounts of the prominent candidates for the Presidential nomination, of the members of the new British Cabinet, and of many other persons of note, have been prepared, and the obituary sketches of such as have achieved celebrity in America or abroad are given extensively. The scientific record is fuller than usual. The ASTRONOMICAL PHENOMENA AND PROGRESS of the year are described by Professor Daniel Kirkwood, of Indiana University. Recent advances in CHEMISTRY and in its industrial applications are explained in an extended article by Dr. W. J. Youmans, of New York. Darwin's discoveries of the laws of plant-movement are explained in CIRCUMNUTATION, and other new theories and discoveries in various special articles. The important subject of domestic sanitation and hygiene is ably discussed by John B. Hamilton, Surgeon-General United States Marine Hospital Service, in HOME HYGIENE. Another interesting illustrated article, containing an historical and descriptive account of the Government LIGHTHOUSE ESTABLISHMENT, was written by A. B. Johnson, Chief Clerk of the Lighthouse Board. The approved system of the MISSISSIPPI RIVER IMPROVEMENT is described by a citizen of New Orleans. In CALIFORNIA the proposed plans for rescuing agricultural lands from destruction by mining *débris* are explained. The latest achievements in ENGINEERING, and the results of GEOGRAPHICAL EXPLORATION are given with the customary detail.

The historical and statistical features of the "Annual Cyclopædia" have never received greater attention. The digest of the proceedings of CONGRESS, the annual review of the affairs of the individual States, of the ARMY and the NAVY, the reprints of diplomatic and other public documents, the review of the nation's COMMERCE, are as complete and as intrinsically important as ever before. The statistics of commerce, industry, and agriculture, in the different States, are being collected with greater fullness and by more thorough official methods every year. The political history and statistical account of all the different countries of the globe are as careful, complete, and well up to date as it has been possible to make them. Illustrations have been prepared wherever they were thought to be useful.

The "Annual Cyclopædia" chronicles the history of all nations and the annual stages of civilization, giving special prominence to the events and developments of the United States; it records progress in every field of research and endeavor, and with special amplitude that which has a bearing on practical life and social development. It aims to give all information which is needed by the student of current history and actual institutions, and much which is of practical importance to the active and enterprising in all walks of life.

Engraved portraits are given of President Garfield, of Czar Alexander III of Russia, and General Hancock.

THE ANNUAL CYCLOPÆDIA.

A

ABDURRAHMAN* KHAN, the new Ameer of Cabool, is a son of the Ameer Afzool Khan, who died in 1867, and a grandson of Dost Mohammed, or, as the Afghans still call him, the "Great Ameer," who died in 1863. Even before he was elevated to his present position, he was regarded as one of the most prominent among the numerous descendants of his distinguished grandfather. Of his early life little or nothing is known. He is said to have been born about 1830, and to have taken part in the second campaign in the Punjab, when Akbar Khan crossed the Indus to aid the Sikhs. He did not come prominently forward, however, until a much later period. In 1863, the death of his grandfather, Dost Mohammed, was the signal for the commencement of disturbances, which in the following year declared themselves in a civil war. The first campaign between Shere Ali, whom Dost Mohammed had selected as his successor, and the elder brother, Afzool Khan, Abdurrahman's father, closed with the discomfiture of Afzool, who was nothing loath after his defeat to come to an understanding with his successful brother. An agreement was accordingly arranged between them at Balkh, and, while Afzool swore fealty to Shere Ali on the Koran, the latter took a similar oath to spare Afzool's life. The arrangement was of short duration, owing chiefly, it is believed, to Abdurrahman, who was utterly dissatisfied with the surrender of his father's pretensions. At all events, the tranquillity of the camp of Balkh was soon disturbed by the arrest of Afzool and the flight of Abdurrahman. While Shere Ali returned with his captive brother to Cabool to march against other rebels, Abdurrahman sought ref-

uge in Bokhara, where he was well received. He remained there until after Shere Ali had driven Azim Khan into English territory; but when he found that Shere Ali, instead of following up his successes, was sunk in a state of apathy at Candahar, he crossed the Oxus with an irregular force and easily established his authority in Balkh. Abdurrahman's success north of the Hindoo Koosh did not suffice to rouse Shere Ali to a sense of the dangers which surrounded him. With Cabool as well as Candahar in his possession, he remained apparently of opinion that the period for reëstablishing his authority in the outlying portions of the state might be deferred until a more convenient season. Abdurrahman, who measured the situation more correctly, struck hard and quick. In February, 1866, he had been joined by his uncle Azim, and was in the close neighborhood of Cabool, held at that time by Ibrahim, Shere Ali's second son. On the 2d of March Cabool surrendered, and Azim was installed as temporary ruler. Soon after a decided victory over Shere Ali's forces was gained at Shekabad, of which the immediate consequences were the release of Afzool and the capture of Ghuznee. Afzool then became the recognized Ameer at Cabool, and his son was looked upon as the Hotspur of the confederacy. His right to this title was shown still more conclusively at the crowning victory at Khelat-i-Ghilzai in the early part of 1867. Afzool, after being proclaimed Ameer at Bala-Hissar, soon degenerated into a drunkard, and his death was precipitated, if not caused, by the excesses which he committed after his release from confinement. Azim also had become a petty tyrant, who in the distribution of the chief posts secured the most important for himself and his son Surwar. After Afzool's death there was a critical moment when it was doubtful whether Abdurrahman would recognize Azim as Ameer. He finally concluded, however, to take the oath of allegiance to his uncle, but he quitted Cabool in disgust, and

* A genealogical table of the family of Dost Mohammed, which shows the relation of Abdurrahman to the other members of the family who are mentioned in the former and the present volumes of the "Annual Cyclopædia," is given in the article ARGHANISTAN. When first mentioned in the history of the civil wars of his country, his name was frequently given as Rahman, or Rhaman Khan. (See Annual Cyclopædia for 1874, p. 8.)

retired to Afghan Turkistan, with the administration of which he was intrusted. The spreading discontent with Azim encouraged Shere Ali to make another effort for the recovery of his rights with the aid of fresh troops from Herat, and the then untried abilities of his younger son Yakob. Azim's son had to fly from Candahar, and it became necessary to collect all troops within reach. Accordingly, Abdurrahman was summoned from Balkh, and a severe defeat was inflicted upon him by Yakob. In the winter campaign of 1868 Abdurrahman was once more crushingly defeated by Yakob at Tinah Khan. The civil war closed with that battle. Azim and Abdurrahman escaped, and the latter traveled through the steppe of the Tekke Turkomans to Urgentch (Khiva). From that place he went on to Bokhara, whence he wrote to General Kaufmann, requesting permission to reside in Russian territory. The request was granted, but all his efforts to obtain aid for reopening the war were firmly refused. The Russian Government, however, accorded to him a pension of 25,000 rubles a year (1 ruble = 78 cents), and Mr. Schuyler has told us that for the last nine years he has been living upon one fifth of his allowance. He must consequently have saved during that period close upon 200,000 rubles, the significance of this fact consisting in the circumstance that in 1872 he told General Kaufmann he could raise up an insurrection in Afghanistan if half that sum were given to him. Mr. Schuyler's description of Abdurrahman conveys a favorable impression of his force of character. In Afghanistan proper his reputation after his flight to Russia appeared to have paled before that of his cousin Yakob, but it always remained considerable in Turkistan from Balkh to Badakshan. As governor, he is remembered as the best of the last generation. As soldier, the Uzbecks took a personal interest in his successes and sympathized with him on his defeats, for it was they who fought and bled under him. An additional motive was given for their affection by his marriage with the daughter of Jehandir Shah, ex-chief of Badakshan. (A full account of his movements in 1880 is given in the article *AFGHANISTAN*.) His twelve years' residence in Russian territory has made Abdurrahman quite different from all other Afghan princes. He has learned to write and dictate his own letters, and to act and to think for himself without the dangerous aid of a crafty confidant. Hermann Vambéry, who is generally regarded as the best living authority on the affairs of Central Asia, regards the installation of Abdurrahman ("Allgemeine Zeitung," June 3, 1880) as fraught with danger for the English interests in India.

ADVENT CHRISTIAN CHURCH, commonly called Second Adventists. The name Advent Christian is the more common church designation. This denomination embraces a

class of religious worshippers organized into churches and conferences, found in all the Northern States and California, excepting the Rocky Mountain States, in several of the Southern States, and in the Canadas. They are more numerous according to population in the New England States. Their ministry numbers more than four hundred regular preachers, and their congregations over six hundred, many of the ministers preaching to more than one congregation. They are congregational in their church polity, and their conferences exercise no ecclesiastical jurisdiction over the churches, but are advisory to them. They meet for worship on the first day of the week, teach justification by faith, conversion and regeneration through the Holy Spirit, the divinity of Jesus Christ, and atonement by his blood alone. Their distinctive tenets are, the present entire mortality of mankind, the unconscious state of the dead, the resurrection of the body a necessity to a future life, the personal second advent of the Saviour soon to be revealed, immortality to be given to the righteous only at that time, the utter destruction of the ungodly in the judgment-day, and the renewed earth the final and only promised inheritance of the saints. They make Christian character, and not denominational tenets, the test of Christian fellowship, and practice baptism by immersion only. They teach no set time as known by man for the second advent, though they have done so somewhat formerly.

PUBLISHING AND MISSION SOCIETIES.—The largest organization of the Second Adventists as a denomination is that called *The Second Advent Christian Association*, which holds its meetings annually and transacts business relating to gospel work by this people. This association is formed of delegates sent from the various conferences, each conference being entitled to one delegate, and to an additional delegate for every three hundred church-members within its limits. This association was organized A. D. 1860, has been somewhat modified since then to suit its increasing work, and held its last annual meeting in Chelsea, Mass., in the Advent Christian church, commencing Tuesday, August 17, 1880. Elder E. A. Stockman, of Chelsea, Mass., was elected President; Elder E. McCulloch, of Nevada, O., Vice-President; Elder Frank Burr, of Portland, Me., Secretary; and Ozias Goodrich, of Boston, Mass., Business Agent. Nine members at large were elected a Board of Directors, and these with the officers constitute a Board of Managers for the year.

The association also controls and elects officers for a society formed of its adherents, and called the *Advent Christian Publishing Society*, the object of which is to issue a weekly religious paper called "The World's Crisis," also to publish and keep for sale tracts and books on religious subjects. Officers for the present fiscal year, Elder S. G. Mathewson, of Westfield, Mass., President; Elder Frank Burr, Secretary; O. Goodrich, Treasurer and Business Agent. There is also an Editorial Committee of three,

and a Publishing Committee of five, who with the officers form the society for the year. This society also publishes a semi-monthly Sunday-school paper, called "The Young Pilgrim," of which Elder C. E. Barnes, of Salem, Mass., is Editor. There is also a society called *The American Advent Mission Society*, Elder Miles Grant, President; and Elder A. W. Sibley, Secretary. This society attends to mission-work in sending tracts and books to various localities and furnishing funds for missionary work. Tents are used by the missionaries in the warm season, and thus many are induced to hear who would not otherwise be reached. The Second Advent Christians also hold camp-meetings in various parts of the country, those at Springfield, Mass., and Alton Bay, N. H., being the most noted. The latter is said to be the largest camp-meeting in the country, the attendance at one time being reported as numbering 30,000 people.

There are other publication interests among this people, under different forms of organization, but pushed with commendable zeal and interest. "The Bible Banner" is a religious weekly under the control of a society of stockholders, called *The Bible Banner Association*. It is mostly supported by Second Advent Christians, and reports many of their conference doings, yet claiming to seek an undenominational standing. Its doctrines advocated are the same as those herein noted as peculiar to the Second Adventists.

A society of Second Adventists, called *The Life and Advent Union*, also publishes a weekly religious paper at Springfield, Mass., called "The Herald of Life." It gives prominence to the doctrine of the non-resurrection (so called) of the unconverted dead, a doctrine honestly held by a small portion of the Second Adventists, but not favored by the societies before mentioned.

The number of Second Advent Christians in the United States and Canadas coöperating with these mentioned institutions is estimated to be upward of 30,000.

AFGHANISTAN, a Mohammedan country in Central Asia; area about 278,000 square miles, or 721,664 square kilometres; the population has hitherto been estimated at about 4,000,000. The territory of Afghanistan will be somewhat diminished by the execution of the Gundamak treaty of May, 1879 (see "Annual Cyclopædia" for 1879, page 10), but to what extent, has not yet been officially calculated. Mr. A. H. Keene has published careful researches on the population of Afghanistan (in "Nature," January 22, 1880), according to which the total population is at least 6,145,000. He distinguishes according to the nationality of the inhabitants:

Afghans and Pathans (Iranians).....	3,520,000
Tajiks [Persians] (Iranians).....	1,000,000
Hindis (Hindoes).....	500,000
Hazaras and Aimaks (Mongol-Tartars).....	600,000
Kataghans [Uzbeks] (Turki).....	200,000
Badakhsh (Galtshen).....	100,000
Beloaches (Iranians).....	100,000
Kizil-Bash (Turki).....	75,000
Kohistanis and Slah Posh (Galtshen).....	50,000

The Afghans proper comprise, according to Keene, the following principal tribes:

PRINCIPAL TRIBES.	Territory.	Number.
Durani or Abdall.	Between Herat and Candahar, also in Caboolistan.	800,000
Khujiani....	Principally in the district of Jelalabad.	50,000
Ghilzal or Ghilji.	Between the Cabool River in the north, the Suleiman Mountains in the east, the Gulkoh Mountains in the west, Khelat-i-Ghilzai and Poti in the south.....	600,000
Yusafzai....	Mountains north of Peshawar and in the Yusafzai district of the Peshawar country.....	700,000
Mohmandzai or Mahmandzai....	Mountains northwest of Peshawar, between the rivers Cabool and Swat: chief place, Lalpura.....	40,000
Kakars.....	Extreme southeastern corner of Afghanistan proper.....	200,000
Khataks.....	Southeastern part of the Peshawar country, south and east of Kohat.....	100,000
Utman Khel	Mountains north of Peshawar, between the Mohmands and Yusafzai.....	80,000
Bangash.....	Miranzai, Kohat, and Kuram valleys.....	100,000
Afreedeas...	Lower and eastern offshoots of the Sefid Koh, west and south of the Peshawar country, with the Bara Valley, and parts of the Tehura and Tira valleys.....	90,000
Turis.....	Kuram valley.....	30,000
Shinwaris or Shanwaris.	Parts of the Khyber Mountains, the eastern valleys of the Sefid Koh, on the frontier of Bayawar. From the sources of the Gomal southward, along the western side of the Suleiman Mountains as far as the source.....	50,000
Povindahs...	Suleiman Mountains, from Thal as far as the Gomal Pass.....	50,000
Vaziris.....		250,000

The following genealogical table of the dynasty ruling in Afghanistan will show the relationship existing between the princes who have been prominent in the history of the wars and disturbances since the death of Dost Mohammed, and who are mentioned in the present and in former volumes of the "Annual Cyclopædia":

Dost Mohammed, Ameer of Afghanistan, died 1863, at the age of ninety-two, left thirty-two sons, of whom seven were living in 1880.

Akbar, commander of the Afghan army in the Punjab campaign.	Afzool, Ameer 1866, died 1867.	Shere Ali, 1863-'66, and 1868-1879, died 1879.	Azim, Ameer 1867, died 1869.	Mohammed Hussein, murdered 1879.
Abdurrahman, appointed Ameer of Cabool in 1880.		Surwar.		
Mohammed, died 1865.	Ibrahim.	Yakoob, Ameer 1879.	Ayoob, Governor of Herat.	Abdullah Jan.
Moosa.				

The Viceroy of India gave a state banquet on New Year's day of 1880, at which he made a speech reviewing the events of the year. Speaking with reference to the situation in Afghanistan, he said that India had gained on its

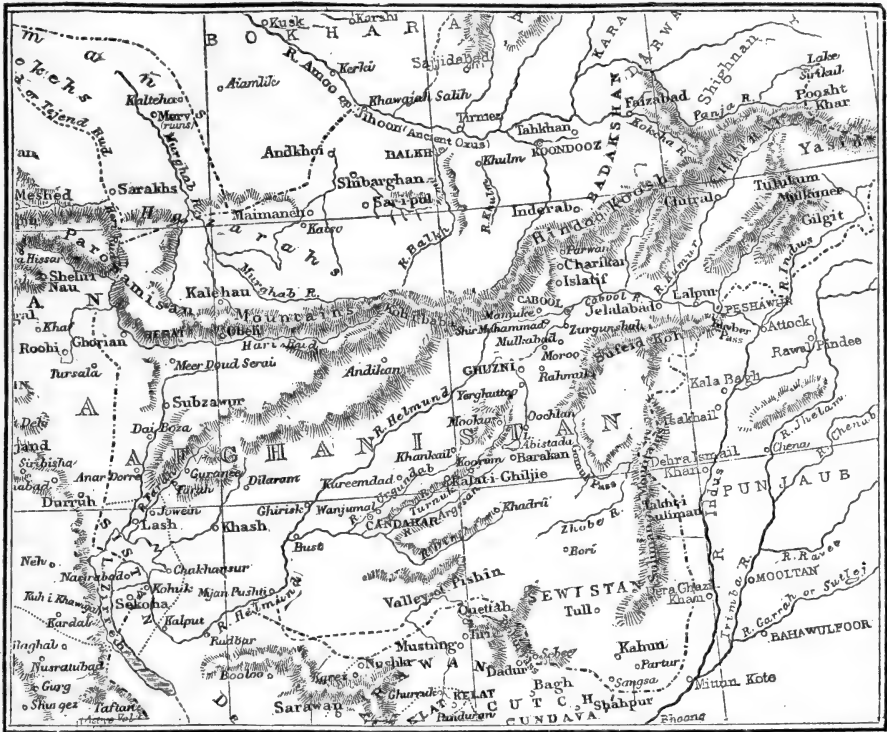

most exposed frontier an established military line of defense, which he trusted it would never surrender, for its value had been severely tested and clearly recognized. The anxiety felt concerning the crisis which the British forces had recently passed through at Cabool was natural but not altogether reasonable. The Indian Government had been charged with want of foresight in not doubling the strength of Sir F. Roberts's force, but such an act would have been unwise; it would have quadrupled all the difficulties and delays in reaching Cabool, and would have left the troops there exposed to infinitely greater perils. In a memorandum written by the late Duke of Wellington on the conditions of Afghan warfare, which had been given him, supreme importance was attached by the writer to the fact that the numbers of a force operating in Afghanistan must always be strictly limited in exact relation to the carefully ascertained means and conditions of supply. Sir F. Roberts had succeeded in collecting supplies sufficient to place his entire force beyond the risk of danger. The General well knew wherein his real strength lay, and neither he nor his garrison ever felt the slightest anxiety. The new year, the Viceroy added, opened under happier auspices and with more hopeful auguries than the old had done; but the work of the soldiers in Afghanistan was not yet over, nor could it be relinquished or relaxed till its object was fully attained.

The situation at Cabool was complicated during December, 1879, by the appearance of large bodies of hostile tribes who speedily possessed themselves of advantageous points, cut off communications, and held the British forces for a few days in a critical position. General Roberts collected his forces within the Shirpoor cantonment. The enemy attacked him there at daylight on the 23d of December, but the British were ready for them. The engagement continued through the greater part of the day, and ended in the complete dispersion of the Afghans and the final deliverance of the city from the danger which had threatened it.

At the beginning of January, 1880, General Roberts had made good his position in Cabool, and was engaged in strengthening the Shirpoor cantonments and constructing block-houses on the hills to command the city and the Candahar and Peshawar roads. Order was restored in and around Cabool, the population began to return, and an amnesty was published, from the benefits of which the leaders in the resistance that had been offered to the British forces were excepted. Other chiefs went out to plot against the British and excite the tribes to a renewal of hostilities against them. Among them was Mohammed Jan, who, when driven from beneath the walls of the Shirpoor cantonments in the battles of December, 1879, had taken with him, it was believed, a large quantity of ammunition and treasure. Leaving the young Ameer Moosa Khan, son of Yakoob Khan, in safe keeping at Ghuznee,

he went into the northern parts of the country, while his colleague, the mollah Mooshki-Alim, departed in another direction. The office of military governor of Cabool was discontinued, and the Wali Mohammed Khan was appointed civil governor. Mohammed Hassan Khan, former Afghan governor of Jelalabad, joined Mohammed Jan at Ghuznee, and afterward went into the Logar Valley for the purpose of arousing the local chiefs and preventing their submitting to General Roberts. Mohammed Jan caused to be circulated among the Kohistani chiefs a forged letter purporting to have come from Ayoob Khan at Herat, saying that he had captured Candahar and driven the English to defend themselves behind breastworks. The Kohistanis declared that they were prepared to fight if the English invaded their country, but would not at present renew the attack upon Shirpoor. General Roberts, previous to his intended advance in March, sent Mustaufi Habiboollah, who had been Minister of Finance under Shere Ali, and Yakoob Khan as a messenger to Mohammed Jan and other malcontent leaders with letters to the effect that the British Government was disposed to accept as ruler for Cabool any sirdar (with certain exceptions) whom the assembled representatives of the nation might choose. In February nearly all the representatives of the dominant and reigning branch of the Barakzai tribe were at Cabool with General Roberts. Among them were five of the seven surviving sons of Dost Mohammed, with their families, and most of the numerous nephews, grandsons, and grand-nephews of that chief. Of his sons, Nek Mohammed was the only one against the English; only three of his grandsons were absent; and the only able counselor of Shere Ali and Yakoob Khan, Mustaufi Habiboollah, was working heartily in the interest of the British. The attempt of the English to come to an understanding with Mohammed Jan was, however, unsuccessful. The British Governor was driven from Kohistan in February, unable to resist the insurgents, who had occupied a number of villages. Peace, however, still prevailed at Candahar, where the administration of General Stewart was attended with almost continuous tranquillity from the beginning.

The British constantly endeavored to conciliate the people, and to satisfy them that their designs respecting the country were moderate. The sirdars were told at an interview held with them by a British agent, Mr. Lepel Griffin, and again on the 13th of April, at a durbar which was attended by the principal chiefs who had cooperated with Mohammed Jan at Ghuznee, and who had come up to Cabool from Maidan for the purpose, that no permanent annexation of the country was intended unless of parts that were necessary for the defense of the frontier; that Yakoob Khan would not be allowed to return; that the Government was ready to appoint any chief whom they might select to be Ameer at Cabool, provided he was friendly to

the English and their allies, and capable of keeping the country quiet; and that the English would retire as soon as peace was restored and the Ameer was enthroned. It was intimated, however, that Candahar would be placed under a separate government; and in pursuance of this policy the Sirdar, Shere Ali Khan, a cousin of the late Ameer, was appointed to the control of that district, with the title of Wali. This chief was a firm friend of the late Ameer, and had served under him as an ambassador to the Russian General Kaufmann, as Regent of Cabool, and as Governor of Candahar.

The tribes renewed their harassing activity with the opening of spring. Captain Showers, of the Punjab infantry, was killed while traveling between Chappa and Quetta; Lieutenant Thurlow, of the light infantry, was shot near Jagdalak. In return, the British swept the hills near Gundamuk and Jagdalak, thus clearing the ground between Jelalabad and Cabool. Fort Battye was attacked on the night of the 26th of March, with heavy loss to the British, although the assailants were repulsed. A fine of 10,000 rupees was imposed upon the tribes implicated in this attack, half of which was paid immediately. General Stewart set out from Khelat-i-Ghilzai for the advance upon Ghuznee April 8th. On the 19th he had

reached a point about twenty-five miles from Ghuznee without having met with any opposition, when his further advance was opposed near the village of Nani by a force of 15,000 Afghans advantageously posted among the hills flanking the road. While General Stewart was preparing to attack them, a body of 3,000 of them, armed only with swords, rushed vigorously down upon the British forces. They were repulsed after a contest of an hour's duration, leaving half their number on the field, when the whole enemy's force fled, abandoning the strong positions they had held. They could not be pursued for lack of cavalry, but General Stewart immediately entered Nani, and on the next day occupied Ghuznee without opposition. On the 23d his forces had another engagement with a body of about 6,000 men a few miles from Ghuznee, in which the enemy were routed with a loss of 400 men. General Jenkins was attacked at Charasiah on the 25th, and kept on the defensive till reinforcements came up, when the enemy were routed. A force sent into the Maidan district destroyed the towns of the hostile chiefs without opposition. The villages were spared under orders from General Roberts that they should not be burned.

Attention had for some time been directed toward the movements of Abdurrahman, the

claimant for the throne, whose pretensions were believed to be supported by the Russians; he had called upon the chiefs to rally around him, and was supposed to be marching into the country with an increasing number of followers. A communication was brought from him to the British on the 19th of April, professing his readiness to submit to the English. He hoped, he said, that he would not be suspected on account of his long residence in Russian territory, and he denied that he had received any aid in men or money from the Russians. The people of Afghanistan and Turkistan gladly welcomed him, and he was confident of the suffrages of the country. He also sent messages to his countrymen in Cabool, warning them that opposition to the English would only injure their interests and his own, suppressed the rebellion in Badakshan, censured his cousin Islack for writing letters designed to inflame the people against the British, and dismissed his army, saying he had no hostile intentions. He was understood at this time to be undisputed master of the territory north of the Hindoo Koosh. A mission, consisting of two native gentlemen on the staff of Mr. Lepel Griffin, the British civil agent, was sent to him from Cabool and was received by him with distinction. The Sirdar bore himself, it was said, frankly and courteously toward the envoys, and discussed business in a sensible and practical way. An offer was made him to recognize him as Ameer of Cabool, to which he deferred a reply till he could consult with his chiefs; but he addressed a letter to the chiefs, expressing his thanks to God that an opening was made to friendship between himself and the British, and a hope that a satisfactory arrangement would be effected. Abdurrahman replied to the British propositions about the first of July, in a note the tenor of which was such as for the time to raise doubts of his sincerity. He took no notice of the fact that Candahar had been formed into a separate province under a separate governor, which had been insisted upon by the British in all their communications, but, both in his note and in a circular which he issued to the country, cited the terms which had been offered by the government without mentioning this important reservation, and claimed that he was entitled to rule the same territory that his grandfather, Dost Mohammed, had governed. The negotiations were nevertheless continued with him by the Marquis of Ripon, the new Viceroy of India, with ultimately a satisfactory result.

General Stewart assumed the supreme command of the British forces in Afghanistan at the beginning of May, while Sir F. Roberts retained his divisional command.

The change in the political character of the British Government resulting from the election of a Liberal Parliament involved as a necessary consequence a modification of the policy toward Afghanistan. Lord Hartington explained

in the House of Commons, June 7th, that the instructions which had been sent out to the new Viceroy of India, Lord Ripon, in reference to this subject, had two objects in view—to bring the actual military operations to a close as soon as possible, and to leave, on withdrawing from the country, an event which it was hoped would take place in the fall, something like a prospect of a settled government.

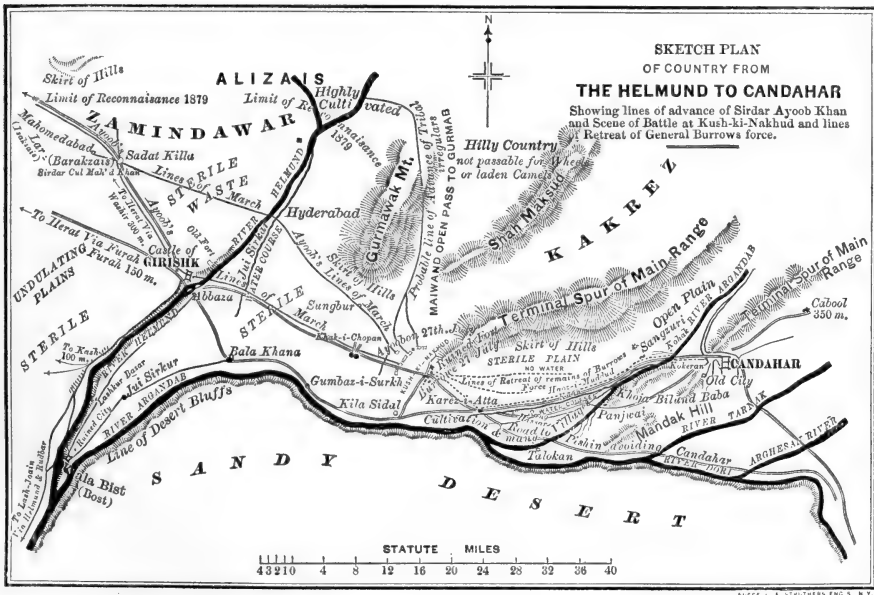

Orders were sent to General Stewart early in June to withdraw his forces with the least possible delay compatible with the health of the troops, and he was instructed that it was desired that Cabool should be evacuated not later than the 31st of October. Orders were also given for the return to India of the surplus staff, and the stores and ammunition which might not be required. A brigade was dispatched from Candahar at the beginning of July to proceed to Girishk and support the Wali, Shere Ali, against Ayoob Khan of Herat, who was reported to have arrived at Farah with his whole force. A mutiny broke out among the Wali's troops, and the disaffected regiments seized the artillery, and drove the Wali with his faithful soldiers across the river. A reinforcement of British troops came up, recaptured the artillery, and dispersed the mutineers, a part of whom went to Herat, while the rest fled to their homes. The Wali withdrew nearer to Girishk.

Abdurrahman, after a considerable delay in crossing the Hindoo Koosh, came into the occupied territories in July, and was recognized by the representatives of the British Government as Ameer at a durbar held at Cabool on the 22d. On this occasion, Mr. Lepel Griffin, on behalf of the British Government, repeated the assurances that had previously been given that the armies would shortly withdraw from northern Afghanistan within those frontiers which were described in the treaty that had been made with the ex-Ameer, Yakooob Khan, and said: "We trust and believe that your remembrance of the English will not be unkindly. We have fought you in the field whenever you opposed us, but your religion has not been interfered with, the honor of your women has been respected, and every one has been secure in the possession of his property. Whatever has been necessary for the support of the army has been liberally paid for. Not a single complaint has been made by any Afghan of any soldier, English or native, belonging to her Majesty's army." In connection with this event Lord Hartington made a statement in the British House of Commons to the effect that it was not yet prudent to speak with too great confidence as to the nature of the arrangements that had been made, for Afghan politics were so uncertain that it was not possible to feel that the troubles in the country were yet at an end; that the question of Candahar and of the new frontier remained in *statu quo*, and were to be independently and separately considered; and that the negotia-

tions with Abdurrahman had been continued after some persons had advised that they be broken off, through the firmness and prudence of Lord Ripon.

The main body of the troops of Ayooob Khan having crossed the Helmund, reached Hyderabad on the 23d of July. On the 27th of the same month, this force, estimated to be 12,000 strong, attacked a body of three regiments of native infantry and 730 British troops at Kushk-i-Nakhub, and routed it after an engagement lasting four hours. The British and Indian troops fled in disorder, pursued and harassed at every point by the enemy, having lost 1,100 men (about half their original number), two guns, the colors of the Sixty-sixth Regiment and the Bombay Grenadiers, and nearly all their ammunition. They suffered

even more during their flight, for they took a road on which they could get no water, and had no food. The loss of the enemy was also very heavy, and was described by the natives as "almost fabulous." Ayooob Khan was afterward driven back to a point between Candahar and Chamar; Candahar was put into a condition of defense; General Phayre advanced with a body of troops upon Chamar; and General Roberts marched from Cabool August 8th with a force of 10,000 men for the relief of Candahar. Ayooob Khan proceeded to intrench himself three miles from Candahar. The withdrawal of the British troops from Cabool was completed the 11th of August, after a meeting of General Stewart and Mr. Lepel Griffin with Abdurrahman. Mooshk-i-Alam, the spiritual chief of the Afghans, bound the turban—the

Afghan equivalent for a coronation—upon the new Ameer's head.

General Roberts arrived at Candahar on the last day of August, having marched 318 miles in twenty-three days, including two halts. His force had suffered from the desertion of the Afghan and Hazara drivers, in consequence of which heavier labor was entailed upon his troops. He attacked the position of Ayooob Khan at nine o'clock on the morning of the 1st of September, and gained a complete victory, after a battle of four hours ending in a total rout of the Afghan forces. The nature of the ground prevented his officers from realizing the extent of their victory, but, while General Ross, commanding the extreme left, was still expecting to have to attack a first position, the advance, after a short halt to replenish

ammunition, showed that Ayooob's camp was deserted. Thirty-two pieces of artillery were taken, including the two guns which had been captured July 27th at Kushk-i-Nakhub. The British loss was 40 men killed and 228 wounded, while the loss of the enemy was estimated at 1,200 men out of a total force of 12,800. General Haines, in a dispatch from the Government, of October 7th, acknowledging General Roberts's report of this action, complimented him on his clear and able record "of one of the most complete and successful military operations of modern times," commended the discipline and behavior of General Roberts's troops, and expressed the desire to bring to the notice of the Government the quick military appreciation of the situation shown by General Roberts, the excellent dispositions made by

him, the admirable manner in which his orders were carried out, and the gallantry of his troops. General Phayre did not reach Candahar in time to take part in the battle. He entered the city on the 7th of September, and found it presenting a desolate appearance. The streets were deserted, the shops were shut, and but few of the inhabitants were to be seen about. An extraordinary change, however, took place on the next day. The people returned to their homes, the shops were opened, and supplies were brought in from the surrounding country where they had been hidden during the siege. Generally the people found their property intact as they had left it, only a few cases of depredations having been brought to notice. It was now evident that Ayoo Khan had altogether failed to induce a general rising in western Afghanistan. His emissaries had traversed the whole country, entreating the people to rise and exterminate the infidels, with only slight success. After the battle before Candahar, Ayoo Khan retired to Herat with a body of horsemen, and was reported early in October to have reached that place, after having left governors at Farah and Sabzwār. Apprehensions were still current that he would be able to foment troubles at Candahar, and the people around that city were still agitated, and continued to neglect their crops and their trade in consequence of rumors that he intended to make another attack. The defeat of Ayoo Khan caused great satisfaction to the Ameer, and had a quieting effect at Cabool and in the surrounding country. A body of troops was sent to Maiwand, the scene of the disaster to General Burrows of Kushk-i-Nakhub, to bury the bodies which had been left on the field. It found evidence to confirm fully the reports of the magnitude of the Afghan losses in the battle that had taken place there. The evacuation of Cabool was accomplished quietly, and the troops marched back toward the Indian frontier without suffering molestation. Peimar Kotal was evacuated on the 12th of September, when Shalozan became the most advanced post of the British. It was decided to recognize the Turis, a powerful tribe in the Kuram Valley, as independent of the Ameer, and to evacuate the valley. A considerable force was left at Candahar, and it was decided to retain a strong division of troops there for the winter.

Communication was had during the campaign between the different divisions of the army by means of the heliograph, the operation of which was very satisfactory. Messages were transmitted by it nearly as quickly as by the electric telegraph, as was shown by the fact that a dispatch from General Stewart announcing the result of an engagement on the 22d of April, was received at the India Office, London, on the next day. Since signals may be transmitted by heliograph, if necessary, over the heads of the enemy, to stations which may be few and far between, its operation is not

dependent upon the keeping open of any route, and can not be interrupted by the appearance of a hostile force between the stations. A heliograph with a mirror having a diameter of ten inches—the ordinary size—is capable of reflecting the sun's rays in the form of a bright spot to a distance of fifty miles, where the signal can be seen without the aid of a glass. To set up the instrument, the operator, having chosen his position on a hill, looks through a spot that has been cleared from his mirror by scraping away the quicksilver, to the station he wishes to signal. He then sets up in front of the mirror a rod bearing a movable stud like the fore-sight of a rifle, so that the stud shall be on a line with the clear spot in the mirror and the distant station. All that is afterward necessary is so to manage the reflections that they shall fall upon the stud, when it is certain that they will reach the station aimed at.

Sir F. Roberts in February gave the following explanation of the executions which had taken place at Cabool under his orders in November and December, 1879: "Before November 12th about seventy-three men were executed; one, the city *kotwal* (magistrate), and six other men convicted of dishonoring the bodies of the officers of the embassy, seventeen for attacking escorts and having property of the embassy in their possession, and forty-nine for proved murders of camp-followers and implication in attack on the Residency. Since November 12th nine were executed on conviction of attacking the Residency. Up to December 15th fifteen more were sentenced to death for killing wounded soldiers as well as for implication in attack on the Residency."

Mr. Lepel Griffin made an address at a dinner given to him at Simla, in which he spoke hopefully of the settlement that had been made at Cabool, saying that "the Ameer was rapidly creating a stable administration, and his position was much strengthened by Ayoo Khan's defeat. The Cabool policy inaugurated by the Conservative Government had been energetically carried to a conclusion by the present Viceroy. He attached no importance to the criticism that the Ameer was a *protégé* of Russia. Shere Ali was ruined through ignorance. Abdurrahman possessed complete knowledge, and those who knew Russia best would like her least. The criticism on the withdrawal from Cabool was as foolish as it was unworthy of Englishmen. Sir Donald Stewart could not have supported General Roberts, and it was well known that General Roberts would meet with no opposition before reaching Ghuznee. To have left an army at Cabool would have made the Ameer unpopular with his subjects. As to the talk about annexation, he could only thank God that the destinies of the country were not yet intrusted to crack-brained enthusiasts, who fancied it high and imperial policy for the Government to drag its coat through Asia for a barbarian to trample upon."

The position of Abdurrahman at the close of

the year was not yet considered wholly secure, and his authority was little felt outside of the district which was under his immediate control. A correspondent of the London "Times," writing from Candahar on the 24th of October, spoke of the extreme indifference which prevailed there as to what was passing at Cabool, and as to what was the position of the new Ameer, and represented that Abdurrahman's rule was still hardly more than nominal at Ghuznee, that the tribes south of Ghuznee were quite beyond his influence, and that at Candahar itself the feeling was hostile to him. Ayoob Khan, who was again at Herat, endeavoring to obtain means to make another advance against the British, and retrieve the losses he had suffered before Candahar, was a rival for the allegiance of the Afghans not to be despised, and combinations were talked of between his forces and the partisans of Yakooob Khan, and the disaffected tribes, which, if they could have been carried out, would have made him really a formidable competitor for the supremacy. The efforts of Ayoob Khan were not, however, attended by results encouraging to his cause. He sent messengers to Meshed to ask assistance from Persia without success, and excited discontent at Herat by his arbitrary conduct in exacting taxes which he had levied in advance in order to secure means to push forward his military preparations. His force at this time consisted of three complete regiments, all of which had served with him in his expedition against Candahar, sixteen field-guns without horses, and two heavy pieces of artillery. This force even could not be depended upon, for in November the regiments which had been defeated at Candahar refused to serve any longer, and returned to their homes. Notwithstanding the signs of weakness in his actual position, a strong feeling was believed to exist in his favor among the Pathan population, and apprehensions were entertained that, in case the British should entirely withdraw from the country, a rising would take place in his favor, with great danger to the authority of Abdurrahman. Some hopes existed that a way might be found to induce him to acquiesce in the British policy, and with this object the father-in-law of Ayoob Khan, who had accompanied General Roberts on his march from Cabool, went to Herat, designing to express the attachment of the people to him, but at the same time intending to advise him to enter into negotiations with the British. Abdurrahman was also said to have made overtures to Yakooob Khan in order to persuade him to acknowledge his authority, and to have even sent him a present of money.

The Wali of Candahar received permission from the Viceroy, on the 29th of November, to retire to India with his family. The fact was the subject of much speculation and of conflicting interpretations as to its meaning. The correspondent of the London "Standard" in Candahar said that the Wali's intention of proceeding to India was not in any degree due to a

hint from the British authorities as to the expediency of such a step. The Wali himself said that the disposition of the people toward him had entirely changed since the fighting at Shirpoor, and that he was so disgusted at their hostile attitude, notwithstanding all the efforts he had made to benefit them, that he felt compelled to abandon any further effort to gain their goodwill. In consequence of the long hesitation of the British in declaring any definite policy, the Pathan population, who would have accepted their rule had they shown themselves determined that it should be permanent, were now declaring with great unanimity for Ayoob Khan.

AFRICA.* The area of Africa, according to the new volume of the "Bevölkerung der Erde," published by Behm and Wagner (vol. vi, Gotha, 1880), was in 1880 estimated at 29,909,444 square kilometres † (= 11,548,519 square miles), and the population at 205,679,000. New planimetric calculations have been made by these editors of all the large countries of Africa, and thus new and more accurate statements of the areas can now be given. The latest information that could be gathered from official publications and the accounts of travelers and missionaries in regard to population, make but slight changes in the figures published in 1878. The table on page 10 exhibits the area and population of the principal divisions and subdivisions in 1880, according to the new volume of the "Bevölkerung der Erde."

The most important among the recent territorial changes in Africa is the annexation of the kingdom of Medina to the republic of Liberia. The area of Medina is not exactly known; its population is estimated by the Government of Liberia at about 700,000, and the total population of the republic is therefore supposed to amount now to about 1,400,000. (See LIBERIA.)

The Italian commercial firm, R. Rubattini, took, in 1880, actual possession of the territory of Assab, which had been purchased in 1870 from some chiefs of the Danakil. It is therefore now regarded as Italian territory. Including the small islands of Omm el Bachar and Ras er-Raml, this territory contains fifteen square kilometres.

(For an account of the British, French, Spanish, and Portuguese possessions in Africa, see GREAT BRITAIN, FRANCE, SPAIN, and PORTUGAL.)

The government of the Cape Colony, after the conclusion of the Zooloo war, undertook to disarm all the native tribes. The Basutos protested against the application of the disarmament to themselves, pleading special reasons for the exemption, without avail. An agitation followed, which lasted through several months, and ended in the Basutos begin-

* For a full account of the religious statistics of Africa, see "Annual Cyclopaedia" for 1879, p. 15.

† 1 square kilometre = 0.386 English square miles.

ning a war against the colony. Much discontent has been manifested in the Transvaal against the annexation of that country to the British colony. In December, the Boers rose against English rule, proclaimed the restoration of the Transvaal republic, and drove the English troops out of a number of places. (See CAPE COLONY.)

Affairs in Egypt have been unusually prosperous. The material condition of the people has improved, the financial exhibits have been more satisfactory, and the foreign relations of the country have been more pleasant. Hostilities with Abyssinia have been suspended, and the conclusion of peace between the two countries was reported in June; but another concentration of troops on the Abyssinian border was mentioned in the fall. The slave-trade, notwithstanding the Government professed to be making great efforts to put it down, has been kept up in the southern provinces and on the coast of the Red Sea. (See EGYPT.)

The condition of the Jews in Morocco has attracted serious attention. The numerous complaints of ill treatment which came from them, led to the calling of a conference of plenipotentiaries at Madrid, which was attended by a Moorish envoy. This body agreed upon a paper, which was put into the hands of the envoy, claiming liberty of conscience and equality of rights for all the Christian and Hebrew subjects of the Sultan. The Sultan was believed to be willing to promise

reform, but wholly incapable and unwilling to carry it out. (See MOROCCO.)

AGRICULTURE. (See COMMERCE and UNITED STATES.)

ALABAMA. The session of the Legislature of Alabama commenced on November 9th, and with a recess in December continued into the ensuing year. Senator Rothen was chosen President of the Senate, and, in the House, N. H. R. Dallas was chosen Speaker.

The financial condition of the State has been greatly improved within the last six years. A readjustment of the debt has been made, which is now wellnigh executed in its details; expenditures have been reduced, resources economized, outstanding warrants cleared off, payment of interest resumed, expenses paid as they were incurred, and a balance accumulated in the Treasury, while the rate of taxation has been reduced from eight mills to seven on the dollar.

The total interest-bearing bonded debt of the State is now \$9,008,000, on which the interest for the current year will be \$244,040, and for the year 1881-'82, owing to the increased rate on the A and the C classes of bonds, \$319,130. The amount of the bonded debt, and therefore of interest, will be increased from time to time by further exchanges until the settlement embodied in the act of February 23, 1876, is complete.

On September 30, 1878, there remained in the Alabama Insane Hospital at Tuscaloosa 401 patients. In the last two years 214 pa-

tients have been admitted and 213 have been discharged, leaving 402 under treatment on the 30th of September last, of whom 213 are women and 189 men. The percentage of cures on admissions was 44-50, and the percentage of deaths on the total number treated was 5-84. Of those under treatment at the date of the report, 71 were colored. The number of applications for treatment within the two years beginning October 1, 1878, was 427, of which 214 were received. In this time 142 were refused for want of room. The hospital receipts for 1878-'79 were \$85,095.95, of which \$68,659.50 was from the State, and the balance from paying patients, sale of stock, borrowed money, etc., and the expenditures for all purposes were \$85,095.95. The receipts for 1879-'80 were \$84,658.07, of which \$67,203.50 was from the State, and \$3,288.15 was borrowed; the expenditures, including the payment of money borrowed the previous year, were the same.

There is a Deaf and Dumb and Blind Asylum in the State, in which the number of pupils is 75, of whom 19 are blind. All deaf-mutes in the State, and all blind children over eight years of age, are entitled to the benefits of the institution free of charge, save that all except the indigent bear the expense of travel from their homes and pay for their clothing.

In the State Penitentiary there were on September 30, 1878, 954 convicts, after which date 270 were received and five were recaptured, making a total during the two years of 929. Of these, 274 were discharged, 29 were pardoned, 26 escaped, and 60 died, leaving in prison on the 30th of September, 1880, only 540 convicts—a decrease in two years of 114. At the same date in 1878 there was due to the Penitentiary, and uncollected, from contractors \$17,290.81, from the United States \$626.50, and from other sources \$35.11, and there was in the hands of the Warden in cash \$5,313.37—in all, \$20,247.79. The gross earnings of the prison for two years were \$51,813.15, and the expenses for provisions, clothing, wood, medicine, and transportation of convicts since March 1, 1879, were \$9,840.94, leaving as net earnings \$41,972.21.

There exists in Alabama a system of hard labor as an alternative for imprisonment in the Penitentiary. It is peculiar to the State, where it results in such diversity of punishment for the same offense in different localities that in some cases felons practically escape with a fine and in others are punished excessively and cruelly; for a sentence to hard labor for the county is supplemented by a further conditional sentence, often for a longer period than that fixed for the crime, for the payment of costs, thus bearing hardly and unequally on the evildoer whose inability to pay subjects him to longer confinement and service. The growing disposition to substitute hard labor for the county for hard labor in the Penitentiary is depopulating the latter, in which the number of convicts is decreasing at the rate of more

than fifty a year—the actual decrease in two years being 114.

On the subject of the payment of costs in criminal cases, the Governor, in his message to the Legislature, presents the following views: "I recommend such changes in the laws prescribing hard labor for the county for misdemeanors as will forbid and prevent punishment for non-payment of costs. In a recent case, an offender convicted of two misdemeanors on the same day and in the same court, was sentenced to three months' hard labor for each offense, and, on default of payment of costs, to hard labor for an additional period of nearly three years in each case. This is an instance of unusual hardship; but many cases differing from this in degree only have been brought to my attention. Inability to pay costs is not a crime, and should not be treated as such. Reasonable costs should be paid by the county which has the service at hard labor of convicts for misdemeanors, and the State should pay reasonable costs where the sentence is to the Penitentiary. Adequate punishment should be inflicted for every offense committed, but no punishment should ever be permitted for mere inability to pay what is in effect and fact, whatever it may be in law, a debt to the State or to its officers."

The receipts and expenditures of the State Treasury for the fiscal year ending September 30, 1880, were as follows: At the close of the last fiscal year, on October 1, 1879, there was a balance in the Treasury of \$267,051.75. During the ensuing year the total receipts amounted to \$681,174.81, and the disbursements to \$597,692.82, leaving a balance in the Treasury, September 30, 1880, of \$350,533.74, or \$83,481.99 as the net accumulation of the year. This is attributable to the economy of the administration for 1880, a comparison of disbursements with those of the preceding year showing a difference of more than \$90,000 in favor of 1880. The fact of there being no General Assembly to pay partly accounts for this difference, but that expense being less than \$50,000, there remains a balance to the credit of the administration of more than \$40,000. This statement, by comparison with those of former years, discloses the fact that receipts from general taxes have decreased. For the fiscal year ending September, 1878, the State received from general taxes \$593,499.34; the next year \$564,722.17; and for the year 1880, \$515,716.16. Receipts from the tax on license, redemption of land, the Penitentiary, and other sources of revenue, were increased.

The following statement shows the valuations and taxation of property in Alabama for the last four years:

YEAR.	Valuation of property.	Tax rate.	Amount of taxes.
1876.....	\$135,535,792 00	7½ mills.	\$1,016,518 44
1877.....	130,739,138 57	7 "	915,598 07
1878.....	126,773,262 85	7 "	887,412 84
1879.....	123,757,072 85	7 "	866,299 51

With increasing prosperity and population the assessments continually diminish, and this condition of affairs is attributed to some radical defect in the revenue laws.

The school statistics of 1879, compiled by the Superintendent, give the number of persons of school age as follows:

Whites.....	214,093
Colored.....	162,551
Total.....	376,639
Those in attendance in public schools:	
Whites.....	106,950
Colored.....	67,695
Total.....	174,585

The number of children at colleges and private schools is about equal to that in the free schools. Of colleges in the State there are the State University, the Agricultural and Mechanical College, the Normal (white) at Florence, and also one at Huntsville and the other at Marion, both colored. Besides these, there are male colleges at Greensboro, at Mobile, at Marion, and at Oxford. There are female colleges at Tuskegee and Eufaula, at Montgomery two, at Marion two, at Huntsville two, at Athens, Florence, and Tuscaloosa two, and in almost every city, town, and village in the State are flourishing private schools. There has never been before such an interest in schools and education generally in Alabama as now exists.

While comparatively little has been expended in schoolhouses, salaries, printing, and books, a large proportion of the children are educated in log structures built by neighborhoods. The people have cheerfully paid the tax for free schools in sums relatively larger than the amounts paid by the populations of richer States. The following statistics show the improvement in public schools within a few years:

In 1874-'75, 145,797 pupils were taught in 3,898 schools an average of about sixty days, at a cost of \$562,437.50.

In 1875-'76, 126,891 pupils were taught in 3,632 schools an average of eighty days, at a cost of \$351,496.64.

In 1876-'77, 143,571 pupils were taught in 4,175 schools an average of eighty-one and one half days, at a cost of about \$370,000.

In 1877-'78, 160,713 pupils were taught in 4,796 schools an average of eighty-four and two-thirds days, at a cost of \$377,634.38.

In 1878-'79—not including Fayette and Winston Counties, from which no reports have been made, and not including the unreported negro schools of Blount—172,540 pupils were taught in 4,582 schools an average of eighty-four days, at a cost of \$381,884.35.

The Board of Health for the State differs with the National Board of Health about the expediency of intrusting the administration of quarantine to any other health authorities than those of its own people and appointment. The State Board objects to the several bills before

Congress for increasing the efficiency of the National Board, as interfering with State and local quarantine. It argues that no uniform system of quarantine regulations is suitable at all times and places; but that one which is applicable to one place will often prove unsuited to another, and that in different seasons even the same place will require different regulations. It holds also that the circumstantial details of quarantine present the important problems of quarantine administration, and that only by experts, intimately acquainted with the local conditions, can these be wisely ordered and managed. The State Board also objects to the rule established in 1879 by the National Board, to the effect that assistance should be extended only to such State and municipal boards as had first adopted the national rules and regulations, and it contends that such State and municipal boards as desire the assistance of the National Board should be required to submit their local regulations to the National Board for examination, and if these are found sufficient the needed assistance should be granted; that the National Board ought properly to have the general direction and control of quarantines against foreign countries, but that even these international quarantines could be most wisely administered through the agency of State and municipal boards having local jurisdiction in the seaport cities. The Alabama Board disclaims any antagonism to the National Board; on the contrary, admits for it a wide and important field of usefulness within which State and municipal boards have no jurisdiction, and that its existence should be maintained by the appropriations for which it has made application, as necessary for the successful continuance of scientific investigations, sanitary surveys, and other works of sanitary administration and research that have been auspiciously begun.

The commissioners representing the late corporation of Mobile, in October, 1880, decided with the bondholders on a basis of adjustment in the payment of three per cent. for five years, four per cent. for fifteen years, and five per cent. for five years. Under the terms of the act annulling the charter of the late city, the commissioners are required to report to the Governor of the State the result of their compromise with the bondholders. The attorney of the commissioners will at the same time submit to the Legislature a draft of such an act for their consideration as, in the judgment of the commissioners, may be required to carry into effect the scheme of adjustment agreed upon. On the passage of such act the commissioners are to apply to the Chancery Court at Mobile for such orders and decrees as may be necessary to secure the application of the assets under its jurisdiction to the uses and purposes agreed upon.

A decision by the United States Supreme Court in several cases arising from the repeal of the Memphis charter follows the decision

in *Barkeley vs. Levee Commissioners et al.* It decides that a State has the power to abolish a public corporation, even when it owes debts, and that new corporations may be created over the same territory which are not responsible for the debts of the defunct corporation; and, further, that the creditor has no remedy in the courts whatever, but can only apply to the Legislature for relief.

According to the sixth quarterly report made by the commissioners to the Chancery Court, and filed therein September 20, 1880, it appears that the total outstanding coupons due down to May 1, 1880, amount to \$86,504. This, added to the bonded debt (\$2,223,749), makes the total debt \$2,310,253. Add to this the coupons that may be due when the adjustment goes into effect, and the judgments obtained against the late city, and the debt will still be under two and one half millions.

To pay three per cent. upon this debt will require \$75,000 annually for five years, \$100,000 annually thereafter for fifteen years, and \$125,000 annually thereafter for five years.

The assessed value of property within the old limits of the city in 1878 was \$16,254,093. Assuming that the assessments under this adjustment will amount to \$16,000,000, it will require a tax of less than one half of one per cent. to realize \$75,000 annually. In five years the assessments may advance with renewed prosperity, and no larger ratio of taxation be required to realize the \$100,000 which will then be needed annually.

The annual statement of the commerce and trade of Mobile, in September, 1880, does not exhibit a large increase—with New Orleans on one, and the Atlantic ports on the other side of her, and with the extensive shipments of cotton from the interior by railway to the north, Mobile suffers serious disadvantages as a commercial seaport. But notwithstanding these, new branches of trade and industry have sprung into existence. The popular enterprise is directed toward manufacturing; the increase of naval stores, and the lumber trade; and to the production of vegetables for the Western markets. Its dry-dock competes successfully with similar establishments elsewhere, and the proprietors have launched, in addition to smaller craft, a new river steamboat of about one thousand bales capacity. Two new manufacturing enterprises have been inaugurated, an ice company and a furniture factory; while evidences of work in iron, tinware, vehicles, etc., are increasing. In the vegetable trade alone, \$175,000 worth of produce was shipped in 1880; and the fish and oyster traffic shows creditable results.

The Alabama railroad system is very complete, and is rapidly developing the State. The South and North Alabama (a part of the Louisville and Great Southern)—the grand trunk, so to speak—runs from Montgomery to Decatur, 183 miles. At Calera it crosses the Selma, Rome and Dalton; at Birmingham it

crosses the Alabama Great Southern, and at Decatur it crosses the Memphis and Charleston, and taps the Tennessee River, with its line of boats to Chattanooga, and thence by rail on to Nashville, Louisville, St. Louis and Cincinnati, etc. The Alabama Great Southern runs east and west across the State, 295 miles, connecting at Meridian, Mississippi, with the Mobile and Ohio and the Vicksburg and Meridian. The other lines traverse the State in all directions—such as the Mobile and Montgomery (now a part of the Louisville and Great Southern); the Western, from Montgomery to Selma, and to Atlanta and Columbus, Georgia, and the Montgomery and Eufaula, *via* Eufaula to Macon and Savannah, with cross and short lines to nearly everywhere and in all directions. The only two projected roads needed in Alabama are the Georgia Western, from Atlanta, and the Grand Trunk, from Mobile to Birmingham. With these two additional lines, especially the first mentioned, the system will be complete, and equal to any emergency in the near future, notwithstanding the present and prospective industries and developments. The Alabama River is navigable all the year, five hundred miles, between Montgomery, Selma, and Mobile, as are also the Warrior, Bigbee, and Chattahoochee—all tapping a rich cotton belt and making rail connections.

The purchase by the Louisville and Nashville of the Selma and Pensacola Railroad will open a new timber and cotton market for Pensacola, Greenville, and Montgomery. There are in operation forty miles of this new purchase, known as the Selma and Gulf, from Selma in the direction of Pensacola. The Louisville and Nashville company are working on its southern end, from its junction with the Mobile and Montgomery and the Pensacola, at or near Pollard.

The Louisville and Nashville combination and consolidation with the Georgia system is nothing more than an alliance, offensive and defensive, or division of territory, as to freights and rates.

The route from Meridian to Tupelo touches Lauderdale Junction, where the Alabama Central Railroad diverges on its way to Selma and Montgomery. From Mobile to Macon, a distance of one hundred and seventy-six miles, the road traverses the long-leaved pine region of the South. Crowned with perpetual green, the stately monarchs of the Southern forests tower a hundred feet in the air, and at their feet, in tropical luxuriance, grow dwarf palmettoes with their fan-like leaves, magnolias with their gigantic buds and flowers, hollies, myrtles, and evergreen oaks, draped with long gray moss. At Macon the prairie region begins, and thence to Okolona, a distance of about sixty-five miles, the country is open and slightly rolling, with occasional skirts of woodland dividing plains almost level. The soil is of a fertility nearly equal to that of the Mis-

issippi bottom, and a large portion of it is under cultivation, though the area planted is less than before the war. Cotton is the leading product, but corn, wheat, and other cereals may be as easily grown. West Point, an important station on this division, near Okolona, is the county-seat of Clay County. Its population is among the thousands, and the town is an important shipping point for cotton, and the various products of this agricultural region. It is situated two hundred miles from Mobile, and two hundred and thirty-nine from Columbus, Kentucky, making it the half-way station of the road.

A case between the Southern Express Company and the Louisville and Nashville Railroad, which organized an express company of its own in opposition to the former, was decided in the United States Circuit Court, at Nashville, against the latter. The rights of express companies, in their relations with railroads, were very distinctly defined. The points set forth in the decision were "that the express business is separate and distinct in every way from the railroad business, and that railroad corporations desiring to embark in this pursuit must do so as expressmen, subject to all the rules and restrictions imposed upon that class of persons. If a railroad desires to have an express department, it must be a separate and distinct branch of its business, which must deal with the railroad proper upon the same basis with other express companies. The railroads are prohibited from making discriminations in favor of their own express departments as against other express companies. The practical result of the decision, so far as the interest of the public is concerned, is that the great railroad corporations will be prevented from making the express business a monopoly by the exclusion from their lines of mere express companies.

The Democratic State Convention met June 2, 1880, at Montgomery. Dennis M. Stone was elected President, and the following persons were nominated for office: R. W. Cobb for Governor; W. W. Screws, Secretary of State; H. C. Tompkins, Attorney-General; I. H. Vincent, Treasurer. For Chief Justice of the Supreme Court, Robert C. Brickell was nominated; George W. Stone and Amos R. Manning, Associate Justices; J. M. Carmichael for Auditor, and H. C. Armstrong, Superintendent of Education. E. A. O'Neal and Walter Bragg were nominated for Presidential Electors at large. The platform of the last Convention, without the resolution relating to paper money, was adopted. The delegates to Cincinnati were instructed to adhere to the two-thirds rule.

The committee upon resolutions reported a platform, the concluding resolution of which was as follows:

That we favor the just payment of the public debt and a stable currency. We are opposed to the refunding of the public debt beyond the reach of the Gov-

ernment to pay it as soon as it is able. We favor the retirement of the national-bank notes as soon as the same can be done without injury to the business of the country, and the issue of Treasury notes, commonly called greenbacks, sufficient in volume to meet the commercial and business demands of the country, and redeemable at the option of the holder, and that we oppose any unnecessary restriction on the coinage of the silver dollar.

The Convention voted to strike out the resolution, because it was deemed that the proper place to consider a national question was in the Democratic Convention at Cincinnati.

The platform adopted was as follows:

1. The Democratic party in convention assembled declares its confidence in and unshaken adherence to the great principles of democratic government; its devotion to the Union and Constitution, with the amendments thereto; its unswerving maintenance of the following principles, viz.: strict subordination of the military to the civil power; purity of elections, and their absolute freedom from all interferences by the officers of the Federal Government, civil or military; profound respect for the popular will fairly and legally expressed at the ballot-box; a fixed purpose to expose and punish all political fraud and corruption; the political equality of all citizens; the largest rights of individual liberty consistent with the rights of others, and general participation by the body of the people in public affairs.

2. That our present tariff laws are an impediment to American industry, devised in the interest of monopolies, and maintained in opposition to the demands of the people. We therefore demand their repeal and substitution of a simple revenue which shall be productive without being oppressive. We demand the restoration of the Federal Government to its constitutional limits, and a return of its administration to its original economy, simplicity, and impartiality.

3. In the name of the Democracy of Alabama we most solemnly arraign the Republican party before the bar of public opinion as the authors of all the evils of government which threaten and oppress the people; protesting its friendship for the Federal Union, it sought to destroy it in centralization; declaring its purpose to establish justice, it trampled it under its feet; "to insure domestic tranquillity," its proclaimed mission, it preached the gospel of hate, and filled the land with misrule and anarchy and blood. As the legitimate fruit of its administration it has paralyzed all our industrial pursuits; it has destroyed the value of our property; it has impoverished the country, and it has filled the land with discontent and agitation. For these crimes against humanity and constitutional government, we denounce the Republican party as unworthy the trust and confidence of an intelligent and patriotic people.

4. That the fraud, first triumphant in American politics and unparalleled in the world, whereby the will of the freemen of the republic was defied and subverted, and a defeated candidate placed in the Presidential chair, shall never be ignored, and we call upon the Democracy and the people throughout the land to stand with us in demanding the vindication of the right, and the condemnation and punishment of the wrong, to the end that fraud shall henceforth be powerless and odious, and free government a reality in America.

5. By the levy of excessive duties upon tobacco and alcoholic productions it has encouraged violations of the revenue laws, and, under pretense of protecting the revenue service, it has turned loose on our people irresponsible and reckless men, who maltreat and imprison our citizens, and who destroy property at will, yet refuse to allow these enemies to society to be tried in the State courts for the violation of State laws.

6. That we rely, to a great extent, upon the education of the masses of the people for the perpetuity and

J. A. Garfield

PRINTED BY J. A. GARFIELD

peace of our republican form of government, and we therefore favor the most liberal system of public free schools that is consistent with the financial condition of the State.

The Republican State Convention met at Selma, May 20th. George Turner, ex-United States Marshal, was appointed President. A large majority of the delegates appointed to the Chicago Convention favored General Grant. A stormy debate on the report of the committee on credentials disturbed the meeting.

The State election took place on the first Monday in August, 1830. Governor Cobb was elected by a majority of 92,545 over Mr. Pickens, the Greenback candidate. All the candidates on the State ticket received about the same vote. At the election the Democrats had no regular Republican ticket to oppose. The Executive Committee of that party advised the support of the Greenback ticket, but in several counties, where there were many negroes, not a Greenback State ticket was seen. A Democratic ticket alone was voted. The only real contest made for the Greenback ticket was in the counties of the First District, where about one third of the vote for Mr. Pickens was cast. Even there the Democrats had a handsome majority. At this election the Democratic vote was the largest ever cast, which was attributed to the intense interest attaching to contests for local offices, as many as ten Democrats in some counties running for the same office. Each of these men was supporting the Democratic State ticket, and the colored voters obtained by them voted, in nine out of ten cases, the whole ticket from Governor down. This accounted largely for the increased vote for the Democratic State ticket over previous elections; and even should the vote of those counties where it is urged that fraud was perpetrated be thrown out, there would still be a majority for the Democratic State ticket of over 60,000. Hancock electors received more than 80,000 majority over the Republican candidate for Governor.

The vacancy in the Supreme Court, caused by the death of Judge Manning, was supplied by the appointment of Henderson Michael Somerville—a selection highly approved by the State at large.

At the session of the Legislature which commenced in November, James L. Pugh was elected to the United States Senate during the unexpired term of the late Senator Houston. Mr. Pugh was born in Georgia, on December 12, 1819. He was a candidate for Presidential Elector on the Taylor and Fillmore ticket in 1848, and on the Buchanan ticket in 1856, and was chosen. In 1859 he was a member of Congress. During the war he was in the Confederate army and Congress.

No acts of general importance were passed by the State Legislature previous to its recess in December.

The returns of the census show the population of the State to be 1,253,069, with four

counties incomplete, and estimated on the basis of 1870, with the percentage of gain in the district added. The population in 1870 was 984,215.

AMERICA. A new difficulty between the United States and British Governments respecting the interpretation of the fishery clauses of the Washington Treaty arose from an act of violence committed by some Newfoundland fishermen upon a party of Americans who were seining for herring in Fortune Bay in January, 1878. A demand for indemnification of the American fishermen for the loss sustained was presented to the late British Government, but was curtly dismissed by Lord Salisbury. Measures were initiated in Congress with reference to the possible failure to come to a common understanding of the meaning of the treaty, and a strong disposition was manifested in Congress and among the public to renounce altogether the privileges and obligations flowing from the treaty with respect to the fisheries, on account of the frequently recurring misunderstandings and disputes regarding the fishery rights. The dilatory answer of the British Foreign Office protracted the controversy until it devolved upon the present British Government. Mr. Evarts repeated his demands and the reasons on which they are based to the new Government, and found Lord Granville disposed to view the question as a debatable issue, admitting of discussion and perhaps of arbitration. (See CANADA and UNITED STATES.)

In the Canadian Dominion the construction of the Pacific Railroad has for a second time been intrusted to the hands of a syndicate. A contract has been concluded, on the basis of extensive land grants and money subsidies, which is strenuously opposed by the party out of power. The question of the ratification of the bargain is the first business to be considered by the Dominion Parliament in its winter session of 1880-'81. The contract is of a similar nature to those under which the United States transcontinental roads were built.

The quadrennial election in the United States, resulting in the election of James A. Garfield for President over Major-General Winfield S. Hancock, was characterized by an unusual degree of partisan fervor; yet so vigorous has been the commercial revival, so strong the consumptive demand and the productive impulse, that the usual disturbance and interruption of mercantile affairs attending a Presidential contest were scarcely felt in any part of the Union.

The harassing, irregular wars which have been carried on against the United States Government by Sitting Bull and his Sioux, and Victoria with his murderous band of Apaches, have ceased; and no organized force of turbulent Indians now menaces the settlements of the far West.

The interoceanic canal at Panama has not yet been begun, but the capital has all been

subscribed. The application for twice or thrice as many shares as there were, when the books were opened, shows a remarkable confidence throughout Europe in the judgment and ability of De Lesseps, its promoter.

The year has been marked by events of the highest importance for some of the Spanish-American states. If peaceful elections and the fact of a change of administration having been effected in the midst of unexampled serenity; the resumption of friendly relations with foreign powers after a protracted period of estrangement; the construction (no longer projected, but actual) of railways; the extension of inland telegraph lines, and the laying of a submarine cable—if all these bespeak the inauguration of an era of prosperity, such an era has assuredly begun for Mexico within the past twelve months.

In the Central American republics a season of international quiet, if not of absolute international harmony, has been enjoyed, and much has been accomplished in the direction of facilitating foreign commerce.

In Colombia the reverse has, for the most part, been the order of things; and General Nuñez's Government, inaugurated in April, has chiefly attracted attention at home and abroad by a marked increase of imposts on foreign products entering the republic: printed books, including even text-books for the use of schools, having been subjected to an onerous rate of duty. A bill for an international copyright treaty with the principal European and American nations was laid before the Colombian Legislature, and the new administration has manifested a desire to encourage the development of the mining industry of the country.

Little has been accomplished in the way of real progress in either Venezuela or Ecuador; Peru has continued to resist, but has been powerless to repel, the Chilean invaders, and her very capital has been menaced with destruction; while Bolivia, partly from inability and partly from apathy, has tendered little aid to her ally, but rather sullenly submits to the prospective forfeiture of an important portion of her territory, which must inevitably follow the ultimate success of the Chilean arms in the present strife.

In Chili, commerce, agriculture, and mining have of necessity suffered from the long drain of forces to maintain the strength of the army; but the moral energy of the Government and people has been sustained by uniform success; the interest on the foreign and home debts has been regularly paid, nor has the Executive required to be invested with any extraordinary powers to raise funds and organize elements with which to carry on the war.

The Argentine Republic has been the scene of considerable disturbance during the electoral campaign. The military policy announced by the new President in his message, and the increase of the military and naval resources of

the country, have given place in some quarters to the assumption that belligerent designs were entertained toward Chili, with which republic the Patagonian boundary question is still pending; while the more plausible explanation of the armament is by many regarded as simply a prudent desire on the part of the Argentine Government to be prepared in case Chili, when finally at peace with Peru, should be tempted to make a demonstration of her liberated forces in support of her claim to sovereign jurisdiction over the disputed territory. The material prosperity of the Argentine Republic has, in the mean time, suffered no check.

Political affairs in Uruguay have been in a very unsettled condition, and the national revenue in the second half of the year proved inadequate to meet the Government requirements.

In Brazil the discussion of the electoral bill was continued with but little interruption; but no event has occurred throughout the year to retard commercial or industrial progress; trade with foreign nations, on the contrary, would seem to be rapidly increasing, a by no means unimportant proof of which is the fact of arrangements having been made for the establishment of a regular line of steamers between the ports of Halifax, Nova Scotia, and Rio Janeiro in October, 1881.

ANGLICAN CHURCH. The population connected with the Anglican Church in the British Isles, in British North America, and in Australia, is estimated as follows: *

British Isles.....	18,522,000
British North America.....	600,000
Australia and New Zealand.....	760,000
Total.....	19,882,000

The following new sees of the Church of England were established in 1879 and 1880: In England, Liverpool, 1880 (forming part of the province of York); in India, Travancore and Cochin, 1879; in China, Mid-China, 1880; in America, New Westminster, 1879, and Caledonia, 1879.

The Convocation of Canterbury met June 1st. Petitions were presented and considered in favor of the act for closing the public-houses on Sunday, against any alteration in the Book of Common Prayer, and in favor of the more complete representation of the clergy. In the Lower House, a resolution respecting the "Burials Bill" supported by the Government before Parliament was adopted, as follows: "That the Lower House of the Convocation of Canterbury are bound by their duty to the Church humbly to record the expression of their deep regret that it should be judged necessary on the part of her Majesty's advisers to propose to Parliament a measure which, if it shall become law, will, for the first time in the history of the country, save and except only the time of the Commonwealth, take away from the

* For a more detailed statistical account, and for a complete list of dioceses existing at the beginning of 1879, see "Annual Cyclopædia" for 1879, p. 80.

Church of England the exclusive control, according to her own doctrines and discipline, of the use of her own churchyards; and that this House desires, by this solemn protest, to deliver itself of all responsibility as to any dishonor which may be done to Almighty God by the character of the worship which, in the event of the passage of this bill, may hereafter be offered in her churchyards." A committee was appointed to consider the best method of providing for Episcopal supervision over Anglican congregations in the North of Europe. The Archbishop was deputed to confer with the Government respecting an increase in the number of elected proctors, and a change in the mode of elections and the qualifications of electors. The bishops agreed that they would use all their influence in Parliament to secure the incorporation in the bill for taking the census in 1881 of a provision for taking a religious census in England.

The second meeting of the Convocation was held July 13th. A committee of both Houses was appointed to consider how best to provide for Episcopal supervision over Anglican congregations in the North of Europe. The committee to whom the subject of the Burials Bill had been referred, made a report suggesting that, if the bill should not be passed, both the Church and dissenters should give up the funeral services at the grave, and hold them only at their houses of worship. This clause was struck out by vote of the Convocation, and the report was referred back to the committee. The Convocation of York met at the same time, and took action in favor of securing provision for a religious census of England in the bill for a general census which was about to be presented to Parliament.

The eighty-first annual meeting of the *Church Missionary Society* was held in London, May 4th. The Earl of Chichester presided. The total amount of contributions given to the Society during the year had been £221,723, and the expenditures had been £200,307. The capital fund had been restored to its original figure of £68,281. The committee had resolved to set apart £60,000 as the permanent working capital of the Society, and to place the remainder of the fund to a separate account, to be called the contingency fund. Four hundred and eighty clergymen, of whom 218 were European, were engaged in the work of the Society, with 2,686 native and country-born Christian catechists. The number of communicants in the mission churches was 28,510.

The receipts of the *Society for the Propagation of the Gospel* for 1879 were: from collections and subscriptions to the general fund, £71,099; from legacies, £10,934; from dividends, £4,753; total in the general fund, £86,787. Other funds had been appropriated to the amount of £9,943, and special funds amounted to £34,943, making the entire income of all classes, £131,674. The Society had employed 593 missionaries.

The twelfth annual Conference of the Society for the Liberation of Religion from State Patronage and Control, was held in London, June 10th. Mr. H. Lee, M. P., presided. The report stated that the receipts of the Society for the year had been £11,398, and the expenditures £10,848. Seven million copies of publications had been issued, and nearly two thousand meetings had been held. Resolutions were adopted declaring that the Conference viewed with satisfaction the results of the recent elections in Scotland, and the indications that the question of disestablishment was not to remain in abeyance till another election; that it approved of Mr. Roundell's motion affirming the inexpediency of retaining clerical restrictions in connection with any headship or fellowship in any college of Oxford or Cambridge, and also of Mr. Bryce's proposal for the abolition of such restrictions in connection with professorships of Hebrew and ecclesiastical history; that the Public Worship Regulation Act had failed to accomplish its professed object; expressing the belief that a remedy for the evils which afflict the Church would be found, not in fresh legislation, but in employing the spiritual forces of a free church; and expressing gratification at the early introduction of the Burials Bill, and a hope that it might be satisfactorily amended.

The twentieth annual *Church Congress* was held in Leicester, beginning September 27th. The opening sermons were preached by the Archbishop of York and the Dean of Llandaff. The Bishop of Peterborough presided at the Congress. Papers were read and discussed on subjects relating to the foreign missions of the Church, "The Church and the Poor"; "The Religious Condition of the Nation"; "The Church in relation to the Organization of Labor"; "Upper and Middle Class Education; its Present Condition, and how to maintain and promote its Religious Character"; "Sunday-Closing and Local Option"; "The Internal Unity of the Church, and the Influence of the Three Great Schools of Thought in the Church of England upon each other, and upon the Church"; "The Existing Forms of Unbelief; their Social and Moral Tendencies"; "The Cathedral System; how to reform it so as to strengthen the Relations of the Cathedral to the Diocese, and to make each Cathedral a more Efficient Center of Religious Equality"; "The Duty of the Church as regards Civil Laws relating to Marriage and Divorce"; "The Communion of Saints; how may it be strengthened and manifested"; "Popular Recreations; how to improve them; Light Literature and the Stage." The Congress was visited by a deputation representing the nonconformist ministers of Leicester, bidding it welcome to the town. The Bishop of Peterborough responded in a courteous address.

The *Synod of the Episcopal Church in Ireland* met in Dublin, April 20th, and was opened with an address from the Lord Primate. The

financial reports showed that a steady decrease in the receipts from various sources had been going on for several years past, the amount received under the head of assessment having fallen from £124,424 in 1876 to £108,272 in 1879, and the receipts from all sources from £212,095 to £165,007. The attention of the Synod was given to the discussion of the relations of the Divinity School in Trinity College with the Synod, of the status of proprietary churches, the formation of a General Church Committee, the claims of the minor incumbents and curates, the increasing expenditure of the representative body, the consecration of church-building, and primary education.

The *Provincial Synod of the Episcopal Church in Canada* was held in Montreal in September. The Synod decided that the name of the Church should hereafter be "The Church of England in Canada"; that a Board of Foreign Missions should be formed for the collection of money for missions to the heathen abroad, and a Board of Domestic Missions for work in British America, particularly in the diocese of Algoma; and that persons might be admitted to the diaconate, but not to the priesthood, without surrendering their worldly callings.

The fifth *Synod of the Diocese of Sydney* met in Sydney, New South Wales, June 22d. Bishop Barker, in his opening address, mentioned as important topics affecting the interests of the Church, the Public Instruction Act of 1880, and the Church and school land revenues, an act concerning which was pending before the Colonial Parliament. He urged the clergy to avail themselves of the opportunities for imparting religious instruction in the public schools. A resolution was proposed reciting that the Church had not the influence in the colony to which it should, by its numbers and position, be entitled, and advising the members to take a more active interest in politics. After considerable debate, it received the vote of a large majority of the clergy, but was defeated by the negative vote of the laity. The income of the *Church Society* for the year had been £14,000. The Society granted stipends to thirty-eight clergymen and eight catechists.

The triennial meeting of the *General Synod of New Zealand*, was held at Christchurch in April, and was attended by seven bishops, twenty clergy, and twenty-three lay representatives. The Primate suggested that a revision of the wording of the constitution of the Synod was needed to adapt the instrument to the changes which had taken place in the circumstances of the colonies since it was framed, and a motion providing for a revision was made, but not acted upon. The principal subjects considered by the Synod were the consolidation of the parochial system, and clerical education. The Board of Theological Studies provided a uniform standard of education for all the dioceses. It was resolved not to attempt to establish a central theological college, but to

found exhibitions which might be held in New Zealand or elsewhere. The arrangements for the selection of hymns and the musical parts of the service were declared to be under the control of the clergymen, not of the vestry. Favorable accounts were given of religious work among the Maories, and in the islands.

ANTIMONY-MINES IN MEXICO. The antimony of commerce has hitherto been derived almost exclusively from the sulphide-ore called stibnite, or gray antimony. In this state the metal is distributed very widely over the globe, though it is found nowhere in large deposits. It is mined in Hungary and different parts of Europe, and is found in California and Nevada; but the principal source of the supply is Borneo, whence it is shipped in ballast to the English smelters. The cost of the purified metal is quite high, being as great as that of tin and copper, and about four times that of lead. Its high price is owing not only to the comparative infrequency of the ores, but to the difficulty of reducing the sulphide, in which the antimony is usually associated with various troublesome mineral impurities, which impede and complicate the process of extraction. The reduction of the sulphide is a long process. The sulphide is first separated from the gangue by fusion, and then reduced to an oxide by roasting in a reverberatory furnace; and from the oxide the metallic antimony is obtained by fusion with charcoal saturated with a solution of carbonate of sodium.

Extensive mines of the oxide of antimony have recently been discovered in Sonora, Mexico, in the district of Altar. The attention of metallurgists was called to these deposits in 1879 by the discoverer, E. T. Cox, of Arizona. A company of capitalists from Boston was soon formed who secured nine claims of the dimensions allowed in Mexico, 2,624 by 656 feet, including all the outcropping lodes. The geological character of the country where this valuable discovery was made is identical with that of southern Arizona. The mountains are in short, narrow ranges, running mostly in a north-and-south direction. Some of the summits are irregular and rugged, and some are smooth, round cones, owing to the different degrees of erosion in the different materials of their masses. Between the parallel ranges is table-land or *mesa*, formed of the eroded material. The peaks are porphyry, quartzites, basalt, diorites, and trachytes, the principal mass of the mountain-chains granite, the sedimentary rock on their flanks a sub-carboniferous limestone, in which the fossil remains have been effaced by igneous action. The *débris* which forms the *mesa* is so loose that the rain sinks through it, leaving the surface always dry and arid. In the immediate neighborhood of the mines only the limestone and quartzite are found. The lodes are from four to twenty feet thick. The ore has been removed to the depth of thirty feet, and the fissures are found to be filled from one wall to the other with the solid ore. It is oxide of anti-

mony, almost pure, and remarkably uniform. The course of the lodes is north and south, parallel with the axis of the mountains. The pitch is high to the east. All the lodes are found within an area five or six miles long and one half mile wide; on three of them the ore crops out above the surface of the ground, and can be seen bulging out for several hundred feet along the lode. The ore is almost pure oxide, the only impurity being silica, which is present in very small quantities. The ore assayed 60 and 70 per cent. of pure metal, and is expected to average 50 per cent. There is no indication that the oxide ceases and gives place to sulphide deeper down in the lodes. The mineral varies from a light color, almost white, to a dark brown. The purest specimens have the specific gravity 5·07; in these there is 75 per cent. of antimony; they contain 5 per cent. of water. It corresponds in composition and specific gravity to the mineral called *stibiconite*. It is only slightly soluble in hydrochloric and nitric acids, and *aqua regia*. Fused with carbonate of soda in a crucible of platinum, it decomposes readily. The ore is reduced only with difficulty before the blow-pipe, but yields readily in a crucible with powdered charcoal or cyanide of potassium, giving star antimony. This particular oxide of antimony has never before been met with except as a slight coating on other minerals containing antimony. It has before been so rare that specimens containing only a few grains were difficult to procure.

Antimony is an exceedingly useful metal, and if more abundant could be applied to additional uses. It is chiefly valuable for the alloys which it gives in combination with other metals. The chief of these are type-metal and britannia-metal. Type-metal is composed of lead and antimony, the proportion of the latter varying between 17 and 20 per cent. Britannia-ware is made of an alloy with tin, copper, and zinc, containing 16 per cent. of antimony and 81 of tin. The valuable pharmaceutical preparations of antimony, tartar-emetic, etc., must be freed absolutely from arsenic and other impurities which the antimony of commerce nearly always contains.

ARGENTINE REPUBLIC (REPÚBLICA ARGENTINA).* The President of the Republic is Brigadier-General Don Julio A. Roca (inaugurated on October 12, 1880); and the Vice-President, Don Francisco B. Madero. The new Cabinet is composed of the following Ministers: Interior, Señor Del Viso; Finance, Dr. Cortínez (*ad interim* until May, 1881, when the regular appointee, Dr. Don Juan José Romero, Governor of the province of Buenos Ayres until that date, will assume the portfolio); Justice, Public Worship, and Public Instruction, Señor Pizarro; War; and the Navy, Señor Victorica.

The Argentine Envoy Extraordinary and Minister Plenipotentiary to the United States

and Great Britain is Dr. Manuel R. García. The Argentine *chargé d'affaires* in the United States (during the Minister's absence in England) is Señor Don Julio Carrié. The Consul-General (at New York) for the American Union is Señor Don Carlos Carranza. The Governors of the several provinces, etc., were:

Buenos Ayres.....	Dr. Juan José Romero.*
Minister of the Interior.....	Dr. Carlos A. D'Amico, } October,
Minister of Finance.....	Dr. Mariano Demaria, } 1880.
Catamarca.....	M. J. Rodríguez.
Córdoba.....	M. Juárez Celman.
Corrientes.....	F. Cabral.
Entre-Ríos.....	Colonel J. Anteto.
Jujuy.....	Bustamante.
La Rioja.....	V. A. Almonacid.
Mendoza.....	E. Villanueva.
Salta.....	Dr. M. Oliva.
San Juan.....	M. Moreno.
San Luis.....	T. Mendoza.
Santa Fé.....	S. de Iriondo.
Santiago del Estero.....	Santillan.
Tucuman.....	D. Martínez de Huelgas.
Gran Chaco Territory.....	Colonel L. V. Mansilla.
Patagonia.....	Colonel A. Barros.

The Argentine army, exclusive of the National Guard, comprises 7,175 men, as follows: 2,929 horse; 3,332 foot; artillery, 914. There are 5 generals of brigade, 9 colonels-major, 30 colonels; 107 lieutenant-colonels; 166 sergeants-major, and 735 officers of other grades. The National Guard was, at the time of last returns, 236,000 strong; and the reserve, 68,000.

The navy was composed of 27 vessels: 2 steam ironclads, 6 steam gunboats, 2 steam torpedoes, 12 steamers (transformed into war-ships), 3 steam transports, and 2 sail of the line; with an aggregate tonnage of 12,000, an armament of 88 guns, and manned with 2 chiefs of squadron, 5 colonels, 8 lieutenant-colonels, 6 majors, 7 captains, 26 lieutenants, 22 students, 43 midshipmen, 7 paymasters, 26 engineers; 900 seamen, including officers; 2,000 infantry and artillery (National Guard); and 1 torpedo section, with 3 commandants, 8 subaltern officers, and 80 men. There is a naval school and a school for cabin-boys; and an arsenal has been built at Zárate.

The estimated revenue and expenditure for the fiscal year 1879-'80 were as shown in the following tables:

REVENUE.	
Import duties.....	\$13,300,000
Export duties.....	2,500,000
Warehouse fees, etc.....	350,000
Stamped paper, patents, etc.....	650,000
Post-office and telegraphs.....	450,000
Lighthouses, etc.....	40,000
Railways.....	635,939
Interest, etc. (on national funds loaned to provinces).....	509,061
Wharfae.....	15,000
Sundries.....	500,000
Total.....	\$19,250,000
EXPENDITURE.	
Ministry of the Interior.....	\$2,582,881
Ministry of Foreign Affairs.....	117,540
Ministry of Finance.....	9,413,180
Ministry of Justice, Public Instruction, etc.....	1,286,068
Ministry of War and the Navy.....	5,078,745
Total.....	\$18,479,614

* See "Annual Cyclopædia" for 1872, 1877, and 1878, for statistics concerning area, population, territorial divisions, etc.

* *Ad interim* until May, 1881, when he will assume the portfolio of Finance in the national Government.

The surplus observed on comparing the totals of these two tables is \$770,386.

Some of the more important items of expenditure in the several departments of the Government, according to the estimate already referred to, are exhibited in the subjoined table:

INTERIOR.

President of the Republic (salary, and expenses of his household).....	\$46,920
Legislature.....	580,575
Post-Office and telegraphs.....	602,760
Immigration.....	246,086
Subsidies to provincial governments.....	52,485
Railways.....	875,600

WAR AND THE NAVY.

Army.....	\$4,487,968
Navy.....	640,782

JUSTICE, ETC.

Justice.....	\$168,865
Public Instruction.....	565,656

FINANCE.

National debt.....	\$5,433,587
Collection of revenue.....	715,440

The customs receipts for each month of the year 1879, as given in the following table, though in general but little below the standard for the most favorable years, do not aggregate as high as the estimated receipts for 1879-'80, shown in the foregoing table of the revenue:

January.....	\$1,199,487 25
February.....	1,230,019 28
March.....	1,059,946 21
April.....	1,103,615 77
May.....	1,414,375 24
June.....	1,011,146 07
July.....	1,029,261 34
August.....	929,967 22
September.....	888,509 53
October.....	1,152,858 98
November.....	980,427 95
December.....	4,196,883 71
Total.....	\$13,150,823 50

Dr. Avellaneda, in his message to Congress, immediately before surrendering the executive power to his successor, made the following statement concerning the budget:

The total expenditure for the year 1881 is estimated at \$20,207,851, as follows: Interior, \$3,452,995.08; Foreign Affairs, \$140,840; Finance, \$9,455,322.57; Justice, etc., \$1,499,452; War and the Navy (army, \$4,740,610; navy, \$917,692 =) \$5,658,232; and showing an increase of \$1,724,337 over the present year (1880) as follows: Interior, \$870,114; Foreign Affairs, \$24,000; Finance, \$42,252; Justice, etc., \$202,484; War and the Navy (army, \$302,647; navy, \$279,840 =) \$582,487. This increase is in a great measure merely nominal, as the whole amount appropriated is rarely spent, although it well might be in the present instance, and particularly in the branches for which the increase is intended. A few words will explain this: Of the \$870,114 asked for the Interior, \$650,000 are for the extension of the Central North and Andine Railways, and may be looked upon as the earnings of said lines. Consequently, the real increase is only \$220,114, which will be chiefly devoted to immigration and colonization, and subsidizing the municipal bodies to be created for those purposes; the founding of new colonies in Patagonia; the improvement of roads, bridges, and public buildings; the canalization of the port of Santa Fé; the repairing of the dredging-machinery, and other urgent public items which reach in the aggregate \$85,848 in the estimates of the other ministerial departments. The increase for Public Instruction is comparatively insignificant, if the appropriations made in former years for this branch are considered, and how important it is for

young nations to have the largest possible number of inhabitants educated, while it is perhaps the noblest manner of returning to the people what they have contributed to the Government. Finally comes the Ministry of War and the Navy with \$82,720, of which \$50,000, are for the new powder-factory, a medical corps, and Board of Health, the placing in commission of several ships at present lying up, the erection of marine workshops, etc. The taxes all remain as they were in 1880, except some slight modification in the manner of collecting them.

The financial condition of the Argentine Republic is, on the whole, and despite of many unfavorable circumstances, chief among which are the devastating revolutions which attend electoral campaigns, extremely favorable, and the country's credit is uniformly maintained abroad, thanks to the unexceptional regularity observed in the service of the national debt. Between the years 1863 and 1870 the revenue increased 120 per cent., and between 1870 and 1878 a further advance of about 4 per cent. was apparent. The returns for 1879 now show an increase of rather less than 5 per cent. as compared with those for 1878; * but this is attributed in part to the enhanced import tax on wool, for which Minister Plaza obtained permission from Congress in 1878. Notwithstanding that it is an express violation of the Constitution to impose any export duties on native products, yet the tax on wool was raised to 6 per cent. *ad valorem*, a state of things regarded as prejudicial to the interests of the republic, since it would be impossible for Buenos Ayres, shackled with such an impost, to compete with Australia, which exports its wool free of duty. Dr. Plaza's policy, however, was cordially supported by the people of Buenos Ayres. As the inhabitants of the city already paid forty-five dollars per capita to the national Government, twenty dollars to the provincial government, and about ten dollars to the Municipal Council, it was deemed wise and "more patriotic" that any new taxes should be laid on the *estancieros* (farmers, etc., occupying the *estancias* in the rural districts). The incidence of taxation was as follows:

NATIONAL REVENUE.

Buenos Ayres (city).....	\$3,600,000
Buenos Ayres (rural districts).....	4,800,000
Thirteen remaining provinces of the republic.....	2,100,000

\$15,500,000

REVENUE OF BUENOS AYRES.

City.....	\$3,250,000
Rural districts.....	1,500,000
	\$4,750,000

Total..... \$20,250,000

Hence, the taxes paid by the Argentine people were as follows:

DIVISIONS.	Taxes.	Rate per capita.
Buenos Ayres (city).....	\$11,850,000	\$55.00
Buenos Ayres (rural districts).....	6,800,000	15.00
Thirteen remaining provinces.....	2,100,000	1.50
Total.....	20,250,000	10.01

* See "Annual Cyclopædia" for 1879, p. 88.

In the foregoing statements are not included the municipal taxes of Buenos Ayres, or the local taxes of the thirteen other provinces. It is, however, sufficient to remark that the city of Buenos Ayres paid thirty-five times as much per capita as the other provinces, than which circumstance none can more satisfactorily explain the wish of the Buenos Ayreans to get rid of so much government. "The cause of such heavy taxation," observes an Argentine economist, "is the extra liberality of the British public in lending us money," and indeed the interest and sinking fund of the following loan constitute a heavy yearly drain:

YEAR.	Debt.	Amount.
1865.....	Argentine.....	\$11,000,000
1870.....	Buenos Ayres.....	5,250,000
1871.....	Argentine.....	81,250,000
1872.....	Hard dollars.....	5,750,000
1873.....	Buenos Ayres.....	10,500,000
	Total.....	\$63,750,000

In this table are not comprised the Buschenthal loan of 1863, the foreign indemnity bond, the 1876 loan of 500,000,000 pesos current money (about \$20,000,000), the Lottery loan of 1878, nor such minor matters as the loans to Santa Fé and Entre-Rios. If the railway guarantees be excepted, the whole indebtedment of the republic and of Buenos Ayres is about \$100,000,000, or a little over \$10 per capita of the population of the country, and one fourth of the Australian average. If the finances be carefully handled, says the writer last referred to, the country will retrieve itself in ten or fifteen years. It is a pity that the public men are violent protectionists, and paralyze the imports with an impost of 50 per cent. *ad valorem* for the purpose of protecting manufactures. In this way "good sheep farmers are being converted into bad bootmakers and execrable tailors," and the exports for 1878 showed a decline of 20 per cent. from those of the year immediately preceding, particularly in wool, tallow, and hides. At the close of 1877 the price of Argentine bonds in the London market (taking those of 1868 for a guide) was 70; at the end of 1879 it was 90 to 92; and in December, 1880, some were, for the first time, sold at par. Here is an evident indication of financial prosperity. Yet one great drawback still proves a heavy drag on the financial and commercial prosperity of the country, namely, a depreciated currency which calls aloud for remedial measures. Gold, the "shuttle-cock of the *bolsa*," is still at a high premium. With the large influx of gold from Great Britain in 1879, and the confidence felt in the stability of the Government, there ought to be but little difficulty in reestablishing the *Oficina de Cambios*, making paper a legal tender at the former rate of 122½ pesos to the pound sterling, a financial achievement which would favor the flow of capital into the republic, and render commercial transactions safe and steady. As things have been for a number of years past, however,

there is too much of the gambling element; and a country whose foreign securities have almost attained par value, ought not to be exposed to the humiliation of a depreciated currency at home.

The great feature in Argentine history during the past few years is the increase of production, and the marked excess in the value of the exports over that of the imports, the reverse of which condition was formerly the rule. The appended tables show the values, sources, and destinations, respectively, of the imports and exports for 1879:

IMPORTS.

From.	Values.
Belgium.....	\$3,081,000
Brazil.....	2,224,000
Chili.....	321,000
France.....	9,105,000
Germany.....	2,213,000
Great Britain.....	12,083,000
Holland.....	296,000
Italy.....	2,631,000
Paraguay.....	724,000
Spain.....	2,177,000
United States.....	8,794,000
Uruguay.....	2,116,000
West Indies.....	128,000
Other countries.....	943,000
In transitu.....	3,076,000
Total.....	\$44,567,000

EXPORTS.

Destinations.	Values.
Belgium.....	\$13,870,000
Brazil.....	3,279,000
Chili.....	1,150,000
France.....	11,621,000
Germany.....	1,536,000
Great Britain.....	8,758,000
Italy.....	1,602,000
Paraguay.....	464,000
Spain.....	736,000
United States.....	8,791,000
Uruguay.....	1,436,000
West Indies.....	1,018,000
Other countries.....	475,000
In transitu.....	3,004,000
Total.....	\$47,765,000

The values of the principal commodities exported in the same year were as follows: wool (91,951,094 kilogrammes), \$21,610,000; ox-hides (2,336,799 kilogrammes), \$8,149,000; horse-hides (317,429 kilogrammes), \$292,000; sheep-skins (25,088,878 kilogrammes), \$3,965,000; tallow (15,538,289 kilogrammes), \$2,033,000; salt beef (32,309,577 kilogrammes), \$2,812,000; animals (297,073), \$2,130,000; hair (2,372,962 kilogrammes), \$766,000; bones, \$506,000; various skins, not above enumerated, \$789,000. According to statistics, Buenos Ayres owned at the commencement of 1880, 5,116,029 head of cattle, or 936 for every 100 inhabitants; and 46,600,000 sheep, or 8,275 for every 100 inhabitants; which last figures are without a parallel elsewhere, though, singularly enough, the number of cattle in Uruguay was 6,000,000, or 1,385 per 100 inhabitants, while the number of the sheep was but 12,000,000.

No returns of shipping movements at the various ports of the republic have been published of a later date than those given in the "Annual Cyclopædia" for 1879.

The total length of railway lines in operation in 1878 was 1,448 miles; and concessions had been, up to the end of that year, granted for new lines to the extent of 1,989 miles, including the great interoceanic railway from Buenos Ayres to Santiago (Chili), 888 miles. Still further concessions were granted in 1879 and 1880, and works on the new lines and continuation of those already built were carried on with activity.

The telegraph lines in operation in 1877 comprised 9,887 miles of wires, of which 3,365 belonged to the state. The total number of dispatches in 1878 was 214,714.

The tide of immigration continues to increase, the number of immigrants for 1879 having reached 50,000, a figure hitherto unprecedented outside of the United States, and showing an increase of 14,329 as compared with that of the year immediately preceding. The lack of immigration from Northern Europe to the Argentine shores is very generally deplored, and active measures are on foot for encouraging its augmentation. Of the 286,000 immigrants from the United Kingdom and Germany in 1879, hardly 1,000 went to the River Plate regions.

The political situation of the country in 1880 contrasted widely with that of 1879, the events of which latter year comprised only measures of peaceful industry at home, while the single question of a menacing character in the foreign relations of the republic was the still existing vexed question with Chili as to the possession of territory in Patagonia. In the year just past, as the final issue of the elections for a new President approached, the smoldering fire of party strife broke out and raged for several months with unmitigated violence, paralyzing all branches of trade and industry, and being attended with considerable bloodshed, the city of Buenos Ayres itself having suffered the hardships and inconveniences inseparable from a state of siege. An incident which seriously complicated the main question at issue was that of the discussion concerning the definitive establishment of the capital of the republic, Buenos Ayres, which had been the *provisional* capital ever since the days of the independence, with the trammels and expense of a double gubernatorial machine, and the object of envy and jealousy of all the provinces save that in which it is situated. The first days of October brought the reestablishment of peace, with the termination of the electoral campaign, and the inauguration of the new Chief Magistrate of the Republic, Brigadier-General Don Julio A. Roca, whose administration is regarded as one full of patriotic and fruitful promise. General Roca gained considerable distinction as Minister of War and in other important capacities under the Avellaneda government. The fact of his being a soldier, together with his resolution to initiate a military policy, and the continued arrival, for some time past, of war material for the Argentine Government, gave

place in some quarters to apprehensions of belligerent designs toward Chili, with which country, as already hinted, the Patagonian boundary question is still pending. But a more reasonable explanation of the armament would be the prudent desire on the part of the Argentine Republic to be prepared in case Chili, after making peace with Peru, should feel tempted to make use of her liberated forces in support of her claim to sovereign jurisdiction over the disputed Patagonian peninsula.

The following extracts we translate from President Roca's inaugural speech to the Argentine Congress on October 12, 1880, than which no other description could present a clearer view of the present political condition of the country:

MESSRS. SENATORS AND DEPUTIES: I have just taken the oath prescribed by the Constitution for the office to which the most important duties and the gravest responsibilities attach; and I consider that I should, on this solemn occasion, express to the representatives of the Argentine people what my intentions are on accepting that high post.

I do not come unconsciously to power. I well know that the path now before me is beset with snares for him who feels the responsibility of this elevated charge among a free people; nor am I unaware of the bitter trials ever awaiting him who is resolved upon the rigid discharge of his duty. But, as you know, it was beyond my power to control the current of opinions which has terminated in this (by me unsought for) result of the electoral contest—a contest which has served as a pretext for staining once more our country's soil with blood. When the liberties of mankind and the growth of a nation are concerned, all that is great or enduring is to be attained only at the expense of vast efforts and painful sacrifices. Nor are the severe trials passed through by the Argentine Republic to be wondered at, when we survey her rapid progress and the triumphs achieved in half a century of national existence, as compared with the tardy development to which history bears testimony in the governments of the most advanced societies.

We live very rapidly, and in our feverish impatience to reach in a day the level arrived at by other nations through centuries of labor and sanguinary attempts, most of the problems of our organization, political and social, take us by surprise.

The Congress of 1880 has completed the federal representative system of government; and we may be said to have this day fairly entered the period of constitutional rule. The law just sanctioned by your body for the final settlement of the capital of the republic, is at once the starting-point of a new era in which the Government will have entire freedom of action, and the realization of the people's dearest wish, as implying the consolidation of the union and the reign of peace for long years to come. The existence of that law had come to be an inevitable necessity, and your highest claim to the nation's esteem will be your having so faithfully interpreted its desire.

Henceforth, free of preoccupation and undisturbed by the internal commotions which hourly imperiled the very integrity of the republic, the Government will be enabled to devote its attention to the concerns of administration and the fruitful works of peace; and the revolutionary period being closed for ever, which constantly retarded our onward march, we shall soon reap the fruits of your firmness and tact.

On assuming the general administration of the country, I would mention the subjects which occupy my mind more particularly than all the others—the army, and means of internal communication.

The army and navy, implying, as they do, the integrity and safeguard of our country from without,

and peace and order at home, have the first claim to the attention of Congress and of the new Government.

The present army of the republic is a model of disinterestedness, fortitude, valor, and loyalty to its flag, but at the mercy of arbitrary dispositions, and without rules for its guidance or laws for its organization on a regular and systematized plan.

To the reforms required in this direction I shall devote my best endeavors, in order to avert the dangers of militarism, which is the suppression of liberty, at a more or less distant day, and make of the army a veritable institution, according to the terms of the Constitution and the requirements of modern progress. By this means, and being removed from party influence, it will occupy, as it now does, an exalted place in public opinion, and in the unfortunate event of our country's rights being endangered, be in a position to disinvolve an irresistible force. This measure will prove advantageous also in an economical point of view, doing away with useless expenses which weigh heavily upon the Treasury because of the impossibility for previous Governments to establish a perfect system of civil and military administration in the services connected with the army.

As for internal means of communication, they present to my mind an imperative and unavoidable necessity, which can not be neglected without injury to the common weal. It is indispensable to complete our railways to their natural termini in the north, west, and east, with their several branches, thus perfecting the facilities of travel and cementing the bonds of union between the provinces.

Such as have attentively watched the progress of this country can not have failed to observe, as you yourselves well know, the marked changes—economical, social, and political—effected by railways and telegraph lines in their progressive extension through the interior.

Rich and fertile provinces but await the construction of railways to increase their yielding powers a hundred-fold, with ready means of transportation to markets and the seacoast for their varied and magnificent products, representing the three kingdoms of nature.

For my part, I shall regard it as the greatest glory of my Government if, in three years from this day, we succeed in saluting with the whistle of the locomotive the towns of San Juan and Mendoza (the region of the vine and the olive), of Salta and Jujuy (the region of coffee, sugar, and other tropical products), and, throwing wide open at the same time our gates to the commerce of Bolivia, to receive the metals from her rich and inexhaustible mines.

I rely upon your aid, and that of the whole country, for the realization of these projects within the time specified, or sooner if possible; nor will the works mentioned be at all extraordinary or superior to our resources, if we can only live in peace.

The other branches of administration, such as immigration, public instruction, the enlightenment of all classes of society, the fostering care due to religion, commerce, arts, and industry—these have become normal duties which no Government can now neglect.

I must, nevertheless, make special mention of the necessity of peopling the desert territories, but yesterday the home of savage tribes and to-day the possible seat of populous towns, as the most efficient means of securing their possession.

I shall continue our military operations along the present frontier lines, north and south, until the complete subjection of the Patagonian and Chaco Indians, in order to blot out the military frontiers for ever, and not leave a single span of Argentine soil beyond the jurisdiction of the laws of the land.

Let us rid completely those broad and fertile regions of their traditional enemies who, since the days of the conquest, have ever retarded the development of our pastoral wealth; let us offer absolute security of life and property to those who engage their capital and their hands in the labor of fertilizing them, and we

shall soon see them peopled by eager multitudes of every race and from every clime, the future founders of new states to swell the power and greatness of the republic.

A young and vigorous nation like our own, with a vast extent of territory, fertile lands, a favored climate, and liberal institutions, ought not to look with amazement at such feats as these, of the accomplishment of which elsewhere under similar circumstances numerous examples are recorded in the history of human societies.

We are the outline of a great nation destined to exercise powerful influence in the civilization of America and of the world; but in order to complete the picture with full perfection of detail, we must enter with firm tread the path of regular life, as a people constituted in the image of those we have chosen for our model: that is to say, we require lasting peace, order unbroken, and permanent liberty. And, touching these particulars, I declare aloud from this exalted seat that I may be heard throughout the entire republic, I will make use of all means and authority placed by the Constitution in the hands of the Executive power of the nation to avert, crush, and repress any attempt against the public peace. If in any spot of Argentine territory a fratricidal arm be raised, or a movement subversive of the constituted authority, thither the nation's whole power shall be directed to restrain them. Yet I trust there shall be no need of this; for there are now none—either individuals or parties—any longer mighty enough to arrest the chariot of the republic's progress by the crime of a civil war. On the other hand, the liberties and rights of citizens will be faithfully protected; and political parties, so long as they keep within constitutional bounds and do not degenerate into revolutionary parties, may remain in peaceful security from interference or hindrance on the part of my Government. The door of the Constitution and the law is wide enough for all parties and all noble ambitions. And thus, who can doubt that the party which twice in the course of six years committed the error of attempting to repair electoral defeats by force of arms might this day be the legitimate directors of the destinies of the nation, had they not resorted to such odious extremes? In cases of doubt or of impossibility to discern where the rights of the citizen end and the attributes of the Government begin, my preference will always be to refrain from action, leaving time and public reason to solve the difficulty; and, should I be forced to take any steps that might affect the political interests of even the unworthiest of Argentines, I shall proceed upon mature reflection, and after having heard the opinion of my natural advisers and of the acknowledged eminent authorities which the country happily possesses.

Our relations with foreign powers will be zealously maintained and fostered by my Government, care being taken to augment and strengthen the bonds of union between this republic and the most advanced nations. It will be my especial endeavor to preserve harmony with our neighbors, while strictly abstaining from interference in their internal concerns. And as for those with whom, in relation to boundaries, we have difficulties still pending, I shall seek to solve these in a manner worthy of all concerned, without yielding one iota where I understand the dignity, rights, or integrity of the republic to be affected.

As a consequence of these views, our obligations toward foreign commerce shall be regarded as sacred, and I shall spare neither pains nor sacrifices to preserve our credit, both at home and abroad, by scrupulous attention to the service of our debts; for I regard the national honor as dependent upon the faithful discharge of that duty.

ARGYLL, Duke of, GEORGE DOUGLAS CAMPBELL, K. T., the Lord Priy Seal in the new English Cabinet, was born April 30, 1823. He is the only surviving son of the seventh Duke

of Argyll, and succeeded his father on April 26, 1847. He sits in the House of Lords as Baron Sundridge and Hamilton, in the peerage of England. He held the office of Lord Privy Seal also in the Earl of Aberdeen's Cabinet from 1852 to 1855, and on the break-up of that Ministry he retained the office under Lord Palmerston's premiership. He afterward became Postmaster-General in the same Cabinet, but resumed the Privy Seal in 1859, exchanging again to the postmastership on Lord Elgin being sent to China in the following year. He retired in 1866. In the last Liberal Cabinet of Mr. Gladstone, the Duke of Argyll held (from 1868 to 1874) the position of Secretary of State for India. He has been a frequent speaker in the House of Peers on such subjects as Jewish Emancipation, the Scottish Marriage Bill, the Corrupt Practices at Elections Bill, the Sugar Duties, Foreign Affairs, the Ecclesiastical Titles Bill, the Scottish Law of Entail, the Repeal of the Paper Duties, etc. During the administration of Lord John Russell he generally supported the Government, but he identified himself with the Liberal Conservatives. He showed a special interest in all questions affecting Scottish interests brought before the House of Lords, especially in the affairs of the Church of Scotland. Even before he had succeeded his father, he took, as Marquis of Lorne, an active part in the controversy in the Presbyterian Church of Scotland relating to patronage, and was regarded as the chief support of Dr. Chalmers. The first pamphlets published by him, and entitled "A Letter to the Peers, from a Peer's Son" (1842), and "On the Duty and Necessity of Immediate Interposition in Behalf of the Church of Scotland," related to this question. Though an admiring friend of Dr. Chalmers, he condemned the Free-Church movement then in agitation among certain members of the General Assembly. The fullest *exposé* of his views on church matters is given in his work, "Presbytery Examined" (1848), which traces and critically reviews the history of the Presbyterian Church of Scotland since the Reformation. He was elected Chancellor of the University of St. Andrews in 1851, and Rector of the Glasgow University in 1854. In addition to the works already mentioned, he published in 1866 "The Reign of Law," which had a very large circulation; in 1869, "Primeval Man: an Examination of some Recent Speculations"; and in 1870 a small work on the "History and Antiquities of Iona," of which island he is proprietor. He is Hereditary Master of the Queen's Household in Scotland and Keeper of the Great Seal of Scotland, Lord-Lieutenant and Hereditary Sheriff of Argyllshire, and a Trustee of the British Museum. He was married to Lady Elizabeth, daughter of the second Duke of Sutherland. His wife died in 1878. Of his children, five sons and seven daughters were living in 1880. The eldest son, the Marquis of Lorne, married, in 1871, the Princess Louisa, fourth daughter of Queen Victoria.

ARKANSAS. The correct pronunciation of the name of this State has been a subject of investigation by a joint committee of the Eclectic and the Arkansas Historical Society. According to the results of their research, it appears that the name was taken from that of a tribe of Indians inhabiting the country upon the northern bank of the river of the same name. The early French explorers caught from them the sounds of the name, and endeavored to represent them by French modes of spelling. In other words, it belongs to the class of Gallicized Indian names, which, together with those of purely French origin, make so important a part of the nomenclature of the rivers, mountains, and prairies of the territory purchased from the French under the name of Louisiana. In the old diaries, notes, reports, and rude maps of the early French, the name is differently spelled. Each, having no guide, made his own phonetic effort to represent sounds heard upon the lips of the natives. In one point all agree, that the sounds represented by the letters and syllables can, in the French language, be nothing different from that pronunciation which afterward became common, namely, the pronunciation of those syllables with the final *s* silent, and the broad sound of *a* in each. This French pronunciation passed afterward to the Americans, prior to and with their purchase of the territory, and was used by all the people, as well as by statesmen in official transactions. This is illustrated by the American spelling, which for a while was adopted, to indicate approximately the French sounds. The English not having the final silent *s*, the letters *aw* were introduced temporarily to avoid corruption in pronunciation. They nearly, but not quite, represent the broad sound of *a* in the French, with the silent *s*. This became the spelling of Congress. It caught the pronunciation and transported it into the English at a critical period, when it might have been lost or corrupted, as many French names of less importance have been, to the point of entire disguise. When the pronunciation had become familiar, and the danger was thought to be past, the better taste of the more cultivated people, among whom was Governor Izard, of the State, insisted upon a restoration of the original orthography, which was easily effected, and now universally adopted. But for uniformity, however, it would still be pardonable to use the orthography of Congress, in the act establishing the Territory.

Through these changes in spelling the pronunciation remained unaltered, and was retained by all the people until a quite recent period, and is still used by a very large majority of the people of all classes. The origin of the other pronunciation, which is used by a small class of educated people and has obtained recognition, to some extent, among lexicographers, although quite recent, eludes all investigation. By it the accent is cast on

the middle syllable, the final *s* is sounded, and the Italian sound of *a* in the second and third syllables changed to the sound of *a* in *can* instead of its sound in *car*. The committee say: "We are happy to state, however, that we find this vicious habit less universal and less firmly established than the honor given it by lexicographers led us to fear. It has never obtained except among a small class of immigrants from more distant States. It is almost unknown in those States which have furnished the great mass of our population, and entirely so among those born and bred in the State, or who came here at an early period. We are, therefore, unanimous, and without hesitation in declaring it, as the result of our inquiries, that the true pronunciation of our State is in three syllables, with the broad Italian sound of *a* in each, and with the final *s* silent, with the accent on the first and last. The spelling is correct, and indicates properly its French origin. The polite world will doubtless concede to our State the privilege of fixing the pronunciation of its own name. The pronunciation herein indicated as proper, is now retained and commonly used by the Governor, heads of departments, and all the Judges of our Superior Courts. We beg leave to recommend that it continue to be used in all official *viva voce* proceedings."

The Hot Springs adjustment was finally secured by an act of Congress, passed on June 16, 1880. The important features of the act may be briefly stated. It provides that every person, his heirs or legal representatives, in whose favor the commissioners appointed by Congress, relative to the Hot Springs of Arkansas, have adjudicated, shall have the sole right to enter and pay for the amount of land the commissioners have adjudged him entitled to purchase. This privilege continues for eighteen months after the expiration of the notice required by the tenth section of the act of Congress of March 3, 1877. The person so entering land must pay to the receiver at Little Rock forty per cent. of the assessed value of said land placed thereon by the commissioners.

A large and unadjusted claim is held by the State against the Government of the United States. Under an act of Congress of 1850, designed to aid in the construction of the necessary levees and drains to reclaim the swamp and overflowed lands, Congress gave to the State the whole of such overflowed lands not then fit for cultivation. The Interior Department, by this authority, reported as due 8,652,432.93 acres, and of this amount 7,627,812.14 have been approved to the State, and 7,121,953 acres actually patented. There still remain unapproved 1,024,620.79 acres, and of the approved lands no patent has been issued for 505,858.66 acres. The matter is complicated from the fact that Arkansas is largely indebted to the Smithsonian Institution, which is under the charge of the Government. This

Institution holds 500 \$1000 bonds of the State of Arkansas issued in 1838, and, as no interest has ever been paid, the indebtedness now stands at something like \$2,000,000, and the United States has made this default on the State's part the occasion for withholding payment of the five per cent. fund due the State arising from the sale of public lands.

Another complication arises from the issue of patents to citizens for this land already granted to Arkansas, and the donation of another quarter million of acres to railroads as a subsidy. Efforts are being made to have Congress reduce the price of public lands in this State to 62½ cents an acre, except the reserved alternate railroad sections. The State Land Commissioner, in the fifteen months before January 1, 1880, disposed of 146,664 acres of the public lands of the State by sale and 317,640 acres by free grant to actual settlers, against 127,415 acres sold and 183,743 acres donated to settlers in the twenty-four months preceding.

An amendment was proposed to the State Constitution, which was designed to take from the Legislature all authority to pay certain State bonds. To become valid, it was requisite that it should have been agreed to by a majority of all the members elected to each House of the Legislature, and adopted by a majority of the electors of the State. The amendment had passed the Legislature and was submitted to the voters at the election in September. It was in these words:

ARTICLE XX. The General Assembly shall have no power to levy any tax or make any appropriations to pay either the principal or interest, or any part thereof, of any of the following bonds of the State, to wit: Bonds issued under an act of the General Assembly of the State of Arkansas, entitled "An Act to provide for the Funding of the Public Debt of the State," approved April 6, A. D. 1869, and numbered from four hundred and ninety-one to eighteen hundred and sixty, inclusive, being the "Funding Bonds" delivered to F. W. Caper, and sometimes called "Holford Bonds," or bonds known as Railroad Aid Bonds, issued under an act of the General Assembly of the State of Arkansas, entitled "An Act to aid in the Construction of Railroads," approved July 21, A. D. 1868, or bonds called "Levee Bonds," being bonds issued under an act of the General Assembly of the State of Arkansas, entitled "An Act providing for the Building and Repairing of the Public Levees of the State, and for other Purposes," approved March 16, A. D. 1869, and the supplemental act thereto, approved April 12, 1869, and the act entitled "An Act to amend an Act entitled, 'An Act providing for the Building and Repairing of the Public Levees of this State,'" approved March 23, A. D. 1871, and any law providing for any such tax or appropriation shall be null and void.

At the election in September, this amendment was rejected by the people by a majority of nearly four thousand votes.

A Republican State Convention was held at Little Rock, on May 2d, at which John A. Williams was President. Delegates to the Chicago National Convention were appointed, and instructed to support General U. S. Grant for President. Presidential electors were also

selected, and other business transacted relating to the State election.

The Greenback National-Labor Convention assembled on June 17th, and nominated for Governor, W. P. Parks; for Secretary of State, C. E. Tobey; for State Treasurer, W. A. Watson; for Auditor of State, C. E. Cunningham; for State Land Commissioner, Wilshire Riley; for Superintendent of Public Instruction, Peter Brugman; for Chief Justice of Supreme Court, J. Cole Davis; for Clerk of Chancery Court, W. T. Holloway.

The Democratic Convention assembled on June 4th, and nominated for Governor, T. J. Churchill; for Secretary of State, Jacob Frolich; for Auditor of State, John Crawford; for Treasurer of State, William E. Woodruff, Jr.; for Attorney-General, C. B. Moore; for Commissioner of Public Lands, D. W. Lear; for Supreme Judge, E. H. English; for Superintendent of Public Instruction, J. L. Denton; for Judge of Pulaski Chancery Court, D. W. Carroll; for Clerk of Pulaski Chancery Court, J. W. Calloway.

The following platform was adopted:

We, the Democratic party of the State of Arkansas, in delegated convention assembled, reaffirming and renewing the pledge of our allegiance and unwavering devotion to those great principles of equal rights, untrammelled suffrage, and universal toleration toward all men of whatsoever race, nationality, creed, or condition, that underlie and uphold the fabric of our free Government and republican institutions, and hereby solemnly pledging ourselves to a continued recognition, observance, and enforcement of the same, do further make these our declarations of party principles:

1. That the General and State governments are each in their own proper and constitutionally appointed sphere supreme, and entitled to equal love, obedience, and devotion, and that neither can trench upon the province or prerogatives of the other without grave danger and detriment to the highest interests of both.

2. That, recognizing morality and intelligence together as the true and lasting basis of every free government, and an essential requisite to a proper exercise and enjoyment of the rights and privileges of the same, we are in favor of such a system of free public schools as will increase to even greater extent the facilities of education our people now enjoy, and with this view we commend to the Legislature of our State such needed revision of our school laws as may be most conducive to this end.

3. That we favor and cordially invite immigration from every quarter without restriction, save that it be of an honest and industrious class, and we hereby proclaim and publish to the world that all charges and intimations that any man or classes of men have been or will be in any manner proscribed, or ostracized among us on account of political opinion, or otherwise, is an unjust and unfounded libel upon our people and State; and we hereby guarantee equal protection and enlightened tolerance to all alike who may come to cast their lot among us, and make our beautiful and growing State their home; and we demand from the Legislature the enactment of such suitable laws as will tend to encourage and increase immigration into our midst.

4. We are in favor of such wholesome legislation as may be necessary to encourage the investment of capital in and the building up of manufactories in the State to the full extent that the same may be done without undue discrimination in favor of one class or branch of industry or enterprise before another of equal importance to the welfare of the people at large.

5. That, recognizing from well-attested acts and conduct in the recent past that the time has come when a large number of our colored fellow-citizens, ignoring the party affiliations and prejudices of a bitter past, are now willing to strike hands with us in the living present and march shoulder to shoulder with the great political party to which is intrusted the reins of power to be exercised for our common weal, we do hereby warmly acknowledge their kindly aid and disposition already shown, and cordially invite them to a yet fuller and more active coöperation with us in fostering and forwarding our common interests, and the welfare of our noble Commonwealth.

We endorse the action of the Democratic State Convention assembled in 1878 in recommending the submission of the question of our State's bonded indebtedness to the people by resolution providing for an amendment to our State Constitution, as also the action of our State Legislature of 1879 in submitting the same to the people, and we do not now regard that question as a political one, and remit the same to the people to be voted on by them at the approaching election, irrespective of party.

The result of the election was the success of the Democratic ticket by a large majority.

ARMY OF THE UNITED STATES. Lieutenant-General Sheridan reports that there were 4,850 officers and men in the Department of Dakota; 2,840 in the Department of the Platte; 4,720 in the Department of Missouri; and 3,640 in the Department of Texas. He protests anew that this force is too small for the work which it has to perform, and inadequate for the suppression of disturbances in the Territories and Western States, and the protection of the borders. In the Division of the West there is only one man for 75 square miles of territory, in the Department of Texas only one man for 125 miles.

Major-General Hancock reports a force of 317 commissioned officers and 2,390 enlisted men in the Division of the Atlantic.

The number of soldiers drawing increased pay for length of service under the act of 1854 is 6,129; for five years of continuous service, 3,762; for ten years, 1,872; for fifteen years, 227; for twenty years, 130; for twenty-five years, 97; for thirty years, 41.

The number of men and officers killed and mortally wounded in actions with Indians in the four years past was for each year as follows: In 1876, 16 officers and 272 men; in 1877, 7 officers and 121 men; in 1878, 2 officers and 8 men; in 1879, 2 officers and 32 men. The total losses for the four years were 27 officers and 333 men.

According to the report of Adjutant-General Drum, the enlistment of soldiers has been conducted with such care in selection, that out of 23,300 applicants only 5,026, or less than 22 per cent., were enlisted. A great improvement in the class of men applying for enlistment has been observed within the past few years, which he ascribes to the act of June 18, 1878, to advance the more soldierly and intelligent of the enlisted men to commissions. The total number of soldiers who have passed out of the service during the year is reported as 7,582: 235 by death, 2,043 by desertion, 3,158 discharged on expiration of service, 482 by court-martial,

15 by civil authority, 116 on account of minority, and 653 by order. The assignments of recruits and reenlistments amounted to 5,620: recruits assigned, 4,166; non-commissioned officers reenlisted, 474; musicians, etc., 41; privates, 939.

The deaths reported among the white troops by the Surgeon-General were 219, or about 1 per cent. of the mean strength (22,100), of which number 126 died of disease and 93 of wounds and casualties. The proportion of deaths to cases treated was 1 to 179. The number of white soldiers discharged from the service on surgeons' certificates of disability was 734, 3·3 per cent. of the average strength. The number of deaths among the colored soldiers was 46, or 1·9 per cent. of the mean strength; 21 of these died of disease, and 25 of wounds, accidents, and injuries. The proportion of deaths to cases treated was 1 to 88. The number of colored soldiers discharged on certificates of disability was 42, or 2·2 per cent. of mean strength (2,368). Casualties of seventeen hostile engagements with the Indians were reported for the year ending June 30, 1880. The organization of the army at present provides for 11 general officers, 555 officers, and 1,286 enlisted men for the staff; and 1,989 officers and 24,214 enlisted men for the line. Secretaries Sherman and Ramsey in their reports to the President recommend that the strength of the army be increased to 25,000 men in the troops of the line, instead of that number of enlisted men for all duties, to which limit the army is confined by the appropriation bills. Frontier tactics have undergone a great change since the extension of railroads through the Territories. It is no longer necessary to guard stage-routes and maintain small posts; but considerable bodies of troops may be concentrated at points of intersection on the railroads, whence they can be rapidly forwarded to the scene of action when Indian outbreaks take place. It is desirable to build permanent quarters for the soldiers at these central posts. Many of the small posts are still occupied, because they afford the only available quarters for the troops, which have ceased to be of any strategic importance. Secretary Ramsey and General Sherman recommend that authority be given to sell these useless sites and buildings, and apply the proceeds to erecting new barracks at the important military positions. The lack of officers for field-service prompts the suggestion that only retired officers be allowed in the educational employments for which regimental officers are now frequently detailed.

There are 78 schools in operation in the army, under the supervision of officers, with an aggregate attendance of 2,305 enlisted men and children. The enlistment of 150 schoolmasters, with the rank and pay of sergeants, is recommended by the Secretary of War.

Adjutant-General Drum addressed a circular in July to the adjutant-generals of the different

States, offering to aid in the organization of the State militia, and to help assimilate the rules and forms used in the State organizations to those employed in the regular service. The motive of the interest in the discipline of the State forces manifested on the part of the authorities of the regular army is to enable the army to be readily strengthened by the State troops and regular and volunteer recruits suitably officered by officers of the militia in the event of a war. Officers were detailed to visit and inspect the summer encampments of the State troops.

The year has witnessed the suppression of the two troublesome bands of hostile Indians who have infested the Northern and Southern frontiers for many months, escaping over the borders when hard pressed by the military. The Apache leader Victoria and his band have been destroyed in Mexico, and the main body of the Sioux led by Sitting Bull have delivered themselves up to the military authorities.

In the engagement between Major Thornburgh and the Utes, near the White River Agency, September 29, 1879, 10 were reported killed and 35 wounded. In an attack upon Colonel Miles's command by the Sioux, at Beaver Creek, Montana, 3 were killed and 3 wounded, July 17th; in a skirmish at Salt Lake, Texas, July 25th, 2 were wounded; at Big Creek, Idaho, July 29th, 2 were wounded, and 1 killed at the same place August 20th. In an engagement with the Apaches, near Fort Bayard, New Mexico, 4 were killed and 1 wounded, September 5th. A number of engagements took place in New Mexico between a detachment under Colonel Morrow and the Apaches belonging to Victoria's band. On September 30, 1879, 2 were killed at the head-waters of the Rio Cuchillo Negro; 3 were killed and 1 wounded at Grozman Mountain, October 26th and 27th; on the Rio Perche, January 13, 1880, 1 was killed and 1 wounded. In an engagement in the San Mateo Mountains, January 17th, 2 privates were wounded and an officer killed. In engagements in the Carvallo and San Andreas Mountains, January 30th and February 7th, 1 was killed and 4 wounded. A severe fight took place on the east side of San Andreas Mountain, April 6th and 7th, between Mescalero Apaches and a portion of Colonel Hatch's command, in which an officer and 8 men were wounded. In a meeting on Ash Creek, Arizona, with Victoria's Apaches, May 7th, 1 man was killed. Trouble occurred also with the Sioux in Montana, who attacked several scouting parties. A party supposed to belong to Sitting Bull's band attacked a small detachment on Pumpkin Creek, February 7th, wounding 1 and killing 1; in another attack near Rosebud River, March 8th, 2 scouts were killed. On April 1st a skirmish took place on O'Fallon's Creek, in which 1 man was killed.

The Apaches were hotly pressed in New Mexico and Arizona by the United States troops and by volunteer organizations of citi-

zens. They were encountered and scattered by a force commanded by General Grierson, and pursued wherever they showed themselves. Victoria and his band of marauders were finally driven over the Mexican border in September by General Buell. The American forces pursued them into Mexican territory for more than 100 miles south of Quitman, Texas, when they were notified by the Mexican Colonel Terrassas, with whom they had communicated, that a further advance into Mexico would be objectionable. After committing a massacre in the district of Chihuahua, the Indians were met by the Mexican troops under Terrassas. Victoria was slain with 60 of his warriors and 18 women and children; and 68 women and children were captured. The remainder of his band, about 30, fled across the line into American territory again. The raids of Victoria extended through a year and a half. His band and their allies are supposed to have committed as many as 400 murders. A party of Mescaleros who had been separated from Victoria's band in the fight with General Grierson attacked a picket near Eagle Springs, Texas, October 29th, and killed 4 men.

An organized band of emigrants from Kansas, Arkansas, and Texas, called the Oklahoma Colony, started in November for the strip of territory of 57 miles beyond the border-line of Kansas in Indian Territory, which they claimed was not a portion of the ceded reservation, and which they announced that they would settle upon and occupy by force unless forbidden by act of Congress, since the Secretary of the Interior had expressed the intention to settle the wild Indian tribes of the Southwest upon the disputed tract, and the Federal courts had not promptly accorded a judicial hearing of the matter. The president of the colony was D. I. Payne.

The removal of the Utes from the reservation in which silver and gold mines have been found, in Colorado, has been attended by many difficulties. A critical conjuncture, in which the Indian agents and the small body of troops on the reservation were in danger of becoming the victims of a sudden outburst of savage rage, was brought on by the action of the State authorities in regard to a case of manslaughter, in which an Indian was killed by a freight-carrier, and the perpetrator captured and put to death by the Indians. (See COLORADO.)

At the beginning of November about 1,500 Indians who had taken part in the rebellion of Sitting Bull had surrendered to the military, and were placed on the reservation in Montana, under the control of the garrison at Fort Keogh, and set to agricultural employments. The chiefs Spotted Tail and Rain-in-the-Face gave themselves up with their camps; but Sitting Bull refused to deliver himself up till the return of the British officer, Major Walsh, who had treated with him as a mediator.

The number of Indians in the United States, exclusive of Alaska, is 255,938, all of whom except some 18,000 are under the control of agents of the Government. In the Indian Territory there are 60,560 civilized and 17,750 uncivilized Indians. There are about 25,000 Indians in Dakota, 23,000 in New Mexico, 21,000 in Montana, 17,000 in Arizona, and 14,000 in Washington Territory. Over 5,000 Indians live in the State of New York, and 10,000 in Michigan. The number of acres broken by Indians not belonging to the five civilized nations of Indian Territory in 1880 was 27,283; the number of acres under cultivation, 170,847; bushels of wheat raised, 415,777; of corn, 666,430; of oats and barley, 222,439; of vegetables, 376,145; tons of hay, 56,527; number of cattle owned, 78,812; of sheep, 864,137. By the civilized tribes the number of acres cultivated was 314,398; the number of bushels of wheat grown, 336,424; of corn, 2,346,042; of oats and barley, 124,568; of vegetables, 595,000; tons of hay cut, 149,000; bales of cotton raised, 16,800; number of cattle owned, 297,040; of swine, 400,282. Among the Indians, exclusive of the five civilized tribes, 110 day-schools and 60 boarding-schools have been maintained with 316 teachers. These have been attended by upward of 7,000 children. The boarding-schools are regarded as more efficacious than the day-schools, since in them the teaching of farming and domestic work can be more successfully conducted. As much attention is given to instruction in useful labor necessary to self-maintenance as to the schoolroom studies. There are tribes numbering 50,000 Indians who have no treaty school funds. The Indian Bureau intends to open 13 new boarding-schools during the present season, which will be the first schools established for the instruction of the Western Shoshones, the San Carlos Apaches, and the first regular and satisfactory instruction provided for nine other tribes, numbering in all over 33,000 individuals. The officers conducting Indian affairs deem that the time is come when the tribal customs can be supplanted by the law of the land to a considerable extent, and when the policy of granting communal rights only in the reservations may safely be abandoned, and agricultural lands be allotted to individual Indians to hold in severalty. Acting-Commissioner Marble reports that the feeling among the Indians on the reservations in favor of individual ownership is almost universal. "Following the issue of patents comes disintegration of tribal relations, and if his land is secured for a wholesome period against alienation, and is protected against the rapacity of speculators, the Indian acquires a sense of ownership, and, learning to appreciate the advantages and results of labor, insensibly prepares himself for the duties of a citizen." The Commissioner recommends a law also to prevent polygamy and legalize marriage among the Indians, and the enactment of a code of criminal law for the reservations. He considers that the

laws for the punishment of trespassers upon Indian reservations are inadequate, and asks for a law making such interlopers strictly amenable to punishment. Secretary of the Interior Schurz, in his annual report, expresses similar views of Indian policy. The policy of massing the Indians on the largest reservations, which was followed in the beginning of the present Administration, in accordance with which the Pawnees, the northern Cheyennes, and the Poncas were removed to the Indian Territory, Mr. Schurz thinks has been a mistaken one. The policy advocated is to respect the rights which the Indians possess in the lands they occupy and their attachments to their homes, and by teaching and encouragement to cultivate among them independence and a love of work and desire to accumulate private property. He advises giving separate holdings of land, with an inalienable title running a sufficient length of time; proposing to allot lands in fee simple eventually to Indians able to maintain themselves upon them, and to dispose of the lands of those of the Indians who do not prove themselves able or disposed to maintain themselves upon them, for the benefit of and with the consent of the owners, to white settlers. The aim of such a policy is to dissolve the tribal system and to gradually make citizens of the Indians. By a decision of the United States Circuit Court, rendered by Judge Dundy, the Ponca Indians are entitled to the lands in Nebraska from which they were removed. By the same principle their former reservation in Dakota will be returned to them, and the Sioux, to whom the Poncas' lands were assigned and who now hold them, have no legal title and may be dispossessed.

The Chief of Engineers, General Horatio G. Wright, directs attention to the backward condition of the harbor defenses. Only a small portion of the existing fortifications are of recent construction, and planned with reference to modern heavy ordnance. These are all of them earthen barbette batteries. The casemated forts, which were as good as any in the world when they were built, were designed only to resist the attacks of wooden vessels, and are pierced for guns long out of date. The modern naval vessels are armed with guns of from 9 to 17 inch bores, firing 800 to 2,000 pound projectiles, and are clad with from 6 to 24 inches of iron armor. Foreign nations have naval stations within a few hours' sail from the American shore. Immediately upon the declaration of a war these fast war-steamer could appear at any one of the American ports and pass the present batteries with ease. The navy could not avert such a danger, and no rapid concentration of troops could prevent the burning of the seaport thus attacked by explosive shot. Some of the wealthiest cities of the United States, thousands of millions' worth of property, and a large part of the naval and military stores of the Government, are thus ex-

posed to quick destruction upon the first outbreak of a war. This danger can only be successfully guarded against by a thorough system of harbor fortifications constructed in accordance with the principles followed by European nations, casemated forts armed with the heaviest artillery and protected by thick iron scarps, supplemented by earthen batteries and a well-planned system of torpedo defense. Barbette batteries may be used entirely in the ports with shallow harbors which will not float the heaviest ironclads. Fortifications should be studded along the channels of approach of every harbor and in the harbor, and in all waters in the neighborhood of a city within the longest direct or curved range of modern gunnery. In the harbor mouths and channels should be placed lines of torpedoes for the purpose of holding the vessels of the enemy under the fire of the fortifications. The torpedoes should be ready in the fortresses to be laid down at the breaking out of a war according to regular plans which have been studied out with reference to the topography of the bottom and the tidal currents. The wire for firing the torpedoes should be securely laid in subterranean galleries conducting from the secure chambers within the fortifications, where the electrical apparatus is placed, out into deep water. Heavy mortars should be placed to command every position where the enemy might anchor either for the purpose of shelling the city or of destroying the torpedo lines. The guns and mortars should be heavy enough to penetrate the iron plating and break through the decks of ironclads, and should be numerous enough to prevent the fastest war-steamer from running their fire. The present casemated forts, where they can be strengthened and pierced for heavy ordnance, ought to be coated with strong plates of iron, and provided with iron casemate shields to protect the guns and gunners from direct or curved fire.

The trial of a 11-inch muzzle-loading rifled cannon which had been made over from a 15-inch smooth-bore has been very successful, and proves the practicability of converting old guns into effective weapons of the approved form. With this gun 398 rounds were fired with 90 pounds of powder and 495 and 543 pound shot, and 3 with 95 pounds of powder and 540 pound shot. Tests with an 8-inch breech-loader, with battering charges of 35 pounds of powder, led the Board of Ordnance to recommend the breech-loading system. The advantages of the use of chambers in rifled cannon for heavy charges having been tested with a 3-inch rifle, one of the 8 inch rifles was chambered and tried. After a preliminary trial 100 rounds were fired with the maximum charge of 55 pounds of powder and 180-pound shot. The velocity was found to be about one third greater than in the unchambered guns, and the power and accuracy were increased, while the wear of the bore by the 55-pound charge was no greater than that produced in the other

form by 35-pound charges. The penetration at 1,000 yards was 9.93 inches, while that of the unchambered rifle of the same caliber is 7.73 inches, and that of the English 9-inch rifle 8.76 inches. In all kinds and calibers up to 11-inch bores the method of converting old guns into the newer forms, both muzzle- and breech-loading, has proved a success. Four 12-inch breech-loading rifled guns were directed to be constructed in the bill making an appropriation of \$400,000 for armament. The reluctance of contractors to take the orders for guns heavier than the foundry plants are adapted to caused a delay; but the contracts were finally placed. The manufacture of small-arms in the National Armory during the fiscal year aggregated 20,387 rifles and carbines. The reserve supply on hand at the end of the year was 22,979, including the manufactures of the year. The Springfield breech-loader is still retained. No form of magazine gun has yet been brought to the point of perfection which would warrant its general use in the army. The Hotchkiss type is the most promising one, and is being developed and improved, and, if successful, will probably be adopted, though the bolt and handle are not looked upon with favor in the service. The Chief of Ordnance, General Benet, has recommended that the bayonet and the saber both be abolished. The General of the Army gave orders for studies and experiments with the design to have the ramrod shaped so that it would serve the additional purpose of a bayonet or foil after the manner devised by Lieutenant Zalinski, and for the manufacture of a light, efficient knife or trowel for digging in the ground and other uses. Colonel Benton, commanding the Armory, has produced a combined bayonet and ramrod, which is a simple modification of one used in Hall's breech-loading carbine, invented seventy years ago. It occupies the same space as the ordinary ramrod, is strong and efficient, reduces the weight carried by the soldier, and does away with the bayonet-scarbard. In the butt of the gun is a receptacle for the screw-driver, cartridge-extractor, and wiper. A trowel-knife has also been devised. A limited number of both instruments have been furnished to soldiers for trial. Trials at extreme ranges have demonstrated that the service-rifle is able to wound or kill up to nearly 3,000 yards, and that the carbine with the rifle-cartridge made for the service carries as far. The 500-grain bullet fired from any rifle with sufficient twist ranges nearly 3,700 yards. Ordinary variations in the weight of powder-charges do not affect elevation at very long ranges, velocities approximating each other. The range of the Government rifle may be made, according to Colonel Benton and Captain Greer who made the trials, as long as that of any in the world by preparing the cartridge as at present, but with an increased weight of ball.

The case of suspected hazing of the colored cadet Whittaker, at West Point, in April, who

was found with the cartilage of his ears cut open, and with other injuries and marks of violence, which he asserted had been committed upon him during the night by a band of students of the Academy, aroused considerable popular excitement. The authorities of the school were convinced from the first that the tale was an imposture, and that the cadet had inflicted the marks upon himself for the purpose of obtaining an excuse from certain examinations, or from some other motive. An investigation was entered upon, in which Whittaker exhibited a threatening anonymous letter, which he said had come to him several days before the alleged outrage. The presence of the Attorney-General, who was requested to watch the proceedings of the trial as a representative of the Government, was resented by the commandant and other officers. No one was implicated besides the supposed sufferer by the evidence brought out at the trial. In the yearly report of Major-General Schofield, commanding the post, the officers and teachers are defended from the charge of showing disfavor to the colored cadets, and the students are exonerated from the imputation of hazing Whittaker. The regulations which require white cadets to sit at the same mess with colored students, to meet them and hold the necessary intercourse with them in the class-room, on parade, and in other places, General Schofield considers an invasion of their social liberty. The two races are not required to occupy the same dormitories. The white cadets respect the legal rights of colored cadets more scrupulously than those of each other. "The enforced association of the white cadets with their colored companions, to which they have never been accustomed before they came from home, appears to have destroyed any disposition which before existed to indulge in such association. The intellectual inferiority of the lately enslaved race is a reason for the want of success of colored cadets at West Point. One out of the eleven appointees has passed through the course and graduated with credit, though without social recognition. The case of the cadet Whittaker is the natural result of the assumption that the enfranchised race have attained in half a generation the social, moral, and intellectual level which the average white man has reached in hundreds of years. . . . He imagined that officers who had fought to make him free, and who were laboriously striving to teach him what he could not comprehend, were governed in their conduct toward him by 'hate of the nigger,' and that cadets who would neither touch him nor speak to him, could be believed to have tied his hands and feet, and cut his hair and ears, and that so tenderly as not to hurt him. He had not reached that point in civilization where it is first apprehended that human nature may be governed by motives other than love, hatred, or fear." The cadet Whittaker was subsequently dropped from the roll of the college, having failed to satisfy the requirements of the stand-

ard for examinations in certain branches of study. His case was discussed later on in a meeting by President Hayes and his Cabinet, and by order of the President a trial by court martial, on the charges of duplicity made against him, was accorded to take place in January, 1881. General Schofield has been relieved of his command at West Point, and General Howard placed in charge of the post.

ASIA. The sixth issue of Behm and Wagner's* publication, "Die Bevölkerung der Erde" (Gotha, 1880), estimates the territory of Asia at 17,210,044 square miles, or 44,572,000 square kilometres, and the present population at 834,707,000. Not included in this number are the Polar Regions, to which the editors of this periodical now assign an independent position among the large divisions of the land-surface of the earth. We give their estimates of the area and population of these regions in the article POLAR REGIONS.

As long as the final results of the Kulja treaty between Russia and China are not known, there is some uncertainty about the present boundaries of these two empires. The area and population of the large divisions of Asiatic Russia are set down as follows:

DIVISIONS.	Area + in sq. kilometres.	Population.
Caucasus, inclusive of recent (1878) increase in Armenia	7,569,644	5,623,344
Siberia (exclusive of New Siberia, for which see POLAR REGIONS) ..	12,469,524	8,410,362
Central Asia	3,824,096	4,401,376
Caspian Sea (without islands)	439,418
Total Asiatic Russia	23,802,682	13,470,582

For the Turkish possessions in Asia the following figures are given:

COUNTRIES.	Sq. kilometres.	Population.
Immediate possessions	1,889,055	16,193,000
Cyprus (under English administration) ..	9,601	150,000
Tributary principdom of Samos	550	87,000
Total	1,899,206	16,320,000

The area of the still independent region between Khiva, Bokhara, Afghanistan, Persia, and the Russian Transcaspian district, is given as 206,500 square kilometres, with a population, according to Vambéry, of 450,000. The only stock that have up to the present moment retained their entire independence are the Tekkes, of whom 200,000 are Akhal Tekkes, frequenting the oases at the foot of the Kuren-Dagh; the remainder, about 100,000, have their seat to the east, at present in Merv. Of Khiva the area is given as 57,800 square kilometres, and the population 700,000. The total number of people of the Turkoman stock in Central Asia is given as 1,100,000. Bo-

khara, with the adjacent districts of Karategin, Shignan, Roshan, etc., which the English-Russian treaty about the northern frontier of Afghanistan recognized as subject to Bokhara, has an area of 239,000 square kilometres, and a population of 2,130,000.

The total area of Arabia is given at 3,156,600 square kilometres, and the population 5,000,000; of this, 2,507,390 square kilometres, with a population of 3,700,000, are still independent of Turkey.

On the basis of new estimates for one or two districts of Persia, the area of this country is now set down as 1,647,070 square kilometres, with a population of 7,000,000. The district of Khotoor, ceded to Persia by Turkey, in virtue of the Berlin Treaty of 1878, has an area of 1,125 square kilometres, and a population of 8,000.

As the Afghan-English Treaty of Gundamak, of May 28, 1879, which placed the districts of Kuram, Pisheen, and Sibi under the protection and the administration of the British Government, was annulled by the subsequent hostilities, and a new agreement had not been made up to February, 1880, Behm and Wagner continue to set down the area of Afghanistan as 721,664 kilometres, and the population as 4,000,000. At the same time they give the detailed lists of the various tribes and stocks published by A. H. Keane in "Nature" (January 22, 1880), as the result of careful and independent research, and yielding as the estimate of population the much higher figure of 6,145,000, which may be still further increased by a more accurate knowledge of the country. (See AFGHANISTAN.) Kafiristan has an area of 51,687 square kilometres, and a population of 1,000,000, and Beloochistan 276,515 square kilometres, and 350,000 inhabitants.

China with all its dependencies has an area of 11,813,750 square kilometres, and a population of 434,626,500. The latter figure is, however, very uncertain; some authorities maintaining that it is much too high, and others much too low. Hong-Kong had (1876) an area of 83 square kilometres, and a population of 139,144 inhabitants; Macao (1879), 11.75 square kilometres and 77,230 inhabitants. Japan, according to official statistics of 1878, had an area of 379,711 kilometres, and a population of 34,338,504.

The total area of the immediate British possessions in India, including British Burmah, is given as 2,329,201 square kilometres (=899,341 square miles), and of tributary states as 1,444,922 square kilometres (=577,903 square miles); population of the former, 191,095,445, of the latter, 49,203,053; total British possessions, 240,298,500. The French possessions in India have an area of 508½ square kilometres, and a population (1877) of 280,381; the Portuguese, an area of 3,855 square kilometres, and a population in 1877 of 444,957. Ceylon has an area of 24,702 square miles, and a population in 1877 of 2,755,557.

* For a fuller reference to this periodical, which has now become the great fountain from which all statistical works are supplied, see article EARTH in the present volume of the "Annual Cyclopædia."

† One square kilometre = 0.386 English square mile.

The following table shows the areas and populations of the various subdivisions of the Indo-Chinese Peninsula, according to the latest attainable data of any value :

SUBDIVISIONS.	Area in sq. kilometres.	Population.
British Burmah.....	229,851	2,747,148
Manipur (British).....	19,675	126,000
Tribes east and south of Assam (independent).....	65,500	200,000
Independent Burmah.....	457,000	4,000,000
Siam.....	726,850	5,750,000
Anam.....	440,500	21,000,000
French Cochin-China.....	59,457	1,006,000
Cambodia.....	88,561	800,000
Independent Malacca.....	81,500	800,000
Straits Settlements.....	3,472	350,000
Total.....	2,167,440	36,968,000

The East India Islands are subdivided thus :

ISLANDS.	Sq. kilometres.	Population.
Andaman Islands.....	6,497	14,500
Nicobar.....	772	5,500
Sunda Islands and Moluccas.....	1,698,757	27,848,000
Philippine Islands.....	299,585	7,450,000
Total.....	2,002,611	34,818,000

The following table exhibits estimates of the population connected with the Roman Catholic, Protestant, and Eastern Churches :

COUNTRIES.	Total Population.	CHURCHES.		
		Roman Catholic.	Protestant.	Eastern.
Russia.....	13,471,000	51,000	14,000	5,941,000
Turkey.....	16,170,000	260,000	25,000	3,000,000
Persia.....	7,000,000	10,000	3,000	50,000
China *.....	435,000,000	488,000	50,000	5,000
Japan.....	34,838,000	21,000	4,000	6,000
Anam.....	21,000,000	480,000
Burmah.....	4,000,000	5,000
Siam.....	5,750,000	25,000	2,000
British possessions †.....	248,508,000	1,264,000	2,600,000	400,000

Portuguese ".....	822,000	850,000
Dutch ".....	26,745,000	80,000	170,000
Other countries.....	17,443,000
Total.....	834,707,000	8,829,000	2,868,000	9,402,000

The number of Mohammedans in Asia is about 115,144,000. (See MOHAMMEDANISM.) According to recent works on Japan, the Shinto religion, although it is recognized as the state religion of Japan, has no more than from 100,000 to 200,000 professed adherents, the rest being Buddhists or nothing. (See JAPAN.)

In Afghanistan, the British held, at the beginning of the year, Candahar, Cabool, which they had reconquered from the Afghan insurrectionists, and the districts bordering on India with their passes. Mohammed Jan had been driven from the positions he had taken before

Cabool, and had retired with the Prince Moosa Khan to Gluznee, and was endeavoring to excite the tribes to a new rising. Ayoub Khan was at Herat with a considerable force, which he was preparing to lead against the British. He assumed the offensive during the summer, and inflicted a serious defeat upon General Burrows at Kushk-i-Nakhub, on the 27th of July. He then laid siege to Candahar, but was routed on the 1st of September by General Roberts, who had marched from Cabool to the relief of the garrison, and was compelled to retire to Herat, while his troops were scattered. Abdurrahman, the nephew of Shere Ali, was installed Ameer of Cabool on the 22d of July. The British forces were withdrawn from Cabool during September; the garri-on at Candahar was strengthened, with the intention of holding the city for the present; and the Kuram Valley was evacuated and left in the possession of the Turis under a British guarantee that their independence of the Ameer of Cabool should be maintained. (See AFGHANISTAN.)

The progress of events in Afghanistan, and matters connected with them, constituted the most important objects of attention in India. The estimates for the expenditures on account of the war, which were published at the beginning of the year, gave promise that the cost would be light, and encouraged the belief that the viceroyalty would be able to sustain it without calling upon the British Government for help. This expectation was afterward disappointed by the production of other items of expense, and new estimates which showed that the cost of the war would be one hundred and fifty per cent. more than that which had first been given, and very far beyond the ability of India to sustain. Upon the occurrence of a change in the British Government, Lord Lytton was recalled from the office of Viceroy, and the Marquis of Ripon was appointed in his place. Apprehensions were entertained for a time that the new Government might abruptly enter upon a policy of administration, particularly with reference to Afghanistan, so different from that which had been pursued by the previous Government, as, by a too sudden change, to bring disaster upon interests and enterprises which had been adapted to the old policy. The measures of the new Government were taken, however, with such carefulness and deliberation as to assure the country that these fears had no solid foundation. A land-slide which occurred at the summer resort Naini Tal, on the 18th of September, caused the death of several officers of the Government of Bengal, and of other persons of high standing in Indian society. (See INDIA.)

A Russian expedition was dispatched against the Tekke Turkomans to chastise them for the depredations and incursions of which they had been guilty. It was said before the expedition started that it would not occupy Merv, for the

* Including dependencies.

† Including native states under British protectorate, and Cyprus. The population set down as Protestant is based upon an estimate made by Protestant missionaries of the native population under the control and direct influence of the Protestant churches.

‡ Including Cambodia.

Russian Government was desirous to avoid such an occupation, lest it should provoke a counter-occupation of Herat by the British. It was intended to be conducted on a reduced scale during two years, and the operations of the first year were to be confined to establishing outposts, lines of communication, etc. The expedition started at the beginning of the summer, under the command of General Skobeleff, pushed on beyond Geok Tepe, against which a detachment from it made a reconnaissance, to a point between that place and Merv, where it made preparations to spend the winter. Another Russian expedition, under Colonel Prjevalsky, of a scientific and topographical character, had penetrated into Thibet, when its further progress was stopped by the order of the Thibetan Government. The expedition was obliged to retrace its steps, and was traveling along the Yellow River, with the intention of returning to Siberia, when the members of the party were arrested by the Chinese. They were afterward set at liberty, and permitted to continue the exploration of the Yellow River, but intended to return to Kiakha before the end of the season. (See RUSSIA.)

The Chinese Government has exerted great strength, and has persistently followed the policy of reasserting its claims to equality of consideration with any other power, and to the recovery of whatever territory has been wrested from it. The arrangement made with Russia in the previous year for the delivery of Kulja was not satisfactory to the Government. The envoy who negotiated the treaty was degraded for his failure to secure better terms, and the demand for a revision of the treaty was pressed upon Russia with such energy that war was regarded as imminent during nearly the whole year. The claims of China to the paramount sovereignty of the Loochoo Islands were vigorously pressed against Japan. The Government has given notice to Portugal of its intention to resume the occupation of the promontory of Macao. (See CHINA.)

Japan has made a considerable advance in the exploitation of its mines and the development of its manufacturing interests. The Government continues to make great efforts for promoting the education of the entire people. Important reform movements are going on among the Buddhists of the country. (See JAPAN.)

English influence has become ascendant in Persia. Negotiations have been reported to be in progress between the British and Persian Governments, for a treaty, under which Persia should be permitted to acquire and hold Herat, in consideration of its granting to British companies certain privileges of navigation in its waters, and of the construction of roads in its territory. A portion of the country suffered severely from famine; and the Kurds rose in the fall, and, joined by the Turkish Kurds,

made extensive depredations, pillaging and destroying numerous villages, of which they killed most of the inhabitants. (See PERSIA.)

Burmah has been in an unsettled condition, on account of the discontent and hostility which the capricious conduct of King Theebaw has aroused. An embassy dispatched by the King for the purpose of bringing about a resumption of diplomatic relations with the British Government, received no encouragement; but, after having remained for several months at Thayetmayo awaiting a recognition which the British agent refused to give it, was obliged to return without having accomplished its mission. The kingdom was disturbed by an insurrection in behalf of the Nyoungoke Prince; but the insurrection was put down, and the Prince fled into British territory, where he was arrested. The King claimed an indemnity of the British, because the Prince had entered Burmah from British territory, and in October sent troops to the frontier. (See BURMAH.)

ASTRONOMICAL PHENOMENA AND PROGRESS. *Solar Parallax from the Velocity of Light.*—The most trustworthy method of finding the sun's horizontal parallax is now believed, with good reason, to be that based on the experimental determination of the velocity of light. The "American Journal of Science" for January, 1880, contains a paper on this subject by Mr. D. P. Todd, M. A., assistant in the Nautical Almanac Office, Washington, D. C. The latest determination of the velocity of light is that of Mr. A. A. Michelson, of the United States Navy; viz., 186,360 miles per second. Hence the mean horizontal parallax of the sun is found to be $8''.808''$. The corresponding distance of the sun from the earth is 92,800,000 miles.

Sun-Spots.—The quiescence of the sun's surface during the spot minimum of 1878-'79 was extraordinary and long continued. We have now entered, however, on another period of activity. In 1880, especially toward its close, the spots were quite numerous. In accordance with the theory of a connection between auroral phenomena and the variation in the number of sun-spots, the former have been found to be likewise increasing. It is worthy of notice that the period between the last two spot minima was not only greater than that immediately preceding, but greater also than the average length.

Ellipticity of Mars.—The "American Journal of Science" for March, 1880, contains a paper on the "Ellipticity of Mars," by Professor C. A. Young, of Princeton, New Jersey. After remarking that the polar flattening of Mars had never been satisfactorily determined, and specifying the results obtained by different observers, Professor Young continues:

Either of these values is apparently irreconcilable with the planet's known mass and period of rotation if we admit the presence of water upon its surface, as the polar "snow-caps" seem to indicate, except upon

the almost absurd assumption of a density rapidly increasing from the center toward the surface.

It has seemed to the writer quite possible that the difference of illumination of the limbs of the planet, caused by phase, may lie at the bottom of the difficulty. Except on rare occasions there is phase enough, even at the moment of opposition, to produce a notable difference of appearance between the fully illuminated edge of the planet's disk and that opposite, a difference which can hardly fail to be felt in microscopic measurements. Unexceptionable observations for determining the polar compression can therefore be made only when the planet reaches opposition and its node together. This was so nearly the case last season that, on the night of November 12th, an observer on the planet would have witnessed a transit of the earth. At this time, and for a few days before and after, the phase was extremely small, and an opportunity was presented for determining the planet's ellipticity such as will not be available again for nearly half a century.

An elaborate discussion of Professor Young's observations gives, as a final result of the work detailed, an ellipticity of $\frac{1}{219}$. In other words, the polar diameter is to the equatorial in the ratio of 218 to 219. This agrees very closely with Professor J. C. Adams's recent estimate of the compression ($\frac{1}{228}$) which the planet ought to have if it follows the same law as the earth in the variation of its density. The ellipticity assigned by Professor Young is considerably greater, it will be observed, than that of the earth.

Minor Planets.—Since the date of our last report, nine minor planets have been added to the cluster between Mars and Jupiter, making the present number 219. The dates of discovery, names of discoverers, periods and mean distances, are as follows:

NUMBER.	When, and by whom discovered.	Mean distances.	Periods in days.
211.....	1879, December 10, Palisa...	8.0524	1,948
212.....	1880, February 6, Palisa....	8.1164	2,009
213.....	1880, February 19, Peters....	2.7455	1,662
214.....	1880, March 1, Palisa.....	2.6111	1,541
215.....	1880, April 7, Knorre.....	2.7680	1,682
216.....	1880, April 10, Palisa.....	2.7941	1,706
217.....	1880, August 30, Coggia.....
218.....	1880, September 4, Palisa....	2.7010	1,622
219.....	1880, September 30, Palisa..	2.3820	1,342

No. 216 has the greatest eccentricity (0.29) of those discovered during the year, and the last in the catalogue the greatest apparent magnitude.

The 219 minor planets now known have been detected by thirty-five discoverers. First in this list is Dr. C. H. F. Peters, Director of the Observatory of Hamilton College, at Clinton, New York, who has discovered forty-one—nearly one fifth of the whole number. The next is Professor Palisa, of Pola, now credited with twenty-seven. This successful observer discovered five of those announced in 1880. The third is the lamented James C. Watson, late Director of the Observatory at Ann Arbor, Michigan, who detected twenty-two. Of the whole number, seventy have been discovered by American astronomers.

Jupiter's Period of Rotation.—In the monthly notices of the Royal Astronomical Society

for January, 1880, H. Pratt, Esq., of England, discusses a series of observations of the great red spot of Jupiter. These observations were continued from July 26 to December 6, 1879, including 321 rotations of the planet. Mr. Pratt's resulting period of rotation is $9^h 55^m 33.91^s$. This exceeds the period found by the Astronomer Royal in 1835 by 12.91^s . A series of observations by T. D. Brewin, Esq., covering a period of 437 rotations, gave $9^h 55^m 34.1^s$ —exceeding the value found by Mr. Pratt by only 0.19^s .

Evidence that the Light of Jupiter is partly intrinsic.—Among the papers read at the meeting of the Royal Astronomical Society, on May 14, 1880, was one of great value, by Dr. Henry Draper, of New York. For several years it has been held, by Mr. Proctor and others, that Jupiter's light is not wholly reflected. The facts now obtained by spectroscopic investigation seem clearly to indicate, as Dr. Draper remarks, that "Jupiter is still hot enough to give out light, though perhaps only in a periodic or eruptive manner." It is proper to remark, however, that in the discussion which followed the reading of Dr. Draper's paper, some doubt was expressed in regard to his conclusions. The question can not be regarded as definitively settled without further investigation.

Jupiter's Red Spot.—Observations of Jupiter's great red spot in 1879 and 1880 indicate but little change in its appearance between the last two oppositions of the planet.

Probable Existence of Ultra-Neptunian Planets.—In February, 1880, Professor George Forbes, of the University of Glasgow, read a memoir before the Royal Society of Edinburgh, designed "first, to show reasons for a belief in the existence of two planets, whose orbits are greater than that of Neptune; and, secondly, to indicate the probable positions of these planets."

The whole of this research is founded upon the theory of the introduction of comets as permanent members of the solar system, which is now generally held. According to this theory, comets are bodies of size, composition, and character, which we need not at present discuss, but which move through interstellar space subject to the laws of gravitation. Every time that such a comet becomes sensibly attracted by any star, such as we have reason to suppose our sun to be, it is attracted toward it, and tends to describe about it an orbit sensibly parabolic.

Let us call the distance of the Earth from the sun one Earth's radius. The orbits of comets thus attracted into the sun's neighborhood, though on the numerical average parabolic, may have their orbits transformed, by planetary perturbation, either into ellipses or hyperbolas. If the comet approach a planet in such a manner that its velocity is increased, it then will describe an hyperbolic orbit in future, and will never again return to the sun. But if the action of the planet be such as to reduce the velocity of the comet, it will then for the future revolve in an elliptic orbit round the sun, which may have its elements altered by planetary perturbations, and may eventually be actually in this way driven out of the solar system altogether, but which, in default of these accidental occurrences, must become a permanent member of the solar system.

It has long been known that the aphelion-distances of comets are grouped in classes at definite distances from the sun. Thus we know that there is a large group of comets whose aphelion-distance is about the same as the distance of Jupiter from the sun. Jupiter's distance is 5 Earth's radii, and there are eleven periodic comets whose aphelion-distance is between 4 and 6 Earth's radii. Neptune's distance is 30 Earth's radii, and there are six comets whose aphelion-distances vary from 32 to 35 Earth's radii.

On tabulating the aphelion-distances of all the known elliptic orbits of comets, it was found that in no case was there any grouping of aphelion comet distances which did not agree with the distances of planets, except that beyond the distance of Neptune there were two groupings of comet aphelion-distances, one at 100 Earth's radii, the other at 300 Earth's radii approximately.

Taking Professor H. A. Newton's theory with respect to the introduction of comets into the solar system, it would follow that the disturbing planet must, at the time when the comet was so introduced, have been somewhere near the position of the comet's aphelion. Two hypotheses then present themselves: 1. We may suppose that the planet must have been extremely close to the comet when it introduced it, in which case it would be necessary to prove that the aphelion-positions of a fair proportion of these comets lie in one plane which passes through the sun. In this case we could determine the date when the planet was in some definite positions, and so might predict its present position; 2. We may suppose that the planet revolved in some orbit close to the ecliptic, and assume that it attracted the comet into the solar system, when it was most near to the comet's aphelion-position.

The details of Professor Forbes's interesting researches can not here be given.* He assumes that the comets 1840 IV, 1846 VII, 1861 I, and 1861 II, were introduced by a planet whose distance is about one hundred times that of the earth, and whose period is about one thousand years. The estimated position of the planet in 1880 is in longitude 174° , and north polar distance 87° . Some attempt has also been made to determine the position of the more remote planet, but no satisfactory result has yet been attained. If the bodies really exist, their apparent magnitudes are doubtless very small.

Comets.—On the evening of February 2, 1880, Dr. B. A. Gould, Director of the Observatory at Cordoba, South America, noticed a bright stream of light rising from a point beneath the western horizon. As was supposed when first observed, this luminous beam soon proved to be the tail of a very large comet. From observations at Cordoba, the Cape of Good Hope, and other points in the southern hemisphere, the elements of the orbit were calculated by Dr. Gould, Mr. Hind, and others, with the remarkable result that the comet had actually passed through the sun's atmosphere; the nucleus, in perihelion, having been less than 100,000 miles from the solar surface. It was found, moreover, that the orbit coincided so closely with that of the great comet of 1843 as to render it nearly certain that the bodies were identical.

The second comet of the year was discov-

ered, on the 6th of April, by Mr. J. M. Schärberle, Assistant Astronomer at the Ann Arbor Observatory. It passed its perihelion on the 1st of July, at a distance from the sun considerably greater than that of Mars in aphelion.

The comet of Faye, whose period is seven years and five months, was detected by Mr. Common, of England, on the 2d of August. This is its fifth return to perihelion since its discovery, in 1843.

A comet was discovered by Dr. Lewis Swift, at Rochester, New York, on the night of August 11th. The body, however, on account of cloudy weather for several nights following, was not reobserved, and consequently its orbit is wholly unknown.

The fifth comet of 1880 was discovered by Dr. Hartwig, of the Strasburg Observatory, on the 29th of September. It was barely visible to the naked eye, and had a tail two degrees long. It was discovered independently on the following night at Ann Arbor, Mich., by Professor Harrington, and on the 3d of October by Mr. Baxendell, of Southport, England. Professor Winnecke, of Strasburg, having discussed the observations of this body and compared them with those of former comets, thinks it probably identical with the comets of 1382, 1444, 1506, and 1569. The period deduced is sixty-two and one third years. It is regarded, however, as not wholly improbable that this may be a multiple of the true period. The orbit approaches very near to that of Mercury, and Dr. Winnecke thinks it possible that the former may owe its elliptic form to Mercury's disturbing influence. The elements are as follows:

Perihelion passage.....	September 6, 1880.
Longitude of perihelion.....	$88^\circ 33' 25''$ } Mean equinox, 1850.
Longitude of ascending node....	$44^\circ 33' 30''$ }
Inclination.....	$38^\circ 8'$ } 38,856
Eccentricity.....	0.9777
Semi-axis major.....	15.72
Mean daily motion.....	$56^\circ 93'$

Another comet was detected by Dr. Swift on the night of October 10th. Its apparent diameter was three or four minutes, but the disk was ill defined and irregular in outline. From the first available observations the elements of its orbit were computed by Mr. Seth C. Chandler, Jr., of Boston, Massachusetts. These elements so closely resemble those of the third comet of 1869 that the identity of the bodies can scarcely be doubted. The probable period is, therefore, either eleven or five and one half years. The same comet was independently discovered by Mr. Lohse at Dunecht Observatory, England, November 7th.

Meteors.—The shower of meteors radiating from Quadrans, and hence termed Quadrantids, was observed, in 1880, by Mr. E. F. Sawyer, at Cambridgeport, Massachusetts. Between seven and eight o'clock on the evening of January 2d, Mr. Sawyer recorded six meteors of this well-known group. The radiant was in right ascension 227° , declination 48° north. The meteors were bright, and their motions rather slow.

* They may be found in Christie's "Observatory" for June, 1880.

The Shower of November 14th.—Professor D. E. Hunter gives the following results of his watch for meteors at the Leonid epoch in 1880, at Washington, Davies County, Indiana: The morning of November 13th was cloudy, and on the 15th the moonlight interfered with observations till daylight. On the morning of the 14th, watch was kept for two hours, from 3^h 45^m to 5^h 45^m by Professor Hunter and three assistants. One hundred and sixteen meteors were seen, of which ninety-one were Leonids. During the first hour, before the moon had set, but fifteen meteors of the November shower were seen; but in the second hour (the moon being absent) seventy-six were observed, and of these fifty-one were counted in the last thirty minutes. The length of the tracks varied from 2° to 40°, the average being about 6° or 7°.

Fire-balls.—Many large meteors or fire-balls were seen during the year, of which the following are some of the principal: A meteor "of immense size" was seen at Welling, in Kent, England, at 5^h 20^m, p. m., January 3d. On January 19th, at 7^h 20^m, p. m., Dr. L. Waldo saw at New Haven a fine double meteor. It was first observed very near Capella, and it moved toward Theta in Ursa Major, the track being parallel to the line joining Beta and Gamma in that constellation. The distance between the meteors was about 1° 30'.

On April 12th, at 9^h 42^m, Professor F. P. Denza, at Moncalieri, saw a fine meteoric fire-ball with a path from right ascension 30°, declination 62° north, to right ascension 29°, declination 45° north, leaving a long streak, and moving slowly. ("Observatory" for June, 1880.)

A large fire-ball, whose light was nearly equal to that of the full moon, was seen by Professor E. W. Claypole, of Antioch College, Ohio, June 10th, at ten minutes after nine o'clock, p. m. It was first seen very near Benetnasch, "and disappeared behind a cloud on its way to the west-northwest point of the horizon. It was visible about two seconds, and left no sparks behind."

Several daylight meteors have been seen during the year. In "Nature," for July 1st, Mr. W. Odell, of Coventry, England, states that on June 11th, shortly before sunset, he saw, due east of his position, a bright white meteor moving toward the north with a path slightly inclined to the horizon. The length of its track was 10° or 12°. A fire-ball half the apparent size of the moon was seen in daylight on the afternoon of July 9th, by the Rev. Lloyd Jones, one mile east of Greenwich, England. According to the Indianapolis "Daily Journal," of November 23d, a large meteor was seen by several persons at Bloomington, Ind., about 4^h 30^m—shortly before sunset—on the evening of November 18th. It was first observed at a point nearly northwest at an altitude of 30° or 35°. Its motion was approximately parallel to the horizon, and its

explosion occurred at a point very nearly north. Its apparent magnitude was one half that of the moon. No sound was heard to follow the explosion. The same meteor was seen by many persons at Washington, Ind., fifty miles southwest of Bloomington.

New Stars, or hitherto Undiscovered Variables.—The "Observatory" for June, 1880, contains a letter from Mr. Joseph Baxendell, of Southport, England, announcing the discovery of two stars, which he regards as either new or as long-period variables, whose cycles of change have not been determined. The first is in Gemini, and was discovered January 28th. The second is in Boötes, and was first seen on the night of March 12th.

The Variable R Hydra.—Dr. Gould, Director of the Cordoba Observatory, South America, has lately discussed the recorded observations of this interesting variable, dating back to 1662. The variability was discovered by Maraldi, at Paris, in 1704. The assigned period was four hundred and thirty-six days, and the range of variation was from the fourth to the tenth magnitude. Dr. Gould's discussion has led to a significant and important discovery, viz., that the period of variation is rapidly decreasing. This decrease, according to Dr. Gould, amounts to more than nine hours in each period.

New Double Stars.—The monthly notice of the Royal Astronomical Society for December, 1879, has a communication from S. W. Burnham, Esq., of Chicago, giving an account of his discoveries of double stars since the publication of his last catalogue. Beta Scorpii has long been known as a wide double, but now Mr. Burnham announces the duplicity of the principal component. The star is therefore triple, and the members in all probability constitute a physical system. 48 Virginis, seen as a single star by all former observers, was found to be a very close pair, the members being each of the sixth magnitude. 86 Virginis had been known as double, but the Chicago telescope has separated each of the components. The four stars taken together form the closest quadruple system known. They are of the sixth, tenth, eleventh, and thirteenth magnitudes, respectively. 550 Virginis is a double star, which Schmidt, in 1866, discovered to be variable. Mr. Burnham has detected a distant companion, of the twelfth or thirteenth magnitude, forming with the old components a triple system.

The Warner Observatory.—Through the liberality of Mr. H. H. Warner, a new astronomical observatory has just been built at Rochester, New York. It is to be supplied with a telescope having an object-glass sixteen inches in diameter, and a focal length of twenty-two feet. The observatory will be placed in charge of Dr. Lewis Swift, a gentleman already distinguished by his discovery of comets.

The Lick Observatory.—Perhaps no enterprise of our time gives brighter promise of

optical discovery than the projected observatory on Mount Hamilton, California. The site of the observatory was originally suggested by Professor Edward S. Holden in 1874, and the recommendation was subsequently concurred in by Professor Newcomb. In order to test the fitness of the location, the trustees of the "James Lick Trust" authorized Mr. S. W. Burnham, of Chicago, an experienced and skillful observer, to fit up a temporary observatory on Mount Hamilton, to be used as long as might be necessary for the purpose. The results of the experiment are embodied in Mr. Burnham's report, presented to the Board of Trustees in the summer of 1880.

The latitude of the Observatory Peak is 37° 21' 3" north; longitude, 121° 36' 40" west. By the highway it is twenty-six miles (nearly east) from San José; by an air-line, only thirteen. The elevation is 4,250 feet above the level of the sea. "The sides of the mountain, in most directions, are very steep, and form an acute angle at the summit. The view from the peaks is unobstructed in every direction, there being no higher ground within a radius of one hundred miles."

Mr. Burnham remained on Mount Hamilton from August 17th to October 16th, inclusive. The atmospheric and other conditions of the place were found eminently suited for the permanent location of the Lick Observatory. The trustees have accordingly announced that "the preliminary work on Mount Hamilton has already been commenced, and will be prosecuted as rapidly as possible under the circumstances. The smaller equatorial, of twelve inches' aperture, has been ordered of Alvan Clark and Sons, and will be placed in position early in 1881; and the great equatorial, meridian circle, and other instruments, will be contracted for at an early day."

AUSTRALIA AND POLYNESIA. I. GENERAL STATISTICS.—The area and population of the principal divisions of Australia and Polynesia are given as follows in the new volume of the "Bevölkerung der Erde" (sixth volume, Gotha, 1880):

DIVISIONS.	Kilometres.	Population.
Australia.....	7,696,598	2,178,568
New Zealand and adjacent islands....	272,989	477,344
New Guinea and islands.....	807,956	500,000
Oceanic Islands.....	176,184	879,850
Total.....	8,953,727	4,031,000

From careful estimates the area of New Guinea is set down by Behm and Wagner as 785,362 square kilometres (1 square kilometre = 0.386 English square mile) or, with the neighboring islands, 807,956 square kilometres, and the population at 500,000.

The four groups into which the Oceanic islands are divided have, according to the same authority, the following area and population:

GROUPS.	Area in square kilometres.	Population.
Melanesia.....	145,855	606,800
Polynesia.....	9,791	130,400
Sandwich Islands.....	17,003	58,000
Micronesia.....	3,580	84,650
Total.....	176,184	879,850

II. BRITISH POSSESSIONS.—The following table exhibits the population of the Australasian colonies of Great Britain according to the censuses taken in 1871 or 1870, and according to an official estimate in December, 1878:

COLONIES.	1871 or 1870.	1878.
New South Wales.....	501,580	693,748
Victoria.....	729,563	879,442
South Australia.....	183,995	248,795
Northern Territory.....		8,265
Queensland.....	120,066	210,510
Western Australia.....	24,735	28,166
Total Australia.....	1,565,294	2,063,921
Tasmania.....	99,328	109,947
New Zealand.....	294,028	432,323
Natives.....	Included in total.	100,000
Total of the Australasian colonies.....	1,958,650	2,706,191

On June 30, 1879, an official calculation estimated the population (exclusive of natives) in New South Wales at 712,019; in Victoria, at 887,434; in South Australia, at 255,148.

The new census of New Zealand reveals the fact that the Maories are rapidly decreasing. In 1861 they were still estimated to number 55,336; now they have dwindled down to 43,595. The Registrar-General of New Zealand is not sanguine as to their recovery from their downward career, for, apart from their deficiency in moral qualities necessary to arrest the progress of decay, the history of aborigines invariably shows, in his opinion, an inability to graft the habits of civilization on native habits and customs. At the time when the colonists first landed it is believed their number was not less than 120,000. About fifty-seven schools are now in existence under Government auspices, at which there is an attendance of 1,799 children, in which the rudiments of knowledge are taught, and the girls are instructed in domestic duties. The number of natives in New South Wales was (in 1871) 983; in Victoria (1877), 1,067; in South Australia (1876), 3,953; in the other colonies no enumeration has taken place.

Some interesting information on Chinese immigration in the Australian colonies may be obtained from a report of the Colonial Government of Victoria. It appears from this report that in 1859 there were 46,000 Chinese residing in Victoria; but the number has greatly diminished during the last twenty years, and does not now exceed 13,000. As far as can be ascertained, the number of Chinese in Queensland is 14,524; in Victoria, about 13,000; in New South Wales, 9,500; New Zealand, 4,433; South Australia and Port Darwin, 2,000; Tas-

mania, 750; making a total of 44,207, being nearly 2,000 less than in Victoria alone twenty years ago. The Chinese dwelling in the city of Melbourne are about 500, and in its suburbs 380. Of these, not more than sixty-six can be fairly considered to compete in the labor market with Europeans, and these are employed as waiters and domestic servants. All the rest obtain their livelihood as gardeners, as hucksters, or by employments with which a European would not dream of occupying himself.

The Queensland Government has passed an act authorizing the construction of the Transcontinental Railway, which shall connect the northern with the southern shores of the island continent, and bring the colonies within thirty days of England. A syndicate has already agreed to perform the work, on the condition of receiving, among certain other privileges, an area of 8,000 acres of land for each mile of railway constructed. The railway extending from Brisbane in a northwesterly direction to Roma, a distance of 317 miles, was completed in the course of 1880, and from this point to the nearest part of the Gulf of Carpentaria on the north coast is, in a direct line, barely 850 miles. The line would almost touch on its way the important railway from Rockhampton to Emerald Town, also in Queensland, and the blanks to be filled up in the existing lines between Brisbane and Sydney are no greater than the links required to complete the chain between Adelaide and Sydney. If these latter are completed, there will be on the completion of the now projected line from Roma to the Gulf of Carpentaria, continuous railway communication between the northern and southern coasts of Australia, having the additional advantage of traversing the whole of the most settled districts, and connecting all the principal cities, except those in Western Australia.

The other English possessions in Australia, exclusive of some uninhabited islands, are:

Islands.	Population.
Feejee Islands,	112,272
Chatham Islands,	196
Lord Howe's Island,	25
Rotumah (annexed in 1880),	2,680
Fanning Island,	150
Malden "	79
Total,	115,402

The territory of Queensland was enlarged in 1879 by the annexation of some islands situated in Torres Strait. Letters patent dated October 10, 1878, for the rectification of the maritime boundary of the colony, provide that "all islands included within a line drawn from Sandy Cape northward to the southeastern limit of Great Barrier Reefs, thence following the line of the Great Barrier Reefs to their northeastern extremity near $9\frac{1}{2}^{\circ}$ south latitude, thence in a northwesterly direction, embracing East, Anchor, and Bramble Cays, thence from Bramble Cays in a line west by south (south 79° west, true), embracing Warrior Reef, Saibai, and Tuan Islands, thence di-

verging in a northwesterly direction, so as to embrace the group known as the Talbot Islands, thence to and embracing the Deliverance Islands, and onward in a west-by-south direction (true) to 138° east longitude, should be annexed to and form part of the colony of Queensland." The law authorizing this annexation came into operation on August 1, 1879.

The "Melbourne Argus" estimates the yield of gold in the colony of Victoria in the year 1879 at a little over 715,000 ounces, being nearly 39,000 ounces less than in 1878, and being also less than half the quantity obtained in 1868. The "Argus" adds: "It is well known that the yields of gold during the latter half of 1879 were much superior to those of the first half, and, if mining should continue as healthy during 1880 as it has recently been, it is probable that the yield for it will exceed that of the year just closed." The amount of gold coin issued from the Melbourne mint in 1879 was 703,709 ounces, the value of which was £2,740,000. The discovery of the Temora gold-field near Sydney in 1880 created great excitement in Australia.

Victoria.—The Parliament of Victoria adjourned on December 20, 1879. As the Parliament had refused to pass the Reform Bill, which embodied a scheme for the introduction of the *plébiscite* and the substitution of a Council nominated by the Ministry of the day for an elective Upper Chamber, the Ministry proposed to the Governor to dissolve Parliament. The request was acceded to, and new elections took place in February, which placed the Ministry in a minority of twelve in the Legislative Assembly. Accordingly, the Hon. Graham Berry and the members of his Cabinet tendered their resignations. The Governor accepted the resignations, and formed a new Cabinet, which was composed as follows: Colonial Treasurer, Mr. James Service; Chief Secretary and Minister of Public Instruction, Mr. Robert Ramsay; Attorney-General, Mr. George Kerferd; Minister of Lands, the Hon. J. G. Duffy; Postmaster-General and Commissioner of Trade and Customs, Mr. Henry Cuthbert; Commissioner of Railways and Roads, Mr. Duncan Gillies; Commissioner of Public Works, Mr. Thomas Bent; Minister of Mines, Mr. Clark. The new Premier, Mr. James Service, in an address to his constituents on March 10th, explained the programme of his Cabinet. It was proposed to empower the Legislative Council to expunge items involving questions of public policy from the Appropriation Act, and to deal with them in a separate bill. The ministerial programme further announced bills regarding irrigation and mining on private property. The railways would be placed under the control of a commission or board. Reforms would be proposed in the civil service in the direction of reducing the salaries of all classes of public officials, such reduction, however, only to apply to those appointed subsequently to the passing of the bill. Pensions would be totally abolished in the case

of civilians, who would be required to insure their lives. Government officials would be prohibited from taking any part in politics. The Government, while endeavoring to relieve the farmers and miners, did not propose to make any change in the policy of protection, neither would it interfere with the present system of education. All the members of the new Cabinet were reelected unopposed. The new Parliament was opened on May 12th by the Governor, the Marquis of Normanby, who referred to the question of the construction of colonial defenses, and stated that commissioners had been appointed to report on the subject. After dwelling on the necessity of irrigation works and an extension of the railway system, the Governor said that the depression in trade was passing away and confidence was being restored. Bills would be introduced for a reform of the Constitution, and the settlement of land; and a scheme of reforms relative to railway management and the civil service would also be submitted to Parliament. The Reform Bill was soon after introduced. It provided in the first place for the introduction of the so-called "Norwegian system." When any bill has been passed by the Assembly and rejected by the Council in two consecutive sessions, the Governor, according to Mr. Service's plan, will have power to dissolve both Houses at the same time; if, after the elections, the Assembly and the Council continue to differ, the Governor may summon them to meet as a single legislative body for the purpose of discussing and deciding upon the contested matter, an absolute majority of the whole number of members being required for the enactment of the bill in dispute. As the Assembly is composed of eighty-six members and the Council of thirty—to be increased gradually to forty-two—these provisions insure the ultimate victory of the popular branch of the Legislature, when the preponderant opinion in favor of any measure is unmistakable. Mr. Service's Reform Bill dealt also with the constitution of the Council, providing for an addition to the numbers of that body and a very large reduction in the qualifications of members and of electors. With respect to the Appropriation Bill and to the practice of "tacking," Mr. Service proposed that the Council should in no case be allowed to throw out the bill, as has more than once been done, to the injury of the whole community, but that where two thirds of the Council decide that any particular vote is not "a grant of money for the ordinary service of the year," the Assembly shall be bound to deal with the matter in question by a separate bill. Although at the last general election the constituencies had emphatically refused to give any support to Mr. Berry's policy, the new Assembly rejected the only alternative scheme which was before the colony, and upon which the Ministry of Mr. Service had staked their political credit. Early in June the second reading of the bill was thrown out by forty-three

votes against forty-one, which clearly showed that Mr. Berry in his attacks upon the Government was joined by six or seven members who had been elected as his opponents. The debate on the address showed that the nominal majority for Ministers, or rather against Mr. Berry, was weakened from the beginning by internal jealousies. The "Corner party," consisting of Independent Liberals who had parted company with Mr. Berry, were dissatisfied at the composition of the Cabinet, in which doubtless they supposed they had themselves a claim to be considered. Irritation on the same ground was more openly expressed by Sir John O'Shannassy, the leader of the Roman Catholics, who stoutly asserted the right of his following to a share in the distribution of official places, and condemned the absence in the ministerial programme of any concession to the Roman Catholic demands for separate educational grants. In compliance with Mr. Service's proposal, the Governor dissolved the Parliament. New elections took place on July 14th, when forty-four opposition candidates were elected and only thirty-five ministerialists. Besides, there were seven members who declared themselves neutral. The Catholic vote was cast against Mr. Service, and the leaders of the party declared that they would not support any government until the country would consent to make separate educational provision in the public schools for Catholic children. The defeated Service Government resolved to meet the House and encounter a deliberate vote of want of confidence. The new Assembly was opened on July 22d. In his opening speech the Governor, after alluding to the deficit in the revenue for the year, expressed a hope that Parliament would pass a satisfactory measure for the reform of the Constitution. Mr. Berry subsequently moved a vote of want of confidence in the Cabinet of Mr. Service, which was passed by forty-eight to thirty-five votes. In consequence of this, the Cabinet resigned, and Mr. Berry, after failing in an attempt to form a coalition Ministry, formed a Cabinet entirely constituted of men of his own party. The following are the members of his Cabinet: Chief Secretary and Colonial Treasurer, Mr. Berry; Attorney-General, Mr. Vale; Minister of Lands, Mr. Richardson; Minister of Public Instruction, Mr. W. C. Smith; Commissioner of Railways and Roads, Mr. Patterson; Minister of Mines, Mr. Langridge; Commissioner of Trade and Customs, Mr. Williams; Minister of Justice, Mr. A. T. Clark.

The Melbourne International Exhibition was formally opened on Friday, October 1st, by the Governor of Victoria, the Marquis of Normanby, in the presence of the Duke of Manchester and the Governors of South Australia, New South Wales, and Western Australia. The Marquis of Normanby, in reply to an address, said the undertaking had been carried out in a most creditable manner, and that the display was one of which any country might be proud.

The day was observed in Melbourne as a public holiday. A dispatch from Sir Herbert Sandford, the official representative of the Royal Commission for the Australian Exhibition, stated that the exhibition had opened most successfully, nearly all the courts being very complete, especially the British court, thanks to the exertions of the exhibitors and of the Great Britain committee, who respectfully desire to congratulate his Royal Highness the Prince of Wales and her Majesty's commissioners on the splendid display of British fine arts and manufactures.

New South Wales.—The Governor's speech, in proroguing Parliament in August, 1880, refers to some signs of progress. Among the most important acts passed by the Legislature is the act to amend the Land Acts of 1861 and 1875, the aim of which is to afford additional facilities and securities for industrial settlement upon the soil; the Public Instruction Act, for carrying out a system of primary instruction, open alike to all classes and all creeds, and which provides the means for improving the methods of teaching to the highest degree, and places the teacher within reach of the remotest child in the land; the Electoral Act, which reduces the anomalies in the representation to a principle of virtual equality, and enlarges the representative branch of the Legislature. As regards the material progress of the colony, it is stated that during the current year two hundred and twenty-three miles of new railway lines will be opened to the public, while provision is made for new extensions, which will when completed add more than a thousand miles to the railway system of the colony. The revenue from the working railways is steadily increasing, and at the present time is fifty thousand pounds in advance of that for the corresponding period of 1879. Other large public works have been completed or are in course of construction, including the fortification of the harbors of Sydney and Newcastle, lighthouses on various parts of the coast, Government offices and public buildings. It is confidently expected that the International Exhibition of Art and Industrial skill recently closed at Sydney will have given a stimulus to enterprise and invention, and amply justify the grants for its inauguration.

The International Exhibition at Sydney was closed in April. At the closing ceremonial the Governor, Ministers, Judges, both Houses of Parliament, and a vast concourse of the public attended. Seven thousand awards were declared officially, and an address and gold medal were presented to the Governor. The whole ceremony was very successful. Three cheers were given for the Queen, Governor, Lady Augustus Loftus, and the Executive Commission.

Queensland.—Parliament was opened in July. The Governor, in his speech on the occasion, referred to the return of the Premier, Mr. Mellwraith, from England, and the proposals

which he had submitted to the Home Government for the establishment of an improved mail service and the transport of immigrants *via* Suez and Torres Straits. The Governor proceeded to state that the last Queensland loan issued had been completely successful. The settlement of land, and especially for the cultivation of sugar, was increasing. The discovery of tin in the northern rivers showed that the settlement of the country was progressing very favorably. The revenue of the colony for the year showed an increase of £20,000. The financial statement of the Treasurer, which was submitted on the 18th of August, estimates the revenue at £1,700,000 and the expenditure at £1,670,000. The debit balance on June 30th was £190,000. The deficit is to be covered by transferring under the new statute to the consolidated revenue the receipts of the land department previously applied to railway construction. There is to be no increase of taxation except in the excise duties upon colonial spirits. The Treasurer considered that it would be unjust to augment the public burdens in order to push forward the construction of railways in the interior, when the sale of a portion of the land made accessible would suffice to pay interest on the capital required. British capitalists were offering to complete the railway system in consideration of a Government grant of land, and a bill to sanction that course would be introduced. The depressed state of trade was passing away, and there was a gradual increase of the revenue. Nothing was wanting for the restoration of the full prosperity of the colony but means for placing its surplus food and products within the reach of the British consumer. In the sitting on the 19th a vote of want of confidence in the Government on account of the budget was moved by the leader of the opposition, but was rejected by twenty-seven votes to eighteen.

New Zealand.—In July, Sir Hercules Robinson, the Governor of New Zealand, delivered a speech, in which he condemned the New Zealand educational system as too expensive, too secular in character, and in advance of the requirements of the colony; also deprecated the absence of religious teaching in the public schools.

III. FRENCH POSSESSIONS.—Tahiti, or Otaheiti, with its adjacent islands, which hitherto had been under French protectorate, was on June 29, 1880, formally annexed to France. It is reported that the King, Pomaré V, accomplished the act of his own free will, that it was accepted by the commissary of the French Government, and hailed with enthusiasm by the Tahitian population. Pomaré V will retain the honorary title of King. He had been the nominal ruler of the islands since 1877, when he succeeded, as the nearest relation of royal blood, Queen Pomaré, who in 1842 signed the convention with the French Admiral Dupetit Thouars about the establishment of a French

protectorate over the islands. Up to 1846 a small portion of the natives struggled against this protectorate, but since the population have caused no embarrassment to France, and virtually it has been a French possession since that year.

Tahiti is about one hundred and eight miles in circumference and thirty-two miles long, and is described as an elongated range of highland, which, being interrupted in one part, forms an isthmus (submerged at low water) about three miles broad, which connects the two peninsulas. The larger of these is Tahiti proper, while the smaller is named Tairaboo, and both are surrounded by coral reefs. The highest summit in the island is a mountain in the northern part, 8,500 feet above sea-level; another attaining 6,979 feet. From these two peaks ridges diverge to all parts of the coast, throwing off spurs as they descend. The fertile portion of the island lies in the valleys, which are of small extent, and in the plain, which stretches from the seashore to the spurs of the mountains. These produce tropical plants in great abundance and luxuriance. The climate is agreeable, being warm, but not enervating. The natives are a good-humored, gay, happy, and cheerful people, and are further described as honest, well-behaved, and obliging. They have been converted to Christianity by the labors of missionaries, and there are few of them who can not both read and write. The island is divided into seven districts, and is the seat of a Supreme Court, consisting of seven Judges, two of whom reside in Eimeo. Several vessels of about one hundred and thirty tons burden have been built there, which have been employed in the trade to New South Wales, whither they carry sugar, cocoanut-oil, and arrow-root, the principal productions of the island, and whence they bring back in return hardware, cloths, calicoes, etc. Most of the vessels that visit Tahiti are whalers, though until lately they only averaged less than one hundred annually. Its principal town and port is Papiete, and its estimated population is somewhat over nine thousand.

The French now have the following possessions in Oceania:

POSSESSIONS.	Kilometres.	Population.
New Caledonia.....	17,080	41,694
Loyalty Islands.....	2,743	13,174
Marquesas Islands.....	1,274	5,754

Tahiti, Moorea, and adjacent islands...	1,119	21,936
Tubuai, Vavatao, Oparo.....	209	798
Tuamotu Archipelago, with Gambier Islands.....	1,000	5,469
Total.....	23,491	81,822

AUSTRO-HUNGARIAN MONARCHY, an empire in Central Europe. Emperor, Francis Joseph I, born August 18, 1830; succeeded his uncle, the Emperor Ferdinand I, December 2, 1848. Heir-apparent to the throne, Archduke Rudolphus, born August 21, 1858; engaged on

March 7, 1880, to Stéphanie Clotilde, second daughter of the King of Belgium, born May 21, 1864. The marriage was fixed to take place in February, 1881.

The Ministry for the Common Affairs of the Empire consisted, toward the close of the year 1880, of Karl Heinrich Baron von Haymerle, Minister of Foreign Affairs and of the Imperial House (appointed October 9, 1879); Joseph von Szlavy, Minister of the Finances of the Empire (appointed April 8, 1880); and Count Arthur Bylandt-Rheidt, Minister of War (appointed 1876).

The Ministry of Cisleithan Austria, at the close of 1880, was composed of Count Eduard Taaffe, President (appointed August 14, 1879); Baron Moritz von Streit, Justice (1880); Baron Sigmund von Conrad von Eybesfeldt, Public Worship and Instruction (1880); Count Zeno von Welsersheimb, Defense of the Country (1880); Count Julius von Falkenhayn (August 14, 1879), Agriculture; Alfred von Kremer von Auenrode (1880), Commerce; Dr. Julian Dunajewski (1880), Finance; Florian Ziemiałkowski (April, 1873), and Dr. Alois Prajak (August 14, 1879), Minister without portfolio.

The area of the entire monarchy is 622,837 square kilometres*; population, according to the last census of 1869, 35,901,435; according to an official estimate, in 1880, about 38,000,000. The area of Cisleithan Austria, or Austria Proper, is 300,209 square miles; the civil population at the end of 1879 was officially estimated at 22,176,745, to which must be added the army, numbering about 177,500 persons, making a total population of 22,354,245. The official estimate is based upon the census of 1869, by adding the average percentage of increase. The civil population was distributed among the different crown-lands as follows:

COUNTRIES.	Inhabitants, Dec. 31, 1879.
Austria below the Enns.....	2,230,754
Austria above the Enns.....	752,413
Salzburg.....	155,388
Styria.....	1,198,700
Carinthia.....	339,693
Carniola.....	472,903
Trieste.....	220,966
Goritz and Gradisca.....	142,150
Istria.....	278,218
Tyrol.....	798,864
Vorarlberg.....	104,066
Bohemia.....	5,474,864
Moravia.....	2,115,960
Silesia.....	579,456
Galicia.....	6,268,811
Bukovina.....	564,973
Dalmatia.....	478,556
Total.....	22,176,745
Total at the end of 1878.....	21,970,649

From some observations made in the "Statistical Monthly" ("Statistische Monatsschrift") of Vienna by Herr Schimmer, one of the best-known statistical writers of Austria, we learn that the movements of the population in Austria show, in a marked degree, the influence of the bad times through which all European states have been passing. The following table

* One square kilometre = 0.386 English square mile.

is an abstract of the births, deaths, and marriages from 1873 to 1879, inclusive:

YEAR.	Marriages.	Births.	Deaths.
1873.....	194,815	848,206	811,150
1874.....	189,617	849,678	662,929
1875.....	180,349	862,828	634,055
1876.....	176,143	874,623	634,363
1877.....	161,387	851,747	677,743
1878.....	164,233	854,752	633,661
1879.....	163,055	878,035	652,491

For the first time within seven years does the wave of depression show signs of lifting, as testified by the increased number of marriages in 1879. The most encouraging point in the figures is the decrease in deaths, which is most marked in the case of infant mortality. It will be remarked that 1873, the year of the Exhibition, was notorious for the fatalities of the cholera, which carried off great numbers of people in Vienna.

The number of professors and students, inclusive of non-matriculated hearers, was in the summer semester, 1879, as follows:

UNIVERSITIES.	Professors.	Students.
Czernowitz.....	39	276
Cracow.....	84	631
Graz.....	112	745
Innsbruck.....	85	559
Lemberg.....	55	983
Prague.....	191	1,707
Vienna*.....	295	3,509
Total.....	861	8,360

According to their mother-tongues, the students were classified as 3,863 Germans, 1,351 Czechs, 1,410 Poles, 439 Ruthenians, 187 Slovaks, 248 Croats and Servians, 318 Italians, 116 Roumanians, 348 Magyars, and 80 others. According to their religious denominations, 6,642 reported themselves as Roman Catholics, 214 as belonging to the Oriental Greek Church, 262 as Evangelical, 18 as Unitarians, 1,193 as Israelites, 6 as members of other churches, and 25 as belonging to no religious denomination.

Besides the seven universities, Austria had, in 1879, 6 technical high schools, 1 agricultural high school, 2 academies of mining, 2 academies of commerce, 2 high schools of art, 42 theological schools, 91 gymnasia, 18 undergymnasias, 47 *Realgymnasien* of various grades, 61 *Realschulen*, 18 under *Realschulen*, 42 male teachers' seminaries, and 27 female teachers' seminaries. The number of "Bürger-" and "Volkschulen" was, in 1875, 15,166, with 31,196 teachers, and 2,134,683 pupils. There were also in 1877 145 Kindergartens, with 11,663 children.

The total number of periodicals published in 1878 was 1,050, against 1,001 in 1877, 967 in 1876, and 876 in 1875. As regards the contents of the periodicals, there were among them in 1878 330 political periodicals, 32 religious, and 75 educational. The large majority of the pe-

riodicals (717) are published in the German language; next in order follow the Czechic periodicals (122); the Polish (73); Italian (66); Slovenish (17); and Ruthenian (15). The number of dailies is only 81, the number of weeklies 306, and that of monthlies 215.

The population of Bosnia and Herzegovina, according to an official census taken on June 16, 1879, amounted to 1,142,147. Of these, 487,022 belong to the Greek, and 208,950 to the Roman Catholic Church, making a total number of 695,972 Christians. The number of Mohammedans was 442,500, of Israelites 3,426, of others 249. The town of Serajevo, which was supposed to contain 45,000 inhabitants, turns out, according to the English consul Freeman, to have only 22,000, of course without counting military or strangers, of whom about 3,000 are temporary residents. The discrepancy, which is certainly very considerable, may partly be accounted for by the drain on the population during the Montenegrin, Servian, and Russian wars, while others who joined the Mussulman rising have never returned to the town. These absentees, however, could not be more than 3,000 or 4,000 at the most, and it only shows how necessary it is to reduce population estimates to the strict domain of statistics. Not included in these census returns is the Sanjak of Novi-Bazar, the population of which is set down at 61,150 Mussulmans, 101,348 Orthodox Greeks, 49,217 Roman Catholics, 1,340 gypsies, and 65 Jews; total, 223,120. (See "Annual Cyclopædia" for 1879, p. 62.)

In accordance with the political constitution of the Austrian Empire, there are three distinct budgets: the first, that of the delegations for the whole empire; the second, that of the Reichsrath for Austria Proper; and the third, that of the Hungarian Diet, for the kingdom of Hungary. By an agreement, or so-called "compromise," entered into, in February, 1868, between the Governments and Legislatures of Austria and Hungary, the former has to pay seventy and the latter thirty per cent. toward the common expenditures of the empire, not including the interest on the national debt. The accounts of the actual revenue and expenditure of the empire during the year 1878 were published by the Government in 1880. According to them, the ordinary expenditure of the Ministry of Foreign Affairs amounted to 3,318,800 florins*; that of the Ministry of War, 95,700,455; of the Ministry of Finance, 1,896,855; of the Supreme Court of Accounts, 111,924; total, 101,028,042 florins. The extraordinary expenditures amounted to 77,876,767 florins; total of ordinary and extraordinary expenditures, 178,904,809. The surplus from customs apportioned to meet the expenditure for the common affairs of the empire amounted to 3,856,262 florins, leaving 175,048,547 florins to be provided for by con-

* Exclusive of the faculty of evangelical theology.

* One florin = 45 cents.

tributions from Austria Proper and Hungary, according to the compromise referred to above.*

The commerce of Austro-Hungary, compris-

ing imports and exports of merchandise and of bullion, was as follows in each of the years from 1869 to 1876 (value expressed in Austrian florins):

YEAR.	AUSTRO-HUNGARIAN CUSTOMS TERRITORY.				CUSTOMS TERRITORY OF DALMATIA.	
	Merchandise.		Bullion.		Imports.	Exports.
	Imports.	Exports.	Imports.	Exports.		
1869...	420,600,000	438,100,000	39,800,000	26,900,000	8,100,000	7,900,000
1870...	436,000,000	395,400,000	41,000,000	34,100,000	9,200,000	6,600,000
1871...	540,800,000	467,600,000	59,400,000	55,500,000	8,600,000	7,800,000
1872...	618,400,000	834,600,000	36,500,000	66,100,000	9,200,000	6,900,000
1873...	583,100,000	423,600,000	40,900,000	31,100,000	9,700,000	6,100,000
1874...	563,700,000	449,300,000	19,900,000	18,900,000	10,300,000	6,500,000
1875...	552,500,000	504,500,000	15,800,000	18,400,000	13,400,000	10,400,000
1876...	518,000,000	508,600,000	33,600,000	31,300,000	13,500,000	8,200,000
1877...	546,700,000	530,600,000	28,300,000	18,100,000	13,900,000	8,600,000

At the beginning of 1880, Bosnia, Herzegovina, Istria, Dalmatia, and Brody were admitted into the Austro-Hungarian Customs Line.

The following statement shows the strength of the commercial marine of Austro-Hungary on the 1st of January, 1879:

CLASSES OF VESSELS.	Number of vessels.	Tonnage.	Crews.
Sea-going steamers (15,690 h. p.)...	70	56,381	2,162
Coasting steamers (712 h. p.).....	25	1,320	182
Sailing-vessels, including coasters and fishing-smacks.....	7,792	270,028	26,408
Total.....	7,887	327,729	23,752

The army of the Austro-Hungarian Monarchy was in August, 1878, composed as follows:

DIVISIONS.	PEACE FOOTING.		WAR FOOTING.	
	Officers.	Men.	Officers.	Men.
Standing army.....	14,710	257,207	23,637	761,929
Imperial Royal Landwehr...	572	2,782	2,916	118,626
Royal Hungarian Landwehr	1,045	9,288	3,028	127,234
Staffs.....	136	90
Gendarmes and military police.....	24	1,069	24	1,069
Army studs.....	148	5,035	148	5,095
Total.....	16,635	275,531	29,753	1,013,953

The naval forces at the end of the year 1878 consisted of 14 ironclads and 37 other steamers, the majority of the latter of small dimensions, constructed chiefly for coast-defense.

The total length of railways in operation on January 1, 1879, was: in Austria Proper, 11,268 kilometres; in Hungary, 7,002; total, 18,270. The length of the telegraph lines and wires, and the number of stations and messages carried, was in 1878 as follows:

	Austria, 1877.	Hungary, 1878.	Total.
Lines.....	34,087 kil.	14,329 kil.	48,416 kil.
Wires.....	87,535 "	50,072 "	137,607 "
Stations.....	2,418	960	3,378
Messages.....	5,358,544	2,822,259	8,180,803

* For an account of the finances of Austria Proper and of the public debt of the empire, see "Annual Cyclopædia" for 1879.

The number of post-offices in 1878 was 4,006 in Austria Proper, and 1,980 in Hungary; total in the Austro-Hungarian Monarchy, 5,986.

On March 7th the Crown Prince Rudolphus was betrothed to Stéphanie Clotilde, second daughter of the King of Belgium. The event called forth great ovations throughout the empire. At Prague, where the Archduke has for some time been residing as a colonel of a regiment, the burgomaster, in offering to him the congratulations of the city, expressed the hope that the Prince after his marriage would continue to reside in Prague. At Vienna, he received the congratulations of the two Houses of Parliament, the corporation of the town, the Ministers, and other high functionaries.

The Austrian Reichsrath reassembled on the 15th of January. The parties in the present Reichsrath are almost equally balanced, as, at the general election in 1879, 173 of the newly-elected deputies belonged to the different Liberal fractions, and 175 to the Conservatives. (See "Annual Cyclopædia" for 1879, article AUSTRIA, p. 64.) The Ministry, presided over by Count Taaffe, consisted in about equal parts of members of the two parties. The moderate elements of both parties seemed generally willing to support the Ministry, while the extremists on either side showed themselves eager to attack it. The debate on one of the first bills that came up for discussion in this session, concerning the administration of Bosnia, proceeded very smoothly, the bill passing without a formal vote being taken. A sort of armistice seemed to have been established between the Ministry and the two parties, the Right having come to the conclusion that it would be inopportune to exercise on this occasion any pressure upon the Minister-President with a view to forcing him to reconstruct the Ministry out of the ranks of their party. The Left or Constitutional party, on the other hand, perceived that it was not in their interest to continue a relentless and uncompromising opposition to the Ministry, and thereby to precipitate a crisis which would probably not end in their favor. Both the Right and the Left were all the more unprepared for a Cabinet crisis, as both were weakened by internal dissensions.

In the Right, which embraces as subdivisions the Feudal, the Clerical, the Czechist, the Polish, and the Slovenish parties, the Poles were openly at variance with the Czechs, and a large number of the Poles with a minority of the Czechs were decidedly opposed to the principles of the Clerical party. In the Left, the two principal divisions of which are the Constitutional party (*Verfassungspartei*) and the party of Progress (*Fortschrittpartei*), the latter informed the former that in consequence of the support given by a large portion of the Constitutional party to certain anti-liberal measures of the Government, the party of Progress deemed it best to recede from a union of the two parties. The latent dissension among the sections of the Right was greatly widened in the beginning of February by a memorandum addressed by the Catholic bishops of Bohemia to the Ministry of Education and Worship, in which they demand the restoration of denominational schools. The memorandum is signed by all the four bishops of Bohemia, and concludes with these words: "The principle of undenominational schools, and therefore of a separation of the school from the Church, blocks the way to any thorough improvement in the educational system. Favors in regard to any secondary provisions, even if they were granted (which hitherto has generally not been the case), can not avert the injury which is inherent in that principle. Nothing is therefore left to the bishops but to request the Ministry to adopt the necessary measures for restoring the denominational character of the schools for the Catholic population, and to secure to the Church her due influence upon the instruction and education of the youth. If the Imperial Ministry should leave this remonstrance of the bishops likewise without answer, or if it should not afford a definite prospect of a speedy and radical improvement of educational affairs, it would be impossible for the bishops to coöperate any longer in the execution of the school laws. They could, in that case, no longer allow any participation of the clergy in the school boards, and they would deem it their duty to remind the faithful of the sacred duties which will devolve upon them if their children can be intrusted to the schools into which they are compelled to send them, not with confidence, but rather not without great detriments." The Czechs as a national party care more for national Czechic than for Catholic schools, and, though the Old Czech party regards an alliance with the Church as desirable, they are loth to subordinate their national claims to the interests of the Church. The "Pókrok," the organ of the young Czechs, openly opposed the episcopal memorandum and the action of the Clericals, and expressed the conviction that the Czech members would leave no doubt as to their views. The Poles desire a more efficient state control than in the case of confessional or national schools, which in Galicia might be claimed equally by the Ruthenes or the Greek Church. On the 3d of

February the two parties in the House of Deputies measured their strength at the election of twelve members of the *Staatsgerichtshof* (State Court), who have to be chosen by the House. The Right succeeded in electing their entire ticket. A partial change in the Ministry took place on February 17th, when Baron Conrad von Eybesfeldt, the Governor of Lower Austria, was appointed to the Department of Education, and Baron Kriegsau, formerly a candidate for the office of Education, to the Ministry of Finance. Neither of the two new Ministers had played a political part, but both had made their way in the administrative career. Baron Eybesfeldt, who was appointed to the post of Governor of Lower Austria when the Constitutional party was in power, is supposed to have a leaning toward that party.

On April 6th the important debate on the budget began. Great preparations had been made for it on both sides, for it was known that the discussion, as is customary on such occasions, would extend to all great questions of the day, political and national. One of the most remarkable speeches made on the occasion was that by Dr. Plener, one of the most gifted among the younger generation of Parliamentary men in Austria. He severely criticised the political and, above all, the financial measures of the Government, and developed a new scheme of financial reform which attracted great attention on all sides of the House. He combated the idea that the equilibrium between the revenue and expenditure could be brought about by any reduction on a grand scale, either in the military expenditure or in the internal administration. On the contrary, he maintained that the improvements which must be made on account of the army, and the outlay which is still necessary in order to complete the means of communication, will tend rather to increase than to diminish the expenditure. The only way to deal with the deficit was to make a thorough reform of the taxation. Dr. Plener went fully into this subject, and showed the general features of such a reform, laying great stress on the income-tax and the indirect taxes on sugar and spirits. He criticised the present system of drawbacks on these two articles upon exportation, the result of which is that, owing to the large sum thus repaid at exportation, the home consumption of these articles is very small as compared with the consumption in France or Germany. If only one half of the quantity consumed in Germany was consumed in Austria, it would make a revenue of over ten million florins, instead of one million which it now makes, net, after the subtraction of the duty repaid on exportation. It is the same with the duty on spirits, a considerable portion of the revenue on which is also returned at the exportation. The reform of the system of taxation on these two articles would be almost sufficient to grapple with the deficit. Instead of initiating such a policy of reform on a grand scale which alone could meet the diffi-

culty, the Government and the party which supports it had taken refuge in paltry measures, increasing the charges of direct taxation without producing any tangible result. Dr. Plener never hinted that he spoke in the name of the constitutional party; still, from the way in which his speech was received on that side, it was inferred that his plan would eventually be accepted by the Constitutional party as their financial programme. The principal speech on the part of the Right was made by Count Clam Martinitz. The debate came to an end on April 13th. The real issue between the two great parties was on the secret-service money. Both fractions of the Constitutional party agreed to refuse the money on the ground that they had no confidence in the Ministry. In the name of the Ruthenes, M. Kovalski declared that they would also vote against the grant, as the Ministry had used the money against the freedom of the elections the previous year. As the Ministry was supported in this question by the Poles, the Czechs, and the Conservatives, it was expected that the grant would be voted, but, to every one's surprise, when the vote was taken, it was lost by 154 votes against 152 years. In view of the small majority against them, the Minister-President and the members of the Cabinet belonging to the Constitutional party did not deem it necessary to resign.

Still more than by religious and financial questions, the Austrian Parliament was disturbed by the interminable nationality question. The conflict of nationalities at the beginning of the year was especially severe in Bohemia. Meetings of the German-Bohemian members of the Reichsrath and the German members of the Bohemian Diet were held in January and February to draw up a memorandum in opposition to a Czechic memorandum by which the leaders of the Czechs had, in December, 1879, expressed their national wishes to the Emperor. The counter-memorandum drawn up by the Germans was presented to the Emperor on February 9th, by Count Mansfeld, Minister of Agriculture in the former Ministry. Count Mansfeld assured the Emperor that the German memorandum was not dictated by any hostility to the Czechs, but was prompted only by a sense of the duty of preserving the unity and power of the state. The Emperor, in reply, stated that the reconciliation of the two nationalities was his most ardent wish. An ordinance having been issued by the Government, in April, placing the Czechic language on the same footing as the German in all political and judicial proceedings in Bohemia and Moravia, Minister Stremayr, on May 5th, explained in the Reichsrath that the Government ordinance, by which the free use of their language was secured to both nationalities, and which merely ordered the authorities to uphold the rights existing in this respect, has kept within the bounds of its authority. The Government, in his opinion, had not deviated from what had

existed before. On May 10th, the German deputy Wurmbbrand moved that the German language be declared the official language of the empire (Reichssprache), but on motion of the Polish deputy Dunajewski, the Reichstag declined, by 158 against 143 votes, to enter into a discussion of the question.

Another reconstruction of the Ministry took place on June 27th, when the resignations of four Ministers, Dr. Stremayr, General Horst, Baron Korb Weidenheim, and Baron Kriegsau, were accepted, and Baron Streit, Baron Welsersheimb, Baron Kremer, and Dr. Dunajewski appointed in their places. The four Ministers who resigned were the representatives of the Constitutional party in the Cabinet; of the new Ministers the three first named are mere functionaries, while the appointment of Dr. Dunajewski was regarded as a new concession to the Autonomist party.

The Diets of all the crown-lands were opened on the 8th of June. Most of their proceedings were not of general interest. The Diet of the Tyrol received a joint protest from the Archbishop of Salzburg and the Bishops of Trent and Brixen against the formation of two Protestant congregations which the bishops say had taken place against the will and by a violation of the most sacred feelings of the Tyrolese people. The bishops at the same time requested the Diet to embody their protest in the minutes. The Diet of Bohemia rejected, by 135 against 79 votes, a proposition made by the Government to change the electoral law of the crown-land. The change proposed by the Government would diminish the German element of the Diet, and the Germans who at present constitute the majority of the Diet did not feel disposed to lend a hand to a diminution of their own influence.

The German Liberals look upon the majority of the Cabinet as hostile to the interests of the German nationality, and as inclined to sacrifice them to the Czechs and the Poles. They are therefore making earnest efforts to perfect a national organization. Provincial assemblies of German members of the Reichsrath and other prominent men of the party were held at Mödling in Lower Austria, at Brünn in Moravia, and at Karlsbad in Bohemia. The Bohemian meeting, which took place in October, was attended by more than 1,800 persons. The Government showed its hostility to this movement by confiscating all the papers containing the resolutions which had been drawn up for adoption at Karlsbad. The Municipal Council of Vienna expressed the warmest sympathy with this German movement, and resolved in October to invite prominent Germans from all parts of Austria to hold a general meeting at Vienna. The meeting took place on November 14th, and was attended by 4,000 prominent men of the German Constitutional party. Resolutions were adopted, amid great enthusiasm, declaring the federalistic tendencies of the Slavs to be dangerous to the unity of Austria,

and to be likely to produce discord among the different nationalities of the empire. It is claimed, by those who sympathize with the German Constitutional party, that at least nine tenths of the wealthy and educated Germans of Austria will actively coöperate with the opposition against the Federalists. Indications are not even wanting that many Germans of Austria, rather than submit to an increasing predominance of the Slavic element, would prefer a dissolution of the empire, and a union of the German provinces with the German Empire. In 1879 a member of the Reichstag, Herr von Schönerer, had even the courage of expressing these views in the Reichstag. At a large meeting of the students of the University of Vienna, held in November, 1880, the same sentiments were expressed by most of the speakers, and Herr von Schönerer was enthusiastically applauded when he said that the Germans of Austria were gravitating, not only toward Vienna, but toward every center of Germanism, and most of all toward that center which was the most German. The German Conservative party, which follows the lead of Count Hohenwart, endeavored to reply to these demonstrations of the Liberals by counter-demonstrations, the object of which was to show that a considerable portion of Germans in Austria by no means share the apprehensions of the Liberals respecting the dangers which threaten the unity of the empire and the legitimate position of the German element from the policy of the present Cabinet, but that, on the contrary, they think this policy tends to consolidate the unity of the empire, by bringing about peace and satisfaction among all the nationalities of Austria.

The delegations met in Pesth on October 19th. The Hungarian delegation elected Louis Tisza, a brother of the Prime Minister, president, and Cardinal Haynald vice-president. By the Austrian delegation, Count Coronini was elected president and Count Czartoryski vice-president. On October 25th the members of the two delegations were received by the Emperor. In reply to the addresses by the presidents of the two delegations, the Emperor said that his Government had united its efforts with those of the other powers for the purpose of removing the difficulties which the execution of some of the stipulations of the Berlin Treaty had encountered; that the propositions sent to the delegations contained, with regard to some branches of the military administration, further claims on their patriotic readiness to make sacrifices; that, in examining these demands, they would direct their serious care to the unavoidable necessities of the security and defense of the monarchy as well as the well-being of the army; that the state of Bosnia was politically a satisfactory one, making it possible once more to reduce the number of troops there, and thus to diminish the cost. The credits demanded by the Government were granted by both delegations, with the excep-

tion of a few inconsiderable deductions from the demands of the Minister of War.

The fact that Bosnia and Herzegovina have been greatly benefited by the establishment of an Austrian administration is generally conceded. The Austrian Government found it, however, necessary to maintain a strong army of occupation. At the beginning of the year it was reported from the sanjak of Novi-Bazar that numerous bands of robbers were traversing the country and harassing the Austrian army. They were, however, soon suppressed. The Government encouraged emigration from Austria and Hungary to Bosnia, and some progress was made in this direction, but it was believed that immigration on a larger scale would not begin until it was definitely settled that Bosnia and Herzegovina would remain for ever a part of the Austrian dominions. An animated and important discussion on the occupation of Bosnia arose in the meeting of the Hungarian delegation. The discussion had not reference to the Bosnian credit demanded by the Government, as it was recognized on all hands that the Minister of War had done his best in reducing the establishment of the army of occupation from 33,000 to 26,000 men. The debate turned on the right of the delegations to have an insight into the revenues and expenses of the Bosnian administration. In the previous discussion of the subject in committee, the common Minister of Finance, who has special charge of the Bosnian administration, had been asked to furnish returns on the subject. He replied that he was not in a position to do so; it was only during the last quarter of the past year that civil administration had been introduced, and this was itself in a state of transition. Only a few months previously, the monopolies of tobacco and salt had been introduced; not even an approximate estimate could yet be formed of the revenue which the customs might yield; and the tithe, which was the main item of direct taxation, was only just beginning to be paid in. The Minister, however, expressed a belief that the revenue and expenditure would balance next year, as they had done this year, and that no contribution would be asked from the delegation. These declarations seemed to cause an impression that the Minister was not disposed to give any explanation, and rather questioned the right of the delegations to examine the financial administration of Bosnia. The Minister denied, however, that he had any such disposition, and promised to give next year an estimate of the revenues and expenditure of Bosnia, as far as this could be done.

The most notable feature in the foreign relations of Austria is the maintenance and confirmation of the *entente cordiale* existing between Austria and Germany. The Governments of both countries took frequent occasions to express the most friendly sentiments toward each other, and the majority of the German Parliament and press warmly sympathized in

this question with their Governments. In the Austrian Reichsrath, however, the Polish deputy Hausner made, on March 12th, a violent speech against the Austro-German alliance, and recommended in place of it a Franco-Austrian alliance. Many of the Polish, Czechic, and Ultramontane members seemed to sympathize with these views. As Hausner's views were violently attacked by the Germans, both in Germany and in Austria, he published in their defense a pamphlet entitled "*Deutschthum und deutsches Reich*" (Vienna, 1880). The author, though a German by name and birth, is in his political sentiments a Polish extremist. The object of his pamphlet is to show that an alliance of Austria with Germany would virtually be a submission to Germany, and would greatly promote the ambitious plans of Bismarck, who, in his opinion, intends to wrest the Baltic provinces and Russian Poland up to the Vistula from Russia and annex it to Germany—an event which he would regard as the greatest calamity for the Poles, who might not be able to resist absorption by the civilized Germans as well as they resisted the uncivilized Russians. A provisional commercial treaty with Germany was ratified by the Reichsrath in May. A new interview of the Emperors of Austria and Germany at Ischl, and the marked attentions shown to Archduke Rudolphus during his visit at Berlin, were regarded as new pledges of the continuance of the German-Austrian alliance. The revival of a triple alliance between the Emperors of Austria, Germany, and Russia was strongly advocated by Baron Hübnér, who was ambassador in France under the Empire, in a meeting of the Austrian delegation on November 2d. Baron Hübnér is afraid that out of the unsettled condition of Western Europe, especially of England, Italy, and France, there may arise a crusade against conservatism all over Europe, and he therefore demanded that steps should at once be taken to insure a combination of the three great conservative powers of Europe. The feeling of a very large portion of the Austrian population continues, however, to be very hostile to Russia. When the Emperor in September paid a visit to Galicia, the demonstrations made by the Polish population were so significant that many Hungarian papers spoke of an approaching restoration of the kingdom of Poland, and of the inevitability of a war against Russia. Public sentiment in Russia showed itself, in return, greatly irritated against Austria, although the Emperor of Austria, in order not to give any cause of irritation, had never used the Polish language on any official occasion, and, in his reply to the leader of the Polish nobility, who emphatically spoke of the "Polish" nobility, had been careful to use the expression, "the nobility of Galicia." It was a noted feature in the proceedings of the delegations in November that no voice was raised against the desirability and the continuance of the Austro-German alliance.

The friendly relations between Austria and the Government of Italy were not interrupted, although they were repeatedly endangered by the agitation of the party of the *Italia Irredenta*, with which a considerable portion of the Italian people expressed an open sympathy, and which, in the opinion of the Austrian Government, was not as energetically suppressed by the Italian Government as it should have been. (See ITALY.) Within the Austrian dominion, the Italian nationality has of late made considerable progress in Dalmatia. The Italians constitute in this province only 9.5 per cent. of the total population, while the Slavs number more than 90 per cent.; but all that has been achieved in the provinces of literature, art, and science, in material and intellectual progress, is due to the Italian element. The Slavs, on the other hand, are still at the lowest stage of mental development. The schools of the higher grade were, therefore, to a large extent under Italian influence. The sympathy which the tendencies of the "*Italia Irredenta*" met with among the Italians of Italy induced the Austrian Government, in June, to change all the Italian middle schools in Dalmatia, especially those in Sebenico, Curzola, Cattaro, Ragusa, and Spalatro, into Slavic schools.

It was for some time feared that the relations between Austria and England might be seriously affected by the triumph of the Liberal party at the English elections. At one of the meetings preceding the elections, Mr. Gladstone had energetically protested against England joining the Austro-German understanding, and converting it into a triple alliance. He had declared that if the Austrian Government wished to shut his mouth, it should abandon its schemes against the freedom of other countries. When the elections resulted in a triumph of the Liberal party, apprehensions were naturally felt that the English Cabinet would be hostile to the Oriental policy of Austria. These apprehensions were, however, dispersed by a letter addressed by Mr. Gladstone to the Austrian ambassador in London, in which the English Premier states that he has no hostile intention toward Austria, and that his animadversions on her foreign policy were founded upon suppositions which, upon the assurances of the ambassador, he now believed to be unfounded. (See GREAT BRITAIN.)

The question pending between Austria and Serbia, relative to the establishment of railway junctions, caused considerable trouble. On January 10th Baron Haymerle, in the Foreign Affairs Committee of the Hungarian delegation, stated that the Serbian Government had originally held the view that both the Porte and Bulgaria would have to take part in the negotiations, but ultimately M. Ristic, the Prime Minister of Serbia, had admitted the justice of Austria's construction of the stipulations of the Berlin Treaty, and a Serbian representative with full powers would shortly arrive in Vienna to effect a final settlement of the question.

Herr von Schwegel, one of the heads of department in the Ministry of Foreign Affairs, subsequently gave explanations with reference to the commercial treaty with Servia, stating that it was not the intention of the Government to conclude a treaty on the most favored-nation principles, because they considered it more advantageous to adopt the standpoint indicated in the Treaty of Berlin. The idea of forming a customs union with Servia had been allowed to drop, as the proposal was not favorably received by either side. On April 9th a

treaty between Austria and Servia, concerning the construction of an Austro-Servian railroad, which is to lead from Belgrade by way of Semlin to Pesth, was concluded. New difficulties, however, arose between the two Governments concerning the execution of the treaty, and, in October, the Baron von Haymerle addressed a note to the Austrian ambassador in Belgrade, severely censuring the Servian Government. This note was soon followed by the resignation of the Prime Minister of Servia. (See SERVIA.)

B

BAPTISTS. I. REGULAR BAPTISTS IN THE UNITED STATES.—The following is a summary of the statistics of the regular Baptists in the United States, as they are given in the "American Baptist Year-Book" for 1880:

STATES AND TERRITORIES.	Churches.	Ordained ministers.	Members.
Alabama.....	1,456	704	94,569
Arkansas.....	1,110	535	47,398

Total.....	1,189	29,400	18,594	2,589,172

The anniversary of the *American Baptist Home Mission Society* was held at Saratoga Springs, New York, May 26th. The total receipts of the Society from all sources for the year had been \$213,821, and the expenditures had been \$182,998. The debt had been reduced \$12,229, leaving \$18,373 still owing. About 5,500 Indians were members of Baptist churches in the Indian Territory, and were for the most part served by native pastors. The mission among the Chinese at Portland, Oregon, returned three baptisms and a Chinese Young Men's Christian Association. A new Chinese mission had been opened at Oakland, California. The eight academic and collegiate schools for freedmen returned 38 teachers and 1,191 pupils. Four hundred of the students were ministers, or were studying with the ministry in view. The Society adopted a declaration of its judgment that the Indian question could never be righteously or permanently settled till there should be a full recognition of the Indian's rights to citizenship and to hold personal property, upon the same conditions as prevail in the case of persons of other nationalities; and invited people of other denominations and all good citizens to join it in urging that conviction upon the national Government and the country.

The *Woman's Home Mission Society of the West* received during the year ending in May, 1880, \$9,089 in cash and \$2,551 in goods. Its cash expenditures were \$6,506. It supported 17 missionaries in 7 missions among the freedmen of the South, the Scandinavians of the

* Including the United States, British Provinces, and the West Indies.

Northwest, and the Indians, and had organized 27 Sunday-schools during the year.

The cash receipts of the *Woman's Home Mission Society of the East* for the year were \$6,080 and its disbursements \$5,441. It also received and distributed clothing of the value of \$3,413.

The anniversary of the *American Baptist Publication Society* was held at Saratoga Springs, New York, May 27th. The receipts of the Society for the year had been: in the Benevolent Department, \$68,293; in the Business Department, \$281,270; making in all, \$349,563, or \$14,253 more than the receipts of the previous year. One hundred and thirty-three new publications had been issued during the year, of which 304,000 copies were printed, and 126,000 copies of former publications and 94,500 copies of tracts had been printed. The whole number of publications on the catalogue of the Society on April 1, 1880, was 1,288.

The anniversary of the *American Baptist Missionary Union* was held at Saratoga Springs, New York, May 25th. The receipts of the Society for the year from all sources had been \$314,860, of which \$24,509 had been contributed as additions to invested funds, leaving \$290,351 applicable to the payment of the current expenses of the year. The appropriations, including those for the payment of the debt of the previous year, amounted to \$297,474. The Karen churches of Bassein had contributed \$30,470 toward the erection of a new building for their Normal and Industrial Institute, and were, when the report was made, engaged in raising an endowment fund of \$25,000 for the support of the school. The statistics of the missions are: Burmah, 83 missionaries, 448 native preachers, 433 churches, 21,594 members; Assam, 17 missionaries, 49 native preachers, 13 churches, 1,331 members; Telugus, India, 21 missionaries, 77 native preachers, 11 churches, 15,660 members; China, 24 missionaries, 37 native preachers, 16 churches, 1,426 members; Japan, 12 missionaries, 5 native preachers, 2 churches, 76 members; total in the Asiatic missions: 162 missionaries, 616 native preachers, 475 churches, 40,087 members. The European missions (in Sweden, Germany, France, Spain, and Greece) returned 436 native preachers, 433 churches, and 45,221 members.

The *Southern Baptist Convention* met at Lexington, Kentucky, May 6th. The Rev. P. H. Mell, D. D., of Georgia, was chosen President. The *Home Mission Board* had received during the year \$20,624, and had expended \$14,197. The *Foreign Mission Board* had received \$45,543, or about \$10,000 above its average receipts, and, besides meeting all of its expenses, had reduced its debt by \$2,179, the present amount of indebtedness being \$6,389. The missions of the Board were: in the Yoruba country, Africa; China, where were reported at Tung Chow, Shanghai, and Canton, 396 members, with 71 baptisms, and \$528 of contributions by native members; South America, which had two self-

sustaining churches in Brazil and a Chinese church in Demerara with 172 members; and Italy, where were stations at Rome, Bologna, Milan, Venice, Torre Pellice, Modena, Carpi, Bari, Naples, the island of Sardinia, and other places. It was stated, in behalf of the Southern Baptist Theological Seminary, that the institution had received a gift of \$50,000 from ex-Governor Joseph E. Brown, of Georgia, and that it would be necessary to increase the amount of its endowment to \$250,000, of which \$100,000 ought to be raised at once.

The sixth Triennial Conference of the *German Baptist Bund* of North America met in St. Louis, Missouri, October 13th; Professor H. M. Schaffer was elected moderator. The affairs of the German Department of the Theological Seminary at Rochester, New York, of the German Baptist Publication Society at Cleveland, Ohio, of the Orphan Asylum in Louisville, Kentucky, and of a proposed theological school in Germany, were considered. Fifteen students had been graduated from the Theological Seminary during the previous three years. An editor had been appointed for the several periodicals of the Publication Society, and an assistant editor was needed. A committee was appointed to secure a new and suitable hymn-book, and instructed to coöperate with a similar committee in Germany and with the Board of the American Baptist Publication Society. The orphan asylum had twenty-six children as inmates.

The Bund is composed of two annual conferences, the Eastern and the Western Conferences, separated by the western boundary of the State of Pennsylvania. The Eastern Conference, at its meeting, October 7th to 11th, considered the subject of a division into three or more conventions or associations, and took measures for the submission of plans for division to the churches. The Western Conference reported 4,470 members—a gain of 305 during the year—\$2,570 of contributions for home missions, and \$1,600 for foreign missions. It decided upon a division into three conferences, the Central, Northwestern, and Southwestern Conferences.

II. FREE-WILL BAPTISTS.—The *General Conference* of the Free-Will Baptist Church was held at Weir's, New Hampshire, July 21st. Representatives were present from all the Northern and some of the Southern States. The Rev. O. B. Cheney, D. D., was chosen moderator. The year being the hundredth year since the organization of the denomination, the proceedings took to a considerable degree the character of a centennial celebration. Historical addresses were made, and steps were taken for the preparation of a "Centennial Volume," to contain an historical account of the Church, and its publishing and literary institutions, accounts of the action of the General Conferences, the historical papers read at the present General Conference, and tables. Centenary offerings for val-

rious purposes were reported, amounting in all to one hundred thousand dollars. Resolutions were adopted deprecating the ordination of ministers by single churches, and advising that the Association or quarterly meeting be consulted and participate in all ordinations; recommending that abstinence from the use of tobacco be made a condition of ordination; declaring it to be "a necessity and a duty for the churches to encourage lay preaching subject to their approval," and requesting all the churches of the denomination that "they admit no minister as a member, or employ him as a pastor, who does not bring letters of recommendation from some ministers' conference, or quarterly meeting or association and church to which he belongs, duly signed by proper and responsible parties."

The "Free-Will Baptist Register" for 1881 gives the following statistics of the denomination:

YEARLY MEETINGS.	No. of churches.	Ordained preachers.	Licensed preachers.	No. of communicants.

III. THE BRETHREN.—The annual Convention of the Brethren (commonly known as Tunkers) was held at Lanark, Illinois, in June. The attitude of the denomination in respect to conformity to the world was defined in a series of resolutions, which deprecated the disposition to enforce the order of the Church more rigorously than in former years; agreed that the existing form of costume should be quietly maintained, while the labors and principles of the

Brethren should yet be adapted to the wants of the religious world; recognized as offenders those who teach anything contrary to the principles of the Brotherhood; advised, on the expressed ground that "there exists a widespread fear among us that the Brethren's high schools are likely to operate against the simplicity of the gospel," that the principals of the schools adopt rules to prevent any worldly tendency; condemned Sunday-school picnics and excursions; opposed the adoption of unusual means for getting people into the Church; and expressed the opinion that while ministers should not labor in the hope of receiving a salary, and money should not be held out as an inducement to brethren to preach, ministers should, nevertheless, be supported. A plan was adopted for the organization of a Board of Domestic and Foreign Missions. Acts of the annual meeting had hitherto been adopted by general consent, so that it lay in the power of a very small number of members by opposing objections and adhering to them to prevent the passage of any measure. A query was presented to the present meeting asking whether it would not be better for small minorities to accept the will of majorities, and not hinder legislation. The meeting answered in the affirmative, with a proviso that the old rule should prevail when a departure from the general order of the Brethren is attempted. A query whether a sister might not wear a modest hat was answered in the negative. It was, however, declared not to be according to the gospel for a brother who "indulges in the filthy fashion of the world" (the use of tobacco) to reprove a sister for indulging in the vain fashion of dress. It was decided that a brother ought not to accept the office of land-appraiser.

IV. REGULAR BAPTISTS IN GREAT BRITAIN.—The annual meetings of the *Baptist Union* and the affiliated societies were held during the week beginning April 20th. The total receipts of the *Home and Irish Missions* had been £6,280, and the expenditures £6,093, of which £2,513 had been for Home Mission work, and £2,409 for the Irish work. Nineteen agents and two colporteurs were employed. The receipts of the *Baptist Tract Society* had been £1,302. Grants had been made during the year representing 916,317 publications. The income of the *Baptist Building Fund* had been £7,966. With its aid twenty-six chapels had been built and opened for worship, and six other chapels had been enlarged, providing 8,572 additional sittings. The total sum raised in England only for new chapels and improvements had been £47,099, considerably less than the average, while the total debt created had been £27,230, considerably greater than the average. The income of the *Bible Translation Society* had been £2,350; and 43,603 portions of Scripture had been issued from its press. Reports were made at the meeting of the condition of the *Annuitiy Fund* and the fund for the Augmentation of Pastors' Salaries (*Aug-*

mentation Fund). Statements were made to the effect that the last year's accounts of the churches showed an increase of 5,300 members, 30,548 scholars, and 3,427 teachers. A scheme for the constitution of the Union was presented, and laid over to be discussed at the meeting of the body in the spring of 1881.

The receipts of the *Baptist Missionary Society* during the year ending March 31, 1880, for general purposes, amounted to £45,233, and, including contributions for special funds, to £50,351. The amount of general income was the largest ever received in one year, except in the Jubilee year of the Society. The condition of the missions in India, Ceylon, China, Japan, West Africa, Central Africa (Congo), the Bahamas, San Domingo, Trinidad, Jamaica, Norway, Brittany, and Italy, is reviewed in the report of the Society. In all, so far as was reported, the missions included 82 missionaries, 309 other laborers, 407 stations, 33,805 members, 5,141 day-scholars, 166 teachers, and 4,346 scholars in Sunday-schools. The income of the *Zenana Mission* amounted to £3,658. Twenty-seven ladies and forty-six native teachers were employed in connection with the mission, about 700 children were instructed in the Zenanas, and 1,100 women listened to the reading of the Bible. A Home for the Ladies in Delhi was ready to be occupied, and £2,300 had been promised toward the erection of a home in Calcutta.

V. GENERAL BAPTISTS.—The *General Baptist Conference* met at Nottingham, England, June 22d. The Rev. James Maden, of Macclesfield, presided. The Secretary reported an increase of 452 members, making the whole number of members in the home churches 24,455, and, including the mission churches of Orissa, 25,449. Petitions to the House of Commons were adopted in favor of the closing of the public-houses on Sunday, and of the abrogation of the enactments by which the opium-trade between England and China is made lawful. A resolution was adopted approving of the recognition and application by the Prime Minister of the principle that no religious views which a man might have should disqualify him from holding high office under the Crown.

The receipts of the *General Baptist Foreign Missionary Society* for the year ending in May, 1880, were £8,727, and its expenditures £8,538. Fourteen English missionaries were employed in India, and another missionary had been accepted for service in the same field.

BAROMETERS, WATER. The specific weight of mercury being 13·596, a hydraulic barometer in which a column of water about 10 metres high counterbalances the mean pressure of the atmosphere, instead of the mercurial column of 76 centimetres, shows much finer variations of pressure than the ordinary barometer. The simple contrivance of Babinet, consisting of a long, thin tube of glass inserted in the neck of a tightly closed bottle, in which

the water had been forced up the tube, enabled him to observe the minute variations of atmospheric pressure during a small space of time; but the observations were vitiated by the effect of variations of temperature in vaporizing the water and dilating or contracting the mass of the water and the air. Another French physicist has constructed a permanent water barometer in which all the inequalities caused by temperature are avoided or compensated, and which is, therefore, as precise as it is sensitive. A reservoir of air is sunk in the floor of a closed cellar, in which the temperature is practically the same at all times of the year. In the reservoir is placed a large demijohn, in which a tube is inserted, which is carried up to the chamber in the floor of the building where it is desired to observe the barometric variations. The capacity of the reservoir can be from one to 100 litres or more, and can serve for a number of different barometers if desirable. In the Institute there are three connected with the same vessel of water, of a capacity of 85 litres. The copper pipe which connects with the glass tube, on which the rise and fall of the column of water is indicated by a scale, can be carried up from the demijohn at any inclination. The glass indicator need be no more than a metre in length to allow for the height of the vessel in which the tube terminates, and show the extreme variations of barometrical pressure, which fall within 70 centimetres of the scale. The barometer of the Société de l'Encouragement has a copper tube 16 metres long with an interior diameter of 3 millimetres ending in a glass tube with 8 millimetres' interior diameter. Just 13 millimetres on the scale correspond to the millimetre divisions on the scale of the quicksilver barometer, the deviation from the exact ratio of 13·596 between the specific weights of quicksilver and water representing the allowance to be made for the sinking of the level of the water in the reservoir answering to the rise of the column in the tube and that due to the compression of the air in the reservoir, and also to the increase in the specific gravity of the water by the admixture of glycerine, or sometimes sulphuric acid, which is necessary to keep the water in the pipe from freezing if it is exposed to frost. In the building of the Société de l'Encouragement no preventive against freezing is needed, but a tincture of fuchsine in the water reduces the height of the column about one millimetre. The water is forced up the pipe by successive blasts through a tube inserted in the cork of the demijohn, which dislodge portions of the air in the tube, the globules of air driven out through the mouth of the pipe making way for the ascending column of water which is held up by the pressure of the atmosphere. When the summit of the column has nearly reached the point on the scale corresponding to the reading of a good mercurial barometer, it is brought into exact agreement by pouring into the vessel a sufficient quantity of water, or taking water out if the level of the column

has risen above the point of normal pressure measured on the scale. To guard against evaporation of the water in the reservoir, the outer air may be admitted only through a minute puncture, or, better still, through a capillary tube. The exact degree of atmospheric pressure is indicated by the readings of the water barometer without the necessity of any reduction or calculation of errors. The range of errors does not exceed the variation of pressure measured by one millimetre on the scale of the ordinary barometer, an amount which may be disregarded, since in the usual barometric readings the depression due to capillarity in the mercury-tube is seldom taken account of, while that caused by the tension of the mercurial vapor must exceed one millimetre, and the expansion of the confined air occasions an equal variation. The indicator tube may be inclined to any angle with the perpendicular, and the delicacy of the indications proportionately increased. One which has been put up in the Grenelle Gasworks has a scale on which 70 millimetres correspond to one millimetre on the mercurial tube, and which reveals minute undulations of barometric pressure of which ordinary barometers give no suspicion. The water-barometer can be constructed with little expense. It will afford valuable data for the study of rain and the other aqueous phenomena of the atmosphere. If such barometers were set up in the public places of towns, they would be a useful means of popularizing the knowledge of phenomena attended by variations of atmospheric pressure, and would prove of great practical utility by indicating the approach of rain and storms.

BAYARD, JAMES ASHETON, ex-Senator of the United States from Delaware, died at Wilmington, Delaware, on June 18th, at the age of eighty-one. He was a descendant of a distinguished French family who embraced the Huguenot faith. During the persecutions following the massacre of St. Bartholomew they fled to Holland, where Samuel Bayard married the sister of Peter Stuyvesant, then Governor of New Amsterdam, and his three sons emigrated with their uncle, landing in New York, May 11, 1647. Peter Bayard, the youngest of these three brothers, removed to Maryland, and from him descended the subject of this sketch. He was the second son of James A. Bayard, member of Congress from Delaware, and a leader of the Federal party. In 1812 the elder James Bayard was selected by President Madison as one of the commissioners to arrange the treaty of peace with Great Britain which was signed at Ghent. He was envoy to St. Petersburg at the time of his death, in 1815. His eldest son, Richard Bayard, represented Delaware in the United States Senate until his appointment as Minister to Belgium. He was succeeded as Senator by his brother, James Asheton Bayard, in 1850, who was reelected in 1856, and again in 1862. Mr. Bayard entered public life early, having

been elected to Congress by the Democratic party as early as 1828. He filled many public offices with unquestioned integrity. The Republican committee of investigation in regard to the *Crédit Mobilier*, in their report to the House of Representatives, mentioned with praise Senator Bayard's letter in response to an offer of some of this stock, written in 1868, before the character of that operation was known, in which he said, "I take it for granted that the corporation has no application to make to Congress on which I shall be called upon to act officially, as I could not consistently with my views of duty vote upon a question in which I had a pecuniary interest." As a lawyer Mr. Bayard was eminent. His clear intellect and close logic fitted him for the profession which he chose and adorned. Among other important positions which he filled, he was for a long period chairman of the Committee on the Judiciary of the United States Senate. His opinions on constitutional questions and his reports are weighty and authoritative. Under the Van Buren Administration he was United States Attorney for Delaware. In 1862, on his third election to the Senate, the "iron-clad" oath was required of him. Grown old in the service of the nation, he keenly resented this indignity. After an eloquent protest against its constitutionality, he took the oath and immediately resigned his seat. The Hon. George R. Riddle was elected in his place, but, dying soon after, Mr. Bayard consented to serve through his own unexpired term. His son, Mr. Thomas F. Bayard, was elected Senator; and in 1869 both father and son sat in the Senate, the only instance of the kind on record. After his retirement from public life, Mr. Bayard lived in Wilmington.

BELGIUM, a kingdom of Europe. Leopold II., King of the Belgians, born April 9, 1835, is the son of King Leopold I., former Duke of Saxe-Coburg, and ascended the throne at his death, December 10, 1865. He was married August 22, 1853, to Marie Henriette, daughter of the late Archduke Joseph of Austria (born August 23, 1836), who has borne him three daughters. The heir-apparent to the throne is the brother of the King, Philip, Count of Flanders, born March 24, 1837, Lieutenant-General in the service of Belgium, who was married, April 26, 1867, to Princess Marie of Hohenzollern-Sigmaringen (born November 17, 1845), and has two sons, Baldwin, born July 3, 1869, and Albert, born April 8, 1875. The oldest daughter, Princess Louisa, born February 18, 1858, was married on February 4, 1875, to Prince Philip, Duke of Saxe-Coburg and Gotha.

The area of this kingdom is 29,455.16 square kilometres (1 square kilometre=0.386 square mile) or 11,373 square miles. The population, according to the census of December 31, 1876, was 5,336,189, and in December, 1878, according to a calculation based upon the movement of population, 5,476,939. The following table

exhibits the population of each province at the close of 1878:

PROVINCES.	Pop. in Dec., 1878.
Antwerp.....	560,020
Brabant.....	978,071
Flanders, West.....	693,580
" East.....	879,682
Hainault.....	975,252
Liège.....	650,801
Limburg.....	209,343
Luxemburg.....	208,405
Namur.....	321,885
Total.....	5,476,989

The population of the principal cities on December 31, 1878, was as follows: Brussels, 167,693; Antwerp, 159,579; Ghent, 130,671; Liège, 119,942; Bruges, 44,968; Malines, 40,586; Verviers, 39,278; Louvain, 34,664; Tournay, 32,508; Courtrai, 26,672; Saint-Nicolas, 25,628; Namur, 25,627; Seraing, 24,888; Mons, 24,791; Alost, 21,399.

The movement of population from 1872 to 1878 is shown in the following table:

YEAR.	Marriages.	Births,		Deaths,	Still-born children.	Surplus of births.	Total population on December 31.
		Inclusive of still-born.					
1872.....	40,084	174,985	127,768	7,558	47,267	5,175,087	
1873.....	40,598	178,491	120,656	7,788	57,885	5,258,821	
1874.....	40,328	181,728	117,245	7,750	64,383	5,336,634	
1875.....	39,059	183,301	130,229	7,749	53,072	5,408,006	
1876.....	38,228	184,845	124,717	7,980	60,128	5,336,185	
1877.....	36,962	183,122	122,314	8,045	60,808	5,422,791	
1878.....	36,669	180,451	125,462	7,721	47,579	5,476,989	

Almost the entire population is connected with the Roman Catholic Church. The number of Protestants is estimated at 15,000; that of Jews at 3,000. The larger portion of both live in the provinces of Antwerp and Limburg. Of the 5,336,185 inhabitants, according to the census of 1876, 2,256,860 spoke French, 2,659,890 Flemish, 340,770 French and Flem-

ish, 38,070 German, 22,700 French and German, 1,790 Flemish and German, 5,490 these three languages, 7,650 foreign languages, and 2,070 were deaf and dumb.

The immigration into Belgium has since 1871 always exceeded the emigration from the country, as will be seen from the following table:

	1872.	1873.	1874.	1875.	1876.	1877.	1878.
Immigrants.....	15,789	15,792	16,762	15,872	14,416	15,075	14,325
Emigrants.....	11,040	7,981	8,217	10,157	13,124	11,847	11,646
Surplus of immigrants.....	4,749	7,811	8,545	5,215	1,222	3,228	2,679

The budget for the years 1878 and 1879 estimated receipts and expenditures as follows (in francs):

I. RECEIPTS.	1878.	1879.
1. Direct taxes.....	44,008,000	44,418,000
2. Indirect taxes.....	102,955,000	102,735,500
3. From means of communication (railroads, telegraphs, post, etc.)...	100,652,500	108,922,600
4. Miscellaneous.....	9,772,000	10,101,000
5. Reimbursements.....	2,921,360	3,263,160
Total receipts.....	260,338,860	264,435,260
II. EXPENDITURES.		
1. Public debt.....	74,785,815	77,990,229
2. Dotations.....	4,535,308	4,693,475
3. Ministry of Justice.....	16,272,849	15,901,169
4. Ministry of Foreign Affairs.....	1,903,535	2,073,110
5. Ministry of the Interior.....	20,371,424	14,254,599
6. Ministry of Public Works.....	81,354,389	84,240,352
7. Ministry of War.....	41,063,000	44,040,000
Budget of the gendarmerie.....	2,920,000	3,410,000
8. Ministry of Finance.....	15,274,950	15,242,110
9. Reimbursements and outstanding debt.....	1,126,000	1,187,000
Total expenditures.....	259,606,765	272,344,317

The members of the Chamber of Representatives are elected at the rate of one member for every 40,000 inhabitants; the members of the Senate at the rate of one member for every 80,000 inhabitants. The number of members of both Chambers is, therefore, constantly varying, as will be seen from the following table:

YEAR.	Number of members in	
	Chamber of Representatives.	Senate.
1831.....	102	51
1839.....	95	47
1847.....	108	54
1859.....	116	58
1866.....	124	62
1878.....	132	66

The most important events of the year related to the discussions of the laws concerning the schools and their operation; to the controversy between the Government and the bishops, ending in the withdrawal of the Belgian legation from the Vatican; to the elections for the renewal of one half the Chambers; and to the celebrations of the fiftieth anniversary of Belgian independence.

The Chamber of Representatives met after the conclusion of the Christmas vacation, January 21st. The debate on the budget of instruction was taken up and continued till February 6th. The budget was adopted, February 17th, by a vote of seventy in favor of it to fifty-seven against it. On the last day of the debate, M. Frère-Orban, the Prime Minister, defended the Government, contending that more liberty was nowhere given to the clergy than in Belgium, and that they were complaining because the Government refused them

privileges which it did not grant to anybody else. The Government, he said, would know how to make the laws respected; and the struggle of the Right against the secularization of public instruction—adopted as it was now in all civilized countries—would only expose them to the ridicule of all Europe. M. Malon, the leader of the opposition, announced the intention of his party, in case it should regain power, to abrogate the new law of public instruction and substitute the confessional school subsidized by the state for the neutral and lay school. A proposal was adopted on the 23d of March for the appointment of a Parliamentary commission of inquiry into the state of elementary instruction. A commission of eight Clerical and seventeen Liberal members was selected on the 5th of May to pursue the designated inquiry. The members of the Right declined to serve upon the commission, and the appointment of members to fill their places was thrown upon the officers of the Chamber. The commission, having been organized, published a statement in June, defining the scope of its inquiry, and inviting all persons who could assist it with evidence to coöperate with it, and proceeded to its work.

The question of maintaining the legation at the Vatican was discussed in March. The Premier on the 3d assured the Chamber that no concession had been made, and no particle of the rights of the kingdom had been alienated by the continued residence of its envoy at the Holy See. The Minister of Foreign Affairs declared on the 9th that no foreign government had made any communication to him on the subject, and that it was well understood that the Chamber would have to pronounce upon the matter every year, and that no decision definitely committing the country could ever be made respecting it. The Chamber decided in favor of maintaining the legation by a vote of ninety-seven yeas to eight nays and two abstentions. Several Liberal members voted for the measure in order to avoid dividing their party.

The bill to prolong the existing law relative to the treatment of foreigners in Belgium was adopted in May, and was accepted by the Senate on the 12th. During the debate upon it, M. Bara, the Minister of Justice, said that the line of conduct of the Government toward the French Jesuits, should they come to Belgium, would be precisely the same as had been adopted toward the members of religious bodies expelled from Germany. The laws of the state would be enforced as toward them. If they did not trouble the internal and external security of the country, no measure would be taken against them; but, if they came to Belgium to do what was forbidden to them in France, the Government would prevent them.

The Cardinal-Archbishop of Malines and the Bishop of Bruges had made provision before the year began for giving religious instruction to the pupils of the communal schools

within their dioceses. The Archbishop of Malines, in his pastoral for Lent, condemned the public schools, and advised the faithful not to send their children to them. The bishops afterward, upon consultation, decided to allow the children to take their first communion, without raising any objections with reference to the schools they might attend, and to instruct the parish priests to further the religious instruction of the children in their parishes. The Cardinal-Archbishop received a letter from the Pope, in April, approving the position which the bishops had assumed, and commending their efforts to open and found new Catholic schools, "in order to prevent, or at least to diminish, the disastrous consequences of the new school law, which is completely opposed to the principles and prescriptions of the Catholic Church." When asked the meaning of this letter, the Pope replied that he had not in it intended any hostility to the Belgian Government. The payment of salaries from public funds to the curates of parish priests, whose nomination had not been submitted to the Minister of Justice for approval, was suppressed. The expressions of the bishops became more moderate, and their opposition to the secularized schools assumed a less decided form after the elections for the renewal of the Chamber in June, and they appeared desirous to avoid the rupture between the Government and the Vatican which was threatened. Orders had, however, already been sent, on the 5th of June, to the Baron d'Anethan, the envoy, to give notice to Cardinal Nina that the Belgian legation to the Holy See was withdrawn. In his letter conveying the orders the Premier said: "The maintenance of the Belgian legation was possible, and even useful, so long as the Pope remained neutral in the conflict created in Belgium by the opposition of the clergy to the laws and institutions of the country, and so long as his Holiness used his influence to moderate the struggle. The legation, however, became useless from the moment that the Pope encouraged resistance to the laws of the state. After declaring the measures taken by the bishops, with regard to the educational law, to be excessive and inopportune, the Pope, by an unheard-of change of attitude, approves the instructions given by the bishops to the clergy. Under these circumstances the Government considers it to be its duty to recall the legation." The Belgian envoy left Rome immediately after receiving his recall. Notice of the rupture was given to the Papal Nuncio at Brussels on the 28th of June. A memorandum respecting the difficulty was published by the Holy See, which began by stating that the rupture of diplomatic relations had produced so painful an impression on the minds of Catholics, and had attracted so greatly the attention of all parties, that the Pope felt it a duty imposed upon him by his dignity to make a clear and public exposition of the facts which preceded it. The Belgian Minister of Foreign

Affairs addressed a circular, on the 17th of July, to the Belgian diplomatic representatives abroad, in which, on the evidence afforded by letters from the Primate, and a bishop, he accused the Papal Nuncio of having, at a time when it was pretended at Rome that nothing was known of the resolutions of the Belgian bishops, taken part in the framing of political manifestoes containing direct attacks on the Government. He also, upon the same evidence, accused the Pope and his Secretary of State of having approved and praised, but with the most absolute secrecy, the measures which they declared to the Government of the King they were ignorant of and were unable to prevent. Cardinal Nina replied to the circular, July 25th, defending the action of the Vatican, and accusing M. Frère-Orban of having premeditatedly broken off relations with the Holy See. The Premier replied with a review of the course and letters of the Cardinal.

The elections to the provincial councils were held on the 24th of May, and resulted on the whole favorably to the Liberal party.

The biennial elections for the renewal of one half the members of the second Chamber were held on the 8th of June. The Chamber, as it was constituted previous to the elections, consisted of one hundred and thirty-two members, sixty-one of whom belonged to the Right and seventy-one to the Liberal party. Of the sixty-six members who were to retire, and whose places were to be filled at the elections, forty-three were of the Right and twenty-three of the Liberal party. The elections, when they were completed, resulted in a net gain of two members to the Liberal party. The single Liberal member from Antwerp was lost, all the candidates of the Right being returned; but two Liberal members were gained in the province of Luxemburg, and all of the fourteen Liberal deputies from Brussels were reelected.

The Chamber having been called in extraordinary session to participate in the national festivals, terminated the validation of the elections, and constituted its bureau, August 5th. M. Guillery was reelected President.

The National Exhibition in connection with the celebration of the fiftieth anniversary of Belgian independence was opened at Brussels, on the 16th of June, in the presence of the King, the Queen, and the Count of Flanders. The festivities proper in honor of the anniversary were begun on the 18th of July, when the ten thousand civic guards of Brussels and five thousand civic guards representing the provincial towns, the troops of the garrison of Brussels, and the divisions which had gone through the manoeuvres at the camp of Beverloo were reviewed by the King. A statue of King Leopold I, which was erected with the proceeds of a national subscription that was opened after the death of that King, was unveiled in the new public park at Laeken, on the 21st, by the King. The Minister of the Interior delivered an address, reciting the events which had led to the

erection of the statue, and the Governor of Brabant spoke in the name of the subscribers to the monument fund. On the same day a *Te Deum* was sung in the church of St. Gudule, Brussels, in commemoration of the forty-ninth anniversary of the accession of Leopold I to the throne. The festivities were continued through the rest of July, the whole of August, and a part of September, at the capital and in the principal cities of the kingdom, with meetings, exhibitions, horse-races, boat-races, shooting-matches, concerts, military festivals, cavalcades, illuminations, fireworks, and flower-shows. On the 15th of August both the Legislative Chambers met in the hall of the Chamber of Representatives to receive three of the surviving members of the Provisional Government and of the National Congress of 1830 and 1834. Of the three surviving members of the Provisional Government, one, M. Rogier, was still a member of the Chamber; nineteen members of the National Congress were still living, two of whom, M. Rogier and Canon de Haerne, were members of the Chamber, and one, Baron Nothomb, was Belgian envoy to Berlin. After the reception, the members of the Chambers proceeded in procession to take part in a patriotic festival in the Exhibition building. Deputations attended from numerous associations, from the army, from private societies, and burgomasters and deputations from the councils of every municipality in the kingdom. Several speeches were delivered, after which the King spoke at considerable length, expressing his gratitude to those to whom Belgium owed its admirable Constitution, describing the progress which had been made by Belgium since 1830, and adding that the country could not forget to pay a just tribute of thankfulness to the five great powers. A grand historical cavalcade, symbolical of the past and present of the Belgian nation, took place on the 17th.

Forty-two petitions, demanding the reestablishment of a duty on imports of agricultural products for the protection of agriculturists against the competition of importations from America, were referred by the Chamber of Deputies to the Permanent Commission of Industry. The commission in its report on the petitions advised against the reestablishment of the duty, but called the attention of the Government to various means which might be adopted for the improvement of agricultural industry, such as measures to prevent inundations, and the revision of the railway transport tariff.

An International Congress on Education was held in Brussels in the later days of September. Delegates from France, Germany, Spain, Portugal, Russia, Holland, and Chili, took part in the several sessions.

The International Congress of Freethinkers met in Brussels at the beginning of September, and was numerously attended. Reports were read on the historical development and present literature of rationalism in various countries. A committee was appointed on the subject of

a universal federation of freethinkers, the General Council of which, it was resolved, should have its seat in London. An International Congress of Commerce and Industry was opened at Brussels on the 6th of September. The King was present. The purpose of the Congress was explained by M. Dansaert, member of the Chamber and President of the Congress, and by M. Sainetelette, Minister of Public Works.

The Parliamentary session was opened November 9th. The King, in his speech from the throne, thanked the people for the manifestations of loyalty which they had given during the celebration of the fiftieth anniversary of the independence of the nation; said that the condition of the Treasury had improved; and expressed a hope that the budget of 1880 would show a balance between revenue and expenditure. The rupture of diplomatic relations with the Vatican formed one of the most prominent topics of discussion. M. Frère-Orban, the Premier, in an address which occupied several hours on November 30th and December 1st, said that in his long political career he had always been in favor of the secularization of public education, and against the maintenance of diplomatic relations with the Papal See. He reviewed his negotiations with the Vatican, and contended that the Belgian Cabinet had acted with the greatest straightforwardness, and that the Vatican had been guilty of duplicity unexampled in diplomatic annals. The speech was cheered by the majority, and by the visitors who thronged the Chambers. The debate was continued, and the Premier, speaking during the following week, rebuked the clerical side for having dragged the name of the King into the debate, as if a private correspondence of the King with the Pope, or anybody else, was a matter of common concern. He denied that Leopold I had ever solicited from Pope Gregory XVI a cardinal's hat for the Nuncio Pecci (the present Pope) at Brussels, and stated that documents had been carried off from the archives of the Belgian Foreign Office under former ministries, notably those relating to the missions of the Nuncio Pecci. He also attacked the policy of the Clerical party in opposing amendments to the new Public Education Law, which would have rendered it more acceptable to them. The Liberal party gained one seat in the Senate by the election, in October, of M. de Kerckhove, from Ghent, to fill a seat which was formerly occupied by a member of the Clerical party. An election for one deputy was held in Brussels, November 29th. Five candidates were in the field, all advanced Liberals. Professor Vanderkindere, Rector of the University of Brussels, was chosen. He is an advocate of the movement called "the Flemish movement," the object of which is to secure for the Flemish language in the Flemish provinces equality of consideration with the French language.

Major-General Gratry was appointed Minister of War in November. He was formerly

director of the Engineer Department in the Ministry of War, and had lately been in military command of the province of Brabant.

Twelve persons were condemned, December 6th, to imprisonment for different terms on charges of participation in the traffic in English girls for immoral purposes. Since the case concerned English girls chiefly, the proceedings were watched by an English solicitor on behalf of the British Government.

BENEDICT, ERASTUS CORNELIUS, LL. D., Chancellor of the University of the State of New York, was born at Branford, Connecticut, March 19, 1800. His family removed to New York when he was three years of age. In 1821 he graduated with the highest honors from Williams College, Massachusetts. He taught school in various parts of the State of New York until he was admitted to the New York bar, in 1824. His interest in all that concerned public education remained undiminished through his legal career, although he attained a large practice, and for half a century was considered a leader in admiralty cases. He held no office until 1840, when he was chosen Assistant Alderman for the Fifteenth Ward. In 1850 he became a member of the Board of Education, of which body he remained the President until his resignation in 1863. He systematized the whole educational system of New York, and under his nurturing care the Free Academy developed into the College of the City of New York, of which he may be justly called the founder. He was a member of the Assembly in 1848 and 1864. In 1872 he was sent to the State Senate in the interest of reform. He had been made a member of the Board of Regents of the University of New York State, and, on the death of Chancellor Pruyn, in 1878, he was chosen his successor. He was also a trustee of Williams College, and endowed his alma mater with a fund for "Benedict prizes." An elder in the Dutch Reformed Church, he was widely connected with religious and charitable organizations. He was a manager of the Association for Improving the Condition of the Poor, and Governor of the New York State Woman's Hospital. He published in 1850 what has become a standard legal authority on "American Admiralty." In 1860 he wrote a slight volume of European travel. He was the author of many lectures delivered before the Geographical and various historical and scientific societies of which he was a member. He made three distinct translations of the "Dies Iræ." The first is remarkable as being expressed entirely in words of Gotho-English derivation. The second is very successful from its nearness in words and rhythm to the original. Perhaps the most lasting monument of his elegant and facile pen is the translation of the "Hymn of Hildebert and other Mediæval Hymns" (1868). He excelled in metrical translation, and has left many scholarly renderings of French, German, and Latin poems. He received the degree of

LL. D. from Rutgers College in 1865. In his legislative career he was chairman of the Senate Committee on Literature. He induced the passage of an act for the revision and consolidation of the acts relating to public instruction. In 1872 and '73, while in the Senate, he was appointed a member of the Court of Impeachment, in which the corrupt judges were tried. After a long life of eminent services as lawyer, legislator, and instructor, he died suddenly, in New York City, on the 22d of October.

BERNHARDT, SARAH, a French actress, was born in Amsterdam, about 1847. Her father was a Frenchman, and her mother was Dutch, both parents belonging to the Hebrew race. While a young girl her father placed her in the convent-school at Grand Champ, near Versailles. When she had completed the course of studies taught in the seminary, on expressing a choice for the dramatic profession, she underwent a brief preparation for the entrance examination of the Conservatoire. She owed her acceptance as a pupil of the Conservatoire, it is said, to the expressive and attractive manner in which she recited the tale of "Les deux Pigeons," by La Fontaine, not being provided with a tirade from the dramatists such as it is usual for the candidates to declaim, drawing upon herself the attention of Auber, who was one of the examiners, by her graceful rendering of that simple poem. She entered the Conservatoire in 1861, becoming the pupil of Beauvallet, the famous actor. She was so successful in her studies that she gained a prize for tragedy, winning the right to a *début* at the Théâtre Français. Her appearance in "Iphigénie" with the company of the Comédie Française was praised by some critics and considered full of artistic promise, but was not a professional success. She also played in Scribe's "Valérie," but did no better. Bernhardt next essayed less ambitious rôles upon humbler stages, serving the dramatic apprenticeship which the most gifted actor seldom escapes, and acquiring theatrical experience and routine by performing comedy and burlesque parts in the theatre of the Porte St. Martin, after undertaking and then breaking off an engagement at the Gymnase; and afterward at the Odéon, where she advanced into the front rank of dramatic artists. Her engagement at the Gymnase was to perform in one of Labiche's comedies. She disappeared after the second night's representation, writing a characteristic note to the author, the import of which was that the part assigned her was not satisfactory. At the Porte St. Martin she appeared in a fairy piece under an assumed name. "I have been turned away everywhere; but try me, for I assure you there is something there," is said to have been the phrase which she used in applying to M. Duquesnel, who was associated with M. Chilly in the management of the Odéon; pointing, as she said it, to her heart instead of to her head. Chilly declared that she was only fit for tragedy; but Duquesnel engaged her in opposition

to his partner's judgment. At first she made no distinct impression; but when given the leading part in Alexandre Dumas's "Kean," though the play was coldly received, she herself was enthusiastically applauded.

During the siege of Paris Mlle. Bernhardt left the mimic stage to take a leading part in the patriotic work of nursing the sick and the wounded, tending the ambulances until the end of the war laboriously and devotedly. On the 2d of February, 1872, she reappeared on the boards as Marie de Neubourg in "Ruy Blas," achieving a complete artistic triumph, and gratifying the author not less than the public. This success induced the Comédie Française to not merely receive Bernhardt as an associate, but to press her to become a member of that famous and unique society of dramatic artists by whom the rich traditions of the French stage are sacredly conserved, and invigorated by the constant assimilation of the genuine artistic developments of the modern French theatre. In the Comédie Française Bernhardt could not take the preëminent position which an artist of her powers usually assumes in ordinary companies. Associated with a group of players, all of them of the highest rank, she did not obtain an opportunity to display her talents at first, being unfortunate in the rôles assigned to her. She earliest showed her higher powers in the characters of Andromaque and Junie; but it was not until March, 1874, when the "Sphinx," was brought out, with Bernhardt as Berthe de Savigny, that she became the great favorite of Paris audiences, and began to be spoken of as the foremost tragedienne of the age, and the successor to the laurels of Adrienne Lecouvreur, Dumesnil, Clairon, and Rachel Félix. Bernhardt has had few opportunities to create new characters. Other parts in which she is most admired are Phèdre and Zaïre of the classic French drama, and Adrienne Lecouvreur and Marguerite Gautier, the heroine of the younger Dumas's "La Dame aux Camélias," of the modern realistic drama.

Bernhardt, though of feeble frame and far from physically vigorous, possesses a fund of nervous energy which she is able to call forth in the passionate moments of a play with thrilling effect. She is an assiduous and tireless student in her profession, searching types and suggestions often in the scenes of real life. She shows a wonderful power of dramatic impersonation and imagination in the lifelike manner in which she projects herself into the character assumed in each play. The remarkable delicacy of her perception of character is the result of indefatigable studies. At the production of "Hernani," in 1870, Bernhardt took the part of Donna Sol, a character which had been identified with Mlle. Mars, who made it famous. The novel and sympathetic reading of Bernhardt was declared by Victor Hugo to correspond completely to his poetic ideal. Her praise in this rôle was repeated by the critic Sarcy and echoed by all Paris.

Sarah Bernhardt has cultivated other arts besides the one in which she has won celebrity. After posing for a bust, in 1869, it occurred to her to try her hand at modeling; and since then she has produced several pieces of sculpture which have been praised for their merit. She has also painted in oils with more than an amateur's skill. The subjects which she chooses for her sculptures and paintings are oftenest of a somber and funereal character. She is an accomplished performer upon the harp and the piano. She is known as a graceful and spirited writer for the press, and was at one time art critic of the "Globe" newspaper. She has made several ascensions in balloons, and written descriptions of her aeronautic experiences. A picturesque and elegant villa on the Parc Monceau was built for her after her own plans and drawings.

In the summer of 1879 Mlle. Bernhardt played in a series of French dramas presented by the company of the *Comédie Française* in London, where she was singled out from the company for popular favor and praise in a still more decided way than in Paris. She exhibited her plastic and pictorial creations while there, and gave rehearsals in the houses of the leaders of fashionable English society, requiring to be paid at the rate of a hundred guineas for each performance. The following year Bernhardt returned to London; but she was not this time supported, as she had been the season before, by the strength of the famous company of which she was a member. At this time a difficulty occurred between Mlle. Bernhardt and Émile Augier, the director of the *Comédie Française*, in consequence of which she resigned her position and severed her connection with the company. She was afterward sued for breach of contract, and ordered by the civil tribunal to pay one hundred thousand francs damages to the company. The cause of the rupture with the *Comédie Française* was her want of success in the play of "L'Aventurière," she attributing her failure to the want of time for proper preparation and an insufficient number of rehearsals.

A contract was signed by Sarah Bernhardt with Henry Abbey, of Booth's Theatre, in New York, on June 9, 1880, by which Mlle. Bernhardt engaged to make the tour of the principal cities of the United States, the manager agreeing to pay her one thousand dollars for each performance, with a share also of the profits.

Mlle. Bernhardt arrived in New York toward the end of October, 1880, and in the second week of November commenced her engagement in Booth's Theatre, playing through the series of her most famous rôles. After concluding there, she gave them next in Boston, and then in Philadelphia, playing to very large houses in each city, and winning admiration and applause from the public, and obtaining the highly appreciative, though sometimes qualified and measured, praise of the dramatic critics.

BOLIVIA (REPÚBLICA DE BOLIVIA). For area, territorial division, population, etc., reference may be made to the "Annual Cyclopædia" for 1872 and 1878, and, for a retrospective view of Bolivian statistics and Bolivia's relations with the neighboring states, see our volume for 1879.

The President of the Republic is General Narciso Campero (June, 1880); the first Vice-President is Dr. A. Arce; and the second Vice-President, Señor Belisario Salinas. In December, 1880, the Cabinet was composed of but two Ministers: Señor J. M. Calvo, Minister of Justice, Public Worship, and Public Instruction, and acting Minister of the Interior, and of Foreign Relations; and Señor Belisario Salinas, Minister of War and acting Minister of Finance.

The regulation strength of the army in time of peace is 3,000, as follows: 8 generals, 1,012 subaltern officers, and 2,060 men, maintained, it would appear, at an annual expenditure of \$2,000,000, or about two thirds of the entire revenue. As stated in our article for 1879, the force was raised to 20,000 men accustomed to fighting and the use of arms, after the commencement of the war with Chili. In October, 1880, however, the Bolivian army had, by Chilian reports, been reduced to two battalions.

Information concerning the Bolivian revenue has always been difficult to procure from official sources, and can now be obtained only through indirect channels. The figures of the following table, said to emanate from ex-Minister Don Julio Mendez, give no signs of decreased yield in the usual sources of income, and refer to the period between the declaration of war and December 31, 1879—that is to say, about ten months:

Second half-year, Indian tax.....	\$691,248 70
Tithes, first fruits, etc. (paid almost exclusively by the Indians).....	252,016 00
Coca contribution.....	250,000 00
Bullion from the interior.....	380,000 00
Negotiation with "Banco Nacional".....	600,000 00
Forced loan (collected).....	500,000 00
Joco nitrate-works (saved).....	50,000 00
Southern custom-houses.....	60,000 00
Total.....	\$2,788,264 70

The war expenses, on the other hand, are reported to have been as follows:

Bolivian army in Peru.....	\$1,018,929 00
Fifth division, Campero.....	450,000 00
Total.....	\$1,568,929 00
Balance against the Treasury.....	1,219,835 00
Total.....	\$2,788,264 70

From this table it is apparent that the Indian population, who furnish the tillers of the soil and the fighting element of the country, are also the chief support of the national exchequer.

The national debt was estimated to amount to \$30,000,000 in June, 1879, comprising a home debt of \$21,500,000 contracted by the Government of the republic at various periods, as the forced loan of 1879 to equip the army for the Chilian campaign, and a foreign debt

contracted in England in 1872* for the purpose of constructing a railway. The railway for which it was incurred has not yet been built. The works, commenced in 1872 under British auspices, suffered "unanticipated detentions" until 1877, when they were resumed under American contractors, Messrs. P. and T. Collins, of Philadelphia, several chancery suits having intervened in the course of the five years' interval. The firm just mentioned deposited, states Colonel George Earl Church,* £40,000 as a caution-fund for compliance with their contract to complete the road from end to end. They sent several large ocean-steamers directly from Philadelphia to the northern terminus of the road at San Antonio on the river Madeira, where there are now (April, 1880) about fifty miles of railway material and contractors' plant. In a short time they had a thousand men at work, and a locomotive running over the first and worst five miles of the road. They cleared fifteen miles of forest, cut large quantities of sleepers, employed four large corps of engineers actively in the field, and thoroughly demonstrated the perfect practicability of the work. As this was thus again being vigorously pushed forward, the bondholders filed a new bill in chancery, March 2, 1878, alleging the revocation of the Bolivian concession and the impracticability of the railway. The trustees were again prevented from applying the trust fund. As in the previous suit, the plaintiffs resorted to every imaginable device to delay the trial. It finally took place before Mr. Justice Fry, April, 1879, who, after hearing their witnesses, dismissed the bill, with costs. Their own engineers gave evidence proving the perfect practicability of the road. The bondholders appealed from the decision. The appeal was heard by the Lords Justices in May, 1879. These held that, owing to the lapse of time, the seven years during which the plaintiffs, the bondholders, had succeeded in preventing the construction of the railway, the burden of proof of its practicability rested upon the defendants, the Navigation and Railway Companies. These gave ample engineering evidence, by their engineers, as to the physical feasibility of the road and its ease of construction. The Court of Appeal gave judgment in May, 1879, to the effect that, "no doubt the scheme was a great one, and one which, if there had been funds and other means for carrying it into effect, would probably produce the revenue which would afford a security for the bondholders"; and then decided that "the railway was impracticable in a business sense," ordering the trust fund, £850,000, to be distributed, *pro rata*, among the bondholders, and the Bolivian bonds to be surrendered and deposited in the Bank of England,

and declaring, moreover, that "the loss of the £850,000 makes the scheme impracticable." The defendant companies appealed to the House of Lords, and the Lords, while eulogizing the magnitude of the enterprise, and lauding the good faith of Colonel Church and its other promoters, confirmed the decision of the Court of Appeal. Bolivia is thus placed in a unique position, continues Colonel Church. Her own bondholders submit her to a relentless litigation of six years, preventing the opening of the commercial route for which they subscribed the loan. Even pending litigation, up to 1875, she paid interest on the loan, and now she finds herself without the money, without the railway, without her bonds, and, by judgment of the Court of Appeal, confirmed by the House of Lords, is told, practically, that an unauthorized act of her diplomatic agent* is more powerful than her Congressional decrees. The following extract from a letter to the London "Times," by its Philadelphia correspondent, in May, 1880, shows how the interests of the American contractors have been affected by the foregoing decision:

The House of Lords, in affirming the decision of the Court of Appeal in reference to the Bolivian loan, deprived the American contractors for the Madeira and Mamoré Railway of Bolivia, and Brazil of any chance of getting payment for work already done and materials furnished. These contractors, Messrs. P. and T. Collins, of Philadelphia, and their creditors, have presented a petition for relief to Congress. They request the passage of a resolution by Congress, asking the President to bring the matter alleged in their petition to the attention of her Majesty's Government, and also instructing the Secretary of the Treasury to give public notice that the United States bonds now in the Bank of England, being the trust fund for the construction of the Madeira and Mamoré Railway, will not be paid by the United States until the rights of the petitioners to the fund are respected. They also ask for such other relief as may be due to them by reason of the fact that, as American citizens, their rights and property are being jeopardized by the hostile action of the Government of Bolivia, in attempting to withdraw the concession and grant of money, upon the faith of which the contractors agreed to build the railway, and have already expended their money. This petition was presented in the Senate by Senator Bayard, and in the House by Speaker Randall. The contractors and their creditors have expended nearly \$1,000,000 on the work, the Philadelphia and Reading Railway, which is mainly owned in England, having furnished large quantities of materials, and being a principal creditor. The numbers of the \$3,727,900 United States bonds in the trust are in the possession of the contractors, and will be furnished to the Secretary of the Treasury. The petitions have been referred to appropriate committees by Congress, but their contemplated action has not yet transpired.

As observed in our volume for 1879, no reliable returns of Bolivia's exports and imports have ever been published by any of the Government departments; hence the impossibility of all but conjecture as to the aggregate value of the foreign trade of the republic. The sub-

* See "Annual Cyclopædia" for 1879, p. 81.

† The instigator of the enterprise, and to whom, as the result of a treaty between Brazil and Bolivia, both countries made concessions, having for their object the opening of a commercial outlet for Bolivian products to the Atlantic through the Amazon River, and its great tributary the Madeira.

* The Bolivian Minister, who, in June, 1876, addressed a letter to Colonel Church, assuming to declare the concessions of the navigation company to be null and of no value. No evidence appears to have since been produced of his authority for the act.

joined table shows the total value of the imports from and exports to Great Britain in the quinquennial period 1874-'78, according to British returns :

YEARS.	Imports.	Exports.
1874.....	\$271,905	\$1,713,185
1875.....	481,440	2,309,895
1876.....	991,830	2,065,595
1877.....	484,690	1,882,260
1878.....	366,975	3,005,130

Copper, nitre, and guano were the commodities chiefly shipped to Great Britain, whence the articles imported are for the most part cotton, linen, and woolen manufactures and machinery. Bolivia being cut off from direct communication with the Pacific seaboard since the commencement of the war with Chili, her foreign trade must of necessity be very limited at present. Nor will any one be surprised to learn that imports are subject to a very high rate of duty, particularly on some articles from the United States. For example, 100 lbs. of soap, costing in New York \$4.57, pay an import duty equal to \$2.75 United States money; a gallon of kerosene with the tin containing it, which costs in New York thirteen cents pays a duty equal to nine and a quarter cents of the same money; and, besides these enormous duties, Bolivia permits Peru to charge five per cent. additional for transit across her territory, from the port of Arica. Nevertheless, the products of Bolivia are admitted into the United States free of duty of any kind. "We can not understand," writes a merchant established in La Paz, "why the United States Government maintains at great expense a Minister in this republic who does nothing to forward the interests of American manufacturers in this matter. Nothing could be more simple than to induce Bolivia to enter into a reasonable commercial treaty on a reciprocal basis."

Nothing could well be more deplorable, in a political point of view, than the picture presented by Bolivia in the course of the past year. Immediately after the reverses of the allied Peruvian and Bolivian arms, which precipitated ex-President Prado's determination to seek safety in flight, General Daza abandoned his post of Chief Magistrate of Bolivia, and fled to escape being assassinated. In Bolivia all is bitterness, writes a journalist from Valparaiso, in February, 1880; everybody wants to be President, and we can not say who is governing; Minister Jofré is in Oruro; General Campero has accepted the Presidency provisionally; Camacho is in command of the Bolivian army stationed at Tacna; and, lastly, Daza has withdrawn to the interior, with the evident intention of provoking a reaction in his favor. General Campero was duly invested with the power in constitutional form in June, and lost no time in appointing a Cabinet, and taking such steps as he deemed most urgent for the continued maintenance of troops at the seat of war. Early in September, the Bolivian Con-

gress issued a decree for a forced loan from all the departments of the republic to the amount of \$500,000, with interest at ten per cent., the bonds to be received in payment of taxes. The Congress further authorized the Government to make new emissions, if necessary, and determine the guarantees for their payment. By another decree of the Congress, \$200,000 in small money, of from one to ten cents, was to be coined in nickel, copper, or other metal.

Yet governmental energy, zealously seconded by individual patriotism, for the enthusiasm for the war had not diminished in Bolivia, was insufficient to grapple successfully with the ever-increasing difficulties of the situation. The National Convention, already called into existence, lent efficient aid to the Executive in devising and carrying out plans for the creation of resources with which to continue the struggle without truce and regardless of sacrifices. The following decree, issued on February 21st, will serve to illustrate the spirit and determination of that body:

ARTICLE I. The National Convention of Bolivia has ordered the sale by public auction of the property of all the convents and monasteries of the republic, except the eighth part, which is destined for the support of the religious communities.

ART. II. The sale is also ordered of the treasures of the churches, including the ornaments of the images, the sacred vessels being alone excepted.

ART. III. The product of the sale shall be applied to defraying the expenses of the war, such as the purchase of ships, the levying of troops, etc.

ART. IV. Priests who in the pulpit or in any other place, and laymen who in the press or in public meeting, oppose the execution of this law, either pacifically or by promoting public disturbances, shall be tried as traitors to the country.

Prior to the date of this decree, the forced loan, already alluded to as forming part of the national revenue for 1879, had been ordered and collected to the amount of \$500,000; and other measures of like character were resorted to later. Still, the Bolivian army was but an insignificant factor at the seat of war; indeed, at the end of June, telegrams (from Santiago, the capital of Chili) announced that it was completely disbanded, the men receiving neither pay nor food, and selling their arms and accoutrements to obtain temporary relief. "In the four corners of the republic," exclaims a leading journal of La Paz, in July, "dismay and dejection seem to threaten the destruction of our nationality, and, in the midst of the awful confusion, what means of salvation remains to us? Shall we yield to the conqueror? No, a thousand times no! However great our effeminacy be, or however deep the grief brought upon us by the disasters of San Francisco and of the Alianza, it is our duty to look up to Heaven for that strength which the earth denies us, and set about the grand work of defending our country. Savages in their miserable condition do not bow under defeat, but perseveringly defend their huts and their families, and are we to triumph by tears and cowardly inaction? Do we not blush at the thought of our

children learning hereafter of our selfishness and our moral and physical degradation? In this deplorable state of things, let us renew our efforts to arouse the slumbering spirit of our countrymen to reconstruct Bolivia, prepare for the national defense, and gain the victory over Chili, cost what it may. To that end the National Convention should, we think, continue for at least six months longer its labor of reconstructing our demoralized national administration. Let the representatives be paid, for no labor is more worthy of remuneration than theirs. Exactions can lead to no practical or useful end. The members of the Convention have hitherto manifested an unusual degree of self-denial in the service of their country. Many of them will continue to do so; but such can not be expected to constitute the rule. It is but fair that those who devote their time and energy to the cause of Bolivia, and thereby neglect their own private concerns, should be remunerated. In the trying times through which we are now passing, it is not prudent to expect everything of the Executive. Chili, in making war against us, has had the counsel and guidance of her people's representatives, while we intrusted everything to the Government. What has been the result? Daza's Government plunged us in ruin; and the present Government, spite of all its patriotism, will at no distant day lose its prestige, for of professional malcontents there is, unfortunately, no lack in Bolivia. The wise direction of public affairs requires the energetic coöperation of the Parliament with an honest Government like that of the illustrious General Campero. Our country's wounds need the firm hand and determined treatment of a National Convention, and a National Convention alone. Lastly, Bolivia, like the phoenix, must find within her own breast the secret of her regeneration. The Assembly, by the light of their understanding, the Executive by patriotic action, and the people by unceasing labor in the cultivation of the fruits of the earth, must raise up the nation from the depths to which she has fallen, and carry our arms to the retrieval of honor lost and soil usurped." A confederation between Peru and Bolivia, accepted by the people of the first country in June, and to be decided upon by a *plebiscitum* in the second, appears to have been favorably considered by the National Convention at La Paz, and the question even submitted to the President for Executive sanction in October. (The leading incidents of the war will be narrated in the article PERU.)

BRAZIL (IMPERIO DO BRAZIL). (Statistics concerning area, territorial divisions, population, etc., will be found in the "Annual Cyclopædia" for 1878.) The commissioners appointed to determine the limits of the empire with the neighboring republic of Venezuela were reported to have made satisfactory progress. At latest accounts the Brazilian section had advanced as far as Maroa, a Venezuelan village

situated on the Rio Negro and above San Carlos; while the Venezuelan commissioners were at Javita, one day's journey beyond that point.

According to the latest official returns, the number of slaves in Brazil was 1,368,254; but as these figures were taken from registers reaching only to the end of 1878, the number must at present be several thousand less, allowing for deaths, and for public and private emancipation. The distribution of the accumulated emancipation fund (about \$2,204,940) was, however, based on the same returns; and the following table shows the number of slaves in, and the share of said fund allotted to each of the provinces at the close of the year above referred to:

PROVINCES.	No. of slaves.	Amount.
Município Neutro.....	43,409	\$71,391
Rio de Janeiro.....	259,239	475,683
Pernambuco.....	91,992	166,292
Maranhão.....	63,164	103,880
Amazonas.....	974	1,632
Pará.....	30,923	50,383
Rio Grande do Sul.....	75,937	124,887
Sergipe.....	26,881	43,886
Santa Catharina.....	12,829	21,098
Rio Grande do Norte.....	10,123	16,969
Piahy.....	21,216	34,802
Espirito Santo.....	21,216	34,892
Alagoas.....	30,397	49,091
Paraná.....	10,088	16,540
Matto Grosso.....	7,051	11,596
São Paulo.....	168,550	277,858
Bahia.....	116,109	190,953
Minas Geraes.....	289,919	476,806
Goyaz.....	6,663	11,451
Parahyba.....	25,696	42,095
Ceara.....	25,773	42,370
Total.....	1,368,254	\$2,204,940

It is stated that, in virtue of a recent revenue law, the emancipation fund will be doubled in the fiscal years 1881-'82, and be probably about \$1,000,000.

In the matter of immigration, Brazil has been particularly unfortunate, notwithstanding the many sacrifices she has made with a view to attracting useful colonists to her shores. Recent experiments with Russians have been attended with results so unfavorable as to discourage the Government from further attempts of the kind. Indeed, it would appear that the abandonment of state immigration has been resolved upon, and that recourse will hereafter be had to the more practical plan of reforming the land laws so as to facilitate grants, sales on credit, and leases, thus affording to small holders easy terms and security from former trammels. Notice is stated to have been transmitted to Europe that the "assisted passage" system would be discontinued, except in the case of already existing contracts; and on the 7th of May all Government lodging-houses were to be closed. Frequent allusion has been made in the British and in the Brazilian press to the disadvantage of allowing large tracts of land to be held on a nominal tenure, yet lying neglected and uncultivated; and it is hoped that the remedial measures just mentioned, together with others in con-

temptation, will not only remove old evils, but afford a free scope to labor, encouraging useful industry, and offering to settlers the incentive of being enabled to benefit their future condition by terms of equality. The subject of Chinese immigration has been mooted, with the assurance that experiments in that direction might prove eminently successful. As examples of the efficiency of Chinese labor, California and Australia have been alluded to; but in both of these the prevailing conditions were different from those characterizing Brazil, where the only desideratum is not competition for labor but hands to cultivate the soil.

The Emperor is Dom Pedro II, born December 2, 1825; proclaimed April 7, 1831; regency until July 23, 1840; crowned July 18, 1841; married September 4, 1843, to Theresa Christina Maria, daughter of the late King Francis I of the Two Sicilies.

A change of Ministry occurred early in the year, but did not result in a change of party, the Liberals continuing in power. The new Cabinet was made up as follows: Minister of the Interior, Baron Homem de Mello; of Justice, Councilor M. P. S. Dantas, Senator; of Foreign Affairs, Councilor P. L. Pereira de Souza, Deputy; of Finance, Councilor J. A. Saraiva, Senator, and President of the Council of State; of War, Viscount de Pelotas, Senator; of the Navy, Councilor J. R. Lima Duarte, Deputy; of Public Works, Commerce, and Agriculture, Councilor M. Buarque de Macedo, Deputy.

The Council of State was composed of the following members in ordinary: the Princess Imperial Donna Isabel; Prince Gaston d'Orléans, Count d'Eu; the Senators—Viscount d'Abaeté, Viscount de Muritiba, Viscount de Bom Retiro, Viscount de Jaguary, Viscount de Nietheroy, Viscount de Araxá, J. P. Dias de Carvalho, and J. J. Teixeira; Vice-Admiral J. R. de Lamare; Dr. P. J. Soares de Souza; and of six members extraordinary: Senators—J. L. C. Paranaçu and M. P. S. Dantas; Councilors—Martin Francisco and B. A. de M. Taques; Viscount de Prados, and Dr. J. C. de Andrade.

The President of the Senate, which comprises fifty-eight members elected for life, is Viscount de Jaguary; and the Vice-President, Count de Baependy.

The President of the Chamber of Deputies, with one hundred and twenty-two members elected for four years, is Viscount de Prados; and the Vice-President, F. de Almeida.

The Presidents of the several provinces were as follows:

Alagoas.....	Dr. C. Pinto da Silva.
Amazonas.....	Baron de Maracá.
Bahia.....	Dr. A. Aragão Buleao.
Ceará.....	Dr. J. J. de Albuquerque Barros.
Espirito Santo.....	Dr. E. S. Martins.
Goyaz.....	Dr. A. S. Spínola.
Maranhão.....	Dr. L. O. Lino de Vasconcellos.
Mato Grosso.....	Dr. J. J. Pedrosa.
Minas Geraes.....	Dr. M. J. G. Rebello Horta.
Pará.....	Dr. J. C. da Gama e Abreu.
Paraguayba.....	Dr. U. M. Pereira Vianna.
Paraná.....	Dr. M. P. S. Dantas Filho.

Pernambuco.....	Dr. A. de Barros Cavalcante.
Planhy.....	Dr. J. P. Belfort Vieira.
Rio Grande do Norte.....	Dr. R. L. Marcondes.
Rio de Janeiro.....	Dr. A. M. Marcondes de Andrade.
Santa Catharina.....	Dr. A. A. Oliveira.
São Paulo.....	Dr. L. A. de Brito.
São Pedro (Rio Grande) do Sul.....	Dr. F. Pereira da Silva.
Sergipe.....	Dr. T. F. dos Santos.

The Archbishop of Bahia, N——, is Primate of all Brazil, and there are eleven bishops: those of Pará, São Luiz, Fortaleza, Olinda, Rio de Janeiro, São Paulo, Porto Alegre, Marianna, Diamantina, Goyaz, and Cuyabá.

The Brazilian Minister Plenipotentiary and Envoy Extraordinary to the United States is Councilor A. P. de Carvalho Borges, accredited October 9, 1871; and the Brazilian Consul-General (for the Union) at New York is Senhor Salvador de Mendonça.

According to the law of February 27, 1875, military service is obligatory for all Brazilian citizens; but numerous exceptions are admitted, and substitution is allowable. The period of service is six years in the regular army, and three in the reserve. The regulation strength of the army in time of peace is fixed at 13,000 men; though the actual strength in 1880 was 15,804, of whom 1,743 were officers. The strength in time of war was to be fixed at 32,000. The arms were distributed as follows: Infantry, twenty-one battalions, eight garrison companies, and one dépôt company for drilling recruits; cavalry, five regiments, one squadron, and five garrison companies; artillery, three mounted regiments, and five foot-battalions; sappers and miners, one battalion; gendarmes, 8,340 men, of whom 931 were at Rio de Janeiro. The National Guard had been disbanded, and was to be reorganized on completion of the new census.

The navy, in 1880, consisted of nine iron-clad steamers, six steam-corvettes, sixteen steam-gunboats, and six steam-transports; and three sail of the line (one corvette and two smaller craft); with an aggregate of 3,758 men, and a total armament of 166 guns. There were, besides, five iron-clad ships, one gunboat, one school-ship, and one brig for midshipmen, all without armament; and there was a gunboat in process of building. There were in the navy 14 general staff-officers, 340 first-class officers, a sanitary corps 73 strong, 17 almoners, 88 accountants, 57 guardians, and 185 engineers; an imperial marine corps 2,695 strong; a naval battalion, 286, and 1,229 apprentices; total, 4,984 men.

The financial position of the empire may in general be considered to have improved, owing mainly to increased productions, the coffee-crop alone promising to fall little short of 300,000 tons (or 672,000,000 pounds)! The issue of gold bonds has proved a financial success—these obligations being largely held in England and in Brazil, and regarded as a favorite investment.

In a non-official report published in July, 1880, the revenue for the fiscal year 1878-79

was set down at \$115,302,355, and the expenditure at \$90,178,304, with a consequent surplus balance of \$25,124,051 for the year 18,9-'80.

In the budget for 1881-'82, the revenue and expenditure were respectively estimated as shown in the subjoined tables:

REVENUE.	
General receipts (ordinary and extraordinary)....	\$58,029,000
Emancipation fund.....	450,000
Total.....	\$58,479,000
EXPENDITURE.	
Ministry of the Interior	\$4,001,107
of Foreign Affairs	431,452
of Finance	29,735,877
of Justice	3,360,143
of Agriculture	9,538,830
of War	6,806,573
of the Navy.....	5,269,166
Total.....	\$59,143,378
Deficit	\$664,378

Later returns, however, published in September, 1880, gave the estimated revenue at \$57,129,000, and the expenditure at \$57,073,423, whereby, instead of a deficit, as above, there would be a surplus of \$55,577.

The total amount of the customs receipts at Rio de Janeiro, for 1879, was \$20,877,663, against \$20,339,380 for 1878, as follows: Import duties for 1879, \$15,977,499, against \$16,072,746 for 1878; export duties for 1879, \$4,900,164, against \$4,266,634 for 1878. The receipts at the same custom-house bid fair to show a still further increase for 1880, having amounted in the first three quarters of that year to \$15,772,151, against \$15,718,395 for the corresponding period in 1879.

A report was current in July, 1880, that the Brazilian customs tariff was again to be revised, and that the Minister of Finance had appointed a committee for that purpose. Such intelligence is far from gratifying, observes a Rio journal, as tariff revisions in Brazil have become synonymous with "tariff elevations." As stated in a previous volume,* the merchants of Rio de Janeiro, on the occasion of the last revision, were invited to take part in the work. After bestowing much time and labor on the question, they found that their suggestions had been uniformly acted upon when favoring an increase of duty, and disregarded when urging the necessity of a reduction. The tariff went into operation on January 1, 1880, and the short period of six months was sufficient to demonstrate that it was based on wrong principles: continual conflicts between the mercantile community and the custom-house officials, diminished importation and sale of certain kinds of commodities, enhanced cost of all means of living for the working-classes, new difficulties in the collection of duties, multiplied complaints of the people, and a general decrease of receipts (spite of the promising state of things at the Rio custom-house, as above

referred to)—such were the results produced by its application.

The subjoined table exhibits the amount and branches of the national debt of Brazil on March 30, 1880:

Foreign debt, at five per cent. interest, payable in gold.....	\$75,538,666	
HOME DEBT.		
Payable in paper money, at four, five, and six per cent.....	\$768,753,550	
Payable in gold, at six per cent.....	37,055,500	
		205,812,050
FLOATING DEBT.		
Debt prior to 1827.....	\$160,365	
Orphans' and other funds.....	25,438,829	
Treasury notes (at two, four, and six months).....	6,166,350	
Paper money (Government notes*)	94,399,795	
		126,365,839
Total.....		\$407,716,065

The following extract from a British financial journal will be found to contain interesting remarks on the Brazilian home debt, and Brazilian credit generally:

In September, 1879, Brazilian five per cents. of the 1865 issue had a medium quotation of 93: in the third week of September, 1880, the corresponding price of these bonds was 96. Some allowance must be made for the fact that all securities have been gradually hardening in price of late in consequence of the cheapness of money; but, even allowing for this, we think it must be admitted that Brazilian credit has improved during the past twelve months. When foreign bonds fell into general discredit, four or five years since, on the collapse of Paraguay, Bolivia, Costa Rica, Honduras, Turkey, Peru, etc. (to say nothing of the partial defaults of Spain, Egypt, and Uruguay), Brazil found her credit seriously weakened, and she became unable to negotiate further loans in London. Under these circumstances, she adopted probably the best and most sensible course which she could pursue—she raised a considerable loan at home. Although the rate of interest attached to this internal loan did not exceed 4½ per cent. per annum, the operation proved completely successful, and while it placed the Brazilian Treasury in funds, it had the further advantage of showing that Brazil possessed such ample resources at home that she really could afford to dispense with English assistance. The 4½ per cent. internal loan concluded by Brazil in 1879 marked, indeed, a new era in Brazilian finance, and reestablished Brazilian credit. The result has been an advance of three per cent. in Brazilian five per cents. of 1865, and a still greater hardening in the securities of railways guaranteed by Brazil. There certainly appear to be order, regularity, and good faith in the financial administration of Brazil. In the bonds of Brazil issued in London the Emperor of Brazil pledges his "imperial and sacred word" that the conditions of the various Brazilian loans shall be scrupulously adhered to; and thus far his Majesty's "imperial and sacred word" has certainly been found to be thoroughly reliable. In her present Emperor Brazil is blessed with a wise and beneficent ruler, distinguished by tendencies at once conservative and liberal. Brazil is deeply indebted to Dom Pedro Segundo.

The long-pending British claims against Brazil have again come to the surface, and hopes are entertained of their settlement through the mediation of Mr. Ford, now accredited as British Minister to Brazil, and whose name was associated with the famous fishery question between England and the United States.

* Exclusive of the notes of the Bank of Brazil and of the banks of Bahia, Pernambuco, and Maranhão, the aggregate amount of which in circulation in 1879 was about \$13,500,000.

* See "Annual Cyclopædia" for 1878.

The foreign trade of the empire for the year 1878-'79 was of the total value of \$183,782,150, of which \$102,029,250 were for exports and \$81,752,900 for imports.

The annexed table exhibits the names and values of the chief staples of export for the year just mentioned:

Commodities.	Values.
Coffee.....	\$56,740,950
Sugar.....	10,906,050
India-rubber.....	3,450,400
Raw cotton.....	4,593,150
Tobacco.....	3,589,550
Skins.....	4,176,250
Maté (Paraguay tea).....	1,357,800
Gold (ingots and dust).....	1,111,150
Diamonds.....	472,250

The imports from Great Britain in 1878 were of the value of \$27,889,760, against \$29,793,275 in 1877; and the exports from Brazil to Great Britain in 1878 were of the value of \$23,252,425, against \$31,724,805 in 1877. A marked decrease is here observable; and, indeed, the trade between these two countries has been steadily declining since 1874, in which year the imports from, and the exports to,

Great Britain were of the values of \$38,392,265 and \$35,015,650 respectively.

Of all the articles of production in Brazil, and of all the Brazilian export staples, coffee is by far the most important, and the chief shipping ports for the staple are Rio de Janeiro and Santos. From the following table it will be seen that while the quantity exported from Rio in the year ending June 30, 1880, was nearly 20 per cent. less than in the year immediately preceding, it closely approximated the average of the past six years. The Rio average is at present about 173,000 tons,* while that for Santos has risen to 55,000 tons, the exports from the latter port having been, however, considerably above that average in the past two years. The total average shipments of coffee from Brazil for the past five or six years closely approximate 225,000 tons; but in 1878-'79 they reached 280,000 tons, and there is every prospect of a crop of 235,000 tons from the Rio district in 1880-'81, and as much as 60,000 tons from Santos, or a total approaching to 672,000,000 pounds!

Coffee Shipments from Rio de Janeiro for the Six Years from July 31, 1874, to June 30, 1880.

DESTINATION.	1874-'75.	1875-'76.	1876-'77.	1877-'78.	1878-'79.	1879-'80.	Annual average for six years.

It is reported that jute is to become an article of export from Brazil, and that a privilege has been granted to the Messrs. Steel for the production of it on waste lands, particularly in the vicinity of Rio de Janeiro. Judging from what it has done for East Indian exports, it is fair to presume it will prove a valuable accretion to the Brazilian staples.

The projected establishment at Rio of a permanent exhibition for American manufactures was much talked of in the past year.

The shipping movements at the various ports of the empire in 1878-'79 were as follows:

VESSELS.	Number.	Tonnage.
ENTERED.		
Ocean.....	2,368	2,414,985
Coasting.....	5,946	1,529,752
CLEARED.		
Ocean.....	3,057	2,863,554
Coasting.....	5,746	1,176,006

The Brazilian Government has contracted with Mr. William Darley Bentley for a monthly

line of mail-steamers between Rio de Janeiro and Halifax, N. S., calling at Bahia, Pernambuco, Ceará, Maranhão, Pará, and St. Thomas, W. I., making the trip from Rio in twenty-nine days, and from Halifax in twenty-eight days, with privilege of calling at Montreal, at the option of the contractor. The vessels are to be of at least eighteen hundred tons burden (gross), with accommodations for forty first-class and one hundred steerage passengers. The subsidy is 100,000 milreis currency per annum, and the contract is for ten years. The service is to commence on October 1, 1881. In case of the repeal by Canada of the favors of the revenue law of 1879, the Brazilian Government may cancel the contract, giving six months' notice. The contractor was to furnish a guarantee of 10,000 milreis within three months of the date of the contract.

The Amazon Steam Navigation Company is spoken of as an enterprise highly creditable to Brazil.

At the end of 1879 there were in the empire 1,911 miles of railway, and 4,340 miles of telegraph, with 123 offices, the number of dispatches having been 232,022. Brazilian progress

* Of 2,240 pounds each.

is in a great measure due to the development of the railway system of the empire. A seven per cent. imperial guarantee is now given in the case of all lines having a Government sanction. Most of the lines have been constructed with British capital and by British contractors, and the main offices of some are situated in London. Some concessions have, however, been obtained and the necessary capital raised by local contractors; and a new line from the port of Paranaguá to Coritiba, the capital of the province of Paraná, and inaugurated in April last by his Majesty Dom Pedro II, is due to the enterprise of a French company, who also provided the required capital. Many of the civil engineers engaged on the native railways, and some of those on the English-built lines, are Brazilians, engineering being a profession high in favor at present in Brazil.

An important event in Brazilian submarine telegraphy was the concession, in October last, to the Western and Brazilian Telegraph Company, to extend their cable from Pará to Cayenne, their intention being to establish communication at the latter point with the United States cable.

Among the more important improvements during the past year may be mentioned the construction of water-works for supplying the city of Rio de Janeiro.

Here follows the Emperor's speech on the occasion of closing the legislative session ordinary of 1880, and opening the session extraordinary, on October 5th:

AUGUST AND MOST WORTHY REPRESENTATIVES OF THE NATION: The meeting of the General Assembly is always an event productive of lively satisfaction.

It is pleasant to me to inform you that good relations of friendship continue between Brazil and the foreign powers; but I am unable as yet to have the pleasure of announcing to you the cessation of the war between the Republic of Chili and those of Peru and Bolivia.

Public order has suffered no alteration.

Thanks to Divine Providence, copious rains have terminated the drought which devastated some of the northern provinces.

I thank you for the solicitude with which, while diminishing the burdens of the nation, you have adopted adequate measures for the production of an equilibrium of the public expenditure and revenue.

The imperative need of giving a definite solution to electoral reform has induced the convocation of the extraordinary session.

August and most trustworthy representatives of the nation:

I expect from your patriotism the decretal of a law securing freedom of voting.

The ordinary legislative session is closed, and the session extraordinary is open.

The first clause of the long-discussed electoral bill was adopted by the Senate in the month above alluded to; it was regarded as the most important, as being pregnant with elements of much-needed reform, such as direct election, instead of the obsolescent system of indirect election; but, unfortunately, it was sent to the Senate shorn of its brightest adornments—provision for the admission to Parlia-

ment of naturalized citizens and citizens of all creeds.

BRIGHT, JOHN, the Chancellor of the Duchy of Lancaster in the new Cabinet of Mr. Gladstone, was born November 16, 1811, at Greenbank, near Rochdale. His father, Jacob Bright, was a cotton-spinner and manufacturer of Rochdale, and belonged to the Society of Friends. John entered his father's business at the age of fifteen, and devoted his leisure hours with great zeal to the study of the best works on history, politics, and national economy. After his return from a journey on the Continent of Europe, he made his first appearance in 1831 as a political speaker in the agitation against Church rates. He became widely known by the prominent part he took in the Anti-Corn-Law League, which grew out of an association formed in 1838 to obtain the repeal of the corn-laws. He won so great distinction as a political speaker, that the League, which extended its operations over all England, appointed him, in 1839, one of its official agitators. In April, 1843, he was the candidate of the League for the city of Durham, but was defeated. In July, 1844, he was, however, returned for the same city, which he represented until 1847. In union with Cobden, Milner Gibson, Fox, and others, he was one of the foremost speakers of the League until its victory was decided in 1846. In 1847 he was returned for Manchester, and was now regarded in every respect as one of the leaders of the Manchester party. He particularly cooperated with Mr. Cobden in the movement which the latter sought to create in favor of financial reform. He demanded efficient relief measures for Ireland, an investigation of the condition of India, and a reduction of the naval and military establishment of the kingdom. He opposed, in 1850, Lord Russell's Ecclesiastical Title Bill and Lord Palmerston's Continental policy. When, two years later, the Derby-Disraeli Cabinet threatened a restoration of the protective system, he actively contributed to its overthrow. Thus far, Mr. Bright's reputation and influence had steadily grown, but the decided opposition which he made to England's participation in the Eastern War alienated many of his former friends, and in the general election following Lord Palmerston's appeal to the country, in 1857, both he and Mr. Milner Gibson were rejected by a large majority. When, a few months later, a vacancy occurred at Birmingham, Mr. Bright was invited to become a candidate, and he was elected in August, 1857. He has continued to represent Birmingham ever since. Mr. Bright's name, during the last twenty years, has been prominently identified with the extension of the right of suffrage and the reform of the electoral laws of England. During the civil war in the United States, he warmly sympathized with the North. He visited Ireland in 1866, and was entertained in Dublin at a public banquet; but, on the whole, his reception was not as enthusiastic as his English friends

had anticipated. In 1868 the city of Edinburgh presented him with the freedom of the city. In the same year Mr. Bright became for the first time a member of the Cabinet, being appointed President of the Board of Trade in Mr. Gladstone's first Cabinet. Illness compelled him to relinquish this office in December, 1870, and he did not again take office until 1873, when he was appointed Chancellor of the Duchy of Lancaster. He held that post until February, 1874, when the Liberal Cabinet went out of office. Selections of his political speeches have appeared under the titles: "Speeches on Parliamentary Reform" (London, 1867); "Speeches on Questions of Public Policy" (edited by Rogers, 2 vols., London, 1869); and "Speeches on the Public Affairs" (London, 1869). A "Life of John Bright" has been published by Mr. Gilchrist (London, 1868).

BROCA, Dr. PAUL, French Senator and scientist, died July 9th. He was born in 1824, at Sainte-Foy-la-Grande, Gironde; studied medicine under his eminent father, graduated from the Paris Faculté de Médecine in 1844, and became an assistant in the hospital. He won several prizes, became demonstrator of anatomy and prosecutor, and in 1849 took his degree of M.D. In 1852 he published a thesis on the "Pathological Anatomy of Cancer." In 1853 he passed as surgeon, and became successively surgeon of the Bicêtre, the Salpêtrière, the Saint Antoine, and Professor of Surgical Clinics at La Pitié. He published works on "Abdominal Hernia" (1856); "Aneurisms" (1856); "Surgical Hypnotic Anæsthesia" (1859); "Fractures and Osseous Regeneration" (1859); "Resuscitating Animals" (1860); "Animal Hybridity in General and Human Hybridity in Particular" (1860); and "Treatise on Tumors" (1865). He was conjoint author with Bonamy, Beau, and Hirschfeld, of "The Descriptive Atlas of the Anatomy of the Human Body," an invaluable work. He was also a frequent contributor to the bulletins of various societies. He was a member of the Anatomical, Biological, Philomathic, and Surgical Societies, and a corresponding member of the leading foreign scientific associations. He was the principal founder of the French Anthropological Society. He was the director of the School of Anthropology and of the Anthropological Laboratory of the École des Hautes Études. His anthropological researches resulted in the publication (1865) of a manual in regard to the best mode of conducting them, followed by "The Physical Character of Prehistoric Man" (1868), and "The Comparative Anatomy of Man and the Primates" (1869). He contributed important articles to the "Encyclopædic Dictionary of the Medical Sciences." Dr. Broca was one of the earliest adherents in France to the Darwinian theory. His advocacy of these views prevented at first his election to the Senate. He was a moderate republican in politics, and in 1880 he was elected life-senator in the place

of Count Montalivet. He was President of the Congress of Anthropology held in Paris at the Trocadéro, during the Universal Exposition of 1878.

BROUGHAM, JOHN, an American playwright, actor, and scholar, was born in Dublin, Ireland, May 8, 1810. He graduated with honor at Trinity College, Dublin. Charles Lever was one of his classmates, and Brougham is said to have been the original of "Harry Lorrequer." He studied medicine, but never became a surgeon. He made his *début* as an actor in 1830 in the extravaganza of "Tom and Jerry," played at a small theatre in Tottenham Court Road, London. As "general utility man," in 1832 he joined the company under the management of Madame Vestris, first at the Olympic and afterward at Covent Garden. In 1840 he undertook the management of the Lyceum Theatre, London. He then began his career as playwright, his first work being "Life in the Clouds." To retrieve his fortunes he came to the United States in 1842, and made his *début* at the Park Theatre, New York, as *Tim Moore* in "The Irish Lion." He became a favorite, and his popularity as an actor never waned during his long career upon the American stage. His misfortunes were due to his attempts as manager, for which position he was unfitted. He founded Brougham's Lyceum (afterward Wallack's), tried the Bowery Theatre, and finally leased Fisk's Fifth Avenue Theatre, all of which proved as unlucky as his first venture in London. He produced many plays, the well-known burlesques "Metamora," "Columbus," and "Pocahontas"; an adaptation from "Dombey and Son," which held the stage for many seasons; "The Haunted Man," "Gold Dust," and numerous others. The best of his comedies, "Playing with Fire," was played in New York, and afterward in London, with marked success. His well-known adaptation from Féval's "Le Bossu," called "The Duke's Motto," was written for Fechter, of whose company he was then a member. In 1861 Brougham went to London and played at the Lyceum and Princess's Theatres. He returned to America and resumed his theatrical career. The failure of a banking firm swept away his fortune; broken in health but not in spirit, he spent his last days in the city with which he was identified. A benefit organized by his fellow-players produced over ten thousand dollars, with which an annuity was purchased. He died in New York on June 7th, aged seventy. He left an autobiography, and an unpublished play called "Home Rule."

BULGARIA, a principality of Southeastern Europe, which was created in 1878 by the Treaty of Berlin, as a dependency of Turkey. Reigning Prince, Alexander I,* elected in 1879; area, 63,865 square kilometres (1 kilometre=

* For a biography of Alexander I, see "Annual Cyclopædia" for 1879, article ALEXANDER I; for an account of the history of the race, of the progress of education, of newspapers, of industry, and of the Bulgarian Church, see "Annual Cyclopædia" for 1878, article BULGARIA.

0-386 square mile): population, 1,859,000. The capital, Sophia, has about 18,000 inhabitants. The population of the other principal cities—Tirnova (formerly the capital) 12,000, Widdin 19,000, Rustchuk 23,000, Varna 16,000. The only railroad in operation was that from Rustchuk to Varna, 224 kilometres. The National Assembly consists of the Exarch or head of the Bulgarian Church, of one half of the bishops, one half of the Presidents and members of the Supreme Court, one half of the Presidents of the district courts and of the commercial court, and of deputies of the people—one member representing 20,000 persons.

Prince Alexander has sought, by making visits of friendship and courtesy to Russia, Servia, and Roumania, to strengthen the relations of Bulgaria with the states allied to it by sympathies of race and neighborhood. The efforts of the Government to perfect measures for efficient administration and the consolidation and development of the resources of the country have been hindered by the excess in the amount of obligations to which the principality was committed, and the cost of necessary works over the available revenues. The popular movement in favor of the annexation of East Roumelia has been strong, and has tended to become stronger. The obligations of the Government were stated previous to the meeting of the National Assembly, in April, to consist of £1,200,000 due to Russia, £130,000 to railway companies, and the tribute to Turkey, the amount of which, as well as the amount of the general Turkish debt that would be allotted to Bulgaria to bear, was not yet fixed. To meet these obligations, the revenue of the year was £760,000, or about half the sum which the Turks had raised annually from the provinces constituting the principality, and the whole of that sum had been spent on the army, the civil service, and other ordinary objects. The Government had, furthermore, undertaken to complete the railways from the frontier of Roumelia to the frontier of Servia, a distance of between 60 and 70 miles, at a cost which was estimated at £500,000. At a later date, M. Camille Farcy, in an article published in the "*Nouvelle Revue*," supposing that the tribute would be fixed at the amount which Roumania had paid before the war, or £40,000, and that the principality would be called upon to bear one twentieth part of the Turkish debt, showed that Bulgaria would start with a national debt of £12,000,000, imposing an annual charge of £800,000. Adding the amount that the state had engaged to pay on account of the railways, at least £1,000,000 sterling of an annual revenue, which it was estimated could not amount at its maximum to more than £1,600,000, was appropriated in advance by the Treaty of Berlin. The problem of meeting the treaty engagements of the country and carrying on its administration was thus one which might puzzle men more versed in statesmanship than the untrained deputies of the National Assembly.

The budget, published in July, showed a deficit of £560,000, while the annual expenditure was estimated at £1,800,000, of which amount the Minister of War would require £25,000.

The National Assembly was opened April 4th, by Prince Alexander in person. In his speech from the throne, which was delivered in the Bulgarian language, the Prince referred in terms of satisfaction to the visit he had recently made to Russia, and to the friendly reception which the Czar had given him, and expressed gratification at the especial interest which his Majesty took in the welfare and national development of Bulgaria. He announced that bills would be introduced to promote education, to establish an efficient police, and to impose a land-tax. All of the members of the diplomatic body were present. The new Ministry was constituted as follows: M. Zancoff, President of the Council and Minister of Foreign affairs; M. Caraveloff, Minister of Finance; M. Stoganoff, Minister of Justice; M. Ticheff, Minister of the Interior; M. Gazelev, Minister of Public Instruction; General Ehrenroth, Minister of War. The Ministers were all educated in Russia, and were understood to favor the immediate annexation of East Roumelia. A bill to require all Bulgarians dwelling in Roumania and Servia to be naturalized as subjects of the Bulgarian Principality, which was introduced into the Assembly, was objected to by the Roumanian Government, on the ground that it would interfere with its territorial rights, and was withdrawn upon its representation of the case.

The agitation for the incorporation of East Roumelia with Bulgaria was kept up actively, in both the principality and the province. It was promoted by the gymnastic societies, peculiar organizations of Bulgarians, whose proceedings had rather the character of military drills and exercises of volunteers than that implied by their names. Care was taken, by requiring that admission to the societies could be gained only by election, to prevent the possibility of Turks and Greeks joining them, and embarrassing them in the prosecution of their political objects. The Governor-General of East Roumelia ordered the societies to be suppressed in February, and a considerable number of the most fervid agitators left the province and came into Bulgaria. In July, the Porte received information that the Bulgarian Committee were concerting a plan of action in the event of a rupture between Greece and Turkey. The excitement on the subject was kept up by frequent incursions from Bulgaria over the border, conflicts with Greeks and Turks, and reports of the importation of arms and the formation of military companies, and the agitation for union was fed by numerous wild rumors. Emissaries from Sophia were said in July to be traversing Macedonia and proclaiming to the Bulgarian peasants that the empire of Alexander the Great was to be restored, and to be instigating the formation of

committees in the towns and villages, and the gathering of contributions in support of the movement. Considerable numbers of Russian arms were imported into Bulgaria, and an extraordinary number of Russian officers were said to be entering the Bulgarian military service. A denial of the unfavorable significance attached to these circumstances was published in the "Journal of St. Petersburg," which explained that the Russian officers were going to replace others who were leaving the Bulgarian service, and that the purchases of arms were designed to replace the inferior arms of old patterns which the militia had been obliged to use, with new weapons of a better pattern, and that they were made in Russia because the Bulgarians found the most favorable market there. The arms and ammunition were bought and landed openly. An approaching union with East Roumelia was spoken of in Bulgaria during the summer, but the movement would be delayed, it was declared, by those who talked of it, until late in the fall or winter, when the Turks would not be able easily to occupy the passes of the Balkans. Reports at the beginning of August indicated that the movement might be more comprehensive than had been expected, and might embrace also the forcible annexation of the Dobrudja. An address was presented to Prince Alexander by a deputation of the Bulgarians of Macedonia, declaring that they looked to their liberated brethren to procure for them a speedy deliverance from the Ottoman yoke, and expressing an anxious desire for union with Bulgaria, according to the provisions of the Treaty of San Stefano, which the Prince was conjured not to forget. The Prince was said to have given the deputation an encouraging reply. Colonel Wilson, a European officer who made a tour of official inspection in East Roumelia, reported on his return that he had ascertained that preparations were being made by the Panslavists with a view to union in the event of a war between Greece and Turkey. Several reports were circulated to the effect that Russian vessels were secretly landing arms at places on the Danube, all of which were declared to be false. On the 10th of September a semi-official statement was published at Berlin to the effect that "there is reason to believe that Russia is disposed at the present time to look coldly upon the agitation in favor of the formation of a Great Bulgaria. The Russian Government appears to deprecate any reopening of the Eastern question, although it may not be disposed to make a distinct avowal to that effect." On the 2d of October Prince Alexander addressed a letter to the Czar, announcing his satisfaction with the results of his inspections of the troops and the military establishments, and thanking his Majesty "for having allowed Russian officers to come and organize the Bulgarian army, and to make it worthy of the great objects it is called upon to pursue. Those officers have fully and entirely justified the confidence which

I have shown in them from the beginning, and have thereby rendered a great service to their own country." He also asked to be permitted to thank the Russian officers, on behalf of the Czar, by an order of the day.

The second session of the National Assembly was opened November 1st, by M. Zancoff, the President of the Council, representing Prince Alexander. In the speech from the throne the Prince again referred to the strong interest which the Czar had shown in the welfare of the country during his visit to Russia, and to the marks of good-will he had received during his visits to Servia and Roumania. Bulgaria also enjoyed the sympathy and good-will of the other powers of Europe. The condition of the troops was declared to be excellent. As regarded other branches of administration, Bulgaria had need of constant and earnest activity in order to secure for itself its proper development and to fulfill its mission in the Balkan Peninsula.

Prince Alexander made a visit to Russia during the winter, stopping on the way for two days at Bucharest as the guest of Prince Charles of Roumania. He was entertained by the Czar at the Winter Palace in St. Petersburg, and was engaged in conversation with his Imperial Majesty at the time the explosion in the palace took place, February 18th. The results of his visits at both courts, as represented by the Prince in his addresses to the Assembly, were favorable to Bulgaria, and of a character to encourage the hope of a continued friendship between the two nations. In October the Prince made a visit to Servia, with the understood purpose of conferring with Prince Milan about matters of common interest to the two countries. He was met on the frontier at Radajevatz by General Leschjanin and staff, who had been commissioned by the Prince to welcome him, and was received on his arrival at Belgrade by Prince Milan and the Ministers of State.

The geodetic and astronomical survey of the Balkan Peninsula, which was begun by the Russians in 1877, has been nearly completed. In June, 1880, the trigonometrical network of the observations and measurements covered the whole of Bulgaria and East Roumelia, and a part of the Turkish territory, and had been connected with the Russian and Austrian surveys.

BURMAH,* a kingdom in Farther India. Area, 470,000 square kilometres (190,000 square miles); population, 4,000,000.

The events of the year in Burmah most worthy of notice were those connected with the efforts of the Government to resume diplomatic relations with England and the European powers. After the withdrawal of the British *chargé d'affaires* from Mandalay in October, 1879, an embassy, composed of persons who it was supposed would be acceptable to the Brit-

* For a fuller geographical account, see "Annual Cyclopædia" for 1879, article BURMAH.

ish, was dispatched to negotiate with the Indian Government. The envoys were detained at the frontier by order of the Viceroy, and were informed that they would not be allowed to proceed unless they bore authority to assent to stipulations which would render the position of a British Resident at Mandalay tolerable. During the delay to which the legation was thus subjected, the chief of the body applied to the British Deputy-Commissioner at Rangoon, asking for copies of the Penal Code and the Code of Civil Procedure, and other works illustrating the character of English laws and institutions, saying in explanation of his request that he wished to employ the opportunity that was given him in making himself acquainted with the British legal system. The "Mandalay Gazette" of February 22d published an announcement that the King contemplated sending a mission to visit England, France, and Italy, for the purpose of studying everything connected with the mode of government among European nations, including their criminal and civil codes, their revenue systems, and their military regulations; with the aid of the information thus obtained, he designed selecting the best features of administration in each country for adoption in his own kingdom. The English believed that the real object of this scheme was to negotiate a treaty with another power than the British, and to seek aid in the construction of railways. The embassy, which was waiting at Thyetmayoo for the permission of the Indian Government to proceed, in time exhibited a royal order defining its powers, and authorizing it to negotiate a new treaty with England. Mr. Aitchison, the British Deputy-Commissioner, replied to the new application of the envoys, that the credentials they had presented were not sufficient, since they failed to confer plenary powers, and added that, while he would gladly wait for the result of a fresh application to Mandalay for powers, it was desirable that the embassy should go back, unless there was good reason to hope that substantial overtures would soon be made. Visits of courtesy were afterward exchanged between the Deputy-Commissioner and the members of the embassy. During April the envoys submitted propositions for a treaty, embodying provisions that residences should be established at Rangoon or Calcutta and at Mandalay; that Burmah should be allowed to send a consul to London; that criminals should be tried by the laws of the country in which the crime was committed; that political offenders taking refuge in the residency of either government should be given up to the power to whose laws they were answerable; that the monopolies in petroleum, teak, and rubies should be continued, and other goods should be sold at former rates; that the Burmese should be permitted to import arms and munitions of war subject to the approval of the Chief Commissioner, who should not be authorized to re-

fuse his consent if friendly relations prevailed; and that all other provisions of former treaties should continue in force. The draft was not acceptable to the British, because it contained no provisions for a guard for the residency, or for the relaxation of the humiliating etiquette which the sovereign of Burmah imposed upon the representatives of foreign powers, and which practically forbade the Resident from having interviews with the King, and thus left the principal grievances that had been complained of unredressed. The embassy was, therefore, dismissed, the Deputy-Commissioner assigning as an additional reason why it could not be entertained any longer, that as a change in the Government of India was imminent, it would be necessary to postpone the negotiations for the present, so that the new Viceroy should not be hampered in his action.

The frontier was troubled by raids and disorders which the Government professed to be unable to prevent. An irruption was made in the spring upon the territory of the Rajah of Manipoor. The Governor of Sillemyo detained the mail-steamer Yonan, and was arrested for the offense and taken in irons to Mandalay by the embassy returning from Thyetmayoo. An order was afterward issued to the *Woons* along the river, instructing them not to summon the captains of steamers ashore, but to go on board the vessels if they had business, with not more than five unarmed followers. In May an insurrection broke out near the British frontier, in the interest of Prince Nyoungoke, who had been residing at Calcutta. The Prince escaped from British surveillance, crossed the border, and took the lead of a small force of rebels, to which numerous accessions were soon made. The insurgents were successful in the first engagements, but having neither arms nor money, were incapable of affording a steady opposition to the royal troops, and were defeated and scattered after a few conflicts. Prince Nyoungoke fled to British territory, where he was taken prisoner and held by the British. Late in August the apartments of King Thebaw were entered by a Ponghee, designing to assassinate the King, but he and his design were betrayed by a dagger falling from his garments. The Ponghee had twelve accomplices associated with him, one of whom, his nephew, and himself, were put to death.

The Burmese made a demonstration against the British frontier early in October, with two bodies of troops, one consisting of seven hundred and fifty, the other of three hundred men. It was believed to be the purpose of the King to demand an indemnity for the damage which the kingdom had suffered from the insurrection of Prince Nyoungoke. The British admitted that a color of justification existed for such a demand, for the Indian Government, after having given the Prince refuge from the pursuit of the King, had permitted him to escape and make war upon his territory, and had

again afforded him protection after he was defeated and obliged to fly from the consequences of his offense. It might be proper, they reasoned, to give satisfaction upon a proper diplomatic representation of the case, but it could not be regarded as expedient in the presence of a threat. The British Chief Commissioner represented, a few days after the demonstration occurred, that the accounts that had been given of it were exaggerated, that there was no continued cause for alarm, and he did not anticipate trouble; and that he had directed the Deputy-Commissioner to provide better means for securing information, so that the troops should not be harassed and the public disturbed by overdrawn reports. The Burmese accounted for the demonstration by explaining that the troops had been collected as a precautionary measure in consequence of the number of *dakooties*, and of a rumor that Prince Nyoungeke had escaped from Calcutta.

BUTLER, GENERAL WILLIAM ORLANDO, was born in Jessamine County, Kentucky, in 1791. He was of Irish ancestry, his grandparents having immigrated before the Revolution. His grandfather, father, and four uncles fought through the struggle for independence with such distinction that Lafayette said of the five brothers, "When I want a thing well done, I order a Butler to do it." General William O. Butler was a not unworthy scion of the stock from which he sprang. He was a nephew of General Richard Butler, of Pennsylvania, who was killed at St. Clair's defeat, and son of General Percival Butler, of Revolutionary fame. His parents removed in his infancy to Mayslick, Bullitt County, Kentucky, where he passed his boyhood. He graduated at Transylvania University in 1812, and was studying law under Robert Wickliffe at Lexington, when, at the breaking out of hostilities with England, he left his office, enlisted as a private, and hastened to the relief of Fort Wayne. Promoted ensign in the 17th United States Infantry, he was at the two disastrous battles of January 18th and 22d, 1813, at Raisin River. He distinguished himself in the second engagement. The Indians, sheltered in a farm-building, were pouring a murderous fire into their assailants, when the American commander exclaimed, "Will no one burn that barn?" Ensign Butler seized a torch, and, crossing alone through a concentrated shower of rifle-balls, applied it to the hay and dislodged the enemy. He was afterward wounded and taken prisoner. His sufferings from cold, hunger, and the inhumanity of his captors were unparalleled. Paroled at Fort Niagara, amid perils and hardships he traversed the country to Kentucky. Commissioned a captain, he raised a company which was attached to the 44th Infantry, and under its daring commander did good service at Pensacola. He was ordered to New Orleans, where on the night of December 23, 1814, while in command of four companies on the left wing, he attacked and repulsed General Sir Edward

Packenham. This check gave time for the construction of defenses at Chalmette, which on the 8th of January enabled the Americans to repel a force double their own and win a decisive victory. For his conduct on the 23d, he was made brevet major; while his bravery on the 8th is thus mentioned in General Jackson's report: "He displayed the heroic chivalry and calmness of judgment in the midst of danger, that distinguish the valuable officer in the hour of battle." In the following year he succeeded his brother, Major Thomas Butler, as aide-de-camp to General Jackson. He remained always a friend to that soldier, and made a brilliant defense of him before the courts in the endeavor to obtain the remission of a fine of one thousand dollars imposed upon General Jackson for military acts at New Orleans.

In 1817 he resigned from the army, and resumed the practice of the law. Although not a candidate, he was elected in that year to the Legislature, and served through three consecutive terms. In 1839 he was sent to Congress by the Democratic party. In 1841 he was again returned, and subsequently declined a third nomination. He was a member of the House of Representatives during a period when the act abolishing imprisonment for debt to the United States, that establishing the sub-Treasury, the celebrated Tariff Act of 1842, and other important bills were passed. In all these debates General Butler took a leading part. He was undoubtedly the most popular Democrat in his State, and during the Whig ascendancy he was induced to accept the nomination for Governor, with no hope of election, but with the effect of reducing the majorities of the rival party from twenty-eight thousand to less than five thousand. His success at the bar was very marked, but the breaking out of the Mexican War again induced him to join the army. In June, 1846, he was appointed major-general of volunteers. He reported to General Taylor, and in Texas and northern Mexico he bore a prominent part. At the siege of Monterey, September 24th, he charged a battery, was wounded in the leg, and was sent home. He rejoined the army of General Scott the following year, and was at the capture of the city of Mexico. In 1848, being senior major-general, he succeeded General Scott in the chief command, and was holding that position when peace was signed, May 29, 1848. His distinguished services were recognized at home. Kentucky presented him with a sword in testimony of his "gallantry in the desperate charge at Monterey," and Congress voted him another sword, which bears a similar inscription.

In May, 1848, the National Democratic Convention at Baltimore nominated General Butler for Vice-President, on the same ticket where Lewis Cass, of Michigan, held the first place. This ticket was defeated by the schism in the party, and the nomination in New York of Free-Soil candidates, Van Buren and Adams.

General Butler remained in private life after

this election. He refused a nomination to be Governor of the Territory of Nebraska in 1855. Once only he reappeared on the public stage as a member of the "Peace Congress" which in 1861 met at Washington City, composed of able and prominent men who sought in vain to avoid the evil of civil war which then threatened the country. He was a poet of no mean rank, a man of liberal education, of a command-

ing personal appearance and courteous manners, of unblemished character, of comprehensive patriotism, unalterably attached to the Union of the States. After a life of devotion to right and truth, and an old age spent in deeds of charity and words of wise counsel, the scarred hero sank to rest at his home in Carrollton, Kentucky, on Friday, August 6th, in the ninetyeth year of his age.

C

CALIFORNIA. The Legislature met January 5th, and closed its sessions April 16th. It was the first Legislature after the adoption of the new Constitution, and had the heavy task to perform of revising the political and criminal codes, the organization of county governments, and the laws of taxation and revenue, so as to make them conform to the alterations in the fundamental law. The Republican majority in both Houses was disposed to place the most conservative possible construction on many of the provisions of the Constitution. An active and aggressive minority, with more radical views, took a prominent part in the introduction of bills, and disputed warmly many of the measures proposed by the other side. The debates were spirited, sometimes stormy, and on a few occasions disorderly. Many bills were introduced upon pressing questions in which all the parties favor some degree of reform, such as the regulation of the mining business and speculation in mining stocks, the protection of farm-lands, rivers, and harbors from *débris* washed into the cañons in hydraulic mining and swept into the valleys by freshets, changes in the land laws to restrict the accumulation of vast landed estates, etc.; but a reaction against the spirit of innovation which has marked recent Californian politics ruled in the minds of the majority, and the projected laws on these subjects were defeated after a long contest, excepting one on the urgent *débris* question, upon which several bills were discussed, and one was finally framed which became a law, the most important act of the session excepting the Revenue Bill. In hostility to the Chinese all factions were in harmony. A number of anti-Chinese bills were passed without much opposition, of the constitutionality of which many admitted doubts; but, borne out by the requirements of the State Constitution and their electoral mandates, they felt it incumbent upon them to satisfy the general popular sentiment as to the kind of legislation required, leaving the question of its validity to be determined by the courts. There was a determination, in view of the amount of business to be transacted, to question the literal construction of the clause contained in the new Constitution which requires that all bills should be read through three times in each House. The Judiciary Committee of the Assembly declared that the Constitution

required that a bill should be read at length once only. The subject, by vote of the House, was brought before the Supreme Court, but the question whether bills read by title only, but entered as duly read on the record, were valid, still remained open.

Of the bills introduced which failed to become laws, among the most prominent were the bills to regulate the sales of mining stock, intended to reduce the business in mining stocks to a cash basis, forbidding brokers to sell or hypothecate stock belonging to others, making operations on margins a penal offense, and imposing other severe restrictions. A law was passed enabling shareholders owning a majority of stock in mining corporations to remove the company officers and elect new ones.

A land bill was brought in the Senate, requiring heirs to large estates to sell all beyond 5,000 acres within five years, and forbidding any one in the future to acquire real property exceeding in area that limit. Other limits proposed were 640 and 1,280 acres, and 5,120 acres for grazing-lands. None of these bills were passed.

A bill was passed forbidding games of cards to be played in saloons for drink.

A bill was passed providing for the appointment of a State Mineralogist and the establishment of a Mining Bureau.

A law regulating the organization of county governments was hastily enacted in the last days of the session. This act was decided by the Supreme Court in September to be in conflict with the Constitution. The revision of the civil and criminal codes was elaborated in committee; it necessitated the passage of a great number of separate acts.

In framing the Revenue Bill under the new Constitution, the Legislature showed great reluctance to carry out the provisions of the instrument. The Constitution defines property as including "moneys, credits, bonds, stocks, dues, franchises, and all other matters and things, real, personal, and mixed, capable of private ownership." All property, except growing crops, school and other public property, is declared subject to taxation, unless exempt by the laws of the United States. The Legislature is enjoined to levy taxes on all descriptions of property at its "full cash value." The Republican Legislature sought to shape

the law in such a way as to avoid double taxation. The bill framed by the majority of the joint Committee on Revenue and Taxation preserved this principle, and did not include in taxable property shares in corporations doing business in the State, or money on deposit with savings and loan corporations. The minority of the committee presented a bill drawn up more completely in accordance with the directions of the Constitution. The revenue law, finally adopted after a prolonged contest over the policy and right of taxing joint-stock company shares, bank deposits, certificates of indebtedness, and mortgages, and over the principle of assessing property at its market value, was drawn up in accordance with the principles embodied in the minority bill and plainly prescribed in the Constitution. Real estate and improvements are assessed at their estimated market value. Mortgages held against real property are deducted from the valuation of the property affected, and that proportion of the tax is assessed against the mortgages. Joint-stock companies are assessed according to a valuation of their property and assets, and a tax upon the market value of their shares in excess of this valuation is imposed upon the individual stockholders. Depositors are taxed upon their deposits in the banks, and the latter are taxed upon their property, mortgages, unsecured credits, and other assets. In taxing credits the evil of double taxation can no more be avoided than in subjecting bank deposits to a separate taxation. Every solvent creditor is assessed upon the amount of unsecured solvent debts due him in excess of his own liabilities. Debts due outside of the State are, however, not reckoned as an offset; and in the assessment of stocks a like discrimination is made, the holders of shares in outside corporations being taxed according to their selling value, without deducting the value of the taxable property held by the company according to the rule applied to Californian corporations.

The tax levy made by the Board of Equalization pursuant to the new revenue law is based on a total valuation of \$666,183,320, an increase of \$118,660,551, or about 18 per cent., over the valuation of 1879. The tax-rate was also raised, the new rate being 74 cents on the hundred dollars, instead of 62½ cents. The valuation of the county of San Francisco was \$243,552,276, an increase of about \$26,000,000 over the valuation of 1879. The valuation of real estate, with mortgages separately taxed as an interest in the realty, was within a million dollars the same in both years. The increase was in personalty, which was assessed \$68,774,195 in 1880, against \$43,570,856 in 1879. About \$5,400,000 of the increased valuation consisted of stocks, and nearly \$6,000,000 of unsecured solvent credits.

In reply to a delegation of savings-bank managers, who requested Governor Perkins to veto the Revenue Bill, the Governor declared that the session was too far advanced to allow

a new law to be framed, and that the public sentiment outside of the cities was in favor of the bill. He expressed the conviction that the Executive has no right to interpose the prerogative under the Constitution in the case of a bill of such a character, unless it is unconstitutional, or unless it would produce some great public calamity. In his message approving of the bill the Governor made the following protest against this feature of the law:

Failing to find in it any constitutional inhibition to justify the interposition of the Executive veto, and not deeming myself at liberty to disagree with the Legislature on a question of merely public policy as involved in a revenue bill, especially when the sentiment of the people appears to favor the measure (for I heartily subscribe to that which has been so pertinently said by another, that the Executive should have no policy or plan to enforce against the expressed will of the people), I have, therefore, reluctantly given the bill my official signature. It is indisputable that taxation, as it has for years existed in this State, produced well-founded dissatisfaction among those upon whom the burdens of State support fell so inequitably; that the citizen of moderate means, whose all was invested in a homestead, paid his forced contribution under protest, because his neighbor, having cash assets, was not named on the assessment-roll at all. Herein we find a demand for a change in the fundamental law and the controlling motive for the public approval of the present Constitution.

The former Constitution was construed by the Courts to prohibit the taxation of mortgages and solvent debts, thus withdrawing from assessment large volumes of wealth, and necessarily increasing the rates to be borne by tangible property. The present Constitution renders it possible and makes it our duty to correct the unjust system heretofore existing. It ought to be, and doubtless is, a pleasure for every one clothed with the authority to aid in equalizing the burdens of government.

My objection to the present bill (and I sincerely hope the objection will be avoided by supplemental legislation) is based upon those provisions which more directly relate to savings-banks and the deposits in those institutions.

The report of the Board of Bank Commissioners to the present Legislature contains the statement that there are upward of 80,000 depositors in the savings-banks of this State, with an average of \$672.53 to the credit of each, aggregating more than \$50,000,000 of money. Nearly all this large sum is loaned upon real-estate security. These securities will be taxed in the name of the several banks holding them. The banks have issued to each depositor a pass-book showing the amount to his credit, and this will be taxed in the name of the holder of the pass-book.

No refining of language can deduct any other interpretation from the provisions of Bill No. 404; and while it may be upheld by the Courts as constitutionally permissible, it is inexcessably inequitable and unjust. It imposes upon the industrious and economical classes, the many of small means, more than their just proportion of the public charges. It exacts tribute from their savings which are secured by mortgages held by the banks, who are acting, as it were, but as the agents of the depositor.

If the party had loaned his money on mortgage in his own name instead of that of the bank, even under this bill, the mortgage only would be assessed. The average deposit, as we have seen, is \$672.53—a sum so small that great difficulty would be experienced in finding for it a safe and secure investment. But several combine their means, and thus both borrowers and lenders are accommodated. Should, then, a penalty be attached to established and favorite modes of doing business?

The act making it a felony to incite riots, passed two years previously, was repealed by a large majority. A bill was proposed by members belonging to the Labor party for unseating and punishing members of legislative bodies who violate pledges given to political conventions. A projected law, emanating from the same quarter, proposed that newspaper writers should be obliged to print their signatures at the foot of editorial articles. Another proposed to deduct \$500 from the assessed valuation of each tax-payer's property, and others to exempt homesteads of less than \$5,000 or \$3,000 value from forced sales for taxes. A more complete mechanics' lien law than the existing one was enacted. A bill giving laborers employed about thrashing-machines a lien on the grain thrashed was defeated. A bill was passed authorizing railroad corporations deriving their charters from other States to do business on an equal footing with California companies. Another bill compels companies to keep their lines in operation. The Board of Railroad Commissioners demanded by the Constitution was created, consisting of three commissioners, with \$4,000 salary each, and traveling expenses paid by the State. The McClure charter for San Francisco was bitterly opposed in the Assembly by most of the members from that city, but was carried through by a united Republican vote. The act authorizing San Francisco to provide public water-works was repealed. A new insolvency law was enacted. The principal anti-Chinese bills were one prohibiting corporations to employ Chinamen, one authorizing the authorities of municipalities to remove Chinese residents beyond the city limits, one forbidding the award of licenses to Chinamen, and one forbidding them to fish in the waters of the State. A bill was introduced disqualifying Chinamen from testifying in the courts, but this was defeated in the Senate. In these bills the phrase by which the Chinese are designated, in order to conform technically to the constitutional inhibition of special and class legislation, is "aliens incapable of becoming electors."

The validity of the law prohibiting the employment of Chinese by corporations was tested in a case brought in the United States Circuit Court. Tiburcio Parrott, under arrest for violating this law, was brought before Judges Hoffman and Sawyer on *habeas corpus*. It was argued that the law was in contravention of the treaties of the United States Government with China, and of the Civil-Rights Bill and the Fourteenth Amendment. Attorney-General Hart, for the people, argued that the law was not directed against the Chinese, but against corporations, and that the Legislature possesses the power to amend or modify the charters of corporations of its own creation. The Court held that the right of the State to control corporations did not extend so far, and that the law affected the Chinese and deprived them of personal liberties accorded by the

United States Constitution and guaranteed by the treaty with China. The Burlingame treaty also invalidated the law against the use of the State fisheries by Chinamen.

The engineering aspects of the *débris* question were treated of in detail in the report of the State Engineer, W. H. Hall, made to the Governor, January 10th. Mr. Hall recommended a system of public works of a scope and on a scale to comprehend the drainage of the bottom-lands, the reclamation of waste and swamp-lands, the irrigation of dry lands, the improvement and preservation of navigable channels, and the protection of the valleys, river-beds, and harbors from mining *débris* and other detritus. He criticises the methods of irrigation heretofore in practice in the upper valleys as wasteful; and the irregular, fragmentary manner in which levees have been constructed in the lower valleys, under the policy of granting the swamp lands to any one accomplishing their reclamation, he declares to be often wrongful and mischievous in its consequences, since the improvement of the drainage in the upper portion of a river-valley may cause the submersion of marginal lands farther down. The Sacramento Valley is the portion of the State which especially stands in need of drainage-works at the present time. The main drains of the valley are the Sacramento River and its tributary, the Feather. During the era of hydraulic mining the whole character of these rivers has been altered through the accumulation of sediment, filling up the pools and forming bars. The unmethodical and imperfect construction of levees has hastened the process, reducing the scouring capacity of the streams by allowing a portion of the water to be diverted into secondary channels through breaches and crevasses, and facilitating the formation of bars by producing irregularity of flow. The rise of the low-water level in a river indicates the extent of the average deposit of sediment in its shoal parts. The plane of low water has risen since 1862 from five to five and a half feet in the Sacramento River at Sacramento, three to four feet at its confluence with the Feather, thirteen to fifteen feet at the junction of the Feather and the Yuba, and five to six feet in the Feather at Oroville. The accumulation of drift in the Sacramento River opposite Sacramento, and in other deep parts, has been much greater. The channel has been filled up as much as 15.2 feet on the average at Sacramento since 1854, and in some places the bed has been raised twenty-five feet. Owing to the filling up of the deep channels and pools the flood-level has been raised much higher than the low-water level, so that the riparian lands, which were formerly safe from inundation except in the years of extraordinary floods, and then were not injured, are now threatened with an annual overflow and their fertile soil with obliteration by deposits of sand, gravel, and *slickens*, and are rendered only partially secure by building the levees higher and higher each year.

Not only are the agricultural bottom-lands in these valleys threatened with destruction by submersion or detrital deposits, and the harbor and river-channel in danger of being choked up and rendered unnavigable, but, if the sedimentation is allowed to continue, in not many years the sites of Sacramento and Marysville will lie below the high-water level, and no river-walls will be sufficient to save the cities from their consequent doom. The State Engineer considers that the rivers can be soon restored to their condition of twenty years ago by the elaborate system which he proposes. This embraces the widening of the channels in some places, the deepening of them and the removal of bars in others, the deflection of some of the creeks into a new outlet, improving the channel of the lower Sacramento so as to obtain the maximum effect of the tidal scour, a relief-canal in the lower basin to divert a portion of the flood-waters for the security of the delta islands, and the construction of a uniform system of levees along the river-banks which shall be higher than the present ones and capable of confining the waters of the ordinary annual winter freshets, though not intended to hem in the extraordinary floods which occur at intervals of about ten years. None of these works would be of effective and permanent utility without first solving the *débris* problem and finding means to prevent the constant silting of the river-bed with mining detritus. A part of his plan was to dam several of the more heavily charged rivers, notably Bear and American Rivers, at different points in the valleys below, and spread their waters over the low swamp-tracts, where the sediment which is injuring the river-channels would be arrested and precipitated at all times of the year, except in the freshets, thus answering the useful purpose of building up ground in these extensive sinks, and rendering their now worthless area ultimately productive and valuable.

A report of Lieutenant-Colonel Mendell to the Chief of Engineers at Washington recommends a similar system of dams and storage reservoirs for the preservation of the navigable channels of the rivers fed by mining streams. The most convenient place for such dams he thinks is in the foot-hills, where the material for their construction is at hand. He estimates the quantity of *débris* washed annually from the mines into the Yuba at from fourteen to fifteen million cubic yards. The quantity now lying in the beds of the Yuba and its branches between Marysville and the mines, ready to be swept down into the valleys by the next great flood, is estimated at 143,551,864 cubic yards. The accumulations in the bed of the Bear River are estimated at 148,248,000 cubic yards, of which 86,160,000 yards are in the bed of the stream above the foot-hills, and 62,088,000 in the plains below. The quantities of tailings which are being dumped into the cañons every year are so great that the mining streams change their channels almost yearly. The bed of the

Yuba has been filled with this material at Smartsville to a depth of one hundred and twenty-five feet, and about fifteen feet at Marysville, increasing the slope of the river between the two places by one hundred and ten feet, about doubling the original fall. By the increase in slope in the upper mountain-streams, the gravel is rolled farther and farther down, and will in time be washed into the Feather and Sacramento Rivers, and form obstructions which will destroy navigation and the alluvial valleys. The quantity of workable auriferous drift on the Yuba is estimated at 700,000,000 cubic yards. The quantity of silt which has already been washed down into the plains, and deposited in the beds of the rivers, is calculated at 40,000,000 cubic yards in the Feather, and 100,000,000 in the Sacramento to below the mouth of the Feather. The fine sand and clay, or *slickens*, is not precipitated on the river-bottoms, but is carried on by the current into the outer bay or ocean. Colonel Mendell recommends the construction of nine dams in the Yuba to stop the drift of detrital matter into the river-channels. He suggests that Congress make an appropriation of \$250,000 to commence the improvement, which will cost altogether nearly four times that sum.

The area of the Sacramento Valley is 4,769 square miles, of which 2,331 square miles are high plains situated above the reach of overflow, 755 miles are hill-lands and rolling country adjacent to the foot-hills, and the remainder consists of low alluvial bottom-lands, swamp-lands, delta islands, lands covered with *débris*, and all other land subject to annual flooding. The area under water after the March freshet of 1879 along the Feather and Sacramento Rivers was 847 square miles. The area of good farming-land in the valley which has already been destroyed by mining *débris* is estimated by Mr. Hall at 43,546 acres.

Four or five different bills for *débris* relief were drafted, in accordance with the suggestions of the State Engineer, and discussed in the Legislature. The question whether the expenses should be raised by general taxation, or whether only the districts immediately benefited should be taxed, was the chief point of difference. The Young bill, which was finally passed in an amended form, imposes a general and equal tax of five cents in the hundred dollars for this object, and lays a special tax of a maximum rate of \$3 per acre upon overflowed lands which are benefited by the drainage-works, graduated according to the extent of the benefit received, and levies another on the miners, which will yield an amount equal to about one quarter of the general State tax, by taxing the quantity of water used in hydraulic mining.

Captain Eads afterward visited the country, and, in consultation with Colonel Mendell, offered some new suggestions to the Washington authorities. He approved in the main of the plans of Mr. Hall, but opposed the division

of the current and the construction of an outlet canal, either at Grand Island, as proposed by the State Engineer, or above, as had been favored by other experts. He proposed planting willows in the mud of the river-beds near the mines, to form screens to check the descent of the heavier *débris*, instead of the construction of expensive stone dams to impound the *débris*. This he thought would afford a sufficient guard against the coarser material of the tailings, while the scouring action of the current, if the channels of the Sacramento and Feather were rectified and graded, would keep the river below clear of deposits of the finer detritus. He regards the danger to the harbor of San Francisco as imminent, unless steps are taken to prevent the silting of the bay from this source.

According to the decision of District Judge Keyes, in the case of Keyes against the Little York Gold Washing Company *et al.*, farmers whose land is flooded by mining tailings are entitled to relief by the common law for the damage done. The plaintiff was a farmer in the Sacramento Valley, and the defendants were hydraulic mining companies, whose works were situated about sixty miles distant in the Sierra Nevada Mountains, and nearly three thousand feet above the defendant's farm, which lies along the banks of Bear River. The effect of the *débris* law enacted by the Legislature is not to debar the farmers from the rights of recovery from the miners which they possess at common law.

The report of the Fish Commissioners states that, since the organization of the commission, 13,150,000 young salmon have been hatched and placed in the Sacramento River, and that 2,500,000 must be added annually to keep the canning establishments supplied, unless the close season is strictly observed. An attempt was made in the Legislature to substitute a close time between Saturday morning and Sunday night throughout the year for the close season between August 1st and September 15th. The fishermen, who petitioned for the change, alleged that the close season was not observed; that the American fishermen were disposed to respect it, but that the Greek and Portuguese fishermen would not. They declared that they would compel all to observe the close season during Saturday, Saturday night, and Sunday. The bill was objected to by Fish-Commissioner B. B. Redding, who was present during the discussion. A petition was presented at the same time regarding the protection of small fish in the Bay of San Francisco. Mr. Redding stated that the subject was of great importance. There are a large number engaged in catching shrimps, mostly Chinamen. They use a net in the shape of an inverted stocking, which is sometimes thirty or forty feet long. The Chinamen go along the shores of the bays and use a net so fine that a lead-pencil only will pass through it, and catch immense quantities of not only shrimps, but every kind of small fish, which they put through a

process of salting in brine, and then drying on the ground, after which they rub their feet over them and break off the shells, etc., a portion of which is used for food and the balance as a manure for fertilizing the worn-out tea-fields of China. In one year there was shipped to China of these products about \$600,000 worth, and the average per year is about \$300,000. The Portuguese and Greeks are also destroying the small fish in a similar mode by using small, fine-mesh nets, but they make no use of the small fish, and leave them on the ground. On account of their destruction of fish in San Francisco Bay, the law protecting seals and sea-lions was repealed. Mr. Redding stated that these animals destroy more fish than are caught in the nets of the fishermen. Acts were passed by the Legislature providing for the removal of obstructions in the streams so as to greatly extend the area of the spawning-grounds of the salmon. The annual catch of salmon in the Sacramento and San Joaquin Rivers has been as follows: In 1874, 5,098,781 lbs.; 1877, 6,493,563 lbs.; 1878, 6,520,768 lbs.; 1879, 4,482,250 lbs. The falling off in the latter year was due to a quarrel about prices between the fishermen and the canners, which lasted a large part of the fishing season, during which time no salmon were canned. Catfish, introduced into the ponds and streams from Eastern waters a few years ago, are now so plentiful as to be a common article of food. Shad and white-fish have been planted in large numbers, and are succeeding; but brook-trout from the Atlantic coast do not thrive in California.

The returns of the State census give as the entire population of the State 864,836, a gain of 304,589 in ten years. The counties of Alameda, Colusa, Humboldt, Lake, Lassen, Los Angeles, Merced, Mono, Shasta, Tehama, and Tulare have increased their population over one hundred per cent. Among the agricultural counties, Alameda has shown the most remarkable growth, from 24,237 inhabitants to 63,639; but this increase is largely due to its vicinity to San Francisco. Owing to mining discoveries, Mono has increased its population from 403, the smallest of any county in 1870, to 5,416. Tuolumne, Mariposa, and Alpine Counties have receded in population. San Francisco has advanced from 149,473 to 233,066.

Funds were appropriated for the completion of the branch prison at Folsom, the building of which had been two or three times begun since the purchase of the grounds in 1858. But, owing to the failure of contractors and changes of plan, the work is not yet complete, though \$300,000 have been expended upon it. The accommodations at the State's prison of St. Quentin had long been of the most imperfect description. In 1874 there were 941 convicts, confined in only 444 cells. The prison was gradually enlarged, until in 1879 there were 696 cells; but the requirements for sleeping space increased with a like pace, the

number of inmates having grown to 1,564 in July, 1879. The reason for locating the new prison at Folsom was to enable the prisoners to be employed in the State granite-quarries in the vicinity. The cells at Folsom average 480 cubic feet in size. The cell-space in the older portion of the St. Quentin building is only 298 cubic feet. There are 324 cells in the branch prison, which is expected to relieve St. Quentin of 500 of its inmates. The contract for the labor of 350 convicts for five years in the quarries, at fifty cents a day each, can not be completed under the Constitution, which prohibits letting out the labor of convicts to private individuals or companies by contract after January 1, 1882. Governor Perkins suggested that one field in which their labor could be employed without competing with free labor might be in the manufacture of burlap sacks for grain, of which 25,000,000 are annually required for the handling of the crops of the State. The cultivation of the jute, of which material these sacks are made, if the lands in any part of the State are adapted for its growth, would prove a new remunerative employment for husbandmen, and the manufacture of the sacks in the prisons might lessen their cost to the farmers, whose supply now comes principally from abroad. A bill for encouraging the planting of jute was accordingly passed by the Legislature.

The Normal School at San José was destroyed by fire February 10th, and an appropriation was made for its reerection.

The policy of the Land-Office at Washington has been altered with respect to tracts of land, valuable for agricultural purposes, hitherto designated as mineral lands, though containing minerals only in a few places. According to a circular from Washington, issued June 2d, settlers upon such lands are not required to bring proof that they contain no minerals, as formerly; but these are open for preëmption to settlers, and, if miners desire to locate mineral claims upon lands thus settled, they are obliged to bring evidence that they contain minerals. This order applies especially to the foot-hill belt in California. The vexations to which settlers upon this tract have often been subjected under the law, which allows miners to prospect for minerals anywhere within the belt, has prevented the development of an immense extent of valuable agricultural land. The land has also been despoiled of its timber, and the abuse of occupying mineral lands on a fraudulent agricultural entry has been practiced, it is thought, as often or oftener in the past than is likely to occur when the region is open to unrestricted settlement.

Congress has passed an act setting apart for park purposes certain lands in California on which are growing "redwood" or "big trees." The largest group of these gigantic coniferæ yet known, the Calaveras South Grove, has passed out of the possession of the Govern-

ment, having been included in the agricultural grant to the State University, and by it sold to a Mr. Sperry, who has made of the grove a resort for tourists. There are other groves known to exist on Government lands, notably one north of Visalia, in which the trees are as fine as those in the Mariposa grove. The Legislature passed an act for the care and preservation of the latter grove, and of the Yosemite Valley.

The southern counties of California desire to secede and organize a separate State government. The proposition was laid before the Legislature by a member from Los Angeles. The slow development of their portion of the State, and the feeling that they are inequitably taxed for the benefit of the north and ignored in the railroad improvements, furnish the grounds for this agitation.

A sanguinary conflict over contested land titles occurred upon a tract granted by Congress to the Southern Pacific Railroad in Tulare and Fresno Counties. The title of the railroad company to the land took effect upon its filing a map of the route in 1867, being derived from an act of Congress passed the preceding year, but the patents were not applied for until 1877. A large number of settlers had squatted upon the tract called the Mussel Slough District between 1867 and 1877, and had established farmsteads and villages there. When the company proposed terms of sale to the occupants, incensed at being subjected to the hardship of having to pay the value of the improvements that they themselves had made, they formed a land league for the object of resisting the claims of the railroad to exact more than the price of wild lands. The dispute was carried into the United States courts, which decided the case against the settlers. The league were none the less determined to retain possession of their homes and to resist all attempts to dispossess them. In 1878 the company conveyed certain parcels of the land to two purchasers, upon which the test suit was brought, which was decided adversely to the settlers in December, 1879. In May, 1880, the company applied to the Court to put these purchasers in possession. Writs were issued and given to United States Marshal Poole to serve upon the settlers. Accompanied by the grader of the railroad lands in this district, the Marshal and the two men who had purchased from the railroad company and established their title at law proceeded to the district. They dispossessed one family in the absence of the man of the house, setting the household effects in the road, and drove to another farm to take possession. Here they were met by a band of armed and mounted men, who demanded of the Marshal and the surveyor that they should surrender, which they did. The squad then rode forward to the carriage containing the others, and made the same demand. They leaped to the ground and fired at the leaguers, killing five of them, and being finally

shot themselves. The settlers continued in quiet possession of the lands after this fatal encounter, the Government refusing to employ troops to eject them.

The effect of the new Constitution upon business in San Francisco was in many ways injurious. The business of the Mining-Stock Exchange was in great part transferred to other cities, and the loan market, building trade, and other branches whose activity betokens the general prosperity of a community, suffered under the effects of laws in which novel discriminations are made against capital. The deterrent influence upon enterprise of the innovations already accomplished and of anticipations of further legislation in the same direction, and the locking up and withdrawal of floating capital, began to affect the interests of small tradesmen and other classes who had regarded the agitation of the Workingmen's party with sympathy or indifference. The indignation against the Sand-lotters became quite general, and when a Citizens' Protective Union was formed, the hope was frequently expressed that they would put an end to the agitation, by unlawful measures, if lawful means were insufficient. The effect of the new laws upon capital had thrown many laborers out of employment, whose presence in the city, together with the order of the health authorities condemning the Chinese quarter, and the question of the validity of the act forbidding the employment of Chinese by corporations, pending before the Supreme Court, afforded the Sand-lot agitators material for their extravagant oratory. The vaguely menacing tone of the Sand-lot and ward-club speeches was resented by the citizens of San Francisco and denounced by the press of the country, and the leaders of the Workingmen were freely charged with having produced the depression in San Francisco by their incendiary bearing. There were rumors of impending riots, and the fact that such fears could arise was alleged as an excuse for breaking up the obnoxious agitation by violent means. The Council of Two Hundred of the Citizens' Union had no intention, however, of exceeding the provisions of the law. Their first measures were to strengthen the resources of the city for the suppression of riots by providing the police with firearms, increasing the stock of weapons in the armories, and improving the discipline of the militia. The Workingmen in turn procured arms and practiced military drill; but it soon became apparent that they were determined, like their opponents, to keep strictly within the limits of the law. After several weeks of watchful inactivity, Kearney, the leader of the Labor party, was arrested at the instigation of the Council on the charge of having broken certain of the city ordinances by using profane and threatening language in an invective against a manufacturer named Spreckels, a member of the Council of Two Hundred. He was tried by Police-Justice Rix, and, having waived a

jury, was found guilty of the misdemeanor by the Judge, March 16th, and sentenced to six months' imprisonment in the House of Correction and to pay a fine of one thousand dollars, this being the extreme penalty of the law. The sentence was confirmed when brought up before the full bench on a writ of *habeas corpus*, the Court holding that it could not review the decision of one of its members. Kearney had been convicted under an ordinance of the Board of Supervisors making it a misdemeanor to "address to another or utter in the presence of another any words, language, or expression having a tendency to create a breach of the peace." The case was carried before the State Supreme Court, sitting in full bench, May 27th, on a writ of *habeas corpus*, and the decision of the Police Court was reversed. The Court declared, in its opinion, against the doctrine of any judge or jury by ordinance being allowed to say what they deem language calculated to create a breach of the public peace, and that such doctrine infringes constitutional right and the liberty of speech. It held that while the reasonableness of the ordinance is in doubt, its want of harmony with general State laws is also a serious question. It held that the Police Court of San Francisco is an inferior court, and that all jurisdictional facts must appear in its records affirmatively. It was the intent of the ordinance, even if all other objections to it be waived, that the words which constitute the offense shall be uttered, not only of another, but in his presence. In this case it is not averred that the words were uttered in the presence of the person denounced.

The next manifestation in the movement was the impeachment of Rev. I. S. Kallach, Mayor of the city, who had been elected the preceding year on the Workingmen's ticket, by the Board of Supervisors. The charges were all of a vague and general import, specifying nothing which legally amounts to malfeasance. The Superior Court was, therefore, obliged to dismiss the case without argument, on the same day on which Kearney obtained his release.

In the mean time the Citizens' Union had organized a political party in opposition to the Workingmen, and placed a ticket for city officers in the field, which, in the charter election, held in April, defeated the Workingmen's nominees. There was a question raised as to the legality of the count, owing to the fact that the Citizens' ballots differed somewhat in the thickness and color of the paper from the Workingmen's, which had been procured from the State Secretary, when the Constitution requires uniformity; but the election was not contested. In the Presidential campaign a division occurred in the Workingmen's party, a part of them following Kearney, who identified himself with the Greenback party, while a larger number, including Mayor Kallach, voted with the Democrats. A sequel to the attempt to assassinate Kallach in the preceding year by

the editor De Young was the murder of the latter by Kalloch's son.

The Board of Health in February declared the quarter of San Francisco inhabited by Chinese, and called Chinatown, to be a public nuisance. The Health Officer of the city, Dr. J. A. Meares, issued a proclamation, February 24th, declaring that at the expiration of thirty days the officers of the law would be called upon "to empty this great reservoir of moral, social, and physical pollution, which is constantly extending its area, and threatens to engulf, with its filthiness, the fairest portion of our city." A difficulty was anticipated in enforcing the sanitary regulations on account of the great number of the Chinese, there being about twenty-five thousand in the city, as it was expected that many of them would have to be arrested and provided with jail accommodations. There was no necessity, however, of invoking the power of the law, as it turned out, because the Chinamen immediately set about renovating and purifying their dwellings; and the only houses which remained uncleansed at the end of the thirty days were the property of white men who neglected to carry out the law.

The new charter for the city of San Francisco, elaborated under the auspices of the Committee of Two Hundred, and adopted by the vote of the Legislature, was rejected by the people in the municipal election, held September 8th. The vote against the McClure charter was overwhelming, nearly nineteen thousand votes out of the total vote of twenty-three thousand being cast for its rejection. A second indictment was brought against Mayor Kalloch, on account of threatening language used with regard to the action of the Judge, in impaneling a jury for the trial of his son on the charge of murder.

The Republican State Convention met in Sacramento, April 29th, to nominate delegates to the National Convention in Chicago, and adopted the following resolutions, instructing the delegates to vote for the nomination of James G. Blaine:

The Republicans of California, in State Convention assembled at Sacramento, April 29, 1880, as expressive of their views, do hereby resolve:

1. That they reaffirm their adherence to the Republican national platform of 1876 and the California Republican State platform of 1879.
2. That the policy of resumption, which has made the greenback of war days equal to gold in days of peace, should be maintained.
3. That the amendments to the Federal Constitution, and all laws passed in pursuance thereof, should be sacredly and jealously maintained and enforced, so that every citizen of the United States, regardless of color or condition, shall be protected in all his rights, and a full, free, and fair election be held in all the States of the Union.
4. That the free public schools should be guarded and fostered by all the appliances within reach of the State and national Governments, to the end that the children of all may be educated to know, and thereby to enjoy and perform, their full duties and privileges as American citizens.
5. That all peaceful measures should be used to pre-

vent the further immigration of Chinese into the United States, and to rid the country of those now here.

6. That we will cordially support the nominees of the Republican National Convention, whoever they may be; but we know that the six electoral votes of our State are certain to be given for the Republican ticket if James G. Blaine be nominated, wherefore we do hereby instruct our delegates to the Republican National Convention to vote as a unit, first, last, and all the time, for James G. Blaine, and to use all honorable means to secure his nomination for President of the United States.

The Democratic Convention to nominate delegates to the Cincinnati National Convention met at Oakland, May 19th. The following platform was adopted:

The Democracy of California, by their representatives in convention assembled, resolve:

1. We reaffirm our fidelity to the principles enunciated by the Democratic Convention of St. Louis in 1876.
 2. We denounce the fraud by which Rutherford B. Hayes and William A. Wheeler were declared President and Vice-President of the United States, and the fairly elected candidates, Samuel J. Tilden and Thomas A. Hendricks, counted out.
 3. We declare that among the leading issues of this campaign are the vindication of the right of the people to self-government; the condemnation of the crime against the ballot committed four years ago; resistance to imperialism; the maintenance of the reserved rights of the States, and opposition to Chinese immigration.
 4. That the drift of the Republican party toward empire, through the oppressive concentration of capital, is a fraud upon the voting masses, and an insult to the men who carry the guns in defense of our liberties.
 5. We affirm our devotion to the Union, deprecate all sectionalism, hold the Republican party responsible for the agitation of dead issues, and regard the preservation of local self-government as necessary to the perpetuation of the republic.
 6. That we regard with alarm the doctrines of centralization recently announced by the Republican majority of the Supreme Court of the United States as having been made in the interest of party, and intended to blot out the last vestige of State rights, and change the Federal Union to an empire.
 7. That we favor continual lawful agitation of the subject of Mongolian immigration to this country, until the Federal Government is moved to modify our treaties with the Chinese Empire so as to prohibit it, and thus save those of our fellow-citizens who depend upon labor for support from unjust and degrading competition. We condemn and denounce the veto of Rutherford B. Hayes of the bill limiting Chinese immigration, and declare that there is no relief from the scourge except through a Democratic Administration.
 8. That the labor of this country is its capital, and deserves the protection and guardianship of our Governments, State and Federal.
 9. We impose no instructions upon our delegates to the Convention to meet at Cincinnati, save and except to vote for the retention of the so-called "two-thirds rule" in nominating candidates for President and Vice-President.
- The Workingmen's party of California, in their Convention at San Francisco, adopted a platform denouncing subsidies, national banks, and monopolies, and favoring greenbacks, advocating female enfranchisement, compulsory education, a public fund to assist the poor to settle on Government lands, direct ballot for President and Vice-President, and the election of postmasters. A split occurred between the

Greenback and Democratic factions in the Convention, and the latter organized separately.

The returns of the United States census make the total population of the State 864,686, showing an increase in ten years of 304,439 in the population, which the last census gave as 560,247. The male population is 518,271, the female 346,415. The number of inhabitants in the State of foreign birth is 292,680; of American birth, 572,006. The white population numbers 767,266; the colored, 97,420. The population of San Francisco is given as 233,956. Oakland contains 35,010 inhabitants against 10,500 in 1870; Sacramento has grown in population in the ten years from 16,283 to about 23,000; Los Angeles from 5,728 to 11,050; San José from 9,089 to 12,635.

CAPE COLONY AND BRITISH SOUTH AFRICA.* By an official declaration, dated January 8, 1879, the Whale Bay was annexed to the Cape Colony. In consequence of the conflicts between the English and the natives of Caffraria, the remnant of independent Caffraria, Pondoland, was in 1878 occupied by the English. Chief Umquikela was declared to have forfeited his land, and on August 31, 1878, a military post was erected by the English on the left bank of the St. John River or Umzimvubu. Including these new annexations, the area and population of the British dominions in South Africa are as follows (area expressed in kilometres; 1 kilometre = 0.386 square mile):

TERRITORIES.	Square kilometres.	Population.
Cape Colony.....	517,849	720,934
Basuto land.....	21,794	127,701
Griqualand West.....	45,300	45,277
Transkei districts (Caffraria).....	40,334	400,500
Transvaal.....	294,981	315,000
Natal.....	48,560	356,517
Total.....	968,418	1,965,000

Of the population of Cape Colony proper 236,783 belong to the white race, and 484,201 to the colored. Of the former more than one half (143,000) is connected with the Dutch Reformed Church; next in order are the Anglican Church (26,000), Roman Catholics (8,600), Methodists (7,900), Lutherans (6,200), Presbyterians (3,400), Independents (2,500), and Baptists (2,100).

The present Constitution of the Cape Colony vests the executive power in the Governor and an Executive Council, composed of certain office-holders appointed by the Crown. The legislative power rests with a Legislative Council of twenty-one members, ten of whom are elected for ten years, and eleven for five years, presided over *ex-officio* by the Chief-Justice; and a House of Assembly of sixty-eight members, elected for five years, representing the country districts and towns of the colony. The qualification for members of the Council is pos-

sessed of immovable property of £2,000, or movable property worth £4,000. Members of both Houses are elected by the same voters, who are qualified by possession of property, or receipt of salary or wages, ranging between £25 and £50 per annum. There were 45,825 registered electors in 1878. The Governor is, by virtue of his office, commander-in-chief of the forces within the colony. He has a salary of £5,000 as Governor, besides £1,000 as "her Majesty's High Commissioner," and an additional £300 as "allowance for country residence." The administration is carried on, under the Governor, by a Ministry of five members, called the Colonial Secretary, the Attorney-General, the Treasurer-General, the Commissioner of Crown Lands and Public Works, and the Secretary of Native Affairs.

The revenue of the colony is derived mainly from import duties, which produced, on the average of the five years from 1874 to 1878, not far from a million pounds sterling per annum. Comparatively little is derived from rent or sales of public lands, although vast districts are waiting to be cultivated. The greatest part of the expenditure is for interest on the public debt. The estimated revenue of the year 1879 was £2,309,000, and the expenditure £2,226,164. The colony had a public debt of £10,500,000 on the 31st of July, 1879. The debt dates from the year 1859, when it amounted to £80,000. The interest in 1879 amounted to £483,365. The debt is under promise of repayment by installments extending to the year 1900. The imports were valued in 1877 at £5,158,348, the exports at £3,634,073. The commercial intercourse of the colony is mainly with the United Kingdom, and the value of the wool shipped annually from the colony to Great Britain constitutes alone nearly nine tenths of the total exports. The railway lines had, in June, 1879, an aggregate length of 580 miles, and 420 miles were in the course of construction. The number of post-offices was 248; the revenue of the department amounted to £57,870, and the expenditures to £151,220. The telegraphs in the colony, which were constructed entirely at the expense of the Government, comprised, in 1878, 3,380 miles of wire, with 92 offices. The number of messages sent was 183,120.

The Right Honorable Sir HERCULES GEORGE ROBERT ROBINSON, G. C. M. G., who was appointed Governor of the Cape of Good Hope, December, 1880, was born in 1824, and educated at the Royal Military College, Sandhurst. He held for some years a commission in the Eighty-seventh Foot, but retired from the service in 1846, and was employed in various capacities in the civil service in Ireland until 1852. He was in 1854 appointed President of the Island of Montserrat in the West Indies, and in 1855 Lieutenant-Governor of St. Christopher. He succeeded Sir John Bowring as Governor of Hong-Kong in 1859, when he received the honor of knighthood, was promoted to the

* For a statistical account of the races and religious denominations of the Cape Colony, see "Annual Cyclopædia" for 1879, article CAPE COLONY.

governorship of Ceylon in January, 1865, and to the governorship of New South Wales in March, 1872, which position he held until 1878. In August, 1874, he proceeded to the Feejee Islands for the purpose of settling matter between the British Government and the native power. On October 15th he accepted the unconditional cession of the islands, annexed them to the British Empire, and hoisted the British flag. For some time he remained at the head of the provisional government which he established for the islands. For the services rendered on this occasion he was in January, 1875, created a Grand Cross of the Order of Sts. Michael and George. From 1879 to 1880 he was Governor of New Zealand. In 1880 he was "Governor and Commander-in-Chief of the Colony of Good Hope and her Majesty's High Commissioner for South Africa."

The colony of Natal, formerly an integral part of the Cape of Good Hope settlement, was erected in 1856 into a separate colony under the British Crown, represented first by a Lieutenant-Governor, and since 1879 by a Governor. Under the charter of constitution granted in 1856 and modified in 1875 and 1879, the Governor is assisted in the administration of the colony by an Executive and a legislative council. The Executive Council is composed of the Chief-Justice, the commandant, the Colonial Secretary, the Treasurer, the Attorney-General, the Secretary for Native Affairs, and two members nominated by the Governor from among the deputies elected to the Legislative Council. The latter is composed of thirteen official members and fifteen members elected by the counties and boroughs. The budget of the colony shows a steadily increasing revenue and expenditure, as will be seen from the following table:

YEARS.	Revenue.	Expenditure.
1874.....	£247,259	£254,402
1875.....	260,271	307,025
1876.....	265,551	261,938
1877.....	272,473	288,825
1878.....	369,388	387,067
1879.....	473,478	491,888

About one fourth of the revenue is derived from customs, and the rest from miscellaneous sources of income, among them a "hut-tax" on natives, the impost being fixed at 14s. per hut. In 1878 there were 85,714 huts thus taxed. The largest items in the list of expenditures are those for police and the administration of justice. The public debt consists of six loans, all at six per cent., three of them contracted for harbor-works, two for coolie immigration, and the last, raised in 1876, for the construction of a line of railway. The total debt of the colony was £1,631,700 at the end of 1879. The colony has a seaboard of 150 miles, but the extent of some of the districts is all but unknown. As to race there were in 1877 22,650 persons of European descent and 12,823 coolies; all the remainder were natives of Africa. In the two

towns of the colony, Pietermaritzburg and Durban, the European and native population were nearly equal in numbers. Comparatively few immigrants arrived in recent years, the former government aid to this effect having been discontinued. The commerce of Natal is almost entirely with Great Britain. The staple article of export is sheep's wool. The amount of wool exported to Great Britain was valued at £400,672 in 1874, at £514,310 in 1875, at £379,079 in 1876, at £518,379 in 1877, at £568,111 in 1878, and at £502,539 in 1879. Next in importance to wool stand hides, the exports of which were of the value of £67,405 in 1879; and raw sugar, of the value of £13,111, in the same year. Many of the exports of the colony, particularly wool, come from the neighboring Dutch settlements, which also absorb more than one third of the imports. Cotton was first grown in the colony in 1866. The exports of raw cotton to Great Britain were valued at £18,559 in 1870, and rose to more than £29,000 in 1871, but have rapidly declined ever since until 1876, when they amounted to only £197. From 1877 to 1879 no raw cotton was exported. The chief articles of British imports into Natal in 1879 were apparel and haberdashery, valued at £341,317; and iron, wrought and unwrought, of the value of £94,272. The Government in 1875 made a contract for the construction of a railway system which is to comprise 345 miles of a single line, to be constructed at a cost of £1,200,000.

Major-General Sir GEORGE POMEROY COLLEY was appointed Governor of Natal, February 19, 1880. He was born in 1835, entered the army in 1850, and served in the Ashantee and other wars.

The Basutos, who in 1880 attracted great attention by their revolt against English rule, have, to a large extent, been civilized and Christianized by Protestant missionaries from France. The missionaries were invited into the country by King Moshesh, who steadfastly aided all the efforts for spreading education and civilization until his death, although he never became a Christian himself. The majority of the Basutos were in 1880 still pagans, but the Christian minority, excelling by education, industry, and wealth, already has a controlling influence. The churches have had since 1872 a synodal organization after the model of the Reformed Church of France.

The Colonial Parliament was opened, May 7th, by Sir Bartle Frere, who announced in his opening speech that bills would be presented for convening a conference on the confederation of the South African colonies, for sanctioning the annexation of Griqualand West, for extending the system of railways and improving harbors, and for dealing with the detention of Cetywayo and Secocoeni. The proposal for a conference of the colonies on confederation was brought up in June. A stronger opposition was manifested against it than had been anticipated; and, after three days of discussion,

the Premier stated that in the face of the evenly divided feeling of the House on the subject, the Government would not feel justified in advising the convening of a conference, and the matter would therefore be dropped. The Governor, in his address on the prorogation of the Parliament, July 30th, attributed the failure of the conference to the unsatisfactory settlement of Zoolooland and the annexation of the Transvaal.

The annual budget was presented in the Parliament, June 7th. The revenue for the coming year was estimated at £2,549,000 and the expenditure at £2,516,091, against a revenue of £2,509,216 and an expenditure of £2,494,397 for the year that was expiring. The total expenses for war from 1877 to the present date were £1,181,715.

A party among the Boers of the Transvaal continued to manifest discontent over the annexation of that country to the British dominions, and to agitate for the reversal of the act. Mr. Bok, secretary of a committee of a meeting of Boers, which was held in December, 1879, to demand independence, and Mr. Pretorius, formerly President of the Transvaal Republic, chairman of the committee, forwarded to Sir Garnet Wolseley a letter containing the resolutions passed at the meeting, and on account of their prominence in the movement were arrested for connection with a treasonable project. Mr. Bok was released on bail. Sir Garnet Wolseley endeavored to come to an understanding with Mr. Pretorius without success. The ex-President refused to accept a seat which was offered him in the Transvaal Executive Council. The Government had already taken pains to dispel any hopes the people of the Transvaal might entertain that the annexation would be repealed, Sir Garnet Wolseley having embraced the opportunity of a public dinner at Pretoria to announce that the country would hereafter be regarded as a Crown colony, and to declare that it was considered unsafe to trust the Boers with executive functions. A communication was sent to the British Colonial Office on the subject, and a reply was received in March from Sir Michael Hicks-Beach, the Colonial Secretary, explicitly declaring that the Government was not able to entertain any proposal for the withdrawal of the Queen's troops from the Transvaal. In April, Mr. Krüger, the designated leader of the Boers, and Mr. Joubert, were deputed to visit the Government of the Cape Colony to urge the claims of their constituents and seek a satisfactory arrangement. A memorial was addressed to Mr. Gladstone, asking him to use his influence in favor of the reversal of the annexation. On the other hand, a petition against reversal received a considerable number of signatures. To these applications the British Government replied that, whatever might have been the merits of the question in the first instance, it would not be wise or safe to undo the annexation at present. Mr. Gladstone added the

expression of his desire that the "white inhabitants of the Transvaal should, without prejudice to the rest of the population, enjoy the fullest liberty to manage their local affairs."

A proclamation was issued about the first of February, summoning the Basutos to surrender their arms. The Basutos were a pastoral and agricultural tribe, who had made some progress in civilization, and had not been involved in any difficulties with the Government. Their loyalty was unsuspected, and a body of them had rendered services of great value and importance in the Zooloo war. They claimed to possess firearms by virtue of a special and distinct recognition of their right to do so, and had not thought that the attempt would be made to deprive them of them. The policy of disarming them was doubted by many people in the colony and in England; Sir Garnet Wolseley advised against it, and wrote from the Cape, on the 10th of March, that it would be "incurring a most serious risk for an incommensurate object," and would array the native sentiment in every part of South Africa against the British. Letsea, the son of the chief Moshesh, asked for a delay in the enforcement of the order, to enable him to prepare a petition to the Colonial House of Assembly, and to the Queen, against it. Delay was granted, and the time for carrying out the order was extended first to June 21st, afterward to July 12th. The Peace Preservation Act was proclaimed in Basutoland early in April. A deputation of Basutos arrived in the colony early in June, to represent the cause of their people. The House of Assembly, at the beginning of June, refused by a majority of nine to pass a vote of censure on the Government for ordering the disarmament and proclaiming the Peace Preservation Act, and on the 23d of July again rejected a similar motion. The Legislative Council by a large majority adopted a resolution supporting the Government. An appropriation of £30,000 was voted to compensate the Basutos for the arms which they gave up. When the appeal to the Queen had been denied, and the Assembly had sanctioned the policy of the Ministers, Letsea, as paramount chief, ordered his people to obey the commands of the Government. Many of the Basutos brought in their arms; others, with the chief Masupha, determined to resist the disarmament, and opposed by force those who took steps to submit to it. Letsea collected a force of loyal Basutos, proceeded against the insurgents and besieged the discontented chief Masupha at Thababosigo. He, however, retired from the siege without having accomplished anything, not venturing to exercise his authority by force. The chief Lethorodi declined to accept the terms offered by the Government, and with six hundred followers attacked the force of Colonel Carrington at Mafeteng. His men were routed and followed for several miles. A second attack was made on Mafeteng, September 21st, by a force of seven thousand Basutos, and was repulsed after a contest which continued through all the day, with

a heavy loss to the assailants. Twelve hundred Basutos attacked Mohales Hoek, where the magistrate had a small garrison, on the 20th of September, and were beaten off. The attack was renewed on the 21st, and was again repelled. The position was relieved, a few days afterward, by the arrival of colonial troops under Colonel Southey. The situation in Basutoland had become by this time very grave. The area of the rebellion was increasing, and the discontent, which had at first been confined to eastern Basutoland, broke out in the country west of the Drakenberg. An English commissioner and two magistrates, with about one hundred men, had gone up to pacify the people of the latter district, but without success. The situation had become alarming in East Griqualand, and the Pondos and Galekas were restless. An attack was made by the Basutos on Maseru, which was held by Colonel Bayley with about five hundred men, October 10th, and was continued from morning till midnight. The rebels advanced in great force after dusk, and reached to within seventy yards of Fort Gordon and to within thirty yards of the residency. The Government office and barracks, the church, schoolrooms, dwellings, and stores were burned, after which the enemy retired, still holding Colonel Bayley shut up. Lethorodi had in the mean time been concentrating his forces near Mafeteng, and had succeeded in isolating Colonel Carrington, who was there with a rather smaller force than that of Colonel Bayley at Maseru. A body of sixteen hundred and sixty men and officers, one thousand of whom were mounted, with two guns, was collected at Wapener, in the Orange Free State, under Brigadier-General Clark, who had taken command of the colonial forces, and marched October 19th, and relieved Mafeteng on the next day. The Basutos opposed a more vigorous resistance to the relieving force than had been anticipated, and compelled an active contest, but were finally repulsed on every side. The principal disaster to the British was suffered by the First Regiment of Yeomanry, which was charged upon by a large body of Basutos, and lost forty-two killed and wounded. The relief of the post was effected opportunely, for the provisions of the garrison were running short. After this success, a proclamation was issued by the Government, offering protection to all rebels who would surrender with their arms and ammunition. Lethorodi's village was captured by Colonel Carrington on the 22d of October. Mr. Hamilton Hope, magistrate at Qumbo, and his two clerks, were treacherously murdered by Pondos under Umhlonhlo, who, professing loyalty, surrounded and stabbed them under pretense of performing a war-dance, and then destroyed the telegraph station. Other Europeans at the place escaped. The Europeans at Tsolo, with the magistrate, were threatened, but were relieved with the assistance of friendly Pondos. General Clark, having burned the village of the chief Moletsane, successfully

stormed his mountain stronghold on the 31st of October. While this action was going on, a large body of natives attacked the small number of colonial troops holding Lethorodi's village and compelled them to evacuate it.

On the 2d of November the rebels had been driven out of the Matadile district in Caffraria; on the 12th the defeat of the rebel chief Umhlonhlo was announced, and the presence was reported of a sufficient force to suppress the rebellion in Griqualand East. On the 20th the Premier of Cape Colony telegraphed to the British Government that the resources of the colony were apparently equal to the requirements for suppressing the rebellion, and that the Government had no intention of applying for imperial troops. Sir Bartle Frere was recalled from the office of High Commissioner at the beginning of August, the dispatch announcing his recall assigning the action of the Cape Parliament in refusing the conference on confederation as the reason for it. A considerable party in the colony adhered to the late Commissioner, a meeting of which at Cape Town passed resolutions of sympathy with him in the difficulties he had had to deal with, and asserted that before long the people of England as well as of the colonies would acknowledge the soundness and justice of his policy. An address was presented to him on his departure, September 15th, by deputations which included delegates from the eastern frontier and from Natal. Replying to it, he said that the action he had taken with reference to Natal and the Transvaal was either a great service or a great crime, and he highly valued the favorable verdict of the inhabitants of Natal.

On the 17th of November Colonel Carrington was attacked on all sides by the enemy when three days out from Mafeteng. The attacks were repelled, and the main body of the colonial detachment fell back to Mafeteng. A colonial force under Captain Van Hisingen was attacked by Tembus in Caffraria, and the Captain, four other white men, and fifty Fingoes were killed. Jonathan Moloppo and his Basutos, who had hitherto been considered friendly to the British, broke out into open revolt, and twice attacked the residency at Laribe, but were beaten back on each occasion. Colonel Wavell went to the assistance of the Resident, defeated the Basutos, and captured large numbers of cattle. The Basutos were afterward dislodged from the mountains near Laribe, to which they had withdrawn. A column of troops was sent out near the end of November for patrolling operations in Tembuland and Griqualand East, and met with success in the capture of stock from the natives. On the 1st of December Colonel Carrington was out patrolling with six hundred men, when he was almost entirely surrounded by the enemy. His only gun was disabled, and he was delivered from his precarious situation by the infantry marching in square off from the camp, and bringing with them another gun.

The Colonel said that he had eight thousand Basutos in front of him. On the 13th of December a patrolling force numbering six hundred and fifty men, who had moved out toward the north, under Captain Brabant, on entering Tsita Neck, met with a large number of the enemy. Captain Brabant retired on the village, and, after communicating with Colonel Carrington, evacuated it, the enemy taking possession and firing heavily, killing one rifleman. Colonel Carrington's division, which consisted of five hundred men, then moved eastward for three miles. The enemy charged repeatedly on all sides, wounding several men. The number of the enemy engaged was estimated at from nine to ten thousand. This was said to be the most important engagement that had yet occurred.

Mr. Thompson, the magistrate at Gatberg, was surrounded by three thousand of the enemy and reduced to a very scanty supply of ammunition, when he was relieved, December 7th; the defenders of the post were all brought off, and the residency was abandoned.

On the 23d of December the complete rout of Umhlonhlo, with the loss of three hundred men, was reported.

A new element of trouble was introduced into the situation in the latter part of December by the revolt of the Boers of the Transvaal. The insurrection began with meetings of the Boers in large numbers, at which forcible measures were threatened. An attempt was made to arrest the leaders of the movement, and a proclamation was issued warning the discontented Boers of the results of persistence in their action. On the 19th of December about five thousand men, out of a total of eight thousand whites capable of bearing arms in the Transvaal, had taken possession of Heidelberg, and established a republican government, with Paul Kruger as President, and Joubert as commandant. An action was begun at Potchefstroom on the 15th of December, which was continued at that place and before the military camp for several days, and ended in the Boers gaining and holding the place. On another day, a detachment of two hundred and fifty men of the Ninety-fourth Regiment, while marching from Lydenburg to Pretoria, were attacked near Middleburg, while all the men, having laid aside their arms, were endeavoring to extricate some wagons from a swamp. One hundred and twenty men were killed and wounded, and the rest of the detachment were taken prisoners.

On the 31st of December the garrisons of Standerton and Wakerstroom were reported to be well intrenched and supplied, and confident. The Boers, having seized Utrecht, had abandoned it, offering no violence except to break open the magazine, whence the bulk of the ammunition had been removed from their reach. The British headquarters and one company of the Sixtieth Regiment, four companies of drafted men, and two of mounted troops,

under Sir George Colley, were to leave Natal for the front on the 1st of January. About fifteen hundred troops were already on the way, with two cannons and one Gatling gun. The Boers of the Orange Free State were said to be greatly excited, and the President of that State was compelled to send word that he feared he would be unable to restrain them from giving aid to the insurrection. Sir George Colley had issued an address to the troops, saying that the stain cast on the British arms must be quickly effaced and the rebellion suppressed. He trusted, however, that the officers and men would not retaliate for the outrages, and would avoid punishing the innocent with the guilty. He charged them to remember that the Boers, though misled and deluded, were on the whole a brave and high-spirited people, actuated by feelings that in the main are entitled to respect.

A proclamation was issued by the heads of the insurrectionary government, defining and defending the constitution of the new republic. The proclamation contained an offer of pardon to those who opposed the movement for independence, and stated that the present officers could hold their positions provided they would recognize the republic, and that the British consul would be permitted to continue his residence. It also sanctioned the expenditure of money that had been made during the period of annexation. Martial law was proclaimed by the republicans.

CENSUS. Nearly all the large countries of the civilized world have taken their periodical censuses in 1880, or are to take them during the year 1881. The United States, Germany, and Austria are among the former states; while a new census of the whole of the British Empire is due in 1881. In view of the importance of this subject, it appears desirable to refer to the efforts which have been made in recent years to render the results of the official censuses more and more accurate, and to the preparations made for taking the new census in the countries named.

The considerable progress which has been effected in the method of taking the recent censuses is especially due to the careful discussion of the subject by the International Statistical Congresses. Of these, nine have been held in the following years and at the following places: first, 1853, Brussels; second, 1855, Paris; third, 1857, Vienna; fourth, 1860, London; fifth, 1863, Berlin; sixth, 1867, Florence; seventh, 1869, The Hague; eighth, 1872, St. Petersburg; ninth, 1876, Buda-Pesth.

Besides these Congresses, meetings of the Permanent Commission of the Statistical Congresses have been held in 1873 at Vienna, in 1874 at Stockholm, in 1876 at Buda-Pesth, and in 1876 at Paris. Another meeting of the Permanent Commission was arranged for 1879, but it did not take place.

It was especially the Congress held in 1872 at St. Petersburg which very thoroughly inves-

tigated the whole subject and passed a series of resolutions which, it is believed, will form the foundation of most of the official censuses hereafter. These resolutions were substantially as follows:

1. To avoid errors and double enumeration, the real population which is present at a place at the moment of enumeration must be made the basis of the census.

2. The census should mention every individual by name.

3. A census should be taken at least once in every decennium, and in those years the number of which ends in a naught.

4. As nearly as possible, a census should be completed on one day, or all the statements should refer to one day.

5. The execution and control of the census is to be confided to special agents, and the population should be trained to cooperate.

6. Wherever it is practicable, individual cards, containing questions addressed to only one individual, should be used; where this is not possible, household lists should be employed.

7. The points to be inquired into may be divided into those which may be designated as obligatory for all states, and those which may be left to the several states. The Congress designated as points of the first class: Family name and first name; sex; age; relationship to the head of the house; status of the family; occupation; religious denomination; mother-tongue; knowledge of reading and writing; birthplace, if it is different from the place of enumeration; citizenship; bodily and mental infirmities, as blindness, deafness and dumbness, insanity, and imbecility.

Professor H. Wagner, of Göttingen, has published in the sixth volume of the well-known periodical, "*Die Bevölkerung der Erde*" (Gotha, 1880), a complete list of all the censuses which have been taken up to the end of 1879. We extract from this list the censuses of the larger countries to which the "*Annual Cyclopædia*" generally devotes special articles, adding the censuses which were taken in the course of the year 1880.

America: United States, 1790, 1800, 1810, 1820, 1830, 1840, 1850, 1860, 1870, 1880; Canada, 1871; Guatemala, 1872; San Salvador 1878; Venezuela, 1873; Colombia, 1870; Peru, 1876; Chili, 1865, 1875; Argentine Republic, 1869; Paraguay, 1873; Brazil, 1872.

Europe: Austro-Hungary, 1857, 1869, 1880; Belgium, 1846, 1856, 1866, 1876; Denmark, 1840, 1845, 1855, 1860, 1870, 1880; France, every fifth year from 1820 to 1866, 1872, 1876; Germany, 1871, 1875, 1880; Great Britain, every tenth year from 1801 to 1871 (the first regular census in Ireland was taken in 1821); Italy, 1861, 1871; Netherlands, every tenth year from 1829 to 1879; Norway, every tenth year from 1815 to 1875; Portugal, 1863, 1878; Roumania, 1859-1860; Russia (regular censuses have been taken only in a few cities; for the

empire in general there are so-called "revisions," which calculate the total population on the basis of the police registers); Sweden (the Lutheran clergy have kept since 1749 accurate parochial registers, which in general have the value of censuses; the results have been published every fifth year since 1750, as "enumerations"; since 1860 the Government has also published annual results); Switzerland, 1850, 1860, 1870, 1880; Servia, 1866, 1874; Spain, 1857, 1860, 1877.

Asia: British India, 1867-1872; Japan, 1874.

Australia: All the colonies took censuses in 1861 and 1871. Other censuses have been taken as follows: Queensland, 1876; New South Wales, 1821, 1822, 1823, 1825, 1828, 1833, 1836, 1841, 1846, 1851, 1856; Victoria, 1836, 1838, 1841, 1846, 1851, 1854, 1857; South Australia, 1844, 1846, 1851, 1855, 1866, 1876; West Australia, 1850; New Zealand, 1857, 1858, 1864, 1867, 1874, 1878.

The aggregate population of the countries in which censuses have been taken, inclusive of Russia, amounts to 626,000,000.

For taking the tenth census in the United States, Congress provided (see acts of Forty-fifth Congress, chapter cxov) that the President shall appoint supervisors, not to exceed one hundred and fifty, and the Secretary of the Interior shall, on or before the first day of March, 1880, designate the number to be appointed within each State or Territory. Each supervisor of census shall apportion his district into subdivisions, and designate to the Superintendent of the Census at Washington suitable persons as enumerators. The enumeration shall commence on the first Monday of June, and be taken of that date. Each enumerator is required to complete and forward his returns to the supervisor of his district on or before July 1, 1880; and in any city having over 10,000 inhabitants under the census of 1870 the enumeration of population shall be taken within two weeks from the first Monday of June. Each supervisor shall receive \$500 in full compensation for all services rendered. To enumerators in subdivisions, where the Superintendent of Census shall deem such an allowance sufficient, an allowance not exceeding two cents for each living inhabitant, two cents for each death reported, ten cents for each farm, and fifteen cents for each establishment of productive industry enumerated and returned, may be given in full compensation for all services. For all other subdivisions, rates of compensation shall be fixed in advance of the enumeration by the Superintendent of Census, with the approval of the Secretary of the Interior, according to the difficulty of enumeration; but the compensation allowed to any enumerator in any district east of the 100th meridian shall not exceed an average of four dollars per day of ten hours actual field-work each, and the compensation to any enumerator in any district west of the 100th meridian shall not exceed six dollars per working-day of equal length.

In England, three acts were passed in 1880 for taking the census of the United Kingdom in 1881. The first relates to Ireland (43 and 44 Victoria, cap. xxviii). Under the direction of the Lord Lieutenant houses are to be visited on Monday, the 4th of April, and other days, as appointed, and the population on the premises on Sunday night, the 3d of April, to be ascertained, and among the particulars to be gathered is the "religious profession" of each inmate. There are penalties for withholding or giving false information, with a proviso that no person shall be subject to such forfeiture for refusing to state his religious profession. The provision is omitted in the other statutes. The next act (cap. xxxvii) relates to England, and the Local Government Board is to superintend the taking of the census. There are household schedules to be left in the course of the week ending Saturday, April 2d, and to be collected on Monday, April 4th, with particulars as to all persons who were on the premises on Sunday night, April 3d, with penalties for neglect or false answers. The act as to Scotland is cap. xxxviii, and the Secretary of State is to superintend the census, and penalties are to be imposed for disobedience of the directions given as to householders' schedules. In the United Kingdom the census is to be as to persons on Sunday, the 3d of April next. The census of England will be taken by the Registrar-General, Sir Brydges P. Henniker, assisted by Mr. William Clode and Dr. William Ogle, M. D., and Mr. F. J. Williams will be the secretary. The country will be mapped out into about 35,000 enumeration districts.

In Germany the third census authorized by the German Empire since its creation took place on December 1, 1880. In accordance with the recommendations of the St. Petersburg Statistical Congress referred to above, the process of enumeration was begun and completed in a single day, individual enumeration schedules having been distributed in advance and filled up by each adult inhabitant. The fulfillment of this duty was insured by making the owner of each dwelling, or his agent, responsible for compliance with the law on the part of all its occupants. The schedule had been arranged by a conference of the heads of the Statistical Bureaus of the German States. The German system of recension is generally regarded by statisticians as the least liable to error, and to exceed in accuracy the results of any other system except that of Switzerland.

CENTRAL AMERICA. (See COSTA RICA, GUATEMALA, HONDURAS, NICARAGUA, and SALVADOR.)

CHAMBERLAIN, JOSEPH, President of the Board of Trade in the new English Cabinet, is the son of the late Mr. Joseph Chamberlain, of Manor-green Hall, near Birmingham, and was born in 1837. He was educated at University College School, London. He is an alderman and magistrate for Birmingham, chairman of the Birmingham School Board, President of the

School of Design, and chairman of the National Educational League. Mr. Chamberlain has been three times Mayor of Birmingham, in 1874, 1875, and 1876, and has represented Birmingham in Parliament since June, 1876, when he was elected, unopposed, to the seat vacated by Mr. George Dixon. In politics he is a Radical, and strongly supports the disestablishment of the Church of England, and a system of national compulsory secular education. In the House of Commons he has chiefly attracted attention by his advocacy of the Gothenburg system of licensing places in which intoxicating liquors are sold. Soon after leaving school, Mr. Chamberlain became one of the partners of Nettlefold & Chamberlain, wood-screw makers, at Birmingham, a firm of which his father had been a member since 1854. He retired from business in 1874, not long after the death of his father. In the new Cabinet of Mr. Gladstone, he, with Mr. Bright, represents the Radical element.

CHAPIN, REV. EDWIN HUBBELL, Universalist minister, was born at Union Village, Washington County, New York, in 1814. He was of a New England family, and was educated in Vermont. In 1837 he was ordained at Utica, and took charge of a church first in Richmond, Virginia, and later at Charlestown, Massachusetts. In 1846 he became associate pastor with Dr. Ballou, of the Second Universalist Church of Boston. While in Massachusetts he became widely known as a lecturer on temperance, abolition, universal peace, and other reforms then in vogue. In 1849 he removed to New York to be the pastor of the Fourth Universalist Society, then occupying the edifice on Murray Street, corner of Church. Under this gifted preacher the congregation soon outgrew the capacity of the building, and removed to the corner of Broadway and Twentieth Street. In 1852 they purchased the Gothic building on Broadway, between Fourteenth and Fifteenth Streets, erected by Dr. Bellows's church of All Souls. Finally, in 1866, they built the present edifice on Fifth Avenue, corner of Forty-fifth Street. Dr. Chapin was not a learned man, but he had the gift of vivacious extemporaneous speaking. He was not a believer in creeds, but he preached a wise conduct in life, and considered no topic, social or political, as beyond the range of his pulpit themes. The substance of these lectures has been published under various titles: "Duties of Young Men"; "Duties of Young Women"; "Moral Aspects of City Life"; "Humanity in the City"; "Christianity the Perfection of True Manliness"; "Discourses on the Book of Proverbs"; "Hours of Communion"; "A Token for the Sorrowing"; and "The Crown of Thorns," which last volume has had a wide circulation. In 1872 he succeeded Dr. Emerson as editor of "The Christian Leader," the organ of the Universalists. He received his degrees of Doctor of Divinity and Master of Arts from Harvard College. His name will

be preserved by the "Chapin Home for the Aged and Infirm," founded by members of his congregation in May, 1869. Dr. Chapin died in New York, December 27th.

CHEMISTRY. Artificial Diamonds.—The most interesting and perhaps the most important chemical discovery of the year is the production of crystals of carbon, or "artificial diamonds," by Mr. J. B. Hannay, F.R.S.E., of Glasgow, Scotland. The discovery grew out of experiments which Mr. Hannay conducted during the fall and winter of 1879-'80, in searching for a solvent of the alkali metals. The inevitable result of all the processes he attempted with different liquids and gases was that, when the solvent reached the permanently gaseous state, chemical action ensued. A number of experiments were made with sodium, potassium and lithium, and the hydrocarbons, but the metals in almost every case combined with the hydrogen, setting the carbon free. A series of experiments with sodium and paraffine-spirit gave a deposit of very hard scales of carbon. This was the reaction on which the experiments for obtaining crystalline carbon were built. From his experiments on solution, Mr. Hannay deduced the conclusion that, if one body has a solvent action upon another without acting upon it chemically, the solvent action may be increased indefinitely by increasing the temperature and pressure of the solvent; but out of eighty experiments made for producing crystallized carbon, only three were attended with satisfactory results. The first were made with sodium and paraffine-spirit. Although the tubes in which the heat and pressure were applied were of extraordinary strength, and sealed as tightly as possible, they nearly all leaked; some exploded; in some a deposit of scaly carbon appeared, in others the iron was carbonized; but none gave any results encouraging to the further pursuit of researches in this direction. Mr. Hannay then reverted to the idea of dissolving carbon in a gaseous menstruum. He concluded, from some experiments previously made, that a distillation from bone-oil containing nitrogenous bases was the most likely substance to yield the solvent. A distillate of this character was placed in a strong tube with charcoal, and heated for fourteen hours. The gas rushed out with force on opening the tube, and a few bright particles of carbon appeared, differing but little, however, from particles of wood-charcoal. Another experiment was made with lithium and a mixture of highly rectified bone-oil and paraffine-spirit, which was heated for fourteen hours, then cooled slowly. On opening the tube, after the outrush of gas, a little liquid was found, and at the upper end of the tube, as it lay in the furnace, a hard, smooth mass, which was removed with a chisel. Some hard particles were found in pulverizing this mass, which, on examination, proved to be transparent crystals of carbon, or diamonds. New experiments

were made with other alkali metals, paraffine-spirit, and bone-oil, but they yielded nothing except the scaly carbon. Even lithium failed in most of the succeeding experiments, but a small quantity of carbon crystals was again obtained in one of them. The purity of the crystals was tested by burning a portion of the carbonaceous deposit in oxygen, with results indicating that their composition was 97.85 per cent. carbon. The remainder was found to be nitrogen, which appeared to be present in chemical combination with carbon. From the fact that no diamond was found when nitrogen compounds were absent, and from the fact that the mixed carbonaceous product contained nitrogen, Mr. Hannay inclines to the belief that it is by the decomposition of a nitrogenous body; and not the hydro-carbon, that the diamond is formed in the reactions he has described.

Liquefaction of Ozone.—The liquefaction of ozone has been effected by MM. P. Hantefeuille and J. Chappuis. Having ascertained that the preparation of a mixture very rich in ozone was a first condition to the further successful study of that substance, these chemists ozonized oxygen to a greater extent than had hitherto been done, by passing the silent electric discharge through oxygen at a low temperature. After being submitted to this process for fifteen minutes, the oxygen was conducted into the capillary tube of a Cailletet's apparatus, the temperature of which was kept at -23° . After a few strokes of the pump the gas in the tube appeared of an azure-blue; as pressure increased the depth of color likewise increased, until under a pressure of several atmospheres the ozonized oxygen appeared of a dark indigo-blue. The pressure was increased to ninety-five atmospheres, and was then suddenly removed, when the mist which indicates liquefaction was formed in the tube. The stability of a mixture of oxygen and ozone, rich in ozone, appears to be chiefly dependent on the temperature. If such a mixture be rapidly compressed at ordinary temperatures, a considerable amount of heat is evolved and the gas explodes. Ozone, therefore, ranks among the explosive gases. Ozone is much more easily liquefied than oxygen; the latter must be compressed under three hundred atmospheres at about the temperature of -29° before sudden removal of pressure succeeds in producing liquefaction.

Atomic Weights.—The atomic weight of beryllium has long been in doubt in consequence of differences in the results of the determination of its specific heat. The experiments of Professor Emerson Reynolds had seemed to confirm the atomic weight of 9.1 commonly assigned to the metal, since they gave a specific heat which, taken in connection with that number, correctly indicated the received assignment of 5.8 as the atomic heat of the substance. Nilson and Petterson redetermined the specific heat of the element in 1878,

and fixed it at a degree which would require the atomic weight to be increased by one half, or to 13.6, to make it conform to the received atomic heat. Chemists were not inclined to change the determination of the atomic weight of the metal without further evidence; for if it were fixed at 9.1, beryllium, uniting with oxygen as a protoxide, would readily find its place in the magnesium group; whereas, if its atomic weight were 13.2, its oxide would be a sesquioxide, and its place would be in the aluminum group. No place, however, could be found under Mendelejeff's classification of the elements according to their atomic weights for a metal having the properties of beryllium and the atomic weight and combining proportions assigned to it by this determination; and the value of Mendelejeff's classification is too great to make a departure from it expedient except on the most cogent evidence. Nilson and Pettersen have recently repeated the determination of the specific heat of beryllium at different intervals from zero to 300°, and have again calculated the atomic weight at 13.6. Lothar Mayer has, however, since gone over their numbers, calculating the specific heat of beryllium at various temperatures, and has reached results which agree best with the former determination of 9.1. It appears from the experiments that while the specific heat of this element rises as the temperature increases, the value of the increase of specific heat for one degree diminishes. In this respect, beryllium resembles boron, carbon, and silicon, while for other elements whose specific heat increases with increase of temperature the value of the increase for one degree also increases.

Professor J. P. Cooke has continued his examinations, begun in 1878, to determine the atomic weight of antimony. His former experiments left a slight margin of variation; his later ones gave almost absolutely uniform results. The mean result of five experiments in the decomposition of the bromide of antimony with silver indicated that bromine was present in the former substance in the proportion of 66.6651 per cent.; corrections of two of the experiments by a process which made them in effect distinct determinations, although performed with the same materials, gave the proportion of bromine as 66.666 per cent. These results, taking the atomic weight of silver as established at 108 and that of bromine at 80, give the atomic weight of antimony as 120.

The earth from the mineral euxenite, which was formerly called erbia and was supposed to be the oxide of a single element, has been found by Nilson to contain not less than seven different oxides. Two of these oxides, ytterbia and scandia, were subjected by him to special examinations. Ytterbia was separated from the other earths, after performing sixty-eight decompositions. The atomic weight of the metal ytterbium was then determined from the mean result of the analysis of seven fractions of the sulphate to be 173.01.

Nilson separated scandium from ytterbium, with which it is found associated, by forming a double sulphate of scandia and potassa, whence the scandia was extracted under the form of a nitrate. This salt, having been further purified of ytterbia, was examined in four fractions, from the mean result of the analyses of which the atomic weight of scandia was determined at 44.03. This determination agrees exactly with the atomic weight which Mendelejeff derives from his periodic law for ekaber, with the predicted properties of which scandium oxide, Sc_2O_3 , coincides.

Damage to Bookbindings by Gas-Combustion Products.—Professor William Ripley Nichols has reported on the results of investigations he has made with reference to the correctness of the theory which ascribes deterioration in the bindings of books in libraries to the action of sulphuric acid generated by burning coal-gas. Having examined a large number of samples of leather in every stage of decay, he found that morocco was but little affected, common sheep binding was attacked, and russa leather and calf were badly acted upon. An acid taste and an acid reaction were observed that were more marked in proportion as the leather was decayed, and sulphuric acid was found in the extract made from the leather with water, in a similarly increasing proportion. Ammonia was also present, in about such a proportion as in combination with the sulphur would constitute the acid sulphate of ammonia. Samples of fresh leather gave extracts only slightly acid, not enough so to affect the taste, and contained only a minute amount of sulphuric acid in combination. Samples of russa leather and sheep of good quality yielded from less than a quarter to less than a half of one per cent. of acid, and less than a quarter of one per cent. of ammonia. A sample of well-worn but not decayed sheep taken from a Bible more than sixty years old, which had never been exposed to gas, gave 1.42 per cent. of sulphuric acid. Other samples, of very rotten russa, and of scrapings from a number of books, gave from eight to ten per cent. of sulphuric acid, combined with ammonia. A quantity of rotten leather was carefully extracted with water, and crystals of sulphate of ammonia were obtained from it. Professor Nichols believes that in the face of these facts it is difficult to escape the conclusion that bindings absorb sulphuric acid when exposed to the products of the combustion of illuminating gas, as no other condition to which books are commonly exposed can account so well for the large proportion of acid which was found. To the objection that sulphurous (not sulphuric) acid is the general product of the combustion of sulphur compounds, Professor Nichols answers that his analysis of the products of the burning of gas have brought out sulphates with no evidence of the presence of sulphites. He admits, however, that the disintegration of the leather may precede the absorption of sulphuric acid,

and prepare the way for it. Other causes which have been suggested, to account partly for the deterioration of bindings, are the inferiority of the modern quick processes of tanning, particularly those in which soda is used; the use of split leathers, and the impurities in the air disseminated by hot-air furnaces.

Industrial Chemistry.—For the following notes on improved appliances and processes in the chemical industries, we are indebted to the interesting summary of Professor J. W. Mallet, published in the "American Chemical Journal" during 1880.

The improvements in mechanical appliances include the adaptation of grinding-mills to true grinding rather than crushing, the extended use of steam coils and steam jackets for heating purposes, the utilization of the waste heat from vapors under treatment, and the application of heat under pressure greater than that of the atmosphere, which is made practicable by the use of ingenious apparatus, giving special facilities for manipulation and for observing the operations going on within.

Ice-machines for the production of artificial cold have given important aid in a variety of operations; their use has in turn stimulated the demand for a number of chemical productions which are employed in them to induce cold by evaporation, and has thus contributed to the increased manufacture of such substances.

Under the head of improved mechanical arrangements for the agitation or stirring of liquids are included, besides revolving paddle-wheels and similar contrivances, the blowing in of air and steam, by which the work of heating, oxidation, etc., is often performed at the same time with that which is merely mechanical. The nice fractional separation of liquids, differing often but little in their boiling-point, has been facilitated by the introduction of improved apparatus for distillation.

The operation of distillation by means of superheated steam, or along with it, often makes the use of elaborate and tedious chemical processes unnecessary by effecting a simple physical purification of special materials.

The operations of washing solid matters and of filtration have been made more efficient by the general application of centrifugal machines or "hydro-extractors," by the use of filters arranged to work with a partial vacuum, and by the use of filter presses to squeeze out mechanically the liquid which is tenaciously retained by precipitates, sediments, skimmings, etc.

One of the cheapest processes for the extensive manufacture of oxygen gas is that of Tessié du Motay, in which sodium manganate is exposed at a low red heat to a current of superheated steam. The manganate may be reproduced from the residue of manganese sesquioxide and sodium hydrate, by passing purified air over it at the same temperature. This gas has become to some extent a commercial product; and its application in certain directions has been made more feasible by the system of

storing it under a pressure of several atmospheres in portable iron cylinders. In the medical application of oxygen, in diseases affecting the function of respiration, the idea of its having a particular chemical value is no longer held, but it is used with real benefit in those diseases which interfere in a purely mechanical way with the volume of air with which the lungs can be supplied.

Hydrogen may be made industrially, chiefly to be employed with oxygen in the production of the calcium-light, by the process of Tessié du Motay, in which surplus carbon is heated with slacked lime, and calcium hydrate is reproduced by passing steam over the heated carbonate of lime which is formed. Except for a few special purposes, the place of pure hydrogen in industrial applications can probably be supplied by the mixture known as water-gas, or generated gas, which contains that element along with carbon monoxide, nitrogen, and other substances.

Carbon disulphide has acquired greatly increased importance on account of its furnishing the means of dissolving out fats and oils from various materials which could not be treated with equal advantage in any other way. Large quantities of fat are thus recovered from oil-seed cakes, from the marc of olive-oil pressing, from woolen rags and waste, from cotton waste used in wiping machinery and packing stuffing-boxes and axles, and from bones from which gelatine and phosphates are afterward to be made. The same solvent has been used to a limited extent to collect sulphur from poor "sulphur-stone," and to extract delicate perfumes and the aromatic constituents of spices and condiments. The so-called petroleum-spirit or petroleum-naphtha is also used for all these purposes, and has the advantage of being much cheaper than the carbon disulphide. The disulphide, the sulpho-carbonates, and the ethyl- and amyl-disulpho-carbonates have lately been used in European vineyards with considerable success for checking the ravages of the phylloxera. Potassium amyl-disulpho-carbonate is most easily prepared by bringing together, with precautions against a too great rise of temperature, a strong solution of potassium hydrate, amyl alcohol or fusel-oil, and carbon disulphide.

In the production of phosphorus, mineral phosphates, the so-called coprolites, guano, etc., have largely replaced bone-ash as the crude material used. Instead of a part (two thirds) of the calcium, the whole is now removed as calcium sulphate, and sirupy phosphoric acid, dried up with charcoal-powder, is submitted as the material for distillation. The process once suggested by Woehler for procuring phosphorus by distilling a mixture of calcium phosphate, silica, and carbon, is said to have been adopted on an industrial scale some years ago in France, but the result of the experiment has not been reported. Amorphous phosphorus is used to some extent in making friction-matches, though

not to the extent of replacing the ordinary variety, and for the surfaces upon which "safety-matches" are ignited, and also in making the haloid compounds of ethyl and methyl for the production of aniline dyes. A new field for the use of phosphorus in metallurgy has been opened up by the introduction of phosphor-bronze.

Iodine has been lately produced commercially from the mother-liquors from which Chilian sodium nitrate has been crystallized, by adding cupric sulphate and sodium sulphite, by which cuprous iodide is precipitated, and this is afterward decomposed by sulphuretted hydrogen or by zinc, and converted into an alkaline iodide; to a less extent the solutions are treated with a regulated quantity of sodium sulphite alone, and the iodine collected as such either by precipitation or distillation. The production of iodine from kelp has been carried on at a disadvantage under the competition of the Leblanc process, and of the products of the Stassfurt industry. A means for obtaining directly from sea-water the minute quantity of iodine it contains seems to be still desirable. The demand for this substance, which had increased very largely in consequence of its extensive use in making coal-tar colors, has fallen off under the substitution in the process of other salts for the iodides of the iodide radicals. According to a paper by E. Schering, the method of making the potassium iodide most generally in use is the solution of iodine in aqueous potassium hydrate, evaporation to dryness, with the addition of charcoal-powder, and ignition to destroy the nitrate formed. Schering himself, however, prefers the production of iron iodide and decomposition by potassium carbonate.

Bromine is manufactured on a large scale from the mother-liquors obtained at Stassfurt in working the salts of potassium and magnesium, and from similar liquors produced in salt-boiling in Ohio, West Virginia, and Pennsylvania. Bromine is coming into use again, in a modified form, after having been discarded as unsatisfactory, as a substitute for iodine alcoholic compounds in the manufacture of the coal-tar dyes, and is employed to some extent in the shape of its derivatives of the hydrocarbons and phenols in the production of other artificial dyestuffs. The practice of shipping bromine in a solid or liquid form, as bromide of iron or of ethyl, when it is not made at once into potassium bromide, has been resorted to, to avoid the danger and annoyance involved in the transportation of so volatile a substance.

The improvements in the production of the natural vegetable alkaloids relate to the extension of the scale in which they are made, notably to measures for increasing the supply of the raw material by the systematic cultivation of the cinchona-tree, and to the superior degree of purity in which they are obtained. The cinchona alkaloids which accompany qui-

nine have to some extent been brought into use, instead of being rejected as worthless. Among new substances of this class which have been made available for medical purposes are eserine, from the Calabar bean, and apomorphine, a product of chemical alteration.

Methyl alcohol and several of its derivatives play an important part in the manufacture of coal-tar colors. Methyl chloride has taken the place of methyl nitrate, and partly of methyl iodide, as one of the materials for the production of artificial cold by rapid evaporation in closed vessels.

Benzoic acid is made by several processes, chiefly by evaporating the urine of domestic animals and boiling the residue with hydrochloric acid. Besides its employment in making artificial colors, it is believed to be a component of the nostrums which are used in flavoring manufactured tobacco.

Phthallic acid, which is valuable in making artificial dyestuffs, is largely produced as an anhydride from naphthalene.

Improvements in the Preparation of Clothing Materials.—For the old process of washing wool, which involved the entire waste of the substances constituting the grease to be removed, more economical methods have been substituted in the extraction of the fatty matter with carbon disulphide or petroleum naphtha, and in the Maumené and Ragelet process for making potash from the leachings of the wool and burning or charring the organic matter, with the utilization for illuminating purposes of the gaseous products given off by the grease. Wool is freed from burs, bits of straw, and other forms of vegetable matter, by soaking it with dilute sulphuric acid, pressing out the surplus liquid, and gradually heating the wool up to about 212° , after which the vegetable impurities may be readily reduced to dust and removed mechanically. Solution of aluminum chloride and gaseous hydrochloric acid have been used for the same purpose. Mixed fabrics of wool and cotton may be treated in this way, and the wool recovered in a useful form.

Hard water, containing lime-salts, is preferably used in reeling raw silks, because with it a less quantity of gelatine is removed in solution from the surface of the fiber, and less loss of tenacity and beauty in appearance is suffered.

The manufacture of chloride of lime for bleaching has been simplified by the successful application of a process for regenerating the manganese employed in such a form that it may be used again. This is done by precipitating the still-liquor containing manganic chloride with an excess of calcium hydrate and causing the precipitate to be oxidized by forcibly blowing air through it and the liquid in which it is suspended. The chief product of this process is an acid calcium manganite with a considerable quantity of calcium chloride, a satisfactory mode of utilizing which is still desired,

Hydrogen dioxide is applied with special advantage in the treatment of Indian tusseh silk. Atmospheric oxygen in presence of oil of turpentine has been applied to the bleaching of feathers and some other materials of animal origin. A very useful improvement, when properly managed, is the combination of chlorine and air-bleaching. Linen goods and some of the higher grades of cotton cloth, having had most of the color removed by a preliminary bleaching with chlorine, are then exposed to the sun and air after the old fashion, for the completion of the process. In this method the rapidity of bleaching by chlorine is combined with the exemption from injury to the fabric of air-bleaching.

The more recent features in the manufacture of dyestuffs are the introduction of organic colors in great number and variety, which has marked the progress of the last twenty years, and the reproduction of natural organic colors by artificial means, which has been successfully carried out and greatly extended within the last ten years. More recently, the introduction of artificial alizarine has been followed by a falling off in the production of madder and its preparations. Ammonia, instead of lime, has been applied with advantage to the extraction of indigo in Java; and in India an increase of the product, amounting to as much as 25 per cent., has been obtained by increasing the temperature of the steep-water to 110°. The crude material of many long-known vegetable dyes has been replaced by concentrated extracts; and a considerable improvement has taken place in the solubility and tinctorial power of the extracts.

A most important change in the preparation of the original so-called aniline colors consists in the application on a great scale of Coupier's process, or a modification of it, for making aniline red (rosaniline salts) without the use of arsenic, by heating together in the presence of an acid nitrobenzene and commercial aniline oil of high boiling-point, rich in toluidine. The researches of Dale and Schorlemmer have established a full connection between phenol and the whole series of aniline colors. Better processes have been employed in preparing violet, blue, and green. The soluble aniline blacks—"indulines" and "nigrosines"—have come into use for general dyeing purposes, particularly in some forms adapted to silk goods. Alizarine from anthracene, which has to a great extent replaced madder, has become recognized as in the front rank of artificial coloring materials. Numerous new colors of greater or less value have been obtained from this and other bases. The "Cachon de Laval" of Croissant and Bretonnière is a material of much practical value. It is made by heating in close vessels to 250° or 300° C. various waste forms of vegetable fiber, such as sawdust, spent dye-woods, rags, paper refuse, and the like, with caustic alkali and sulphur. The product is obtained in various colors, chiefly of tints of

brown, and is remarkable for the firmness with which it attaches itself to cotton cloth, particularly when fixed with bichromate of potash, while it produces a satisfactory modifying effect upon the brighter coal-tar dyes, and is cheap.

Attempts to generalize our knowledge of organic colors, and to determine some definite relation between their composition and tinctorial power, have been attended by only a very limited success.

New processes have been introduced for fixing colors upon cloth, which are dependent severally upon the employment of silicic acid, chromic hydrate, precipitated sulphur for certain colors, albumen, "lactarine," tannic acid with or without the addition of an antimony salt, lead acetate, and calcium phosphate, with some of the dyes.

The coal-tar colors have been introduced in calico-printing on a large scale, and with remarkable brilliancy and variety of effect; and pigments of mineral origin attached to the cloth by the aid of albumen, have been used in surface printing with similar results. Colors may be used in these processes which are not available in general dyeing—among them the insoluble aniline black of Lightfoot—on account of the difficulty of attaching them uniformly over a large surface of cloth.

The improvements in tanning have not been extensive or important, and relate chiefly to the superior quality of the extracts and the greater purity of the solutions which are used, and their more extensive substitution for crude materials. The results of the rapid processes in ordinary bark-tanning have not been satisfactory, for the saving of time is apparently always attended with deterioration in the quality of the leather. A method of dyeing and at the same time partly tanning raw hide has been introduced in the United States, the product of which, in some respects resembling hard vulcanized India-rubber, is susceptible of a high polish, and is adapted to uses in which flexibility is not required. In the process, the hide, having been properly cleansed, is immersed in solutions containing infusion of logwood, nut-galls, cupric sulphate, vinegar, and a salt of iron.

For the manufacture of India-rubber, the supply of crude caoutchouc has been greatly increased by the fruits of a systematic search for it in different countries, and the use of new plants affording it. The preparation of vulcanized rubber has been adapted to the production by means of an intimate mixture of caoutchouc and calcined magnesia of a hard rubber of high grades which may be used as an imitation of ivory for billiard-balls, piano-keys, and similar articles. A plan has been proposed, but not yet tested by experience, for giving a certain degree of porosity to rubber by mixing in it, before the vulcanizing process is applied, a certain amount of vegetable fiber, with the expectation of producing a material

for clothing and shoes which will allow the escape of perspiration. The introduction of celluloid, a substance formed by the very close incorporation of gun-cotton and camphor, has given a valuable substitute for hard rubber in many of its uses, a material which may be employed for a multitude of different purposes.

Improvements in Glass-making.—By reason of the greater accessibility of purer materials for glass-making, it has been possible to replace the coarser green glassware formerly in use for many common purposes with colorless glass. Greater pains have been taken to ascertain and use the best proportions of the materials with a view to homogeneity and definiteness of composition in the glass, so as to diminish the risk of "devitrification" and the liability of the surface of the glass when in use to alteration by water or other reagents. The Siemens regenerative furnace with gaseous fuel has been so adapted as to dispense with the glass-pots formerly in use, and allow the preparation of the glass to be completed in the hearth itself, where, in three separate compartments, are performed in succession the processes of fusing the mixture of raw materials, "fining" the glass, and bringing it down to the proper temperature and consistence for working. For the production of glass in sheets for windows, the "crown-glass" process of "flashing" has nearly ceased to be employed, while a marked extension and improvement has taken place in the scale on which the product is turned out under the cylinder process, in the size of the sheets that are made by it, and in the smooth, even condition of the surface of the flatted sheets. Plate-glass has been brought more and more widely into use, and plates of very large size have become familiar. The limit of size of these plates is, in fact, found in the difficulty of moving the slabs and setting them, rather than in that of producing them. In the manufacture of hollow ware, the process of pressing in molds has been developed very rapidly, and much varied ingenuity has been shown as to the details of the molds and other tools. The various processes for producing an annealed or toughened glass have given us a material of largely increased strength, and capable of withstanding great mechanical stress and quite violent blows, but which has other qualities tending considerably to limit its usefulness. The progressive improvement in the manufacture of optical glass is shown in the steady increase in the size of the disks from which the largest telescopic lenses are made, which may now be obtained more than thirty inches in diameter, and in their clearness, uniformity, and freedom from flaws. The decoration of glass-work has advanced more in an artistic than a technical direction. Imitations of the precious stones are made with remarkable fidelity to natural appearance, and with a degree of hardness exceeding anything that was known some years ago. To the older varieties of "milk-glass," or enamel, has been added the

"hot-cast porcelain," made by fusing together quartz-sand, cryolite, and zinc oxide, which is chiefly used for less artistic articles. The products of the revived glass industry at Murano well deserve attention. In the surface-enameling of sheet-glass, lace-patterns are transferred from the woven or netted fabric itself, by using it as a stencil to distribute upon the surface the pulverized enamel which is afterward to be burned on. Tilghman's sand-blast supplies a process for etching on glass of great and permanent value on account of its simplicity and quickness, its efficiency in deep cutting, its applicability to very large sheets, and the delicacy with which the minute features of intricate designs may be engraved by it. Iridescent glass, exhibiting a delicate play of soap-bubble colors, is produced by slightly attacking the surface of glass with moderately strong liquid hydrochloric acid under pressure in close vessels, or with the fumes from chloride of tin or analogous material volatilized in a reheating furnace. Dodé's process for platinizing glass, by carefully heating it after the surface has received a nicely applied thin coating of platinum chloride mixed with one of the essential oils, has the advantage of furnishing a mirror which reflects from the front face, avoiding the double passage of light through the glass itself. The exposed metal is not liable to tarnish. Quite an effective *camera lucida* may be made from a piece of flat sheet-glass treated in this way. The platinum film is thin enough to permit the pencil and hand of the draughtsman to be seen through it, while at the same time the objects to be copied are seen by reflection. Glass drawn out into extremely fine threads, or "glass-wool," has been used for decorative purposes, and as a material for filtration.

The greatest improvement in the manufacture of ceramic wares has taken place in the higher grades of stoneware and earthenware rather than in porcelain, and those wares have received almost the same degree of care and attention as have been given to porcelain itself. The most valuable mechanical appliance lately brought into use is the filter-press, which is employed for removing the surplus water from the clay after the mixing has been performed. Some of the presses are adapted to prevent the inclosure of air-bubbles in the clay. The regenerative furnace has been adopted with advantages which are shown in the saving of fuel and the reduction of the number of pieces of ware spoiled in the firing. In the decoration of pottery-wares, painting by hand has been to a large extent replaced by the transfer of printed patterns and designs. Metallic lusters are applied with more successful effect than formerly, and a peculiar surface appearance resembling that of mother-of-pearl is given to the ware by a lustrous bismuth glaze.

The Chemistry of Arsenical Poisoning.—C. Binz and H. Schulz have offered a new explanation of the chemical cause of the poisonous nature of arsenic. The theory of Liebig,

that arsenious acid forms a solid compound with the albumen, which thereby loses the capacity to undergo the transformations necessary to the existence of the living tissues, is untenable for the reason that a solution of arsenious acid, or of its salts, does not form the solid compounds which Liebig assumed. It is precisely those tissues in the body which are specially endowed with the capacity to receive and utilize the oxygen of the blood that form the principal seat of the destructive action of arsenic. The neutral salts of arsenic acid are as poisonous as those of arsenious acid. Arsenious acid changes readily to arsenic acid, and the transformation proceeds still more readily in the inverse sense. The latter change is effected by albumen in general, the former by the living albumen of animals and plants. In a number of experiments with arsenic acid and egg-albumen, the fibrine of warm-blooded animals, and fresh brain-substance, arsenic acid was reduced at the temperature of the body; while with the tissue of the pancreas, of the liver, and the undecomposed protoplasm of vegetable organs, arsenic acid was reduced to arsenious acid, and arsenious acid was oxidized into arsenic acid. A consideration of the individual results of these experiments has led to the conclusion that the reciprocal transformations of the two acids produce within the living albumen-molecule in which they take place a violent oscillation of the oxygen-atom by which the tissues are corroded to the extent of their complete destruction. Nitrogen in its poisonous compounds performs a similar function to that which metallic arsenic seems to discharge here. Itself without direct action, it serves as the inert carrier and distributor of the powerfully aggressive, active oxygen-atom. The differences existing between arsenic and nitrogen are those of degree only. The oxides of nitrogen act instantly, and corrode those parts of the organism to which they are first introduced; the oxides of arsenic develop their activity only within the organism, and are externally corrosive only by prolonged action. A correspondence in behavior as poisons and as chemical agents is traceable among the other members of the nitrogen group, the action of which is similar in the minutest to that of arsenic, differing only in degree.

Distribution of Arsenic in the Body.—Messrs. S. W. Johnson and R. H. Chittenden, of the Sheffield Laboratory of Yale College, have published the results of investigations into the manner in which arsenic is distributed in the human body in a case of arsenical poisoning. Scelossoff has recently attempted to show that instead of localizing itself principally in the muscles, as has long been accepted as a settled fact, arsenic is specially absorbed and retained in the nerve-tissue. His experiments were not considered satisfactory, and his conclusions were disputed, because the arsenic was administered in an exceptional form, and allowance was not made for the modification which might

have been caused by the changed form of the poison in the rate of absorption. In the body of Mrs. Riddle, of Connecticut, which was examined for arsenic after having been buried nearly a year and a half, the poison was looked for in the internal organs, the arm, leg, and muscular and bony tissue of other parts of the body, and was found in the sample portions examined in such proportions as to indicate the existence of 5·2261 grains of arsenious oxide in the whole body. Of this quantity, 2·3805 grains were found in the internal organs, and 2·8463 grains were assigned to the muscular and bony tissues. Only an unweighable trace was found in the brain. One hundred grammes of abdominal muscle were found to contain ·00045 gramme, 100 grammes of muscle and ribs ·0007 gramme, and 100 grammes of muscle from the thigh ·0004 gramme of metallic arsenic, while 300 grammes of brain yielded only an unweighable mirror. In the body of Mary Stannard, who was supposed to have died shortly after arsenic was administered to her, Professor Johnson found 83·23 grains of arsenious oxide in the stomach, liver, and other internal organs, while the brain contained hardly a perceptible trace of arsenic. In the case of a dog that was killed in the laboratory after the administration of arsenious acid in gradually increasing doses for eight days, the amount of arsenic absorbed by the brain-matter was found to be very small compared with the amount absorbed by other tissues. In a recent article on the distribution of arsenic in the animal body after the taking of arsenious oxide, E. Ludwig finds, by constantly agreeing results, that in the case of men as well as of dogs poisoned by arsenic, both in acute and chronic cases, the liver contains the most arsenic; and in acute forms the kidneys contain an abundant quantity; while the bones and brain, in either case, contain only a very small trace.

Albuminoids in Wheat, Grain, and Flour.—Professor Albert B. Prescott, of the University of Michigan, has reported upon the analysis of several varieties of wheat and of the flour from the same, made in order to ascertain the relative value of the different varieties and their flours in nitrogen and albuminoids. The results of the analyses of four varieties were, in percentages of nitrogen, as follows: White amber wheat, grain, 2·013; flour, 1·963; Fulce wheat, grain, 1·996; flour, 1·900; Clawson wheat, grain, 1·794; flour, 1·650; red winter wheat, grain, 2·096; flour, 1·963; patent flour from the last specimen, 2·040. The percentages of albuminoids are obtained in either case by multiplying the percentage of nitrogen by 6·25. The average of all the determinations, excluding that of the patent flour, is, in the entire grain, 1·974 per cent. of nitrogen, 12·338 of albuminoids; in the flour, 1·869 per cent. of nitrogen, 11·682 of albuminoids. The patent flour is made by a process which forces the middlings to give up a part of the rich layer of albuminoid cells which lies so close to the

woody husk that it ordinarily goes to the bran. Its high percentage of nitrogen corresponds with the extreme tenacity of its sponge and the purity of the bread and crusts baked from it. So far as the analyst can ascertain, the proportion of nitrogenous compounds is an unailing, practical measure of the capacity of flour to make light bread, and to make large and heavy loaves from a given weight.

A New Metallic Compound.—A new metallic compound, named Spence's metal, after its discoverer, Mr. J. Berger Spence, has been introduced, which possesses some remarkable and valuable qualities. Its preparation is based on the principle that the sulphides of metals combined with molten sulphur form a liquid which, on cooling, becomes a solid, homogeneous mass, possessing great tenacity, and having a peculiar dark gray—almost black—color. Nearly all the metallic sulphides will form, with an excess of sulphur, combinations which have the same properties. A useful form of the metal is made from an ore of iron pyrites containing lead and zinc sulphides, and belongs to the class of compounds known as thiates, or sulphur sulphides. The compound has the advantages of a low melting-point, 320° Fahr., of expanding on cooling, of resisting atmospheric and climatic influences better than marble or bronze, of superior resistance to acids, alkalies, and water, and of being susceptible of a high polish. A polished surface of the metal has been exposed for six months in all weathers without showing any change, and another specimen suffered but little from a month's soaking in *aqua regia*. By reason of its low melting-point it is easily prepared for the mold, and in consequence of its power of expanding it gives a nearly perfect cast. In the gelatine mold it yields an impression before the form of the mold is destroyed, and then, if the gelatine be allowed to remain on the metal till it is cooled, it remodels itself so as to be ready for the next casting. It is adaptable to a great variety of uses, for some of which it is superior to lead, and for which its cheapness—its cost being estimated as only about one fourth that of lead—gives it great advantages.

Cold as a Chemical Agent.—While heat of temperatures above the freezing-point of water has long been recognized as one of the most powerful agents for producing the chemical operations desired by manufacturers, heat of lower temperatures, or cold, as it is commonly called, has been less generally employed or thought of for such purposes. This agent has been lately made to aid in the manufacture of Glauber's salt, at some French works, with such success as to suggest that its more general application is possible in other directions. Under a process devised by M. Georges Fournier, of Paris, the lye from the oxidized pyritic shales of Rheims and Picardy from which alum and copperas were formerly made, containing aluminum sulphate and a portion of iron sulphate—

is mixed with common salt in such proportion that there shall be sodium enough to combine with all the sulphuric acid, and chlorine enough to take up all the aluminum and iron. The solution is then exposed to a temperature of from 3° to 5° below the freezing-point, at which the sulphate of soda is almost insoluble. That substance is deposited in the ordinary form of Glauber's salt as a fine crystalline sediment, while the aluminum and iron remain in solution as chlorides. The "mother-liquor," or lye, is then run off, and the deposit is washed in brine cooled down to the freezing-point. After it is dried, it is fit for any purpose to which Glauber's salt is applicable. The mother-liquid may be made into a chloride of aluminum, which is valuable for disinfecting purposes. A pure chloride of aluminum, suitable for use in dyeing, and for the destruction of the vegetable matter which is mingled with wool, may be prepared from cake-alum by a similar cold process. Another French inventor, by exposing the lyes of the "sal mixte" of the salt-works of the Mediterranean coast, consisting of common salt and sulphate of magnesia, to a temperature of about 11° below the freezing-point, obtains Glauber's salt in deposit with a solution of the chloride of magnesium, a substance largely used for weighting textile fabrics.

Luminous Paint.—The late Mr. Balmain succeeded in producing from a compound of lime and sulphur a constant and very powerful phosphorescent substance, which he patented and applied as a paint; articles coated with it become luminous after exposure to the light, and retain their glow for a considerable length of time. In a lecture on this substance by Professor Heaton, its sensitiveness was shown by passing electric sparks in front of a card painted with it which had been previously kept in darkness. Each spark impressed its image on the card, and made it luminous. Even a lucifer-match struck in front of a dark pane produced a visible effect on the paint. The highest effect is produced by the violet and ultra-violet rays. The red and yellow rays do not add to the luminosity; in fact, they diminish it when they are allowed to continue to act for a considerable time. A short exposure of the paint to ordinary daylight is sufficient to produce a high degree of illumination, the amount and duration of which will depend considerably on the quantity and quality of the light and on other conditions. When the paint has been exposed to the intense light of the sun or of burning magnesium, a good deal of the brilliancy disappears quickly, but after that the fading is very slow; and a more or less useful light will remain through the length of an ordinary winter's night. The paint appears to be of satisfactory durability as against all weathers and the action of sea-water. The useful purposes to which it may be applied are almost innumerable. The present cost of the substance is fixed by the manufacturers at twenty-eight shillings, or about seven dollars a pound. One pound will paint about twenty-five square feet of surface.

Action of Citric Acid on Minerals.—Professor H. Carrington Bolton, of Trinity College, Hartford, Connecticut, has made investigations of the reactions of two hundred species of minerals with citric acid, by means of which he has found that that substance has a power of

decomposing all classes of minerals little less than that possessed by hydrochloric acid, and that this very difference in degree gives the organic acid an advantage over the mineral acid in the determination of species. Besides treating the minerals with a saturated solution of citric acid, he examined the action of the same solution, to which solid sodium nitrate is added. This mixture proves to be a very powerful solvent, dissolving bismuth, antimony, arsenic, copper, lead, tin, mercury, and silver, and nearly all the natural sulphides. The addition of solid potassium iodide to the solution of citric acid also greatly increases its decomposing power. Applying these reagents to minerals, Dr. Bolton obtained the following results: 1. Complete solution of carbonates, with liberation of carbonic-acid gas. 2. More or less complete decomposition of oxides, phosphates, etc. 3. More or less complete decomposition of sulphides, with liberation of sulphuretted hydrogen. 4. Decomposition of sulphides, with oxidation of the sulphur. 5. Decomposition of silicates, with separation of slimy or gelatinous silica. 6. Decomposition of certain species, with formation of characteristic precipitates. 7. Wholly negative action. The portability of the reagents in a dry state makes this method conveniently applicable in field-work. The relation of the reactions described to the geological work of the organic acids of the soil is a point of much importance, and merits further researches.

Purification of Water.—A new method of purifying and filtering water has been used for more than three months at the Royal Aquarium, London, with complete and satisfactory success, in furnishing a constant supply of perfectly clear water. The water, as it is furnished by the water companies, is first exposed in the softening cistern to a jet of lime-water which coagulates the clay that is held in suspension and causes the impurities to be deposited, and is afterward passed into a filter so constructed as to expose a very large filtering surface, and so arranged that it can be cleaned by mechanism in a few minutes every day, and oftener, if necessary. The apparatus is capable of delivering from eighty to one hundred gallons of pure water per square foot of surface per hour, while the ordinary rate of filtration through sand-beds is said to range from two to six gallons per square foot per hour only. The use of the system has been attended with a great improvement in the condition of the fishes in the tanks to which it has been applied, and a decrease in the rate of mortality among them. It has been adopted in several private establishments, and its application to the public water-supply has been suggested.

A plan possessing similar features, but adapted to a more extended scale of operation, is in use for purifying the waste-waters of the great paper-mills at Essonne, France, and has been suggested as likely to furnish the most feasible means, when still further enlarged, for solving

the difficult questions connected with the purification and disposition of the sewage-waters of Paris.

Bromide of Ethyl as an Anæsthetic.—Bromide of ethyl has been recommended as an anæsthetic, preferable in many respects to ether and chloroform. Dr. R. J. Levis, of the Pennsylvania and Jefferson College Hospitals, Philadelphia, reports of it that, so far as he has observed, after several months of experience in using it, it does not influence the circulation, except sometimes to produce a slight increase in the rapidity of the heart's action and in arterial pressure. Respiration is but little affected by it, beyond its producing the ordinary characteristics of all anæsthetic sleep. Nausea and vomiting occur less frequently with it than with ether or chloroform. It vaporizes readily, and seems to be entirely eliminated through the lungs. Its vapor produces no irritation in the respiratory passages. General excitement and the tendency to struggle occur far less frequently when it is used than in the early stages of the anæsthesia of ether, and, apparently, even than in that of chloroform. Complete anæsthesia is accomplished, it is estimated, in about one third less time than is the case with chloroform, and recovery from the effect is even comparatively more rapid, the time required for recovery generally not exceeding two minutes after the inhalation has ceased. The recovery is so complete that the patient is often able to stand and to walk immediately after awakening. Insensibility is usually produced in from two to three minutes. The completion of the effect is clearly shown by the dilatation of the pupils, which resume their normal condition when the sentient state returns. The vapor of this substance is not inflammable, so that it is free from the danger which attends the use of ether in the presence of artificial lights. The ordinary essentials of the proper and safe production of anæsthesia must not, however, be dispensed with in the use of the new agent, for its safety is only comparative, and is not yet proved to be absolute.

Improved Test for Sugar.—Mr. William L. Dudley, of the Miami Medical College, Ohio, observing that Böttger's test for sugar, with subnitrate of bismuth and sodium carbonate or sodium hydrate, is liable to error on account of the subnitrate being liable to contain silver, and occasionally other impurities, proposes the following modification of it: Dissolve subnitrate of bismuth in the least possible quantity of chemically pure nitric acid, and add to it an equal amount of acetic acid of ordinary strength. To the solution to be tested, add sufficient sodium hydrate to render it strongly alkaline; then add a drop or two of the bismuth solution; heat to boiling, and continue the boiling for a short time (twenty to thirty seconds). If sugar is present, the white, flocculent precipitate, which formed on the addition of the bismuth solution to the alkaline liquid, will become gray or black. The depth of color of the

precipitate depends on the amount of sugar present. If this is very small, the gray or black precipitate forms slowly, and it is necessary to allow it to stand for some time (ten or fifteen minutes). This reduction occurs in the cold, after standing quietly for twenty-four or forty-eight hours. The bismuth solution will remain unaltered, and can be diluted to any degree without the precipitation of the bismuth.

New Test for Gallic Acid.—Mr. Dudley also proposes the following new test for gallic acid: Prepare a solution of ammonium picrate by adding to a dilute aqueous solution of picric acid an excess of ammonium hydrate. Add a few drops of this reagent to an aqueous solution of gallic acid, and there is produced, at first, a red color, which, in a few seconds, becomes a beautiful green, the depth of color depending on the amount of gallic acid present. Pyrogallol and tannic acids produce, at first, a reddish color, but no further material change takes place with them.

Gallium in American Blendes.—Mr. H. B. Cornwall, of Princeton College, has made examinations of American blendes for gallium. Of two European blendes and several American ores submitted to the spectroscopic, the compact grayish blende from Friedensville, Pennsylvania, showed the gallium line about as plainly as a European specimen from Santander, which is classed as among the blendes richest in gallium, while a crystallized, rather dark, yellowish-brown specimen from Phoenixville, Pennsylvania, showed it more distinctly still. Of other American blendes submitted to examination, those from Joplin, Missouri, Warren, New Hampshire, and Ellenville, New York, gave reason to believe that they contain gallium. According to the studies of Lecoq de Boisbaudran, the alloys formed by heating gallium with aluminum remain brilliant, and do not sensibly attract oxygen from the air during their formation. After cooling, they are brittle and but slightly coherent. They decompose water with elevation of temperature, evolution of hydrogen, and the formation of a chocolate-brown powder, which ultimately becomes white flocks of alumina, almost the whole of the gallium being set free in globules apparently free from aluminum. The slow evolution of hydrogen by a solid alloy is considerably quickened by contact with a globule of liquid gallium, owing to electric action. Suffused gallium dissolves aluminum, forming very brilliant, liquid, or pasty alloys, which decompose water with great energy. Ordinarily the decomposition is spontaneous, but sometimes a globule of alloy is inert when thrown into water, while another fragment of the same mass is immediately active, and even renders the first so upon contact with it. On touching the liquid alloy with a fragment of solid gallium, crystals appear which are pure gallium, and which do not act on water. After their removal, the alloy is less active, but, if the whole is remelted by the heat of the hand, the alloy regains its activity.

Variations in the Spectra of Vapors and Gases under Pressure.—G. Ciamician has communicated to the Academy of Sciences of Vienna the results of a number of experiments which he has made on the influence of pressure and temperature on the spectra of gases and vapors. The experiments of Wullner had already shown that with hydrogen, oxygen, and nitrogen, the spectral lines of the second order grow broader with higher pressure, and that this is accompanied with a continuously illuminated background. The phenomenon, however, presents, even in the three permanently gaseous elements, very great differences. While the lines in the spectrum of hydrogen become easily broader, even under moderate pressure, those of the spectrum of nitrogen do not expand. M. Ciamician's purpose was to institute a comparative investigation, extending to as many elements as possible, for the sake of finding a law, and perhaps an explanation, for the phenomena. The spectra of the three halogens, chlorine, iodine, and bromine, at high pressures, exhibit in each case the same peculiarities. The lines have the appearance of merging into each other, and, without showing an expansion into bands, they become occasionally somewhat broader. A steadily luminous background is seen, which becomes brighter when the pressure is increased, and which is often more intense than the lines themselves. The latter circumstance is frequently seen in the case of iodine, where the continuous spectrum finally covers all the rest; while with chlorine and bromine single lines are always distinguishable from the continuous surrounding light. The appearance is remarked of certain lines in the red field in chlorine and bromine which always preserve their precision and delicacy. Very interesting changes are exhibited in the intensity of the spectral lines under different pressures. It is difficult to ascertain the homology of the lines if the spectra of rarefied vapors in Geissler tubes are employed, for the lines can only be compared in groups, and frequently present in each of the three elements such differences of intensity as to leave in doubt the existence of a homology. The apparent differences arise in reality out of the variation of intensity and of the number of the lines with the pressure. Spectra exhibiting the perfect homology of the lines can always be produced by appropriate changes in the density of the gas or vapor. The spectrum of sulphur exhibits no change under increased pressure. The lines maintain their perfect sharpness, and a continuously illuminated background appears in the red field. Phosphorus and arsenic give no reaction, and do not show even the continuous spectrum. Arsenic gives at a moderate pressure, and without the interposition of the Leyden jar, a spectrum of the first order, which is almost continuous; and, with increase of pressure and interposition of the jar, it gives to the spectrum of lines the spectrum of the second order.

With the metals proper, the lines expand into bands, and the continuous light takes a less prominent place. In quicksilver the breadth of the green and violet lines especially is conspicuous. Sodium gives at high pressures a continuously illuminated spectrum near the D-lines, which then appear reversed; at first one or two lines are seen, but soon they widen and merge into each other, and the dark band of absorption gradually covers the whole illuminated part of the field.

New Syntheses.—Mr. Edgar F. Smith has made the synthesis of salicylic acid in small quantities by the following process: Upon heating one part of copper benzoate with about three parts of distilled water in a sealed tube at a temperature of 180° C. for a period of three hours, a large quantity of cuprous oxide separated. The contents of the tube were then removed to a rather large beaker, and acidulated with hydrochloric acid, and the solution was supersaturated with hydrogen sulphide. The filtrate from the copper sulphide contained a considerable amount of benzoic acid, which was removed by distillation in a current of steam. The residual liquid reduced to a small volume gave a crystallization of needles, fusing constant at 156° C., and afforded with ferric chloride the characteristic coloration given by salicylic acid. The salts also proved the presence of the latter. The experiment was varied in one or two instances by using an aqueous solution of benzoic acid and an ammoniacal solution of cupric oxide, when the heat had to be increased to 220° C.

Messrs. Grimaux and Adam have succeeded in building up citric acid, the characteristic acid of lemons, from glycerine. They first produced dichlorhydrine by the action of hydrochloric acid on glycerine, oxidized that substance with potassium dichromate and sulphuric acid, and treated the resultant substance with concentrated hydrocyanic acid. The acid corresponding to the product of the last application having been produced by saponifying with hydrochloric acid, its sodium salt was treated with potassium cyanide, whereby a dicyanide was produced. When decomposed by hydrochloric acid, this dicyanide yielded a citric acid in all respects identical with that obtained from the lemon and other fruits. Glycerine may be prepared from trichlorhydrine, which is itself obtained from the action of chlorine in daylight on propylene chloride, one of the products of the chlorination of propylene. Finally, propylene may be produced by passing a mixture of carbon monoxide and marsh-gas through a red-hot tube; and marsh-gas may be built up from carbon, hydrogen, and oxygen. The synthesis of citric acid from these three elements is, therefore, now an accomplished fact.

CHILD, LYDIA MARIA, was born at Medford, Massachusetts, February 11, 1802, and died at Wayland, Massachusetts, October 20, 1880. Her ancestor, Richard Francis, came from Eng-

land and settled in Cambridge in 1636. She was the daughter of Convers Francis, a baker. Her mother was a simple-hearted, loving woman.

In her early life Miss Francis studied with her brother, who was afterward a distinguished divine and scholar of the Unitarian faith, and professor in Cambridge Theological School. When only seventeen years old, Lydia Maria Francis wrote "*Hobomok; a Tale of Early Times.*" This was published in 1824. It was followed by "*The Rebels; or, Boston before the Revolution,*" a novel containing an imaginary speech by James Otis, which has been transferred to many "speakers" and reading-books. She afterward kept a private school in Watertown from 1825 to 1828. In 1827 she established "*The Juvenile Miscellany,*" a charming monthly magazine for children, which she supervised for eight years. In 1828 she married David Lee Child, a Boston lawyer and journalist, distinguished for the independence of his character and the boldness with which he denounced social wrongs and abuses. In 1829 Mrs. Child published "*The American Frugal Housewife,*" a book of kitchen economy and directions, which in 1855 had reached its thirty-third edition. In 1831 were published "*The Mother's Book*" and "*The Girl's Own Book.*" In 1832 appeared the "*History of Woman,*" and "*Biographies of Good Wives.*" In 1833, when the antislavery excitement was attaining importance, Mrs. Child published her "*Appeal for that Class of Americans called African.*" This remarkable work attracted great attention. Miss Martineau, in her "*Martyr Age of America,*" describes Mrs. Child as "a lady of whom society was exceedingly proud before she published her '*Appeal,*' and to whom society has been extremely contemptuous ever since." Dr. Channing attributed part of his interest in the slavery question to the reading of Mrs. Child's book, and walked from Boston to Roxbury to thank her for it. Undaunted by social ostracism, this champion of antislavery continued her labors, publishing "*The Oasis,*" "*The Antislavery Catechism,*" "*Authentic Anecdotes of American Slavery,*" and "*The Evils of Slavery, and the Cure of Slavery.*"

Mrs. Child's novel of "*Philothea,*" published in 1833, is a romance of Greece in the days of Pericles, and is regarded as one of her best productions. In 1841 she was engaged as co-editor with her husband on the "*Antislavery Standard,*" published in New York. Later on she assumed the entire management of the paper, and made it agreeable to readers of literary taste, without abating its antislavery zeal. She wrote from New York a series of letters, describing every-day life in the city, to the "*Boston Courier.*" These were afterward published in two volumes, in 1843-'44. They went through seven or eight editions in this form. Other works were published as follows: "*Tact and Fiction*" (1846); "*Flowers for Children*" (1852); "*Isaac T. Hooper, a True Life*"

(1853); "The Progress of Religious Ideas through Successive Ages" (1855); and "Autumnal Leaves, and Sketches in Prose and Rhyme" (1857).

In 1859 Mrs. Child wrote a letter of sympathy to John Brown, then a prisoner at Harper's Ferry, which involved her in a correspondence with Governor Wise and Mrs. Mason, of Virginia; these letters were published in pamphlet form in 1860. During the same year she published two small tracts upon the fugitive-slave law and emancipation in the British West Indies. In 1864 she printed "Looking toward Sunset"; then followed "The Freedman's Book." In 1867 "The Romance of the Republic" was printed. During her later years she was remarkable for her munificence in contributing pecuniary help to the Union soldiers during the war, and afterward to the freedmen.

CHILDERS, HUGH CULLING EARDLEY, Secretary of State in the new Cabinet of Gladstone, was born in London, in June, 1827. He was educated at Cheam School and Trinity College, Cambridge, where he graduated in 1850. He gained his earliest political experience in the Australian colonies, to which he proceeded immediately after leaving college. At the age of twenty-three Mr. Childers obtained a seat in the Victorian Cabinet as Commissioner of Trade and Customs, and retained that office six years. He was during the same time member for Portland in the Legislative Assembly. In 1857 he returned to England as Agent-general for the colony, and two years afterward contested Pontefract in the Liberal interest. Though unsuccessful, he was able to unseat his opponent on petition, and afterward gained the seat. Mr. Childers became a Lord of the Admiralty in 1864, and Financial Secretary to the Treasury in the following year, retiring on the advent of Lord Derby's third Ministry. On Mr. Gladstone's coming into power in December, 1868, he was assigned the position of First Lord of the Admiralty, but resigned, owing to ill health, in March, 1871. He joined the Ministry again as Chancellor of the Duchy of Lancaster in August, 1872, and retained the appointment until the Administration was reconstructed, in September, 1873. Mr. Childers is the author of pamphlets on "National Education," "Free Trade," and other subjects, and is a Fellow of the Royal Society.

CHILI (REPÚBLICA DE CHILE). Detailed statements relating to the territorial division, population, etc., of the country were given in the "Annual Cyclopædia" for 1879.

The Patagonian boundary question still remains unsettled, but a friendly solution of the difficulty is confidently looked forward to both by the Chilians and the Argentines.

The President of the Republic is Señor Don Aníbal Pinto (inaugurated on September 18, 1876). The Cabinet was composed of the following Ministers: Interior, Señor Don M. Ro-

cabarren; Foreign Affairs and Colonization, Señor Don Domingo Santa María; Finance, Señor Don J. Alfonso; Justice, Public Worship, and Public Instruction, Señor Huerta; and War and the Navy, General E. Silo.

The peace strength of the Chilian army was fixed by Congress, in 1875, at 3,573, comprising 712 horse, 2,000 foot, 804 artillery, etc. The National Guard consisted of 1,215 horse, 21,147 foot, and 1,925 artillery. But, on war being declared against Peru and Bolivia, the strength of the regular army was raised to 20,000, and that of the National Guard to 30,000, thus giving a total land-force of 50,000. In October, 1880, a single number of the "Official Gazette" is said to have contained eleven decrees relating to the formation of as many new corps, with an aggregate of 20,000 men.

According to official returns published in the second half of the year, the navy comprised 11 ships of war, 12 transports, 3 pontoons, and 2 launches (torpedoes), in all 28 craft; with an aggregate of 28,107 tons, 5,459 horse-power; an armament of 83 pieces of cannon; and 224 naval officers of all grades, and 1,686 seamen; besides six marine officers commanding 389 marines. In the number of vessels here stated are included six mail-steamers chartered by the Government until the end of the war, and equipped by their owners.

In President Pinto's message to Congress on June 1, 1880, the national revenue, ordinary and extraordinary, for 1879, was set down at \$27,693,087, and the expenditure at \$24,777,360. These figures, if accurately transcribed, exhibit a marked—*one might almost say an unprecedented—improvement*, as compared with those for 1878 (\$20,443,977 revenue, and \$21,375,728 expenditure); and, what is still more noteworthy, a surplus of \$2,915,727, instead of a deficit of nearly \$1,000,000. Señor Pinto remarks, however, that "this latter sum (the expenditure for 1879) does not include a considerable portion of the expenses incurred by our legation in Europe and not yet liquidated." But, be the expenses referred to ever so great, the fact still stands of an increase of \$7,249,110 in the revenue for 1879 over that for the year previous.

The customs receipts at the port of Valparaíso for the first quarter of 1880 show an increase over the corresponding period of 1879, as follows:

MONTHS.	1879.	1880.
January.....	\$261,146 19	\$269,313 83
February.....	449,182 69	539,619 00
March.....	555,264 50	667,281 24
Total.....	\$1,265,543 47	\$1,476,214 17

This result was in part due to advanced rates of duty. Taxation, direct and indirect, was in numerous instances increased, though in none to an onerous degree, save in the case of the nitrate, to which further reference will be made hereafter. One most important ex-

ception, however, to the swelling of taxes, was the abolition of the *estanco* or tobacco monopoly, an institution handed down from colonial times, and the suppression of which can scarcely fail to tell favorably on the future welfare of the country. The tobacco-plant finds a genial soil in many parts of the republic, as has hitherto been proved by its cultivation in large quantities, notwithstanding the monopoly, and of excellent quality too, judging from common report. This act, then, sanctions a valuable branch of agriculture, and the demand for home consumption may henceforward be met by home production, without the necessity of keeping up the time-honored system of smuggling, which also flourished, in spite of the *estanco*. Hereafter, the duty on Havana tobacco, in leaf or cut, or in whatever form imported, is to be \$1.50 per kilogramme, and, on all other kinds of tobacco, \$1 per kilogramme.

In the foregoing item of expenditure are not included the expenses of the war with Peru and Bolivia. In the absence of official data, these expenses are estimated at about \$2,000,000 per month—a weighty burden, to be sure, for the Treasury of so small a country. Yet President Pinto, in his message already alluded to, affirms that “the vast expenses of the war have been punctually paid with the resources provided by Congress, with an increased revenue due to the growth of the country’s wealth, and with the resources which have already commenced to flow in from the territories conquered by the armies of the republic.” The resources “provided by Congress” were necessarily derived from increased taxation, and Government issues of a feeble currency, in addition to the bank emission of \$16,500,000 before the commencement of the war.* Of these Government issues, which, considering the absolute necessity of obtaining funds and the general position of affairs, are regarded as one of the best methods that could have been adopted, another was authorized by the Senate in August, 1880. The bill, as sent up from the Chamber of Deputies, might be considered as empowering the Government to issue \$3,000,000 of paper money and obtain some three millions more as an indirect home loan, was so modified by the Senate as to sanction an indirect home debt of \$12,000,000, as follows:

ARTICLE I. The President of the Republic is authorized, during one year, to emit twelve million dollars (\$12,000,000) in paper money of the same character and legal status as that already issued in virtue of the laws of April 10 and August 26, 1879, and of January 10, 1880.

ART. II. Fiscal offices, to be determined by the President of the Republic, shall receive in deposit, but without making use of such deposits, to the amount of twelve million dollars in Treasury bonds or notes referred to in the preceding article. Sums less than one hundred dollars shall not be received. The deposits shall not be made for less than thirty days, and shall bear interest at five per cent. per annum if made

for six months, four per cent. if for four months, and three per cent. if for a shorter time.

ART. III. As often as, in virtue of this law, the sum of one million dollars shall have been emitted in bonds or notes, the President of the Republic will order tenders to be called, for an equal sum, on the terms referred to in the preceding article. Such tenders shall be preferred as are made for the shortest term, and therefore gain the lowest interest.

Taxation, direct and indirect, has been mentioned as one of the resources provided by Congress, and it may not be uninteresting here to explain the allusion already made to the proposed increase of duties upon Atacama nitrate. Though Congress was still in session at the end of August, busily engaged in the discussion of that measure, no decision had yet been arrived at. The rate of the tax proposed to be levied was equal to one half the market value of the nitrate at the time the bill was introduced. “It will be remembered,” writes a resident of Valparaíso, “that Chili, constituting herself the champion of the rights of her citizens, as she was undoubtedly in honor bound to do, undertook the present war in order to protect certain of her subjects (engaged in the nitrate trade) from the illegal exaction, on the part of Bolivia, of an export duty of ten cents per Spanish quintal, and the present action of the Government will strike them as not a little strange, should they compare this comparatively trifling tax with the exorbitant one which Chili now pretends to impose; and they may, and probably will, come to the conclusion that the protection which Chili has afforded to her citizens, in this case at any rate, may prove a very costly one. Chili thus appears in the eyes of the world as compelling those, for whom she undertook the war in order to protect them from the exactions of Bolivia, to pay a hundred or a hundred and fifty cents per quintal on the nitrate they export, as a sort of compensation for saving them from the payment of the trifling duty of ten cents per quintal demanded by the Government of Bolivia; and should the projected law be passed, the unfortunate nitrate-producers may well say, ‘Heaven save us from our friends!’” The bill was passed on October 1st, and the duty is payable in specie or its equivalent. A law was passed at the same time, subjecting iodine to a duty of sixty cents per kilogramme, payable likewise in gold.

Lastly, the “resources which have already commenced to flow in from the territories conquered by the armies of the republic”—the Peruvian guano deposits, and the nitrate deposits in the Peruvian province of Tarapacá, now in the possession of the Chilians. Special attention, says Señor Pinto, has, since the occupation of Tarapacá, been paid to the management of the valuable sources of revenue contained in that province; and the army has been constantly followed by Government employees, whose duty it was to make arrangements for the collection of revenues which formerly belonged to Peru.

* See “Annual Cyclopædia” for 1879, p. 140.

Of the nitrate, 200,000 quintals (of 100 pounds each) were sold by auction at Valparaíso, in March, 1880, for account of the Government of Chili, at from \$3.75 to \$3.85 per quintal. As for the guano, it is to be sold for account of the Peruvian bondholders, but subject to a royalty of £1 2s. per ton to the Chilian Government. The yield to Chili, from the nitrate of Tarapacá, will also be in the form of a tax, the aggregate amount of which, in the opinion of the most experienced, can not exceed \$600,000, a sum perhaps sufficient to defray the costs of the new province (in the now probable event of Chili's ultimate success in the pending strife); but "other means must be sought to pay off the war debt."

Referring to the "Annual Cyclopædia" for 1879, where the amount of the national debt of Chili, on December 31, 1878, was set down at \$63,182,544, we reproduce the following schedule, published in London, in 1880, for the same period:

1838, 44 per cent., foreign.....	\$774,000
1861, 6 " " home.....	2,300,000
1863, 8 " " home.....	3,000,000
1865, 6 " " home.....	1,380,000
1866, 7 " " foreign.....	5,604,630
1867, 6 " " foreign.....	10,000,000
1869, 6 " " home.....	757,000
1870, 5 " " foreign.....	5,068,500
1873, 6 " " home.....	1,628,000
1873, 6 " " home.....	1,232,865
1873, 5 " " foreign.....	11,332,500
1875, 5 " " foreign.....	5,665,000
1878, 8 " " home.....	711,000
1877, 8 " " home.....	5,719,200
1878, 9 " " home.....	3,900,000
Censos redimidos.....	8,349,442
Floating debt in 1878.....	3,058,630

Total.....\$77,654,238

It will be observed that the old three per cent. debt is not here represented. These loans have for the most part been invested in the following, and are mainly guaranteed by mortgage:

Valparaíso and Santiago Railway.....	\$17,836,842 92
Southern Railway.....	9,366,845 82
Angol.....	7,798,152 64
Talcahuano and Chilian Railway.....	5,030,161 55
Calle Blanco.....	651,000 0
The Cochrane, Blanco, and Magallanes.....	2,517,151 24
Congress Building.....	637,315 83
The Exhibition of 1875.....	615,766 57
Valparaíso Lyceum.....	269,977 03
Valparaíso Wharf.....	1,243,838 71
Valparaíso Custom-House.....	1,717,402 52
San José.....	22,250 00

Total.....\$47,176,706 83

The total value of the exports for 1879 was \$36,620,226, and that of the imports \$22,740,000, against \$29,727,825 and \$25,322,011 respectively for 1878.

The post-office returns for 1879 show the following figures: 7,572,987 letters and 10,000,000 parcels, newspapers, etc., against 6,632,110 and 8,800,000 respectively in the year previous.

To the remarks in our volume for 1879 on the subject of public education, we have but to add that, of the total expenditure of the municipality of Santiago, the capital of the republic, in 1879, namely, \$1,355,682, \$49,423 was for schools.

In October last it was reported in Colombia that a treaty had just been concluded between that republic and Chili for the submission to arbitration of all questions in dispute between the two countries. The arbitrators were to be chosen by each party, and, in case they did not agree, the matter was to be referred to the President of the United States. It was also stipulated in the compact that all the other nations of America should be invited to become parties to it, so that in future there might be no possibility of such a war arising as that existing between Peru and Chili. The city of Panama was the point selected for the meeting of the representatives of the different countries which may accept the invitation and wish to join the compact, and the end of 1880 or the beginning of 1881 was the time named for the conference to take place.

The military and naval operations of the war will be found in the article PERU in the present volume.

CHINA, an empire in Asia. Emperor, Kwang-Su, formerly called Tsaetee, born in 1872, a son of Prince Ch'un, and grandson to the Emperor Tau-Kwang, who died in 1850; he succeeded to the throne in 1875. The area of China proper, according to Behm and Wagner's "Bevölkerung der Erde" (vol. vi, 1880), is 4,024,690 kilometres; population, 405,000,000. The area of the dependencies is estimated at 7,789,060 square kilometres, with a population of about 30,000,000. The aggregate area of the whole Chinese Empire may, therefore, be estimated at 11,813,750 square kilometres, with a population of about 435,000,000. The only writer of note who estimates the population of China proper considerably below the above figure, is the missionary, S. Wells Williams, the author of "The Middle Kingdom," who, in a communication to the secretaries of the American Board, expresses the opinion that the disastrous civil wars which have taken place in China have reduced the population of China proper at least to 340,000,000. A letter of Bishop Ridel, the head of the Catholic Church in Corea, states that the so-called "Neutral Territory" between China and Corea has now been occupied by the Government of Corea. The Bishop says ("Annals of the Propagation of Faith," 1879, fifth number): "The land through which we travel has been inhabited only for a short time. A few years ago it was a vast desert which separated China from Corea. The Chinese Government has sold the land, and to-day small new dwelling-houses may be seen everywhere. After the inhabitants had felled and burned the trees, they tilled the land, which soon will be fertile. This tract of land contains about 13,882 square kilometres, and the Korean Government possesses upon it several houses."

Recent accounts of the population of Peking continue to be widely different, varying from 500,000 to 1,650,000. The population of the treaty ports is estimated as follows:

Canton	1,500,000	Tamsui and Kelung	60,000
Tientsin	950,000	Wenchow	50,000
Hankow	600,000	Woochow	50,000
Poochow	600,000	Kiukiang	40,000
Shanghai	278,000	Cheefoo	30,000
Takow and Taiwan	235,000	Kiungchow	30,000
Cnlinkiang	140,000	Swatow	20,000
Ningpo	120,000	Pakhoi	10,000
Amoy	88,000	Tchang	(uncertain)
Newchwang	60,000		

According to a proclamation of the Governor of Che-kiang issued in 1880, there are enormous areas of land left uncultivated in that district, and, although seventeen years have elapsed since the last war which so terribly ravaged the country, a large extent of land has never been able to pay the taxes, and has consequently been left untilled. This is particularly observable in the departments of Ching-houa, Chuchow, and Yen-show, in which upward of 1,000,000 acres are idle; while in those of Hang-show, Ka-shing, and Hu-chow, there are 6,000,000 in the same predicament. Some of the land is too poor even to return much for labor and capital bestowed upon it, but there are at least 5,500,000 acres of really rich and fertile soil at present completely neglected. This arises partly from the fear lest any cultivator of the land in question should be called upon to pay up the arrears of taxes, but the Governor's proclamation specially mentions this exemption.

The military forces of the empire consist of two distinct bodies. The corps which is called the "Banner Army," because it was ranged under eight banners, numbers roughly 230,000 non-commissioned officers and privates, besides 40,000 *élèves* or paid expectants from these grades to the higher ranks, and 5,000 artificers and followers. There are about 86,000 in Peking; other 50,000 are distributed about the province of Pechili; there are 40,000 in Mantchooria; and the remainder furnish the Tartar garrisons of the chief cities throughout the empire. By far the most important of all the Banner forces is that which is known as the Hian-ki-Ying, and which, according to Sir Thomas Wade, is the only corps which can have any claim to be considered as an army. They number some 36,000, besides 26,000 *élèves*. But it is commonly believed that of the whole Banner forces throughout the empire at the present time no more than 30,000 of the Hian-ki-Ying, with perhaps 18,000 of those that make up the twenty-five garrisons, can be said to be effective. Military exercises are almost universally carried on in the imperial hunting park—an immense tract of country surrounded by a wall, the access to which is jealously forbidden to foreigners. In Peking there is a force of field-artillery with modern breech-loading guns, but of their numbers and effectiveness he could form no idea. While the Bannermen are the soldiers of the Mantchoo sovereign, an alien, though suzerain power, the force of the Green Standard, called Luh-Ying, is, in part, the constitutional army of China. The duties of the Luh-Ying

are by no means confined to those of a European army, for the responsibilities of a police force are imposed upon them, and by far the larger portion of them seem to be devoted to the duty of preventing robbery, contrabandism, and other crimes. Besides being the land-force, the Luh-Ying man the navy of the seaboard provinces, and have a distinct organization of divisions and garrisons, each under its general. So completely are these forces under the Governors-General of provinces, that even the Imperial Cabinet at Peking finds it very difficult and sometimes impossible to induce these officers to move their army beyond the borders of their province. The strength of these provincial armies varies with the size of the province and with the duties they have to perform. Taking all the provinces, the average for each is about 34,500 men and 640 officers—one officer to fifty-two men. Of the capabilities of the nation Captain Gill said: "The Chinese, especially those of the north, are a fine people physically; they are hardy and enduring, frugal and temperate; they can undergo great fatigue on a small amount of food, and will support great privations without complaint. They are law-abiding, docile, and obedient to authority; and, if the discipline in their armies is at present lax, the history of Gordon's force shows us what it might be if the soldiers were properly paid, properly officered, and properly looked after." Captain Gill is of opinion that the Chinese, if properly trained, properly armed, and properly led by officers in whom they placed confidence, would certainly furnish material for admirable soldiers.

The foundation for a navy was laid in 1877, when the Government received four iron-clad gunboats which had been built in England. They were primarily intended for the defense of the coast. To these four others were added in 1879, which had likewise been constructed in England.

The following table exhibits the commerce of China from 1872 to 1878, the values being expressed in taels (1 tael = \$1.61):

YEARS.	Imports.	Exports.
1872	74,826,180	83,719,887
1873	78,992,908	77,540,919
1874	64,360,864	66,712,868
1875	67,808,247	68,912,929
1876	70,269,574	80,820,512
1877	73,253,170	67,445,022
1878	70,504,027	67,172,179

In the ten years from 1869 to 1878, inclusive, the imports increased in total value about 18 per cent., and the exports 25 per cent. The foreign trade of China is mainly with Great Britain and her colonies. Tea constitutes two thirds of the exports to Great Britain, the only other important article being raw silk.

The extent of the commercial intercourse with the United States, Great Britain, the British colonies, and Japan, may be seen from the following table, giving the volume of the trade with each country in taels:

COUNTRIES.	1877.		1878.	
	Imports.	Exports.	Imports.	Exports.
United States.....	1,138,000	7,951,000	2,258,000	6,576,000
Great Britain.....	19,994,000	27,784,000	14,952,000	27,010,000
Hong Kong.....	27,002,000	15,256,000	27,445,000	14,979,000
British India.....	19,738,000	578,000	21,077,000	374,000
Straits Settlements, and other English possessions.....	1,643,000	3,017,000	1,471,000	3,060,000
Japan.....	8,527,000	1,870,000	4,050,000	1,683,000

The principal articles of imports and exports in 1877 and 1878 are shown in the following table:

IMPORTS.	1877.	1878.	EXPORTS.	1877.	1878.
Opium.....	80,274,000	82,263,000	Black tea.....	27,155,000	27,237,000
Cotton goods.....	18,956,000	16,029,000	Raw silk and silken goods.....	22,755,000	25,126,000
Woolen goods.....	4,927,000	5,043,000	Green tea.....	4,388,000	8,422,000
Metals.....	4,343,000	4,175,000	Sugar.....	8,725,000	1,864,000

The movement of shipping in the Chinese ports during the years 1877 and 1878 is shown by the following table (entrances and clearances being taken together):

FLAGS.	1877.		1878.	
	Vessels.	Tons.	Vessels.	Tons.
British.....	9,042	6,497,852	9,973	7,499,373
German.....	1,370	496,908	1,983	743,457
American.....	1,446	556,112	1,018	341,942
French.....	167	168,389	174	169,073
Japanese.....	106	115,263	126	123,887
Chinese.....	6,082	3,974,544	6,860	4,377,357
Others.....	638	180,029	794	260,305
Steamers.....	13,708	10,635,625	14,200	11,726,915
Sailing-vessels.....	5,099	1,847,966	6,728	1,719,479
Total.....	18,807	11,983,591	20,928	13,446,349

The first attempt to introduce railways was made by the construction of a short line from Shanghai to Woosung, forty miles in length. One half of this line, from Shanghai to Kangwang, was opened for traffic June 3, 1876, but closed again in 1877, after having been purchased by the Chinese authorities. There are four lines of electric telegraph, having an aggregate length of thirty-nine miles.

The Chinese Government has lately maintained an independent and determined attitude in its transactions with foreign powers, and indicated an intention to recover all of the territory over which it formerly exercised dominion. The treaty with Russia for the retrocession of the province of Kulja or Ili to China, which was concluded by the Chinese envoy at St. Petersburg in the fall of 1879, was not satisfactory to the Government. It granted more important commercial privileges to Russian subjects than the Government was willing to concede, and abandoned to Russia the most valuable part of the province of Kulja, a tract which was so situated geographically and strategically that it left it in the power of Russia, in the event of war between the two nations, to cut off communication between Kulja and the rest of the Chinese Empire at any moment. The Government allowed no time to be lost in expressing its disapprobation of the conduct of its envoy, and its dissent from the conclusions to

which he had committed it; and, on the complaint of the Generalissimo Tso-Tsung-t'ang, lodged with the Emperor, a decree was issued on the 2d of January, several days before the returning envoy, Chung How, reached the capital, depriving him of all his ranks and offices, and ordering him to be handed over to the Board of Punishments, to be dealt with for returning from his post without leave. By the same decree, the treaty and all the official documents connected with it were ordered to be submitted to a council of the highest metropolitan officials, to be reported upon. The indignation against the envoy, Chung How, was very strong, so that notwithstanding he was one of the best Manchoo families, and had powerful connections who brought to bear in his favor all the influence they could exert, and that his cause was taken up by the foreign Ministers, he was for several months threatened with the extreme punishment. The court was divided between two parties: one party, led by the Prince of Tun, with the Board of Censors, of which Chung How was a president, and other powerful officers, supported the impeachment urged by the Generalissimo, and advocated the abrogation of the treaty at all hazards; the other party, in which the Prince of Kung, the Imperial Chancellor, and the members of the Board of Foreign Affairs, were prominent, did not approve of the terms of the treaty, but advocated a lenient treatment of Chung How, and efforts to effect a peaceful settlement of the questions with Russia. The former party appeared to be in the ascendant for a time, but the views of the advocates of a more moderate course prevailed in the end. The treaty was submitted to the six official boards for examination; they, after considering its provisions, decided that the Government ought rather to risk a war than consent to such stipulations. The Russian Government caused it to be given out that the refusal of the Chinese to ratify the treaty would be considered an insult to the Czar, who had given it his signature, and would be resented as an affront, making a rupture of diplomatic relations necessary. The Chinese began to strengthen those points which would be exposed to Russian attack in

case of war, and the Russians collected ammunition and stores in the district of Amoor.

A semi-official statement of the situation as viewed by Russia was published by Professor Martens in April, which, after reviewing the facts that led up to the difficulty, declared that Russia would now restore Kulja, if only approached in a friendly spirit, and would never yield to threats of force. The present conflict was attributed to the predominance of the anti-European party at the court of Peking, headed by the elder Bogdokan, and by the General Tso-Tsung-t'ang. The document suggested that, in the event of a war, the European residents in the foreign settlements in China would be in danger of a massacre, and declared "on good authority" that the representatives of all the European powers at the court of Peking recognized the common danger threatening all foreigners and the solidarity of their interests, and were opposing the anti-European party by supporting the just claims of Russia. Professor Martens also rebutted the accusation which had been brought in some quarters that England had intrigued to foment a conflict between Russia and China, and stated that the British representative at Peking was making energetic efforts to avert the danger, and was lending his hearty support to the Russian *chargé d'affaires*. The "Agence Russe" at about the same time announced that it would be premature to apprehend serious complications, as nothing was yet known of the nature of the Chinese proposals; Russia, however, it added, "is not accustomed to regard a treaty which has been concluded as non-existent, and if new negotiations become necessary they will be carried on under conditions better calculated to secure the execution of the treaty." A letter was published through the same office relating an interview with the Marquis Ts'eng, the Chinese ambassador at Paris, in which his Excellency was represented as saying that the Chinese Government greatly desired to avoid a war with Russia, and to maintain friendly relations with that country. A letter in the "Moscow Gazette" gave an additional and more definite statement of the reasons for the refusal of the Chinese to ratify the treaty. They were, first, that the mountain-passes would, according to the provisions of the treaty, remain in the possession of Russia; and, secondly, that the sum of five million rubles, which it was stipulated should be paid to the Russian Government, would be better expended by China in military preparations. In order to be prepared to meet any contingency without embarrassment, the Chinese Government made an amicable arrangement with Japan respecting the Loochoo Islands, the sovereignty of which had been in dispute between the two powers. It also endeavored to form an alliance with that nation, but without success.

It was announced early in April that the Chinese Government had entirely rejected the treaty, and claimed the unconditional cession of Ili, and had intimated that it would invade and

occupy the district if its demands were not complied with. The Russian Government was determined not to yield, and its military officers began discussing plans for a campaign. Arrangements were begun for sending a large force toward the frontier; seven vessels were dispatched from Cronstadt during June to reinforce the Russian fleet in the Eastern waters, and were to be followed by fifteen hundred soldiers sent to the same destination. The Chinese were also preparing, and were putting themselves in a condition to make an effective contest. They had bought from Germany one hundred and fifty pieces of heavy breech-loading ordnance of modern design, and had native officers in their service who had been instructed in Prussian regiments and knew how to use the guns. The forts at the mouth of the Peiho were partly armed with Krupp guns, and fifteen gunboats were stationed in the river for the protection of the capital. The Chinese ambassador at Berlin denied, however, all knowledge that any preparations for war were going on in China, and the Chinese *chargé d'affaires* at St. Petersburg in July again assured the Russian Minister that his country did not wish to go to war with any European power. It is certain that the reports of hostile acts and aggressions by the Chinese, and of battles, which were numerous during the summer, were unfounded. A Russian vessel sailed on the 2d of July for Chinese waters, having on board four thousand troops of various arms, with two torpedo-boats and a large supply of cartridges and torpedoes; other vessels and more torpedo-boats followed. Work was actively prosecuted at the dock-yards during the month, and in its latter days the last contingent of the Pacific squadron left Cronstadt under instructions not to proceed to the Pacific Ocean at once, but to wait in the Mediterranean for further orders.

The Chinese Government had in the mean time gradually modified its policy till it assumed a more pacific shape. Chung How was sentenced by the Board of Princes and High Officers, by whom he was tried in April, to be confined in prison till fall and then executed. A milder sentence was advised by the party of Prince Kung, but they were overruled. The case of the envoy was then taken up by the foreign ambassadors and Ministers, and by the Marquis Ts'eng, the Chinese ambassador to London and Paris, and was urged with success, so that on the 2d of July it was announced from Peking that Chung How had been reprieved, in order to show that China did not wish to hurt the feelings of Russia, and desired the continuance of friendly relations. The Marquis Ts'eng was instructed in March to go to St. Petersburg. A month later, it was reported that the Chinese Government had expressed a desire to resume negotiations, and had authorized the Marquis Ts'eng to conduct them at the Russian capital. The Marquis arrived at St. Petersburg on the 30th of July, and was received by the Czar on the

23d of August. The Czar expressed, and the envoy reciprocated, a desire for the peaceful issue of the mission. Almost coincidentally with this event, the "Agence Russe" called attention to the conciliatory spirit which had been shown by the two Governments, and mentioned that the Government at Peking had lately settled in a satisfactory manner several matters in China in which Russian subjects were interested; the Russian *chargé d'affaires* in Peking telegraphed that unfinished matters (other than the affair of Kulja) had been satisfactorily decided; and an express statement was published that Chung How had been set at liberty in consequence of the representations of the Marquis Tsêng. The new negotiations on the Kulja question were begun at St. Petersburg on the 2d of September, it having been decided that the Russian Minister at Peking, M. Bützow, should be charged only with the details and the ratification of the results of the negotiations. The Marquis Tsêng informed the Russian Government that China desired to substitute for the Treaty of Livadia a convention ceding the whole of the Ili territory. The Russian Government, while it did not refuse to revise the conditions of the treaty, demanded a rectification of the frontier, in order to put an end to the elements of disorder and stop the flight of Chinese subjects into Russian territory, and also required the possession of a convenient part of the territory of Kulja for the purpose, it was stated, of establishing there a colony of Dungenes, whom it would be dishonorable to abandon to Chinese vengeance. A few days later M. Bützow was recalled to St. Petersburg for the purpose of conferring with the Marquis Tsêng respecting the best means of removing the difficulties between the two countries; or, as was afterward more definitely stated, because the Marquis Tsêng had received permission from his Government to make further concessions, practically accepting the Russian terms as the basis of negotiations. This fact effectually disposed of the rumors that war was again imminent, and made it evident that the Chinese Government had become more conciliatory rather than more warlike.

A formal statement of the stipulations desired by Russia was presented in answer to the communications of the Chinese, in which a demand was added to the conditions previously mentioned for a reimbursement of the expenses of the squadron which had been sent to the Pacific Ocean.

The Chinese Government has demanded of the Portuguese possession of the island of Macao, founding its claim on the ground that the Portuguese have never acquired title to the territory by treaty, conquest, or any other recognized means. The Viceroy of Canton visited Macao unexpectedly during the spring, with great state, and was received with honors. In an interview with the Governor of the colony, he called attention to the fact that, although the Portuguese had had intercourse with China

longer than any other European nation, there was yet no treaty between the two powers, and was pleased to say that there would be no difficulty whatever in arranging a treaty which should put the Portuguese on the same footing as other nations, "not forgetting that acquired rights should be respected." He departed after having staid about three hours in the town, politely thanking the Governor for his courteous reception. Having returned home, he at once communicated to his Government that in pursuance of instructions he had visited the city, and had taken possession of it without resistance; that the Governor had come on board his vessel to render obedience and promised to pay tribute in the future; and that he (the Viceroy), through mere compassion, had permitted the Governor to go his way in peace, and had allowed the Portuguese to reside in the territory. The Portuguese Governor, in ignorance of the construction that the Viceroy had put upon the interview, informed his Government that nothing but advantage could accrue to his country from the visit. Macao was first occupied by a band of Portuguese adventurers in 1557, permission having been granted them by the Chinese authorities in return for services they had rendered in expelling a pirate who had taken up his quarters there. About twenty-five years afterward, when the Portuguese had erected valuable and permanent buildings, the Chinese demanded a ground-rent for the territory. It was paid till 1849, when the Portuguese Governor refused to acknowledge the sovereignty of China, and expelled its officers. The Chinese have steadily refused to recognize the right of the Portuguese to jurisdiction, and declined, in 1862, to ratify a treaty in which the sovereignty of Portugal over Macao was implied in a clause providing for the appointment of a Chinese consul there. The Portuguese journals stated late in April that the Chinese were blockading Macao, and that their cruisers had captured seventeen vessels bound for that port; also that the Portuguese Government had ordered a corvette to proceed from Mozambique to the Chinese coast. The President of the Portuguese Council of Ministers stated in the Upper House of the Cortes, in answer to a question, that Macao was in a position that would enable it to resist, most advantageously, any aggression.

Complications arose during the summer with Spain, which were occasioned by the interference of the Chinese Government with the emigration of coolies to Cuba. Spain demanded an apology and compensation for the interference, and threatened to occupy ports in Formosa and to blockade the Chinese coast, if they were not granted. The Chinese Government insisted that the attempted exportation of coolies was contrary to the treaty, and in violation of integrity and humanity. Spain had the moral support, it was said, of Portugal, whose representatives were sore over the Chinese claim to Macao, and of the Peruvian

envoy, who was irritated by the refusal of the Chinese on the same grounds as were set up in the case of the proposed Cuban emigration to allow a large number of coolies to sail for Peru. The position of China was supported on all material points by the English Governor of Hong-Kong.

Two treaties have been negotiated with commissioners appointed by the Government of the United States, and were signed at Peking on the 17th of November. One of the treaties relates to the introduction of Chinese into the United States, and is understood to secure to that nation the control and regulation of the immigration; the other relates to commerce.

The instructions of the Tsungli Yamèn to the Chinese Ministers abroad, with respect to the revisions of the treaties, furnish the most trustworthy indications of the views which the Chinese Government entertains of its position among the nations, and of what its relations with them should be. The instructions begin by claiming for China a rigid adherence to the treaties which it has signed, and by stating that complaints have arisen in the main from accidents to individuals and from the incidence of taxation. The former can not be guarded against by any amount of foresight; the latter ground arises from differences in the reading of the treaties. But the treaties may be revised every ten years, when the misunderstandings that have appeared may be remedied. The opinion of the Chinese Government is then set forth on the four points of transit, the *lekin* taxes, extra-territoriality, and the "most favored-nation clause." The remarks on transit are technical, but make a distinction between certificated and uncertificated merchandise. It is plainly stated that the *lekin* dues, concerning which disputes have arisen with the British Government, are as objectionable to Chinese merchants as they are to foreigners, and that the Government regards them as only a temporary expedient. "Independent powers," it is said, "must be guided by national necessities in fixing their taxation. In these troublous times the demands of the Government are very heavy, and it is impossible to avoid having recourse to special measures. We maintain that all such matters should be left to be determined by China herself, and that the foreigner has no more right to interfere with, or object to, them than China would have to interfere with, or criticise, the action of a foreign government in raising loans or increasing taxes." The true meaning of the clauses in the treaties guaranteeing extra-territoriality is, according to the instructions, not that a foreigner is at liberty to break Chinese laws, but that if he offends he shall be punished by his own national officers. Therefore, foreign governments should take care that, their consuls being vested with this great authority, only good and trustworthy men should be appointed to those posts. Moreover, it is added, "where cases requiring joint investigation occur, it is neither convenient nor

dignified for a Chinese officer to sit on the bench with a merchant-consul, who may have been fined for smuggling the day before, or who in his mercantile capacity may, perhaps, be personally interested in the case at issue." Of the "most favored-nation clause," the Tsungli Yamèn say that as "it is difficult to distinguish between the foreigners, or to say which belongs to which nationality," it is only right that it should extend to all; but no nation must accept it without giving the corresponding consideration as expressed in the original treaty; for to claim the benefit of the clause otherwise is unfair. The last of the instructions declares that, recognizing that the object of all religious systems is to do men good, China has granted protection to missionaries. But some of these missionaries, "exalting the importance of their office, arrogate to themselves an official status," and interfere with Chinese official business. "This state of things China can not tolerate or submit to." By the extra-territoriality clause foreigners are to be dealt with by their own national authorities; but Chinese subjects on Chinese soil, whether Christians or not Christians, are to be dealt with by Chinese officers under Chinese law, and missionaries must not put themselves in the way. In conclusion, the instructions say that reciprocal consideration and mutual forbearance are needed in the modification of treaties.

A conference, lasting five hours, was held on the 15th of December, between the Marquis Tséng and M. Giers, of the Russian Foreign Office, M. de Bützow, the Russian Minister at Peking, and M. Melnikoff, Director of the Asiatic Department, the Chinese mission secretaries being also present. It was the first interview that had been had respecting the negotiations after a long interval of inaction. According to the reports that were published of what took place at the conference, considerable concessions were made on both sides. The Russians, instead of insisting on retaining the Terek Valley, as it had been stated that they had done, agreed to surrender all that part of Ili, but claimed to retain a section of territory as a country of refuge for the Dungenes who had renounced their allegiance to China. This stipulation was regarded as of much importance on both sides. A proposition was also said to have been offered to settle by a *plébiscite* the question whether the inhabitants of the disputed territory should retain Chinese or adopt Russian allegiance.

Serious disturbances took place in Canton in September. The Roman Catholic mission was attacked, and the European community, which was threatened, was so alarmed that it was necessary to call out the militia. In the encounter which ensued, several of the rioters were killed or wounded, and some of the missionaries were wounded. Shortly after this, on the 20th of September, the Rev. Messrs. Selby and Morris, of the Wesleyan mission at Canton, visited a place called Shék-kok, sixty-

five miles from Canton, intending afterward to proceed farther inland, on religious work. They were assailed by a crowd of people with threats of drowning, stones, and other missiles, and barely escaped with their lives by retreating to the river and taking refuge on a boat.

General Tso - Tsung-t'ang, commander-in-chief of the Chinese troops on both sides of the Great Wall, is described by the Austrian Count Szechenyi, who tried to enter Thibet and was foiled, as a small, fat, jovial man, sixty-seven years of age, with coarse features, and sparkling, always moving eyes. He is the son of poor parents, and has risen solely by merit. He insists upon exercising his authority to its full extent, and has the reputation of being honest and upright, possessing the command of large sums of money and saving nothing. He lives in great simplicity, and employs his large salary in buying Krupp guns for his country. He is cruelly severe, watches the conduct of his soldiers with extreme rigor, and has interdicted the use of opium by them under severe penalties.

The European residents at the treaty ports have been again pressing for the removal of the Woosung bar, an obstruction that lies near the mouth of the river on which Shanghai is situated, and which runs into the Yang-tse. The bar is some eight or nine miles below the Anglo-American settlement, and the water on it, except at certain stages of the tide, is not sufficient to allow steamers of great draught to pass up to Shanghai. The vessels of the Peninsular and Oriental Company and the Messageries Maritimes are, however, seldom prevented from ascending the river to the settlement; so that the bar, though an inconvenience, is not an insuperable obstacle to commerce. The answer of the Chinese, when pressed to remove the bar or dredge a sufficient channel in it, is, invariably, that the bar prevents the passage of foreign ironclads, and is to that extent a defense to their dock-yard and arsenal at Kiangnan.

The following is the text of the two treaties between China and the United States:

I. *Whereas*, In the eighth year of Heen-fung, Anno Domini 1858, a treaty of peace and friendship was concluded between the United States of America and China, to which were added, in the seventh year of Tung Chih, Anno Domini 1893, certain supplementary articles to the advantage of both parties, which supplementary articles were to be perpetually observed and obeyed; and

Whereas, The Government of the United States, because of the constantly increasing immigration of Chinese laborers to the territory of the United States, and the embarrassments consequent upon such immigration, now desires to negotiate a modification of the existing treaties, which shall not be in direct contravention of their spirit:

Now, therefore, the President of the United States of America has appointed James B. Angell, of Michigan; John F. Swift, of California; and William Henry Trescott, of South Carolina, as his Commissioners Plenipotentiary, and his Imperial Majesty the Emperor of China has appointed Pao Chun, a member of his Imperial Majesty's Privy Council, and Superintendent of the Board of Civil Office, and Li Hung

Tsao, a member of his Imperial Majesty's Privy Council, as his Commissioners Plenipotentiary; and the said Commissioners, having conjointly examined their full powers, and having discussed the points of possible modification in existing treaties, have agreed upon the following articles in modification:

ARTICLE I. Whenever in the opinion of the Government of the United States, the coming of Chinese laborers to the United States, or their residence therein, affects, or threatens to affect, the interests of that country, to endanger the good order of the said country, or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable, and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitation. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

ART. II. Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with body and household servants, and Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

ART. III. If Chinese laborers or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill-treatment at the hands of any other persons, the Government of the United States will exert all its power to devise measures for their protection, and to secure to them the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.

ART. IV. The high contracting powers having agreed upon the foregoing articles, whenever the Government of the United States shall adopt legislative measures in accordance therewith, such measures will be communicated to the Government of China. If such measures, as enacted, are found to work hardships upon the subjects of China, the Chinese Minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him; and the Chinese Foreign Office may also bring the matter to the notice of the United States Minister at Peking and consider the subject with him, to the end that mutual and unqualified benefit may result.

In faith whereof, the respective Plenipotentiaries have signed and sealed the foregoing at Peking, in English and Chinese, being three originals of each text, of even tenor and date, the ratifications of which shall be exchanged at Peking, within one year from the date of its execution.

Done at Peking, this 17th day of November, in the year of our Lord 1880, Kuang Tsu, sixth year, tenth moon, fifteenth day.

II. The commercial treaty reads thus:

The President of the United States and his Imperial Majesty the Emperor of China, because of certain points of incompleteness in the existing treaties between their two Governments, have named as their Commissioners Plenipotentiary, that is to say, the President of the United States James B. Angell, of Michigan; John F. Swift, of California; and William Henry Trescott, of South Carolina; his Imperial Majesty the Emperor of China Pao Chun, a member of his Imperial Majesty's Privy Council and Superintendent of the Board of Civil Office, and Li Hung Tsao, a member of his Imperial Majesty's Privy Council, who have agreed upon and concluded the following articles:

ARTICLE I. The Governments of the United States and China, recognizing the benefits of their past commercial relations, and in order still further to promote such relations between the citizens and subjects of the two powers, mutually agree to give the most careful and favorable attention to the representations of either, or to such special extension of commercial intercourse as either may desire.

ART. II. The Governments of China and of the United States mutually agree and undertake that Chinese subjects shall not be permitted to import opium into any of the ports of the United States, and that the citizens of the United States shall not be permitted to import opium into any of the open ports of China, to transport it from one open port to any other open port, or to buy or sell opium in any of the open ports of China. This absolute prohibition, which extends to vessels owned by the citizens or subjects of either power, to foreign vessels employed by them, or to vessels owned by the citizens or subjects of either power, and employed by other persons for the transportation of opium, shall be enforced by appropriate legislation on the part of China and the United States, and the benefits of the favored-nation clause in existing treaties shall not be claimed by the citizen or subject of either power, as against the provisions of this article.

ART. III. His Imperial Majesty the Emperor of China hereby promises and agrees that no other kind or higher rate of tonnage dues or duties for imports or exports on coastwise trade shall be imposed or levied in the open ports of China upon vessels wholly belonging to citizens of the United States, or upon the produce, manufactures, or merchandise imported in the same from the United States, or from any foreign country, or upon the produce, manufactures, or merchandise exported in the same to the United States, or to any foreign country, or transported in the same from one open port of China to another, than are imposed or levied on vessels or cargoes of any other nation or on those of Chinese subjects. The United States hereby promise and agree that no other kind or higher rate of tonnage dues or duties for imports shall be imposed or levied in the ports of the United States, upon vessels wholly belonging to the subjects of his Imperial Majesty, and coming either directly or by way of any foreign port, from any of the ports of China which are open to foreign trade, to the ports of the United States, or returning therefrom, either directly or by way of any of the open ports of China, or upon the produce, manufactures, or merchandise imported in the same from China or from any foreign country, than are imposed or levied on vessels of other nations which make no discrimination against the United States in tonnage dues or duties on imports, exports, or coastwise trade, or than are imposed or levied on vessels and cargoes of citizens of the United States.

ART. IV. When controversies arise in the Chinese Empire between citizens of the United States and subjects of his Imperial Majesty which need to be examined and decided by the public officers of the two nations, it is agreed between the Governments of the United States and China that such cases shall be tried by the proper official of the nationality of the defendant. The properly authorized official of the plaintiff's nationality shall be freely permitted to attend the trial, and shall be treated with the courtesy due his position. He shall be granted all proper facilities for watching the proceedings in the interests of justice. If he so desires, he shall have the right to present, to examine, and to cross-examine witnesses. If he is dissatisfied with the proceedings, he shall be permitted to protest against them in detail. The law administered will be the law of the nationality of the officer trying the case.

In faith whereof, the Plenipotentiaries have signed and sealed the foregoing, at Peking, in English and Chinese, etc.

Signatures of the Chinese Commissioners:

JAMES B. ANGELL,
JOHN F. SWIFT,
WILLIAM HENRY TRESPCOTT.

CHOPPIN, SAMUEL PAUL, M. D., was born in the parish of West Baton Rouge, Louisiana, September 20, 1828. Educated at Jefferson College, after his graduation in 1846 he studied medicine in New Orleans and Paris. In 1852 he was elected Resident Surgeon of the Charity Hospital, and appointed, by the Faculty of the University, Demonstrator of Anatomy. In 1856 he was one of the founders of the New Orleans School of Medicine. Its success was so rapid that in 1859 it numbered two hundred and sixty-seven students. While surgeon of the hospital Dr. Choppin, in conjunction with some of his *confrères*, began the publication of the "New Orleans Medical News and Hospital Gazette." At the outset of the civil

war he was appointed surgeon-in-chief on the staff of General Beauregard. After the close of the war he increased his reputation by brilliant operations in plastic surgery and ovariotomy. In 1876 the Louisiana Board of Health was reorganized, and Dr. Choppin was elected President. This branch of the public service had been loosely conducted. Nine years had elapsed since an epidemic. He made earnest efforts to have the quarantine strictly enforced, believing that the yellow fever never originates in the United States. Denunciations and menaces were freely bestowed upon the President of the Board of Health. The quarantine was evaded, and the epidemic reigned. His public services and defeats told upon his health. He died in New Orleans, May 24.

CIRCUMNUTATION. The manifold wonderful modifications of the climbing organs of vines and creepers, which enable them to lift their foliage to the sunlight, accords so strikingly with Darwin's theory of adaptation that the attention of that scientist was naturally attracted to the study of this class of plants. The subject was brought to his attention by an essay by Professor Asa Gray upon the movements of the tendrils of cucurbitaceous plants, published in 1858, in the "Proceedings of the American Academy of Arts and Sciences." The stems and tendrils of climbing plants are found to be subject to a general law of revolution, sweeping about in wider and wider circles as they elongate, until they encounter an upright object, which they twine about, climbing upward in obedience to the law which directs the stems of all plants skyward. These movements had been observed long before by Palm, Hugo von Mohl, and Dutrochet. There are other remarkable habits of spontaneous movement, some of which are common to all plants, some developed in certain species of many widely divergent orders, and some confined to cognate species. The phenomenon of the sleep of leaves is an example of plant-motion so widespread and so striking that it attracted the attention of Pliny. The sensitiveness to touch observed in a limited number of species was one of the subjects of Darwin's prolific investigations, and led to the curious discovery of the carnivorous habits of some of these. The habits of movement in plants, as well as the other phenomena of vegetable physiology, have been most minutely and patiently watched by contemporaneous botanists, notably by Sachs, Frank, De Vries, and other German investigators, who have gathered by the help of the microscope and other delicate instruments a multitude of facts regarding these phenomena, from which they have made some important generalizations. Collating all the observations upon plant-movements published, and with the assistance of his son Francis verifying and enlarging them by ingenious methods of their own, Charles Darwin has established a general law of deep and comprehensive scientific import. Every

waxing part of every plant is informed by a principle which causes it to rotate as it grows. These spiral revolutions, usually exceedingly minute, are identical in their nature with the revolving movement of climbing plants, which is called by Sachs revolving nutation. To this principle Darwin gives the name of *circumnutation*. All the other movements of plants, excepting certain peculiar motions of the insectivorous species and some other unusual habits, are modifications of this universal revolving movement. This can be understood when the mechanical cause of the phenomenon is explained. It is the increased turgescence of the cells on one side of the moving part which causes it to bend in the opposite direction. This turgescence is accompanied by an increased extensibility of the cell-walls, which in the case of unicellular plants is the element which produces the phenomenon. Circumnutation was until recently supposed to be due to the increased growth of the turgescence side. In growing parts such growth follows upon turgescence. In such parts as are provided with *pulvini*, otherwise called joints or cushions, turgescence continues to take place in the *pulvinus*, and the motion of the part does not cease with the cessation of growth. The turgescence proceeds from side to side, affecting each portion of the circumference, which becomes temporarily more convex. Darwin's experiments convinced him that the stems, roots, leaves, flowers, the cotyledons of germinating plants, and all the young and growing parts of all plants, are continually circumnating. This revolving movement of the extremities being universally present, the development of special movements, which consist in slowly tipping more in one direction than in any other during the periodical revolutions, can be explained upon the Darwinian theory of natural selection. The influence of any attracting or repellent stimulus becomes more and more active when it proves conducive to the life of the plant. These secondary movements are classed by Darwin under the following names: *geotropism*, bending toward the center of the earth; *apogeotropism*, bending in the opposite direction from the center of the earth; *diageotropism*, bending in directions more or less transverse to the radius of the earth; *heliotropism*, bending toward the light; *apheliotropism* (commonly called negative heliotropism), bending away from the light; *diaheliotropism*, bending to or away from the light to a position diagonal to the direction of its source; *epinasty*, the tendency of the upper surface of a part to grow more rapidly than the lower one, causing the organ to bend downward; *hyponasty*, the tendency of the lower surface to grow the most rapidly, causing the organ to bend upward.

The Messrs. Darwin subjected the growing roots of many different species to close observation, and discovered through delicate experiments the manner in which the radicle of a plant

finds a passage downward through the soil. In a germinating seed the radicle is the first part which emerges. It immediately bends downward in the direction of gravitation. The tip of the radicle is constantly circumnating, and consequently finds its way into the crevices of the soil, or down into holes left by decayed roots or made by earthworms or larvae. The tip is the portion which is sensitive to gravitation or geotropism, and as was verified by numerous experiments is repelled by contact with any hard substance, and attracted by moisture. When the seed is covered with soil which is compact enough to offer sufficient resistance, the radicle, following the path found for it by the sensitive and continually gyrating apex, forces its way like a wedge in virtue of its longitudinal and lateral growth. When the seed germinates on the surface of the ground or is forced up by the descending root, the slender root-hairs which are sent out from the upper part of the radicle usually encounter stones or other solid objects to which they firmly affix themselves, and thus afford a resistance which enables the embryonic root to penetrate the earth. The outer surface of the cellulose walls of the filaments liquefies upon contact with a hard body and then sets hard in the air. The object of this process is probably not to assist the radicle to penetrate the earth, but to bring the hairs into close contact with the grains of the soil, so that they can absorb the layer of water and dissolved matter surrounding them. The apex of the radicle can not assist in the penetration, but only guide the way. Acting under the influence of geotropism, strong-growing roots, like that of the bean, do not exert a force of more than one gramme, as Sachs proved by attaching weights suspended over a pulley to radicles held in a horizontal position. The lower extremity of the growing part of the radicle responds to the influence of the apex. The longitudinal pressure of the terminal growing part, which is very rigid, Darwin found, in the case of the bean, to be equal to a quarter of a pound when free; but it is doubtless much greater when held in place by packed earth on every side. The transverse growth of the root exerts a force equal to several pounds. The sensitiveness of the apex of the radicle to hard bodies was proved by affixing with shellac minute squares of cardboard to the tips of the radicles of seedlings growing free in glass jars. The apex, in the cases of the bean, the pea, the oak, maize, and all the other species experimented upon, would bend to the side opposite to the attached object for one or two days, the radicle sometimes forming a complete loop or even two. In the end the repellent influence would cease to act, and the radicle would straighten out again in obedience to geotropic attraction. Very minute bodies, such as a bead of shellac weighing .33 milligramme, sometimes caused this curious curvature. When the roots were placed in a horizontal position, and pieces

of card fastened to the tips so as to influence them to bend in opposition to geotropism, this latter force could not be overcome; acting then, according to Darwin's explanation, directly, while the initial action of the affixed bodies is only opposed by the influence of geotropism acting obliquely, and consequently much more feebly. When one side of the tip was very slightly cauterized with dry caustic, it behaved in the same way, causing the radicle to curve in the opposite direction. The tips of radicles were also found to be sensitive to moist air, and to bend toward the source of moisture. A small section of the radicle above the apex is sensitive to the contact of hard bodies, but acts in the opposite way, bending toward and around an object like the tendril of a vine. This is a very useful property, enabling the root to curve quickly around an obstacle and regain its vertical course more rapidly than the tip could under the influence of geotropism alone. The sensitive tip of a radicle has a length of from 1 to 1.5 millimetres. The growing part which curves in the direction given it by the tip is the part of most rapid growth, and is from six or seven to twelve millimetres long. The tip and the basal part grow very slowly and bend very little. The roots of most plants are sensitive to light, turning sometimes toward and sometimes away from its source. This does not appear to be of any service, and is probably an indirect result of the tips being highly sensitive to other stimuli. The secondary radicles of plants are diageotropic in their growth, growing out horizontally or with a slight incline downward, and, if displaced, will resume their original direction. Their tips are sensitive to contact, and have been observed to circumnutate. These emit a third system of roots which are not influenced by geotropism. When the main radicle is destroyed or compressed in such a way that the sap can not freely enter it, two or three of the secondary radicles nearest it become geotropic and shoot down perpendicularly into the earth. An analogous behavior is observable when the main shoot of a tree is killed or injured on the part of the nearest side-branches, which are immediately rendered apogeotropic. These phenomena, as well as the apogeotropic growth of shoots which spring from branches that have been injured by certain insects, Darwin explains by the principle of reversion, the disturbance which brings it into play in the case of the secondary roots or stems being the increased flow of sap.

The fact that the sensitiveness of the radicles of seedlings to gravitation is confined to the apex was proved by an interesting experiment. The roots of beans were placed for an hour or an hour and a half in a horizontal position, so that the force of geotropism could act most powerfully upon them. The tips were then amputated, and the radicles were placed in the vertical position. The influence communicated to the growing part soon began to act, and the

root became bent and grew for two or three days in a horizontal direction, until a new tip formed which brought it again under the influence of geotropism, and again caused it to curve downward. Ciesielski first performed this experiment, and discovered the power of communicating the received influence thus clearly shown to belong to the vegetative point of the radicle. Sachs repeated his experiments with roots of the pea, bean, and lentil, but did not obtain corroborative results. Darwin tried it with a greater variety of plants, and found that a large majority of the amputated roots behaved as described. The part of the radicle which is chiefly influenced by the sensitive apex is three to six millimetres above it. The effect of the transmitted tendency received by the growing part must be observed within forty-eight hours after the amputation, as a regeneration of the root-cap and vegetative point often occurs as soon as that. The fact that it is the tip alone which is acted upon by gravity, and that this has the power of influencing the direction of the growth of the superior part of the radicle, shows that the roots of plants are not made to grow downward by the mechanical force of gravitation acting directly upon their tissues. The action of gravity on the root is similar to the effect of pressure upon a lowly-organized animal which causes it to draw away. The tip of the radicle seems to possess more wonderful properties than any other portion of the structure of plants, and to be more delicately sensitive, and sensitive to a greater variety of stimuli, than any other part. The important function it has to perform in enabling the root to penetrate the soil, makes it necessary that it should be endowed with such remarkable powers. Darwin likens the action of the tip of the radicle in directing the movements of the adjoining parts to that of the brain of the lower animals, which, analogously to the apex of the root, is situated in the anterior part of the body as it moves. The tip of the cotyledon when affected by light appears to transmit motion to the adjoining parts likewise, and also exhibits a sensitiveness and variety of adaptations almost comparable to the functions of the nervous structure of animals.

With dicotyledonous plants the hypocotyl protrudes first after the radicle, and makes its way upward to the surface; or, if the cotyledons are hypogean, that is, develop below the surface, it is the epicotyls, or sometimes the petioles of the cotyledons, or even those of the first true leaves in some cases, which emerge from the seed-coats and rise to the surface. Whichever of these organs it is that conducts the sub-aërial portion of the plant to the light, it invariably assumes an arched form, the stem while forcing its way through the seed-coats and then vertically upward through the soil being bowed into an elbow, probably for the purpose of protecting the tender apex from abrasion. As soon as it emerges into the air

the arch straightens out and the stem becomes erect. This curving of the stems is of the nature of epinasty or hyponasty. These arched organs are continually circumnutating or endeavoring to circumnutate while working up through the ground, and this movement probably assists them to break through. The part of a seedling which first issues forth is always strongly acted upon by apogeotropism. Whatever portion of the arch first emerges from the seed coat immediately turns upward, and the arch assumes a vertical position as rapidly as the superincumbent earth will permit. The tendency of the hypocotyl to take an arched form is widespread, and occurs sometimes in plants whose cotyledons are hypogean, and where it can be of no possible service. The hypocotyls and the upper portion of the radicles of beans were observed to curve themselves when allowed to germinate in a revolving vessel by which the force of geotropism was neutralized until they were deflected by an average angle of 63° . This phenomenon was first remarked by Sachs, and is called by Darwin *Sachs's curvature*. As soon as the first ray of light touches the pushing shoot the potent force of heliotropism comes into play. The upper surface of the hypocotyl is probably sensitive to light in the case of dicotyledons, and in monocotyledons, which do not emerge from the ground with bowed stems, in the tips of the cotyledons as they protrude. In the grasses the cotyledon is furnished with a sharp, hard crest, which serves for breaking through the soil.

The circumnutation of the arched hypocotyls was a puzzling phenomenon until it was explained by the undulatory nutation of internodes observed by Wiesner in certain seedlings whose tips are bent downward. In such bent stems the turgescence and increased growth do not occur simultaneously along the whole of the outer side or of the inner side of the bowed stem. If they did, there would evidently be no circumnutation. The spasmodic growth occurs on one side of one leg of the arch and on the opposite side of the other leg, while at the elbow there is a zone where the growth is equal on all sides. Before the cotyledons expand, the arched hypocotyl usually straightens itself by increased growth on the concave side, reversing the process by which it first became bent, until ultimately no trace of the curvature remains. The erection of the stem is accompanied with a revolving movement, and is therefore a modification of circumnutation. The hypocotyls and plumules of seedlings after straightening circumnutate constantly, describing oval figures which vary greatly in size in different plants, the period of the revolution also varying considerably. The extreme amount of movement from side to side is relatively very great in the hypocotyls, amounting to .28 inch in the egg-squash, .11 inch in a tall shoot of asparagus, .2 inch in the American oak, and only .04 inch in the European walnut. The

tip of the cotyledon of a seedling cabbage was observed under the microscope to move very rapidly, traveling .01 inch in a little more than three minutes, the forward movement being accompanied by incessant oscillations. The leaf of the *dionæa* circumnutates in the same vibratory manner. A great number of cells must distend at the same time to produce this jerky movement; but it is not known whether the harmonious turgescence, is of an intermittent character, or whether, as they become more and more turgescent, they suddenly break the strain of the opposing tissues and cause the whole part to yield.

The stem of the seedling circumnutates at a comparatively rapid rate. In some plants, such as the egg-squash and cabbage, four elliptic revolutions were performed in twelve hours by the hypocotyl, in some others only one. The ellipses described are very narrow in some plants, and in others, for example the oak, they approach a circle. They are frequently complicated by minute loops and zigzag lines. The cotyledons of all dicotyledonous plants circumnutate, moving upward and downward generally. The period of circumnutation is commonly twenty-four hours, though in some cases many revolutions are accomplished in that time. The two cotyledons circumnutate to a great extent independently of each other. In a great majority of cases the circumnutating movement was *nyctitropic*, or of the nature of the sleep of leaves. Most hypocotyls and cotyledons are extremely sensitive to light. Cotyledons are *paratonically* heliotropic, that is, their daily periodic movements are greatly and quickly disturbed by the sudden admission or seclusion of light, or by variations in its intensity.

Seedling plants are exceedingly heliotropic as a rule. The sensitiveness to light seems to reside in the tip of the cotyledon, which transmits the bending movement for some distance down the stem. The basal portion of the stem after a certain height has been attained does not bend. The effects of light upon seedlings are exceedingly variable upon different individuals of a species. Cotyledons are sensitive to differences in the illumination on opposite sides which are too slight to be perceived by the human eye. Light seems to act upon the tissues of plants in a similar manner to what it does on the nervous system of animals. Cotyledons which were exposed to light for only a couple of minutes at a time, and after long intervals, bent toward the source of the light; and cotyledons which had been exposed to sunlight, and others which had stood in the shade on being placed together under an intermediate degree of illumination, moved in directly opposite directions. The fact that the sensitiveness of the cotyledons of young seedlings to light is confined to the tip, was proved by covering the tip with tin-foil, or painted gold-beater's skin, in which cases the stems remained erect after exposure to a side-light, although when the tips were covered with un-

painted gold-beater's skin the stems bent to the same degree as those which were not covered. Shielding the tips of older seedlings with the same opaque coverings did not prevent the plants from bending toward the light. The remarkable power of transmitting an influence to the adjoining parts resides, therefore, in the tips of very young sprouts as well as in the extremity of the radicle. It was discovered, by amputating the tips of cotyledons, that the effect of apogeotropism is not derived from them, as geotropism is from the tip of the radicle.

The stems of a number of developed plants of widely different families were found by Darwin to circumnutate slightly while growing. The ellipses described were usually narrow, though not so narrow as those of stolons or leaves, and are irregular in their forms and in their periods. A stem will sometimes describe one ellipse on one day and two the next. Some plants make several irregular revolutions within a few hours. The axes of the different ellipses described point in all directions; the stem, after bending as far as it goes in one direction, in its returning path bends toward a point nearly but not exactly opposite.

The circumnutation of stolons or runners is of much greater amplitude than the regular circumnutation of stems, and is suspected by Darwin to be a special adaptation. They circumnutate in a very complex manner. The movement is usually in a vertical plane, owing to the weight of the runner; but there is always more or less lateral motion. A strawberry-runner moves up and down many times in a day, besides some lateral movement. The distance traveled by the end of a stolon during fourteen hours was found by measurement to be 2.67 inches. The movements of stolons are in a great measure opposed to the force of gravity. Such remarkable amplitude of motion in the circumnutation of running plants, which can only be compared to that of climbers, must be exceedingly beneficial to them, enabling the running branches to surmount obstacles which would otherwise contort and cripple them. The remarkable amplification of the circumnuting movement in the stems and in the tendrils of climbing plants can be more clearly ascribed to adaptation. Their stems while young circumnutate in the ordinary manner. After a while they begin to elongate rapidly, and their power of movement becomes enormously increased. The circumnutation is more even and regular than in the case of other plants. The tendrils also, whether consisting of modified leaves or of modified flower-peduncles, sweep wide circles in their circumnutation; whereas in ordinary leaves the movement is generally in a vertical plane.

Flower-peduncles while growing manifest the property of circumnutation. The leaves of plants belonging to both the dicotyledonous class, gymnosperms as well as angiosperms, and to the dicotyledonous class of phenogamous plants, and also those of the cryptogamic sub-

kingdom, have been proved to circumnutate. The seat of the movement is commonly in the petiole; but sometimes it lies in both petiole and blade, and sometimes in the blade alone. The movement is always a very slight one. The angle passed through varies from 2° to 10° in the generality of plants, but in the bean it amounts to 23° . The main movement is in a vertical plane, but with slight lateral deviations, producing ellipses of narrow form. In the case of the camellia and eucalyptus, the lateral movement is considerable, and the leaves of the cissus sometimes describe circular arcs in portions of their revolution. The lines are very irregular, and often broken by subordinate loops and triangles. The leaves of some plants describe several ellipses in the course of a day. A large ellipse is sometimes formed on one day and two small ones on the following. A tendency toward nyctitropism is observed in the leaves of many plants which do not possess the special formation, the *pulvinus*, by which the sleep of leaves is accomplished. The periodicity in the circumnutation of a great many leaves, and their frequent habit of rising in the evening and lowering in the morning, affords a basis for the explanation of nyctitropism as a specialized function in accordance with the theory of natural selection. Nyctitropism is characteristic of a large number of angiosperms, and of species belonging to several different genera of monocotyledonous plants. It has also been observed in the genus *Abies* of the sub-class of gymnosperms, and in the family *Marsalaceæ* of the acotyledons. The genera in which the leaves are raised toward the zenith at night and those in which they point down toward the ground are about equal in number. The cotyledons of a long list of plants exhibit the same sleep-movements, and are usually provided with *pulvini*, like the leaves of nyctitropic plants. The amount of angular deflection from the horizon which should be considered as characterizing nyctitropism is arbitrarily fixed by Darwin at 60° , at which angle the exposure to the sky is just half as great as in a horizontal position. The leaves of sixty-nine genera have been proved to be nyctitropic. Of these thirty-seven elevate and thirty-two sink their leaves at night. In many plants the leaves are raised or lowered through an angular space of 90° . The sleep of cotyledons, although scarcely noticed before the observations of the Messrs. Darwin, appears to be of more frequent occurrence than the sleep of leaves. In the large majority of cases the movement is a rising one. There is no agreement or connection between the behavior of the leaves and the cotyledons of the same plant; in a few species the undeveloped leaflets act in a different manner from the leaves; in some cases the leaves of young plants sleep while those on full-grown individuals do not. The leaves and cotyledons of sleeping plants perform one revolution in twenty-four hours. They are in continual motion, but this motion is considerably accelerated

when they are going to sleep at night and unfolding in the morning. The nyctitropic movements of leaves and cotyledons are exceedingly complex and are wonderfully diversified. The position which they all assume at night is one by which they are well protected from the effects of radiation into the open sky. Enforced exposure, produced for the sake of experiment, has been proved to be injurious to nyctitropic plants. The folding of the parts together is a further protection against the loss of heat. The course pursued differs only from ordinary circumnutation in its greater extent, and in the acceleration of the movement in the evening and in the morning. That the nyctitropic movement is actuated by heliotropism, is proved by the disturbance of its periodicity, caused by darkening the plant in the daytime, or exposing it to artificial light at night, which is the case also with the ordinary circumnutation of leaves. Unless nyctitropism is admitted to be a modification of circumnutation, the leaves and cotyledons of nyctitropic plants which describe a single ellipse in the twenty-four hours do not circumnutate at all. In other cases the leaves and cotyledons describe several ellipses during the day, the path of one of them in the evening and one in the morning being greatly extended. In plants possessing *pulvini* the nyctitropic revolution is sometimes complicated, accompanied with a twisting movement by which the surfaces of the parts are brought into closer contact, affording greater protection. Nyctitropism continues after the parts have attained their full growth only in plants which develop *pulvini*. The *pulvinus* is an aggregation of small cells, destitute of chlorophyl, at the base of a stem. The cells of the *pulvinus* distend and contract after growth has ceased. By reason of the multitude of the cells the movement produced by the extensibility of their walls is more ample. The development of the *pulvinus*, which consists merely of cells whose growth has been arrested at an early age, could be occasioned by very slight causes; and the tendency to develop such a formation, arising frequently as it must from accidental causes, would grow rapidly, in obedience to the law of natural selection, under conditions which render such an organ beneficial. The sleep of cotyledons, although a very common phenomenon, has never before attracted the notice of botanists so as to elicit more than a passing remark. The extent of the diurnal movement of cotyledons not provided with *pulvini* is sometimes, though not as a rule, as great as that of pulvinated cotyledons; but in the case of the former the sleeping habit rarely lasts over a week, while with the latter it continues for a month or more. The utility of the *pulvinus* is therefore evident. Pfeffer has examined with the microscope the *pulvini* of leaves without detecting any difference in the structure of the cells of the upper and lower sides, sufficient to account for the upward movement in the leaves of some plants, and the downward movement

in those of others. Darwin inspected the *pulvini* of cotyledons which become erect and those which become pendent at night, but discovered no difference in the structure of the opposite halves of either class, although the *pulvini* of cotyledons are better adapted for observation than those of leaves. The usual explanation of heliotropic phenomena—that light checks vegetable growth, a partial illumination occasioning the side favored by darkness to grow more rapidly than the lighted side, causing a plant to turn toward the light—will not account for many of the varieties of heliotropic and nyctitropic movement; as many plants which are known to grow best in darkness exhibit movements away from the light.

Heliotropism proper differs from the influence of light upon nyctitropic movements, in that the latter are affected only by the intensity of the light, while heliotropic movement depends upon its direction. All heliotropic effects—positive heliotropism; apheliotropism; diaheliotropism, which causes the parts of plants affected to place themselves transversely to the direction of the source of illumination; and paraheliotropism, usually called diurnal sleep, which consists in the rising, sinking, or twisting of organs when exposed to an intense light in order to protect themselves from its injurious effects—are modifications of circumnutation, consisting in an amplification of the ordinary movement on one side. Heliotropism, or the property of bending toward a lateral light, is almost universal in the chlorophyl-containing organs of plants; yet when this action proves injurious it can be eliminated or even turned into apheliotropism. Thus the tendrils of many climbing plants are not susceptible to heliotropic attraction, and the stems of some, which climb by rootlets, such as the ivy, are decidedly apheliotropic, which aids them in obtaining support. Insectivorous plants, which do not live so much by decomposing carbonic acid, and which derive more benefit from an advantageous position of their leaves for capturing insects, do not seem to be affected by heliotropism. Heliotropic movements when strongly excited are not attended by lateral motion; but under a gentler stimulus plants circumnutate visibly when bending toward the light. When light is suddenly admitted to a part which is circumnutating at the moment in the opposite direction, it does not respond to the attraction until it has turned the curve, and then sweeps rapidly toward the light in its return path. There are some movements exhibited by isolated genera which have no relation to circumnutation. Such is the movement of a mimosa-leaf, when touched, in which a different state of turgescence is produced from that which produces nyctitropism, although the action of the leaf is apparently the same. The movement excited in the tentacles of the drosera by the contact of an albuminoid substance is not a mode of circumnutation, nor is the movement of the stamens of the mahonia-

flower, when touched, toward the pistil; since the organs exhibit no signs of circumnutation, remaining perfectly still unless excited. The curling of the tip of the tendril of a vine upon touching it seems to be unconnected with the regular circumnuting movement of the organ, as the extremity of the tendril does not appear to participate in circumnutation, which has its seat in the base and lower portion of the tendril. There are a number of specialized functions of occasional or rare occurrence which seem to be peculiar modes and amplifications of the universal circumnuting motion acquired by natural selection for special purposes. Such are the phenomena of the straightening or drooping of the flower-peduncles after the flower has withered, by which the seeds can be deposited or scattered to the best advantage. A certain species of clover (*Trifolium subterraneum*) possesses the singular property of burying its seed-pods in the soil by a strongly geotropic action of the flower-peduncles, the three or four perfect flowers of the head curving downward against the peduncle by epinasty, and the central aborted flowers forming stiff, claw-like projections, which are pressed into the ground by the geotropic bending and lengthening of the peduncle, aided by the rocking movement of circumnutation, and which ultimately recurve themselves, dragging the head underneath the soil. The gynophores of the peanut-vine penetrate the ground in a similar manner, actively circumnuting. The seeds of these plants do not become fertile unless thus buried. The *Amphicarpæa monoica* emits branches which pierce the ground and produce flowers and pods. The movements of plants due to epinasty or hyponasty, which have been proved to be modifications of circumnutation, are of the most manifold diversity, and the purposes subserved by them exceedingly various and divergent. In some cases circumnutation takes place in sudden vibratory steps. If the hypocotyls of the cabbage, the joints of grasses, and the leaves of the *Dionæa* are viewed under a microscope, they are seen to jerk forward for a distance of $\cdot 001$ or $\cdot 002$ inch every few seconds, and then recede for a portion of the distance gained. The retreating movement is probably occasioned by the elasticity of the resisting tissues.

Circumnutation depends upon a more rapid growth or an increased turgescence on one side of an organ, followed by a like increase in the growth or extension of the cells of another part, usually almost the opposite side. The seat of this spasmodic extensibility or growth travels about to every part of the surface in succession. This continued action causes the outer portions of the organ to describe a series of irregular ellipses, with their longer axes directed to all points of the compass. The path of any point of the oscillating organ is more correctly described as a spiral line, since the part is continually growing. These revolutions are far from being regular. The path during an os-

cillation is sometimes in lines comparatively direct, sometimes quite curved; its character is apt to change at any time, and sometimes the general movement is interrupted temporarily, and little intermediate loops or triangles are formed. The periodicity in the growth of the cells and the alternating expansion and increment in the different parts of the organ is perhaps due to the need of the cells for periods of rest. All the movements of plants which are proved to be accompanied by the swerving motions which distinguish circumnutation, and are produced by the alternate turgescence of the cells in different parts of the organ, are supposed by Darwin to be modified forms of circumnutation evolved under the action of various stimuli which are beneficial in their effects, in accordance with the law of natural selection.

COCKBURN, THE RIGHT HONORABLE SIR ALEXANDER JAMES EDMUND, Baronet, the Lord Chief-Justice of England, Privy Councillor, Knight of the Grand Cross of the Order of the Bath, was born in 1802. He was the son of Mr. Alexander Cockburn, formerly Minister to Colombia. His mother was Yolande, daughter of Vicomte de Viguier, of Saint Domingo. He was descended from an ancient family, the Cockburns of Langton. He was nephew to Admiral Sir George Cockburn, who took part in the destruction of Washington during the War of 1812. He succeeded to the baronetcy on the death, in 1858, of another uncle, Sir William, the ninth baronet.

He was educated at Trinity College, Cambridge, where he graduated LL. B. in 1829. After a brilliant university career he received a Fellowship. Mr. Cockburn was called to the bar at the Middle Temple, and went on the Western Circuit in 1829. In 1841 he became a Queen's Counsel. A volume of reports on the most important cases springing out of the Reform Bill of 1832 increased his reputation, and gave him practice before the Election Committee. In 1834 he was appointed on the Municipal Corporation Committee. During the railway mania of 1846, when Parliament authorized the construction of lines costing £130,000,000, he obtained a lucrative share of the Parliamentary practice in regard to them.

At the general election of 1847 he was returned as Liberal member for Southampton. He did not distinguish himself in debate until 1850, when he made his eloquent defense of Palmerston's foreign policy in a memorable speech on the Pacifico question. Don Pacifico was a Portuguese Jew, resident in Athens, but born in Gibraltar, and therefore a British subject. The Athenians, in deference to a request of the Rothschilds, were forbidden to continue an annual custom of burning Judas Iscariot in effigy. They revenged themselves by sacking the house of Don Pacifico, who asked for damages amounting to about £30,000. Lord Palmerston added to this some other petty claims, and made a demand on the Hellenic Government for instantaneous restitution. The Foreign

Office had been annoyed by supposed intrigues of France and Russia in Greece, and was the more peremptory. Greece appealed to those powers. Tremendous complications ensued. The French ambassador was withdrawn from London. Europe was on the verge of a general war. The matter was finally settled by a payment of a small portion of Don Pacifico's claim. The House of Lords then passed a vote of censure on the foreign policy of the Government, and Mr. Roebuck moved in the Commons that it was injurious to the honor of the country to sustain exaggerated and unjust demands. Mr. Cockburn's speech on the dignity of a British subject, and the inviolability of his rights, carried away the House of Commons, saved the Government, and made him famous. Promotion followed swiftly. In July, 1850, he was appointed Solicitor-General, and in March, 1851, he was promoted to be Attorney-General, which office he held until the dissolution of the Russell Ministry in the spring of 1852. With the Aberdeen coalition he resumed this office, which he held until 1856, when he was made Chief-Justice of the Court of Common Pleas. He was knighted in 1850. In 1854 he was appointed Recorder of Bristol. During his attorney-generalship his consummate abilities were displayed in the celebrated Hopwood case, and in the prosecution of Palmer. On the elevation of Lord Campbell to the woolsack in 1859, Sir Alexander was advanced to the office of Lord Chief-Justice. Most of the leading cases of the last twenty years have been tried before him. In the case of General Nelson and Lieutenant Brand, prosecuted by the Jamaica Defense Committee for the hanging of Gordon, his charge contains an exhaustive juridical and historical exposition on martial law. On the trial of the Wainwrights for the murder of Harriet Lane, whom they buried in chloride of lime, the defense assumed that if this was her body, she committed suicide, and his reply was, "I will instruct the jury that it is unusual for suicides to bury themselves." In the Tichborne case he presided throughout, and his charge occupied nineteen days in its delivery.

In 1870 he received from Oxford the degree of D. C. L., and that of LL. D. from Cambridge in 1874. In 1876 he received the freedom of the city of London in the customary gold box. He was always a favorite with the English people. His controversies with Mr. Gladstone, with the Dean of Arches, with any and every one who infringed the boundaries of what he considered the law of the land, were sure to command the sympathy and attention of the public. His cogent arguments and caustic wit combined to put him high on the list of their illustrious judges. He was selected in September, 1871, to be the British arbitrator in regard to the Alabama claims. He left Geneva disgusted, and published his "Reasons for dissenting from the Decision of the Tribunal of Arbitration." Mr. Caleb Cushing, in his book, "The Treaty of Washington," attacked

the Chief-Justice's "Reasons" with more force of invective than of argument. Satisfied with comparing their author to "infamous judges like Jeffreys or Scroggs," he left to Mr. Robert Lowe the honor of making a proper rejoinder to the "Reasons." They end with a hope that the decision of the Geneva tribunal would be received with respect and submission. "If," said Mr. Lowe, "it was his opinion that we ought to acquiesce without a murmur in the award, he should not have published his arguments. If he thought it right to publish his arguments, he might have retrenched his advice."

He brought about the abolition of public betting-houses, which were numerous not only in London but in the minor towns, a reform for which he deserves well of his country. One of his last acts was the rehabilitation of Edmund Galley, a guiltless convict who underwent forty years of penal servitude before the wrong was rectified, which was accomplished finally through the untiring efforts of the great Judge.

He was fond of yachting, fishing, and field-sports, when his laborious duties permitted such indulgence. He died in the harness. In the morning he was occupied in hearing a case in Westminster Hall. At midnight, November 21st, he breathed his last at the house in Hertford Street so well known to all the social and literary celebrities of England. This grave Judge, occupied with all the weighty matters of the law, found time to cultivate the whole circle of literature and the arts. He was himself a writer of no mean merit, skilled in the composition of Greek and Latin verse, a lover of music, and as conversant with French and Italian literature as with that of his own country. He was equally great a lawyer, orator, and scholar, and in each department he has left his mark upon his time.

COLOMBIA (ESTADOS UNIDOS DE COLOMBIA). For statistics concerning area, territorial divisions, population, etc., reference may be made to the "Annual Cyclopædia" for 1877.

The boundary question with Costa Rica came again before the Colombian Congress in the past year, and we here transcribe a brief review of the resolutions passed on the subject:

Article I affirms Colombia's "dominion and possession" of all territory within a certain well-defined line. Article II enumerates Colombia's titles to the country from the river Culebras to Cape Gracias á Dios. Article III declares Colombia's "uninterrupted possession" up to the line described in Article I. Article IV details the attempt of a Costa Rican official to exercise jurisdiction over the disputed ground, his prompt discomfiture, and Colombia's continued possession until the present. Article V is a plain and peremptory demand for the continuance of the *status quo*, until the question is settled by arbitration or "other means," and declares any acts of dominion by the Costa Rican government violation and "usurpation." Article VIII asserts

as a preliminary condition for further negotiations, the removal of all Costa Rican officials who may now be found within the limits described in Article I, Articles VI and VII, which were not published, are presumed to define the methods which Congress has laid down for the Executive to follow in carrying out the demand of Article V; and Article IX, no doubt, points out the way in which the "disoccupation" insisted on in Article VIII shall be effected.

The effort to settle the affair by peaceful means is clearly expressed throughout the whole act, but that other contingencies were considered possible by Congress is clearly evident. The articles withheld, no doubt, define also the force which it may be necessary to employ in securing the preliminaries mentioned in Article VIII, or to punish "violations of rights" and "usurpations" of sovereignty, as in Article V, if peaceful means fail.

The President of the Republic is General Rafael Núñez (inaugurated April 1, 1880, for the usual Presidential term of two years), and the Cabinet was composed of the following Ministers: Interior, Señor José Araújo; Foreign Affairs, Señor Eustaquio Santamaría (*pro tem.*); Finance, Señor Antonio Roldán; Public Instruction, Señor Rafael Pérez (*pro tem.*); Treasury and National Credit, Señor Simón de Herrera; War and Marine, General Eliseo Payán; Public Works, Señor Gregorio Obregon.

The Chief Magistrates of the nine States were:

Antioquia	Señor P. Restrepo.
Bolívar	" B. Noguera.
Royacá	" J. E. Otalora.
Cauca	" G. E. Hurtado.
Cundinamarca	" W. Ibañez.
Magdalena	" N. C. Serrano.
Panamá	" Dámaso Cervera.
Santander	" S. Wilches.
Tolima	" T. Santos.

The Colombian Minister to the United States is General Ramon Santo Domingo Vila (accredited in 1880), and the Colombian Consul-General at New York is Señor Lino de Pombo (1880).

The United States Minister to Colombia is Hon. E. Deichman.

The regulation strength of the army in time of peace is 3,000; and in time of war each of the States is required to furnish a contingent of one per cent. of its population. In the returns published in 1880 by the Minister of War, the total number of officers in the Guardia Colombiana was set down at 1,927!

"Colombia is to have a navy once more," writes a Colombian journalist, "if the money is forthcoming." The Federal Congress, by a law sanctioned on July 13th, authorizes the Executive power at once to proceed to organize a navy. It is accordingly empowered to buy ironclads or wooden steam-vessels, as it may deem best, provided with modern armament, and with everything else requisite for the purposes of offense and defense, with the addition of such steam transports as may be considered adequate for the efficiency of the

service. These vessels will be distributed between the Atlantic and Pacific coasts of the republic. A navy-yard will also be established on each coast, with a coaling station attached, to be guarded by a corps of marines, under regulations similar to those applied to the battalions of the Guardia Colombiana, and from which detachments will be detailed for service on the vessels of the respective stations; the rest to be kept at the yards for training in the several arts and occupations connected therewith. Where natives are not attainable, the Government may engage the services of experienced foreigners for the most difficult posts ashore or on board the vessels. With a view to the greater efficacy of the present law, all previous legislation on this subject is restored, and is to be enforced to the same extent which prevailed before the Colombian navy was done away with some twelve years ago. An appropriation of \$1,000,000 is made in the estimates for the current fiscal year, and an equal sum is to be considered as appropriated in the budget for future years, so long as Congress does not determine otherwise.

In the budget for 1879-'80 the national revenue and expenditure were estimated as shown in the subjoined tables:

REVENUE.	
Customs receipts	\$3,000,000
Salt monopoly	1,300,000
Panama Railway	250,000
Sabanilla Railway	150,000
Post-Office	76,000
Telegraphs	30,000
Mint	12,000
National property	10,000
Church property	12,000
Sundries	70,000
Total	\$4,910,000

EXPENDITURE.	
Ministry of the Interior	\$294,972
Foreign Affairs	223,500
Finance	1,061,499
War and Marine	932,432
Public Works	2,958,200
Public Instruction	257,992
Justice	30,012
National debt	2,067,406
Treasury	92,200
Post-Office	634,698
Pensions	50,360
Sundries	81,300
Total	\$3,684,571

The total amounts of the actual revenue and expenditure from April 1, 1879, to January 20, 1880, were given in the President's message to Congress on February 1, 1880, at \$10,469,291.07½, and \$9,926,013.52½ respectively, a state of things much more satisfactory than that foreshadowed in the budget estimates above quoted. The yield of the custom-house department in 1879 was \$3,992,424.35, or somewhat under the general average. This diminution was accounted for in the message above alluded to, by the fact that a considerable quantity of merchandise had been imported free of duty through the Carlosama custom-house, and the consequent decrease in the receipts at Buenaventura and Tumaco.

Some idea of the development of the several departments of the Colombian Government in the past fourteen years may be formed by comparing the estimated expenditures for 1866-'67 and 1879-'80:

DEPARTMENTS.	1866-'67.	1879-'80.
Interior.....	\$199,884	\$294,972
Foreign Affairs.....	99,413	223,500
Public Works.....	124,000
Finance.....	456,025	2,958,200
Treasury and National Credit.....	415,154	92,209
War and Marine.....	370,886	952,432
Public Instruction.....	257,992
Post Office.....	106,122	534,698
Justice.....	23,444	30,012
Pensions, etc.....	50,360
National Debt.....	678,130	2,067,406

A significant feature of this table is the absence of appropriations for the branch of Public Instruction in 1866-'67.

The national debt was reported as follows on August 31, 1879:

Foreign debt.....	\$10,064,000
Home debt.....	9,907,219
Total.....	\$19,971,219

On the principal of the foreign debt, observes President Trujillo, in his message already mentioned, \$136,000 were paid in the civil year of 1879, and for interest, and exchange on remittances, including that which the previous Administration had failed to cover, were paid \$1,000,138. The foreign debt on January 1, 1880, amounted to \$9,959,500.

The following remarks, published in October, 1880, on the subject of the consolidated debt of 1873,* are from the pen of a foreign resident in Panama:

Under the arrangement entered into some years ago by the Government of this republic with its foreign creditors, it was agreed by the bondholders that the debt should be reduced to about one third of its then existing amount, and that the annual rate of interest should be reduced also. In view of these concessions, the Government of Colombia bound itself to pay punctually in future the annual interest, and gave security for the carrying out of the same. Among other incomes thus hypothecated was the subsidy of \$250,000 a year from the Panama Railway to Colombia. The annual interest under the new arrangement was met with considerable punctuality till about a year and a half ago, when, we understand, all payments ceased. We now learn that the bondholders, finding it impossible to get any further remittances from the Government, have fallen back on the hypothecated revenues, and that instructions were received from his Government by the British consul in this city to embargo on behalf of the creditors all further payments of the railway subsidy, which he immediately did. In view of the existing state of affairs, and the apparent apathy of the nation in meeting its most sacred obligations, we do not see that any other course was open to the creditors than that they have taken. At the same time we regret that such a step should have been necessary, as it must cause no little inconvenience to the State of Panama, which is entitled to \$25,000 per annum of the subsidy mentioned, and is in no way responsible for the acts of the nation, and also to the merchants of this city, who have already discounted for the government of the State some five quarters of said subsidy not yet due. We trust, how-

ever, the matter will not be permitted to remain long in abeyance, but that the Government will bestir itself and see that the whole affair is at once arranged in a manner creditable to the nation.

The exports for the year 1878-'79 were of the value of \$13,711,511; and the imports, \$10,787,634.

From the port of Cartagena were shipped in 1879 native products of the value of \$924,489.-50, including sugar, spirits, cotton, starch, rice, canime-oil, India-rubber, coffee, tortoise-shell, cacao, hides, cocoanuts, dividivi, ipecacuanha, corn, dye-woods, lumber, flax, cattle, cotton-seed, tobacco, ivory-nuts. The most valuable of these exports were sugar, hides, cacao, woods, cattle, tobacco, and ivory-nuts. Their values and destinations were as follows:

Germany.....	\$174,164 80
Costa Rica.....	24,553 00
United States.....	343,314 00
France.....	52,183 10
Great Britain.....	249,996 00
Italy.....	1,765 50
Santiago de Cuba.....	55,390 00
	\$901,366 40

The \$23,133.10 remaining to complete the sum total of exports consisted of various shipments of provisions to the port of Aspinwall and the State of Panama.

The value of the Colombian exports to Great Britain in 1878 was \$4,664,680, and that of the imports therefrom \$5,159,760, of which \$3,722,190 were for cotton fabrics. It is here to be observed that one half of the foreign commodities imported by Colombia are British products, and more than one third British manufactures, which would readily yield to competition from the United States if the importance of a commercial treaty based on wise principles of reciprocity were fully realized at Washington and Bogotá. Proposals have already been made to the United States Minister by the Colombian Minister of Foreign Affairs to reduce the duty on American dry goods to 25 per cent. *ad valorem* (it is now 50 per cent.), and admit American beer free of duty in exchange for a reduction of duty on Colombian tobacco here. Mr. Deichman, the United States Minister to Colombia, has given much time and attention to the study of the commercial movements of that republic, and confidently asserts the possibility of turning the balance of trade in our favor; but he is of opinion that, although our products are, as has frequently been stated in these volumes, steadily gaining favor in South American markets, some decided advantages should be offered by us in order to overcome the long-standing habit among Spanish-Americans of trading with Great Britain.

In 1878-'79 there were entered at the various ports of Colombia 833 sailing-vessels, with an aggregate tonnage of 47,425; and 459 steamers, with 538,148 tons.

From the report of the General Superintendent of the Panama Railway Company, it appears that the gross earnings of the line in

* See "Annual Cyclopædia" for 1875, p. 127.

1879 amounted to \$2,156,367.42, and the gross expenses, including subsidy to the Colombian Government, interest on bonds, etc., were \$1,035,409.96, leaving as a net balance of profit the sum of \$1,120,957.46, being 16 per cent. on the capital stock, from which quarterly dividends have been paid equal to 13 per cent. per annum, and \$210,957.46 has been added to the surplus fund, increasing the same to \$1,401,744.40. A temporary reduction in the monthly payments of the Pacific Mail Steamship Company lessened the earnings of the road during the year in the sum of \$120,000, which, if secured by the company, would have made the net earnings of the road at the rate of 17½ per cent. per annum. The total amount of freight carried during the year was 161,743 tons, against 152,477 in 1878, being an increase of 9,266 tons. The principal articles of Central and South American produce carried during the year were as follows:

ARTICLES.	
Bark, bales.....	89,653
Cotton, bales.....	40,026
Cocoa, bags.....	156,110
Coffee, bags.....	851,070
Indigo, zeroons.....	9,531
Ivory-nuts, bags.....	89,795
Rubber, bales.....	16,711
Sugar, bags.....	12,848

The increase in the traffic during the last four years is marked and steady, as will be seen by the following figures: total tons carried in 1876 were 113,781; in 1877, 146,942; in 1878, 152,477; and in 1879, 151,743; showing a net gain since 1876 of over 43 per cent. The portion of American through freight carried during the year was very small, being only 30,734 tons, or about 19 per cent. of the whole traffic. Passengers carried in 1879 number 23,729, against 24,921 in 1878, a decrease of 1,192, attributable to the Chili-Peruvian war, and exceptionally light travel between California and New York.

The works on the Cúcuta Railway appear to be advancing steadily. Thirteen kilometres of the line were completed and opened to traffic in November, 1879.

Of the projected railroad from Honda to Dorada, there were already (February, 1880) about three quarters of a mile ready to receive the rails, and the clearing of the first ten miles is progressing. The work on this road was commenced on August 7, 1879. The surveys for a railroad between Bogotá and Jirardot, now being made by Señor Indalecio Livianno, are to be finished by the middle of the present month.

Of telegraph there were 1,850 miles in the republic in 1879, and the number of dispatches transmitted in the same year was 124,646. The post-office returns for 1878-'79 were as follows: letters, 462,584; packages of printed matter, 470,374.

The subjoined table, showing the number of normal and primary schools in the republic, and the attendance at the same, is from the

report of the Minister of Public Education for 1879:

STATES.	Normal schools.	Primary schools.	Attendance.
Antioquia.....	3	271	10,000
Bolívar.....	2	75	5,241
Boyacá.....	2	282	11,916
Cauca.....	2	143	9,000
Cundinamarca.....	2	228	18,829
Magdalena.....	2	69	2,382
Panamá.....	2	54	2,765
Santander.....	2	243	12,506
Tolima.....	2	84	8,753
Territory of San Martín.....	..	6	279
Total.....	20	1,895	71,501

A resolution was passed in the Chamber of Deputies in April, 1880, relative to the reconstitution of the primitive Colombian Union, comprising the republic now called the United States of Colombia and the republics of Venezuela and Ecuador.

Commutations in Cauca, and a short-lived revolutionary movement in Antioquia, were the only instances of disturbance of a political character during the year.

COLORADO. Negotiations were concluded with the chiefs and head-men of the Utes, and a compact signed, in the beginning of March. The Indians agreed to secure those members of their nation not already in custody who are charged with taking part in the murder of Agent Meeker and his men, or with having been accessory to the deed, and to surrender them up for trial. They also acquiesced in the cession to the United States of the entire territory of the reservation which had been granted to them in Colorado, consisting of one quarter-section of grazing-land and a like quantity of land for tillage to every head of a family in the nation, and one half as much to every single person. The southern Utes agreed to accept in lieu of the reservation ceded back to the Government certain unoccupied agricultural lands on the La Plata River, situated partly in Colorado and partly in New Mexico, or to settle upon other lands in the same region; the Uncompahgre Utes agreed to take up a reservation on the Grand River, near the mouth of the Gunnison, in Colorado; and the White River Utes agreed to settle upon a portion of the Uintah reservation in Utah. The compact allows the Indians to select their own allotments in the localities specified. The existing public highways in the selected reservations are to remain open. In return, the Government engaged to survey the allotments, and to grant a patent to each individual Indian in severalty for the farm selected by him, with an inalienable title and immunity from land taxation for twenty-five years, as soon as the requisite laws shall have been passed by Congress; the Government furthermore agreed to pay the annuities already provided by Congress, of which the sum of about \$600,000 had accrued, and such additional appropriations as Congress should provide, in cash at the option of the Indians, instead of in cash

or in stock, wagons, agricultural implements, etc., at the discretion of the President. For furnishing such articles, as also saw and grist mills, sufficient to enable them to carry on farming operations from the moment when the settlement is effected, other provisions are made. The stipulations of the compact are to be carried out by a special commission, which shall superintend the settlement, and pay over the money appropriated in the proportions of one third to those settling on the La Plata River, one half to those going to the Grand River, and one sixth to those settling on the Uintah reservation. The Indians are to receive in addition, as a further consideration for giving up the Colorado reservation, an annuity of \$50,000 to be distributed among them individually, besides their present annuity of \$25,000. Provision is also made for supplying the necessities of life until the Indians become self-supporting, and also for the education of their children. This is the first assignment of lands to an Indian tribe on the basis of individual ownership.

The Ute lands in Colorado comprise about 16,000 square miles. The Utes showed themselves loath to give up the fertile river-bottom lands, though they placed no value on the hill-regions in which the mineral deposits are found whose discovery has made it politic for the Government to induce the Indians to exchange these reservations for others in Utah and New Mexico. The people of Colorado have been exceedingly impatient at the tardy acquiescence of the Indians, and dissatisfied because the Government has not proceeded summarily with the Indians and dispossessed them without their consent. A party of raiders entered the reservation in March, and had a conflict with the Indians. Other raids were threatened continually. The mineral deposits of the mountains within the limits of the reservation are reported to be, according to all indications, among the largest and most valuable yet discovered.

The Ute commission intrusted with the work of carrying out the provisions of the compact encountered many difficulties in the accomplishment of their task. The death of Chief Ouray made it a much more difficult matter to arrive at an understanding with the Indians. The death of the secretary of the commission also occasioned delay and confusion. The Indians were suspicious and difficult to treat with; and after they had signed the treaty, and even after a portion of the stipulated sums had been paid over to them, they were evasive and exacting in their behavior, some affecting to believe that they had not relinquished their agricultural lands in the old reservation, but only the mineral districts. The impatient behavior and threatening acts of the people of Colorado were an additional impediment to the arrangement of the matter. A body of United States soldiers were posted in the reservation to prevent the invasion of the reservation by the whites, as well as to restrain any hostile or rebellious movement on the part of the Indians. A tragic

episode occurred in the fall, which aggravated the dangerous state of feeling between the citizens and the Indians, and several times threatened to lead to an explosion of vindictive fury on the part of the savages like that which had resulted in the murder of Agent Meeker and his assistants, and the sacrifice of Thornburgh and the soldiers of his command. Two Indians rode into a freighters' camp at Blue Divide, about thirty miles from Los Pinos Agency, on the evening of the 29th of September, and asked for supper. According to the freighters' story, they bore the marks of intoxication, and demanded food in an insolent manner; and, upon being told by the cook to wait until the meal was prepared, they flew into a passion; one of them put a fresh cartridge in his gun, and when the whites fled behind the wagons fired a shot, which was returned by A. D. Jackson, a young nephew of J. H. Jackson, the owner of the train, both Indians thereupon mounting their horses and riding away, apparently unhurt. About fifty armed Uncompahgre Utes appeared at the Los Pinos Agency the following morning at sunrise, in a state of the wildest excitement, stating that Young Johnson, a son of the chief Shavanaux, had been killed by a freighter, and demanding the murderer. A. B. Meacham, one of the Ute commissioners, and Agent Berry started for the scene of the homicide, escorted by a detachment of fifteen soldiers, under Captain Stillé. The guard of soldiers had been asked for by Agent Berry to satisfy the Indians. The freighters' train had been stopped by two whites, named Holmes and Hoyt, and an Indian chief, the main body of the Indians standing in the background with rifles pointed at every man in the train. The freighters had been taken to Kline's ranch, where they were found by Berry and Meacham on their arrival in the evening. That night they were guarded by the soldiery, the Indians posting an outer guard and watching them like beasts of prey. At the agency Chief Pish, acting as spokesman, had threatened to avenge the death of their young chief by a massacre of the whites. During the night they were restrained with the utmost difficulty from taking forcible possession of the person of young Jackson, and the following morning they made a start as though about to carry into execution their menace of a general butchery of the whites. The agent, who exercises great influence among the tribe, and Mr. Meacham, who possesses their confidence, were obliged to use their utmost tact and power of persuasion to prevent such an outburst of savage fury. Meacham had obtained their signatures to the treaty on the promise that the arrear annuities would be paid over to them shortly. It was the failure of the Government to pay these moneys promptly which had wrought the Indians up to such a tense state of feeling. They had grown to consider the presence and continued assurances of Meacham as a guarantee for the payment, and he was therefore placed in the position of a hostage.

In the morning the Indians, when called upon to identify the culprit, pointed out Jackson as the murderer of Young Johnson, and offered no objections to the release of the rest of the freighters, who were attended on their way toward Saguache by a guard of soldiers. Their whole resentment was centered on young Jackson. According to the Indians' story, the act of the young man was a wanton and cold-blooded murder, committed without any provocation. Their version was generally credited by the military and the Government officers, while the people, the press, and the State officials of Colorado accepted without qualification the story of the freighters. The Indians, after a long parley and much hesitation, agreed or feigned to agree to the proposition that Jackson, the accused, should be taken to Gunnison City, for incarceration and trial by their friends, Kline, Hoyt, and Holmes, an Indian going with them. In the evening the three whites returned and reported that, when only a few miles from the ranch, they were surprised by a large body of Indians in ambush, among whom were some white men. They seized upon Jackson and disappeared, and he was never heard of again. The report went abroad in the State that the young man, who was thought to have acted only in self-defense, had been put to torture. The popular excitement was intense. The citizens threatened to march in and precipitate the Government into a conflict with the Indians, feeling that the Government had been dilatory in removing the Indians from the reservations and too indulgent toward them. The soldiers and Government agents on the reservation resented the attitude of the Colorado citizens and authorities, feeling that their lives were jeopardized by the rashness of persons who themselves encountered no danger. The 500 Indians on this reservation, armed as they were with the most perfect modern rifles, would have been able to annihilate the 150 soldiers posted there. A warrant was issued by a State court for the arrest of Berry, on the charge of being an accessory to the murder of Jackson, and others were taken out against Kline, Holmes, Hoyt, and Meacham. A correspondence was carried on between Governor Pitkin and the Interior Department with reference to the question of whether the reservation was within the criminal jurisdiction of the State. The Government officers conceded that the accused parties were amenable to the State laws, but warned the Governor of the danger of removing Berry and Meacham off the reservation at that time. A sheriff entered the reservation and arrested Berry at the agency; but the latter, upon being taken first to the cantonment at his request, managed to escape in the night-time from the side of the sleeping officer, and spent several days in visiting the various Indian camps, counseling peace and patience, and persuading them to consent to his temporary absence for the purpose of meeting the charges brought against him. Meanwhile

Governor Pitkin had given directions that a body of militia should accompany a sheriff's posse into the reservation for the purpose of capturing Berry. In the order the Governor said that, if the Ute Indians attempted resistance to the process, they would be swept away, and further, that if sufficient force and ammunition could not be procured in Gunnison, it should be furnished from Denver, and that the force should be either wholly or partly mounted, and well supplied with ammunition. In the mean time an officer of the United States court had arrived; and Berry, after quieting and reassuring the Indians, expressed his willingness to go in his custody to be examined in the court, whichever it was, which had jurisdiction of the matter. Captain Kline had been arrested and confined in jail at Gunnison. General Pope, in a letter, instructed the officers of the army that the military have no authority to exercise in such a matter, nor jurisdiction of any kind over the Indians or their reservation, which are under the charge and control of the agents of the Indian Bureau, and the military are not empowered to take any action except on the demand and under the direction of the Indian agent. Agent Berry declined to call upon the military for assistance. On October 19th Governor Pitkin received an answer to interrogatories sent to the Interior Department, saying that, if Agent Berry were arrested upon criminal process duly served by the State's officers, the United States troops could not interfere, but that if the militia made their entry upon the reservation without process, the Federal troops may be called upon to eject them. General Pope sent a dispatch to the Governor on the 20th, in which he stated that he had forbidden the troops to prevent the arrest, upon receiving the opinion of the Attorney-General of the United States, that Agent Berry and his subordinates are amenable to the State law for acts committed upon the reservation. While admitting the jurisdiction of the State within the limits of the Indian reservation over the agent, the Attorney-General reserved his opinion as to whether the Indians also were subject to criminal arrest by the State authorities. Agent Berry, on October 19th, submitted to arrest by the United States Marshal, the Indians consenting to his absence upon promise of his return in a fortnight. Upon his arrest Governor Pitkin ordered that the posse, which was on the way to the reservation, should be recalled. Meacham also delivered himself into custody; and Berry, Meacham, and Hoyt were taken to Denver.

In the case of the United States *vs.* Berry *et al.*, in the United States District Court of Colorado, Judge McCrary, the late Secretary of War, decided that the murder by Jackson took place within the exclusive jurisdiction of the United States, and that the claim of the State of Colorado for a transfer of the case to the jurisdiction of its courts had no warrant in law. One of the obligations imposed upon the United

States, by the terms of the treaty of March 2, 1868, with the Indians, is to enforce their criminal laws within the limits of the reservation against all classes of offenders. If the State be conceded jurisdiction in this case, it would be entitled to enforce its own criminal statutes, now in force or to be enacted in the future, against whites or Indians, in all parts of the reservation; and thus it would lie in the power of the State to defeat and destroy the treaty entered into with the Indians by the Government. All the Indian reservations granted by Congress have been kept within the jurisdiction of the United States, whether located in Territories or States; and no instance has been known of a tribe of Indians and its reservation being handed over without their consent into the control of a State.

In a letter of instructions from the Commissioner of the General Land-Office, the Government surveyor in surveying mining claims is directed to base the survey on one lode only, and to make it conform more or less nearly to the figure of a parallelogram. According to the law, a miner can locate 1,500 feet along the length of a vein or lode and 300 feet to each side of its center. It is not allowable to work the claim beyond the vertical planes drawn from the end-lines when it abuts upon the claim of another; but laterally it is permitted to follow the dip of the lode beyond the side-lines. If the survey does not follow the general direction of the vein or lode, and the side-lines of the surface claim cross the vein, the miner is debarred from working further along the length of the vein than the vertical plane from his side-line at that point. Claims can not be made to depart so far from the form of a parallelogram, upon the supposition that the strike of the vein or lode is tortuous, that the side-lines may fall across the course of other veins; and therefore the surveyor is instructed not to allow claims of an angular form in which the end-lines are not parallel with each other or nearly so. When the top or apex of a second vein is discovered within the surface boundaries of a miner's claim, he is confined in his right to operate it to closer restrictions than apply to the vein on which his claim is based; and in working the original vein he is allowed to pass his boundaries only to follow its natural dip, but not along its length, whether his surface plot conform to the true course of the vein or not.

A general strike of the miners commenced at Leadville on May 26th. More than 7,000 hands are employed in the mines at this point. The action of the strikers was preconcerted in secret. A band of several hundred men went first to one of the larger mines and called all the men out early in the morning. In constantly augmenting numbers they visited each mine in succession. Before night work had ceased in every mine in the camp. About 5,000 miners took part in the strike, the remainder remaining in their homes. The mine

owners and managers took rapid measures to protect their property. Strong guards were posted at the shafts of all the leading mines, and barricades were erected. After some weeks the citizens of Leadville, fearing that the managers would close the mines for an indefinite period and the business of the town would be destroyed, organized a vigilance committee on the 11th of June, and on the 13th Governor Pitkin was prevailed upon to proclaim martial law. The militia patrolled the town, and orders were issued closing the public houses, forbidding the carrying of arms without a permit and the gathering of groups of more than two upon the streets. The president of the strikers' association, Michael Mooney, was arrested while at a Greenback Convention in Denver on the 15th. Upon the promise of the personal safety of their leaders, the strikers quieted down, and work was resumed in the mines, new hands largely taking the place of the old miners. The cause of the strike was stated to be the strict rules introduced in some of the mines against talking or smoking during working hours; the declared object was an increase of wages from three dollars to four dollars a day, and a reduction of the hours of labor from a ten-hour to an eight-hour shift. The strike is estimated to have occasioned a loss of about \$4,000,000, this being the amount of metal which would have been produced during the time in which the mines and smelting-works were kept idle.

The total bullion output of Leadville, for the calendar year 1880, amounted to \$15,095,153, against \$10,189,521 in 1879. The aggregate product of the Leadville mining district from the days of early placer mining is computed as follows:

1860-1873, gold from placers	\$6,400,000
1874, gold and silver.....	145,000
1875, gold and silver.....	113,000
1876, gold, silver, and lead.....	85,200
1877, gold, silver, and lead.....	555,830
1878, gold, silver, and lead.....	8,152,925
1879, gold, silver, and lead.....	10,189,521
1880, gold, silver, and lead.....	15,095,153
Total up to 1881.....	\$35,736,129

The total product of Colorado, as given in the annual report for 1880 of Wells, Fargo & Co., is \$21,284,989, or over one fourth of the total yield of the United States, being \$3,000,000 greater than California's product, and \$6,000,000 more than that of Nevada.

The mineral discoveries are not often developed rapidly in Colorado, owing to the large amount of capital required not only to sink the shafts but to erect smelters, without which the ores of many of the camps are of very little value. Among the most important new mining points besides several in Gunnison County are Rico and Breckinridge. The latter is the shire town of Summit County, and has been for many years a placer-camp. Mineral deposits were discovered here as early as 1859. Lately rich veins have been opened in the neighboring mountains, and the place has developed into

a busy mining center. A considerable variety of ores are found, and smelting-works have been established within the year. In Illinois Gulch chlorides, horn silver, and silver glance have been taken out, besides rich deposits of drift-gold; silver carbonates have been worked on Nigger Hill, and chlorides and carbonates on Mineral Hill, Gibson Hill, Carbonate Flats, and at other points.

Rico is a carbonate camp on the Rio Dolores, which was first settled in the spring of 1879. It is situated forty-five miles from Silverton, on the mesa lands of the Dolores Mountains. The surface ores yield silver only; the lodes improve below and contain considerable gold. The mines developed have yielded from \$100 to \$600 or more a ton.

Tomichi, another new settlement of promise, situated on the summit of the Great Divide near the head-waters of the South Arkansas, and at the source of Tomichi Creek, gives quartz-ore containing silver glance associated with pyrites and native brittle silver, inclosed in metamorphic granite. The ores are very rich, each assaying over \$600 a ton.

Of the many camps in the Gunnison country, where, according to all indications, some of the most valuable deposits on the continent will be found, Aspen is that which is at present attracting the most attention, and is second to no camp in the Gunnison country, unless, perhaps, the Ten Mile. Its ores smelt freely, assay well near the surface, and improve with the depth of the developments. There are large bodies of galena-ore carrying native silver, carbonate of lead in large quantities, black sulphurets, ruby and brittle silver, with chlorides and bromides, and various oxides of iron, antimony, and manganese. The geological formation of this remarkable silver belt, extending fifteen miles in a northwest direction to Castle Forks, consists of granite, schistose rocks, quartzite, limestone, spars, trachytic rock, and drift. The whole mass of Aspen Mountain seems to be veined with rich bodies of high-grade ores.

An anti-Chinese riot took place in Denver on the 31st of October. A fear had long possessed the miners and other workmen of the State lest the Chinese should be brought in from California to compete with them in their occupations. This feeling had been wrought upon by the recent publication of the forged Garfield letter, and the popular hatred of the Chinese inflamed to a dangerous pitch. The exciting cause of the Denver riot was a fight in a saloon over a game between a white man and a Chinaman. A mob immediately gathered in the streets, which soon numbered over 1,500 excited men, and rushed toward the district inhabited by the Chinese, shouting threats of murder and destruction. During the day they were kept back by the police and firemen, who stretched ropes across the streets leading to the threatened quarter, and poured water from the engines into the crowd as often as it

threatened to break through the cordon. Nearly all the Chinese in the place, about 160 altogether, were found by the police and escorted to the jail for safety. Several were caught by the mob and maltreated, and two of these beaten to death. In the evening the rioters broke into many houses occupied by Chinese as dwellings and laundries, and destroyed their household goods and washing utensils and the clothes of their customers. A couple of thousand special policemen were sworn in. Upon an attempted renewal of the disturbances the ensuing morning many rioters were arrested. Several hundred were also arrested upon warrants.

The Republican Convention to nominate delegates to vote for a Presidential candidate at Chicago, met at Denver, May 25th, requested the delegation to support the candidacy of Grant, and named Blaine as their alternate choice. The following resolutions upon the Ute difficulty and upon silver coinage formed a part of their platform:

Resolved, That we are uncompromisingly opposed to monometalism, and declare our firm determination to use all legal and proper means to reestablish silver as the equal of gold as a money metal; that we are in favor of the free and unlimited coinage of silver with gold.

Resolved, That the Democratic Congress of the United States, in its treatment of the Indian question, has failed to discharge a high public duty imposed upon it by the progress of civilization. That we do not recognize the claim that any treaty exists between the national Government and the Utes, the treaty which did exist having first been violated in the most savage and brutal manner by the Indians themselves. We therefore most heartily pledge the coöperation of the Republican party of Colorado to the doctrine of speedy removal.

The Democratic Convention to select delegates for the Presidential Convention came together at Denver, June 3d. The resolutions adopted read as follows:

Resolved, That we, the Democracy of Colorado, are in favor of the full and unlimited coinage of silver.

Resolved, That we will support the nominee of the Cincinnati Convention.

Resolved, That the Utes must go.

The Greenback-Labor Convention was held at Denver, June 15th. The national platform and nominations were endorsed, and Rev. A. J. Chittenden was nominated for Governor.

The regular State Convention of the Democratic party was held at Leadville, August 18th. The nominations were John S. Hough, of Hinsdale, for Governor; W. S. Stover, for Lieutenant-Governor; Charles O. Unfug, for Secretary; Dr. A. Y. Hull, for Treasurer; R. G. Bray, for Auditor; and J. C. Stallcup, for Attorney-General. R. S. Morrison was put in nomination for member of Congress. The following resolutions were adopted, in spite of earnest protests from J. Y. Marshall, of Leadville, and others, by a large majority vote:

Resolved, 1. That we reiterate the words of our standard-bearer, that the military should be at all times subordinate to the civil law.

2. That whereas, it is provided by the Constitution of the State that the supreme executive power is lodged

in the Governor, but only to see that the laws are enforced, therefore we declare the placing of Lake County under martial law in time of peace to have overstepped the bounds of the Constitution.

The Republican State Convention met at Leadville, August 26th. Governor Frederick W. Pitkin was renominated, George B. Robinson nominated for Lieutenant-Governor, Secretary N. H. Meldrum renominated, W. C. Sanders nominated for Treasurer, and Joseph A. Davis for Auditor. The nominee for Congressman was James B. Belford. The resolutions adopted endorsed the National party nominations, declared for bimetalism and free coinage of silver, called upon the national and State governments to encourage by suitable legislation the development of the mineral resources of the State; they also protested against any legislation "that shall embarrass the prospector on the public lands in his efforts to secure a perfect title to his discoveries," and accused the Democratic Congress of having failed to discharge a "high public duty imposed upon it by the progress of civilization" in its treatment of the Indian question.

The census of 1880 makes the population of the State of Colorado 194,649. The population of Denver, which was 4,759 in 1870, has become 37,719. Leadville, which is disputing with Denver the privilege of containing the halls of legislation and being the State capital, has within that period, though one of the most elevated inhabited spots on the globe, grown from nothing into a town of about 21,000 inhabitants.

COMMERCE OF THE UNITED STATES. The revival and expansion of commercial enterprise and industrial and agricultural activity, which, after five years of declining trade and financial depression, was first started by the profitable exportation of the large surplus crops of 1878, and which seemed to have reached its flood after the more abundant harvest of 1879 and the continued European demand for the entire surplus, attained a still higher mark in 1880, permeating every branch and department of business and industry, and manifesting itself in an increase in values, in a scale of consumption which has never been equaled, and in a volume of business in internal commerce, manufactures, agriculture, and in financial operations and the extension of productive facilities and inauguration of new enterprises, which exceeds the figures of any previous year in the commercial history of the United States. There has been a very large supply of money in the money market, and an equally active demand, which has occasionally produced a tight market, notwithstanding the enormous capitals which were unlocked at the return of confidence. The transactions on the stock exchange and in the loan market were of unparalleled aggregate magnitude. The United States Treasury has purchased during the year \$103,303,300 Government bonds on account of the sinking fund. A great though not a steady

advance in prices has taken place on the stock exchange during the twelvemonth. The prices of American railroad and other securities in the London market have kept pace with the rising values in New York, and the exportation of American railroad bonds, long interrupted, has been resumed on a large scale. The earnings of the railroad lines have been quite unexampled. Rivals of the Western Union Telegraph Company have entered the field to compete with that huge corporation; several consolidations and alliances have taken place between gigantic railroad corporations, and various new trunk lines have been formed or projected. The production of gold and silver has slightly decreased, and a depression in mining stocks has taken place. In wheat, cotton, iron, and coal there has been a largely increased production. The immigration during the fiscal year 1879-'80 was 457,257 persons against 177,826 the year before. Novel attempts, in most cases unsuccessful, were made to make corners, that is, to monopolize the supply for speculative purposes, in several of the staple articles of merchandise—notably in wheat, in pork, and in coffee.

The total exports of domestic products from the United States during the fiscal year ending June 30, 1880, amounted to the sum of \$823,946,353. Including coin and bullion, the total export trade for the year was \$833,294,246, the value of the coin and bullion exports amounting to \$9,347,893.

The aggregate value of foreign articles of merchandise imported during the fiscal year was \$667,954,746; the total imports of coin and bullion were \$93,034,310, making the total foreign imports of the United States for the twelve months \$760,989,056. The excess of precious metals imported over the exports was \$83,686,417. The excess of merchandise exported over the imports was \$167,683,912. The balance in favor of the United States on both coin and merchandise accounts is \$72,305,190. The re-exports of foreign merchandise amounted to \$11,692,305. The total foreign commerce of the United States in 1879-'80 amounted to \$1,613,770,803, an increase of \$411,062,194, or 32 per cent. over the aggregate exports and imports of 1878-'79. The following statement, going back ten years, gives the aggregate export and import trade of the United States for each year, and the increase and decrease compared with the year immediately preceding:

FISCAL YEAR.	Total commerce of the United States.	Increase.	Decrease.
1879-'80.....	\$1,613,770,803	\$411,062,194	
1878-'79.....	1,202,708,609		\$7,810,790
1877-'78.....	1,210,519,899	8,421,974	
1876-'77.....	1,207,097,425	58,685,550	
1875-'76.....	1,153,411,875		\$1,619,193
1874-'75.....	1,235,031,068		89,073,688
1873-'74.....	1,324,104,706		16,794,515
1872-'73.....	1,340,899,221	128,570,988	
1871-'72.....	1,212,328,238	79,855,975	
1870-'71.....	1,132,472,258	140,575,869	

A summary of the total foreign commerce of the leading commercial nations, comparing the returns for 1878 (for 1879 in the cases of Great Britain and the United States) with those for 1875, showing the fluctuation in the trade of each in the four (or respectively five) years, is given by the Secretary of State in the volume of Consular Reports, for the purpose of comparing the development of the international trade of the United States of late with that of other countries. In Austria, the total volume of commerce increased from \$422,806,000 in 1875 to \$528,252,000 in 1878, an increase of 25 per cent., and the balance of trade changed from \$17,232,000 against her to \$49,046,000 in her favor, a gain of \$66,278,000. In Belgium, the volume of commerce grew from \$464,912,000 to \$498,927,000; increase, 7 per cent.; the adverse balance increased from \$31,786,000 to \$69,559,000; loss, \$37,773,000. China's total trade increased from \$211,790,000 to \$213,588,000, 1 per cent.; the balance changed from \$3,162,000 in favor to \$1,868,000 against; loss, \$5,030,000. The trade of France was \$1,430,130,000 in 1875, and \$1,419,708,000 in 1878; decrease, $\frac{1}{4}$ of 1 per cent., the favorable balance of \$64,848,000 changing to an adverse one of \$192,228,000; loss, \$257,076,000. Germany's commerce increased from \$1,612,266,000 to \$1,686,820,000, $\frac{1}{2}$ per cent., the adverse balance from \$68,586,000 to \$92,882,000; loss, \$24,296,000. Italian commerce fell off from \$430,117,000 to \$397,177,000, decrease $7\frac{1}{2}$ per cent.; the adverse balance decreased from \$35,530,000 to \$11,698,000; gain, \$23,832,000. Russian commerce advanced from \$639,160,000 to \$703,862,000, increase 10 per cent.; the balance was altered from \$104,374,000 against to \$35,248,000 in favor; gain, \$139,622,000. British trade decreased in volume from \$3,165,665,000 in 1875 to \$2,947,795,000 in 1879, $6\frac{1}{2}$ per cent.; the adverse balance growing from \$428,397,000 to \$573,577,000; loss, \$145,180,000. American trade increased in the five years from \$1,106,402,000 to \$1,157,415,000, $\frac{1}{2}$ per cent.; the favorable balance from \$12,074,000 to \$265,859,000; gain, \$253,785,000.

The following is the statement of the merchandise exports and imports in 1879-'80:

Exports of domestic merchandise.....	\$223,946,353
Exports of foreign merchandise.....	11,692,305
Total.....	\$235,638,658
Imports of merchandise.....	\$667,954,746
Excess of exports over imports of merchandise	\$167,683,912
Aggregate of exports and imports.....	\$1,503,593,404

Compared with the previous year, there was an increase of \$125,199,217 in the value of exports of merchandise, and an increase of \$222,176,971 in the value of imports. The annual average of the excess of such imports over exports for ten years previous to June 30, 1873, was \$104,706,922; but for the last five years there has been an excess of exports over imports of merchandise amounting to \$920,955,-

387, an annual average of \$184,191,077. The specie value of the exports of domestic merchandise increased from \$376,616,473 in 1870 to \$823,946,353 in 1880, an increase of \$447,329,880, or 119 per cent. The imports of merchandise increased from \$435,958,408 in 1870 to \$667,954,746 in 1880, an increase of \$231,996,338, or 53 per cent.

There was an increase in the value of the exports of wheat, wheat-flour, and corn, as compared with similar exports of the preceding year, of \$78,253,837, or 39 per cent.; an increase in the value of the exports of cotton of \$49,231,655, or 30·3 per cent.; an increase in the value of the exports of provisions of \$10,184,592, or 8·7 per cent.; and an increase in the exports of live animals of \$4,394,366, or 38·3 per cent. There has also been a noticeable increase in the value of the exports of tallow, oil-cake, vegetable oils, seeds, clocks and watches, hops, wool, and a few other commodities. The export trade in neat-cattle for the eight months ending August 31st amounted to \$12,462,837, which was nearly double that of the same period in 1879. During the year breadstuffs constituted 35 per cent. of the value of the exports of domestic merchandise; cotton, 27 per cent.; and provisions, 15 per cent.

The imports of merchandise for the year exceeded such imports during any previous year in the history of the country. The leading articles, showing marked increase in quantity or value imported, are coffee, hides and skins, raw silk, and tea, all of which are free of duty, and copper, manufactures of cotton, silk, and wool, fruits, glass, iron and steel, lead, leather, precious stones, leaf-tobacco, wool, and zinc. The imports of unmanufactured wool increased from 39,000,000 pounds in 1879 to over 128,000,000 pounds in 1880. The value of the imports of railroad-bars of iron and steel increased from \$70,071 in 1879 to \$4,952,286 in 1880.

Of the total commerce of the United States 57 per cent. has been conducted on an average for the last ten years through the port of New York. In 1879-'80 the share of New York in the total was 58 per cent.; in 1878-'79 it was 55 per cent. The large imports of 1879-'80 account for the relative increase in the trade of that city. The imports of New York, including coin and bullion, in 1879-'80, were \$543,595,398; the exports, \$388,441,664—there was, therefore, an excess of imports at that port of \$155,153,734, while the total commerce of the whole country shows an excess of exports of \$72,305,190. The following statement exhibits the values of the leading classes of imports, with the aggregate value of all other classes and the bullion imports, entering through New York, the aggregate imports of the other ports of the United States, and the total imports of the United States, with the quantities and values of special articles for the port of New York, in the year ending June 30, 1880:

COMMODITIES.	Port of New York.	All other ports.	Total United States.
Sugar and molasses:			
Sugar, 1,261,455,570 lbs.	\$58,338,344	\$30,488,102	\$88,761,946
Molasses, 12,771,493 gallons.			
Melado, 32,065,036 lbs.			
Coffee, 316,041,921 lbs.	43,512,094	16,848,675	60,360,769
Silk manufactures.	30,758,123	1,430,567	32,188,690
Woolen manufactures.	28,138,775	5,475,119	33,613,897
Cotton manufactures.	26,592,501	3,436,365	29,929,866
Flax manufactures.	18,776,280	8,705,177	22,481,407
Iron and steel manufactures:			
Pig-iron, 832,770,324 lbs.	23,088,149	19,673,794	42,766,943
Scrap-iron, 232,141 tons.			
Steel ingots, bars, sheets, and wire.			
Railroad bars of iron, 153,045,314 lbs.			
Railroad bars of steel, 100,002,651 lbs.			
Bar-iron, 83,141,386 lbs.			
Hides and skins, other than furs.	20,430,171	9,572,083	30,002,254
Tin—in bars, blocks, or pigs, 259,004 cwt.	\$5,701,804	7,318,415	23,446,442
“ in plates, 2,027,310 cwt.	10,426,223		
Tea, 51,941,410 lbs.	13,715,368	6,067,263	19,782,631
Wool and leather manufactures.	10,093,891	2,169,142	12,263,033
India-rubber and gutta-percha, crude, 13,931,964 lbs.	9,313,866	144,05,784	23,727,650
Tobacco and manufactures:	8,034,438	1,571,751	9,606,239
Leaf, 8,790,649 lbs.	6,564,760	751,183	7,315,993
Cigars, 599,349 lbs.			
Precious stones.	6,294,492	403,996	6,693,483
Wines, spirits, and cordials.	5,742,203	1,994,324	7,736,532
Fancy goods.	5,345,124	638,039	5,983,163
Rags of cotton or linen, 140,649,028 lbs.	4,248,111	1,226,626	5,474,737
Furs and dressed fur skins.	3,640,325	287,510	3,927,835
Total value of leading articles of merchandise.	\$398,541,950	\$127,407,970	\$465,949,920
Total value of all other articles of merchandise.	121,395,203	80,609,623	202,004,826
Total value of coin and bullion.	83,655,245	9,370,965	93,034,310
Total value of foreign imports, 1879-'80.	\$543,595,393	\$217,398,653	\$760,989,056

The corresponding statement of the amounts of the leading classes of merchandise exports, with the aggregate amount of the minor classes, and the exports of precious metals, for the port of New York, for all the other ports of the

United States together, and the sum showing the total exports of the United States in each class, with the details of the exportation of the great staples from the port of New York, is as follows:

COMMODITIES.	Port of New York.	All other ports.	Total United States.
Breadstuffs:			
Wheat, 67,307,343 bushels.	\$134,671,446	\$153,365,389	\$288,036,835
Wheat-flour, 3,628,291 bbls.			
Indian corn, 39,489,387 bushels.			
Rye, 2,624,941 bushels.			
All other breadstuffs.			
Cotton, 308,515,321 lbs.	36,218,941	175,321,964	211,535,905
Provisions:			
Bacon and hams, 513,404,956 lbs.	69,228,380	32,671,984	121,900,814
Lard, 265,736,447 lbs.			
Cheese, 119,760,142 lbs.			
Preserved meats.			
Beef, fresh, 60,659,725 lbs.			
Beef, salted or cured, 33,177,673 lbs.			
Butter, 31,061,610 lbs.			
Pork, 52,442,156 lbs.			
Oils, mineral:			
Illuminating, 266,841,227 gallons.			
Crude, 24,034,260 gallons.	26,133,094	8,764,917	34,908,011
Naphtha, 15,257,520 gallons.			
Tobacco, leaf, 121,768,712 lbs.			
Cotton manufactures.	8,893,270	7,480,837	16,379,107
Horned cattle, No. 65,151.	7,442,398	2,539,020	9,981,418
Furs and fur skins.	6,047,914	7,296,251	13,344,195
Tallow, 14,393,340 lbs.	4,971,047	433,371	5,404,418
Leather—sole, upper, and all other, 13,907,621 lbs.	4,957,129	2,732,112	7,689,232
Oil-cake, 231,962,161 lbs.	4,306,150	779,983	5,086,133
Sugar, refined, 23,913,432 lbs.	3,798,505	2,461,022	6,259,527
	2,157,504	560,059	2,717,563
Total value of leading articles of merchandise.	\$328,831,519	\$394,406,924	\$723,238,443
Total value of all other articles of merchandise.	56,675,083	44,032,827	100,707,910
Total value of domestic coin and bullion.	2,935,062	6,412,831	9,347,893
Total value of domestic exports, 1879-'80.	\$388,441,664	\$444,852,582	\$833,294,246

A review of the prices of exports for the years 1879-'80 shows an advance, compared with the previous year, of 8½ per cent., al-

though still 6 per cent. below the gold prices of the same articles in 1870. The total exports of domestic merchandise and specie during the

twelve months ending November 30, 1880, amounted to \$866,865,844, the reexports to \$21,006,243; making the total exports \$887,872,087. The imports of foreign merchandise and specie were \$784,577,033. The total exports of domestic merchandise and specie, during the same months in 1879, were \$759,235,839; the reexports, \$17,622,520; total, \$776,858,359; and the total imports for the same period were \$572,364,296.

The Chief of the Bureau of Statistics, in his statement of the imports and exports of the United States for the month of December, 1880, reports that the excess of exports of merchandise stated in specie values was as follows: Month ending December 31, 1880, \$51,483,844; month ending December 31, 1879, \$21,277,042; twelve months ending December 31, 1880, \$192,846,407; twelve months ending December 31, 1879, \$251,557,929. The excess of imports of gold and silver coin and bullion was as follows: Month ending December 31, 1880, \$15,764,154; month ending December

31, 1879, \$5,877,322; twelve months ending December 31, 1880, \$69,229,822; twelve months ending December 31, 1879, \$67,371,960. The excess of the value of exports over imports of merchandise during the first six months of 1880-'81 amounted to the sum of \$161,682,913.

Both in quantity and in value the merchandise exported from the United States exceeded those of any previous year; and the importations were still more in excess of the transactions of any other year. The next largest export trade was that of 1879, which was less than that of 1880 by \$116,973,671. The highest previous total of imports in any one year was in the year 1873, when the imports for the fiscal year are reported as \$642,136,210, the next highest having been those of 1879.

The merchandise transactions for the month of November and the twelve months ending November 30, 1880, compared with the same periods in the preceding year, are presented in the table below:

MERCHANDISE.		November, 1880.	November, 1879.	Twelve months ending November 30, 1880.	Twelve months ending November 30, 1879.
Exports	Domestic.....	\$81,646,874	\$78,347,341	\$858,257,790	\$741,284,119
	Foreign.....	1,354,381	956,224	13,408,556	10,417,055
Total.....		\$83,001,255	\$79,304,065	\$871,666,346	\$751,761,204
Imports.....		47,106,915	50,467,271	709,028,302	485,516,166
Excess of exports over imports.....		\$35,894,340	\$28,836,794	\$162,638,044	\$266,245,088

The bullion movement for the same periods was as follows:

GOLD AND SILVER.		November, 1880.	November, 1879.	Twelve months ending November 30, 1880.	Twelve months ending November 30, 1879.
Exports	Domestic.....	\$744,198	\$483,226	\$8,688,054	\$17,951,720
	Foreign.....	452,710	624,060	7,597,687	7,145,485
Total.....		\$1,226,908	\$1,107,286	\$16,205,741	\$25,097,155
Imports.....		10,601,773	18,395,850	75,548,731	86,548,130
Excess of imports over exports.....		\$9,374,865	\$17,288,564	\$59,342,990	\$61,750,975

The records of the Register of the Treasury show that the total tonnage of vessels of the United States at the close of the fiscal year ending June 30, 1880, was 4,068,034 tons. Of this amount 1,352,810 tons were comprised in 2,378 vessels registered for the foreign trade, and 2,715,224 tons in 22,334 vessels enrolled and licensed for the coasting trade and fisheries. There has been a decrease of 138,723 tons in vessels employed in the foreign trade, and a decrease of 37,157 tons in such as were engaged in the domestic trade.

The vessels built during the year 1879-'80, with their tonnage, are exhibited in the following table:

VESSELS BUILT.	Number.	Tonnage.
Sailing-vessels.....	460	59,057
Steam-vessels.....	348	75,854
Canal-boats enrolled.....	17	1,857
Barges.....	77	17,612
Total.....	902	157,410

The decrease in the tonnage built during the fiscal year, as compared with that of the preceding year, was 35,620 tons.

The total tonnage of vessels entered at the seaboard ports from foreign countries was 13,768,137 tons during the year ending June 30, 1879, and 15,240,534 tons during the fiscal year 1880, showing an increase of 1,472,397 tons, or about 10½ per cent. The American tonnage entered exhibited an increase of only 78,631 tons, or 2½ per cent., while the foreign showed an increase of 1,393,766 tons, or about 13 per cent. The tonnage in these cases is computed on the basis of the number of entries of vessels, and not on the number of vessels, and is restricted to the seaboard ports. Of the merchandise brought in at seaboard, lake, and river ports during the fiscal year, an amount of the value of \$149,317,368 was imported in American vessels and \$503,494,913 in foreign. Of the exports of merchandise, an amount of the value of \$109,028,860 was shipped in American and \$720,770,521 in foreign vessels. Of

the combined imports and exports of merchandise, 17 per cent. only of the total value was conveyed in American vessels.

In 1856 over 75 per cent. of the total value of the imports and exports was carried in American vessels, while in 1880 but 17 per cent. was carried in such vessels, though the total volume of commerce has risen from a value of \$724,000,000 to over \$1,500,000,000.

The annual report of the Secretary of the Treasury contains the following allusions to the decline of the American shipping trade, and the plans proposed for its remedy :

The adoption by the United States of the new code of sailing regulations now used by most maritime nations is urged by the Secretary.

The disproportion between the commodities carried in American and those carried in foreign vessels still continues, and is even greater than during the fiscal year 1879, the amount of merchandise transported in our vessels during the fiscal year 1880, estimated on the basis of value, being five per cent. less than that transported during the former year.

The foreign carrying trade in American bottoms is more than 50 per cent. less than it has been, or than it might be, and if it is desirable to save to the country the annual freightage on merchandise of the value of \$1,200,000,000, the only course to reach that result would seem to be to increase our registered shipping. But while the ordinary demand for increased tonnage causes no annual increase in the building of vessels, the only method available, as a measure of public policy, of effecting such an increase, is either to allow American citizens the privilege of purchasing vessels of foreign build, to give a bounty on home-built vessels, or to await the increase of American-built vessels and their tardy substitution in the foreign trade for those of other nationalities. Doubtless the number of vessels of home-build will be adequate in time to take up the freightage lost to American bottoms in consequence of the war of the rebellion. At present, however, the demand for vessels to carry on our immense import and export trade does not seem to so stimulate the ship-building industry as to prevent an annual decrease in the number of ships built. The present facilities for freighting in foreign vessels appear to be a greater discouragement to that industry than would be the privilege of purchasing such vessels.

A buoyant tone prevailed in the markets, and a general advance in values took place in the beginning of the year. But in May and

June the speculative movement met a sudden check, the confident spirit disappeared, and prices again fell. Iron was the first article to decline; and the principal cause of the momentary arrest of the advancing tide of prosperity was probably the sudden cessation of an over-stimulated demand for this great staple, which is usually looked upon as a commercial thermometer, which marks the rise and fall of general prosperity. The fall in iron was extraordinary; the price declined from \$41 a ton in February to \$23 in June. A combination of speculators, controlling money and credit to a vast amount, had made an effort to create an artificial scarcity in wheat, by buying up the available supplies, intending to compel merchants and speculators, in order to fulfill their contracts, to buy of them the immense stock which they had accumulated at arbitrary prices. While these operators were buying freely in the market to obtain a monopoly, the price of wheat advanced to \$1.59 a bushel in Chicago; but it was beyond the power of this combination of a few individuals to hem or control the leading staple of the United States, and the great pool collapsed, the price dropping suddenly to \$1.03 a bushel in September. The price of cotton declined from 13½ cents a pound in March to 10¼ cents in November. The effect upon the stock market was still more marked. The fall in prices was so great that a general financial panic was apprehended. After June, the tone improved gradually and prices slowly recovered; but the pending national election prevented any great commercial activity. After the State elections in Ohio and Indiana on October 12th, which were generally accepted as indicating the result of the Presidential election, a remarkable upward movement took place on the stock exchange, and a business of enormous volume, with generally improving prices, was done in all the markets. A comprehensive survey of the commercial year, and a comparison of the most salient data of the commerce of 1880 with the corresponding data for 1879, are presented in the appended table :

VARIABLES.	1880.	1879.
Coin and currency in United States, November 1st.....	\$1,802,793,480	\$1,165,553,508

Number of immigrants †.....	457,257	177,826

Concurrently with the extension of the railroad network of the United States, the concentration of the control of the railroads into fewer and fewer hands is going on continually.

The year 1880 has been a notable one in regard to the formation of gigantic combinations and the consolidation and merging of companies, many of which had been but struggling concerns, into enormously wealthy and powerful corporations. The evils and danger of this

* Twelve months ending November 30th.

† Year ending June 30th.

movement, which has already proceeded so far that fifteen companies have in their direct possession or under their indirect control fully one half of the total length of railway in the United States, have been described oftener than has the advantage—that, owing to the unification and better systematization of the business, and to mechanical and technical improvements which the employment of ready capital has facilitated upon roads that had been crippled for lack of means, the cost of transportation has been reduced on an average 40 per cent. The extension of railroads during the year was unprecedented. About 7,150 miles were built, against 4,721 in 1879. The corporations which added most largely to their mileage were the Chicago and Northwestern, which operated at the end of the year 2,624 miles; the Chicago, Milwaukee and St. Paul, with 3,627 miles; the Northern Pacific, which had extended its length to 991 miles; the Union Pacific, with a total length of 3,126 miles; the Wabash, St. Louis and Pacific, operating 2,487 miles; the Missouri Pacific, with 731 miles of road; the Chicago, Burlington and Quincy, with about 2,800 miles of rail; the Atchison, Topeka and Santa Fé, with 1,501 miles; the St. Louis and San Francisco, with 596 miles; the Texas and Pacific, with 550 miles; and the Central and Southern Pacific, with 2,586 miles of road. These eleven companies control together nearly 22,000 miles of railroad, the total mileage of the country being 93,637 miles, as estimated by the "Railroad Gazette." The extraordinary changes which were brought about in the character of the corporations, by the extension of the lines, the buying up of other roads, and coalition of separate companies under one charter, the issue of scrip dividends, etc., are such that no fair comparison is presented by ranging together the quoted values of the stocks for 1880 and former years. The gross earnings of forty-three railroads for the twelve months of the calendar year amounted to \$193,036,245, against \$152,056,126 in 1879, an increase of about 26 per cent. The roads taken operate about 32,500 miles of rails, or about one third of the total mileage of the United States. The operations in railroad stocks and bonds in the year 1880 far exceeded those of any previous year. The reported sales of railroad stock on the New York Stock Exchange amounted for the year to 100,000,000 shares, the number sold in 1879 having been about 75,000,000. The sales of railroad bonds footed up \$570,000,000, against \$413,000,000 the previous year. Many new stocks and bonds were admitted to the list. The extraordinary depression in stocks which occurred in May and June carried down the price of nearly every stock on the list 20 or 30 per cent. In the late summer and autumn a remarkable buoyancy and rise of values set in.

The most noteworthy financial events of the year in the stock market were the transfer of New York Central stock to the syndicate, by

Vanderbilt; a sale of \$10,000,000 Central Pacific stock, by Huntington and associates, to another syndicate; the acquisition by Jay Gould of the Missouri, Kansas and Texas, the St. Louis and Iron Mountain, and other roads, until he controlled every important through line west of the Mississippi and south of the latitude of St. Louis, except the Atchison, Topeka and Santa Fé and the Atlantic and Pacific; the suspension of the Philadelphia and Reading Railroad and Coal Company, which took place in May; the contest for the control of the Western roads between the Chicago, Burlington and Quincy company and Gould's Wabash, St. Louis and Pacific combination, which commenced in August and was settled in October; the fall in Western Union Telegraph stock on the publication of an alleged decrease in earnings in December. The Louisville and Nashville and the Chicago and Rock Island railroad companies each declared a scrip dividend of 100 per cent., the total amount of stock dividends distributed by these and other railroad corporations during the year summing up nearly \$40,000,000. Three vast combinations were formed to force up the prices of staple commodities, which produced mischievous effects both in the money and in the goods markets. These were: the attempted corner in wheat, in Chicago, by Keene and associates, which broke down with great loss to the manipulators; the coffee syndicate, which ended in the disastrous failures of B. G. Arnold & Co. and Bowie, Dash & Co., of New York, in December; and the corner in pork, managed by Armour & Co., of Chicago, the same operators who had attempted to obtain a monopoly of the same article the year before, but had been obliged to close out their transactions with a heavy deficit. This year the scheme was conducted, with larger means at command, to a successful issue. The combination obtained the complete command of the market, and controlled the supply for months, winding up the operation in the fall with very large gains.

The money market in the first months of the year, and at its close, presented the natural phenomenon, in such times of activity, of an abundant general supply with high rates prevailing, and occasionally great stringency. From January to May the rates for call loans were usually four to six per cent.; prime commercial paper was discounted at five and six per cent.; and in March and April one sixteenth of one per cent. per diem was the common price for advances to meet engagements in Wall Street. The fall in the values of many commodities, and the sudden decline in stocks and severe depression in the stock market, which was followed by a period of lassitude, continuing long after the upward turn in prices had again set in, left the money market very slack. The ordinary rates for call loans until the October elections were two and three per cent., while prime notes were in good demand at close rates, four to five per cent. being the prevailing rates up to

August, afterward five to six per cent. until the middle of November. The unexampled financial activity of the late fall and winter drove the rates up to five and six per cent. again on call loans, while the discount rates on prime business paper advanced to six and six and one half per cent. In December the minimum price of money in New York was frequently as high as six per cent. on Government-bond collaterals, and one sixteenth per cent. per day was charged for carrying margins. In the beginning of the month the market was so tight that operators paid three eighths of one per cent. per diem commission. Foreign exchange was in favor of Europe, and the demand for sterling bills was strong and steady for the first half of the year on account of the large imports of merchandise that took the place of the large amounts of American securities which were brought back from Europe in 1879, and had the same effect of keeping up the demand for bills of exchange. In the latter half of the year the course of exchange was in the opposite direction, as the large importations were arrested by the decline in the prices of merchandise; so that an influx of specie took place, which continued until the close of the year, \$69,000,000 being imported between the dates of August 1st and December 31st.

The number of mercantile failures in the calendar year 1880 is given in Dun's report as 4,735, the aggregate liabilities \$65,752,000, a still more favorable exhibit than that for 1879. The following comparative statement gives the annual number of failures and aggregate liabilities for the period of fifteen years past:

YEAR.	Failures.	Amount of liabilities.
1866.....	1,505	\$53,783,000
1867.....	2,750	96,666,000
1868.....	2,608	68,694,000
1869.....	2,739	75,054,054
1870.....	3,546	88,242,000
1871.....	2,915	85,252,000
1872.....	4,069	121,056,000
1873.....	5,183	228,499,900
1874.....	5,830	155,289,000
1875.....	7,740	201,000,000
1876.....	9,092	191,117,000
1877.....	8,872	190,669,936
1878.....	10,478	284,888,132
1879.....	6,658	98,149,053
1880.....	4,735	65,752,000

The distribution of the failures in the different sections of the United States, and those of the Dominion of Canada, for 1880, with the average liabilities and the proportion of the failures to the total number of mercantile houses in the different geographical divisions, are given below:

STATES.	No. in business.	No. of failures.	Percentage of failures.	Am't of liabilities.	Av'ge liabilities.
Eastern States.....	85,774	723	1 in every 118	\$6,460,117	\$8,535
Middle States.....	237,062	1,472	1 in every 161	33,953,292	23,066
Southern States.....	109,821	835	1 in every 131	8,813,442	10,555
Western States.....	275,672	1,171	1 in every 235	11,519,419	9,837
Pacific States and Territories.....	38,494	534	1 in every 72	6,005,730	9,374
Total for United States.....	746,823	4,735	1 in every 158	\$65,752,000	\$13,886
Dominion of Canada.....	57,100	907	1 in every 63	\$7,988,077	\$8,807

The following tabulated survey of prices shows the rates obtaining in the stock and exchange markets for the leading lines dealt in, the quotations of Government bonds, and the

rates for money and exchange, ruling on or about the 31st of December, in 1880 and the preceding two years, together with the prices of the staple articles of merchandise:

Pork, mess..... per barrel	14 00	12 75 to 13 00	7 10 to 7 20

The estimated cereal production of 1880 and the estimated yield per acre, compared with the crop of 1879, are as follows:

CROP.	Aggregate yield, 1880.	Yield per acre.	Aggregate yield, 1879.	Yield per acre.
Wheat.....	480,849,723	18·3	448,756,113	18·7
Corn.....	1,537,535,900	29·2	1,547,901,790	29·2
Oats.....	355,553,684	27·8	364,238,180	28·7
Buckwheat....	13,695,000	22·8	13,140,000	20·5

The United States wheat-crop in 1878 aggregated 420,122,400 bushels. Of the estimated wheat-crop of 1880, the Agricultural Department estimates that 275,000,000 bushels will be required for the home consumption of food and seed, leaving an exportable surplus of 205,000,000 bushels. The following statement of the exportable surplus of the various wheat-growing regions of the globe producing wheat in excess of the domestic requirements, and the deficiency to be supplied from abroad in the importing countries, was calculated upon information received in Mark Lane, and gives the estimated surplus crops or consumptive demand for foreign wheat in each country in millions of bushels: Exporting countries—United States, 188; Canada, 8; Australia, 12; Austro-Hungary and Southeast Europe, 24; Chili, 4; British India, 8; Egypt, 4; Algeria, 2; Russia, 16; total exporting countries, 266 million bushels. Importing countries—United Kingdom, 120; France, 14·66; Germany, 16; Holland and Belgium, 16; Switzerland, 6;

Spain and Portugal, 4; Central and South America, 12; West Indies, 4; Cape Colony, 4; total quantity required by importing countries, 196·66 million bushels, leaving a surplus to remain in the exporting countries beyond their needs, or to be exported to replenish stocks or form a surplus supply, of 69·34 million bushels.

The imports of wheat and flour from the United States into Great Britain for the crop year ending July 31, 1880, amounted, according to the British Board of Trade returns, to 38,138,729 cwt. of wheat and 7,026,966 of flour, equivalent together to 89,259,969 bushels of wheat; in addition to which about 7,500,000 bushels of American wheat were imported through Canada, the aggregate constituting about seventy per cent. of the total importation into the United Kingdom for the year.

The exports of wheat from the United States for the last four fiscal years, flour included and reduced to its equivalent in wheat, were reported as follows: 74,750,682 bushels in 1875-'76; 57,043,935 bushels in 1876-'77; 92,138,286 bushels in 1877-'78; 147,687,649 bushels in 1878-'79; 180,304,168 bushels in 1879-'80.

The receipts and exports of grain of the five principal Atlantic ports, including Montreal, for the whole calendar year 1879, and eleven months of the year 1880, flour and meal being reduced to their equivalent in grain, with the percentage of each port in the total receipts and exports for the two years, are shown in the annexed statement:

PORT.	1879.				1880 (eleven months).			
	Receipts.	Per cent.	Exports.	Per cent.	Receipts.	Per cent.	Exports.	Per cent.
New York.....	\$168,124,890	49·1	\$123,513,859	49·6	\$161,127,886	51·1	\$122,618,312	50·5
Boston.....	32,798,829	9·9	15,891,088	6·3	31,762,548	10	18,761,267	7·7

Total.....	\$332,438,709	100	\$249,409,568	100	\$315,565,112	100	\$242,761,590	100

Of the New York receipts, from January 1 to November 30, 1880, 69,440,901 bushels were brought by rail, 3,982,751 by river and coastwise, and 87,704,237 by canal. Of the Montreal receipts, about 4,500,000 bushels came by rail. The exports of the Pacific coast for the latter half of 1880 were about 13,000,000 bushels.

The receipts and exports of grain of all kinds in bushels, and flour and meal reduced to bushels of grain, from the port of New York for each of the last four years, ending December 31, are given in the next column.

The exports of provisions from the United States for the eleven months ending Novem-

ber 30, 1880, aggregated in value \$128,110,921, against \$99,190,038 for eleven months in 1879. During this period the shipments of fresh beef were 88,325,197 lbs., against 57,797,230 lbs. in 1879; of salted beef, 41,104,012 lbs., against 35,840,768 lbs. in 1879; of bacon and hams, 715,848,524 lbs., against 674,138,580 lbs.; of butter, 35,796,542 lbs., against 40,824,749 lbs.; of cheese, 127,545,379 lbs., against 125,693,974 lbs.; of lard, 373,021,149 lbs., against 312,208,448 lbs.; of pork, 84,260,514 lbs., against 83,356,090 lbs.; of tallow, 110,200,794 lbs., against 92,128,447 lbs. The exports of pork, lard, and hams and bacon for the twelve months of the packing season ending October 31, in 1879 and 1880, and their destinations, are presented in the statement below given:

EXPORTED TO—	LARD.		BACON AND HAMS.		PORK.	
	1878-'79.	1879-'80.	1878-'79.	1879-'80.	1878-'79.	1879-'80.

The summary of the exports of pork products for the two years, with the increase or decrease in 1870-'80, is as follows:

EXPORTS.	Year ending October 31, 1879.	Year ending October 31, 1880.	Increase or decrease.
Salt pork.....lbs.	74,525,000	69,298,600	5,226,400 decrease.
Hams and bacon.....lbs.	759,348,658	776,849,919	17,501,261 increase.
Lard.....lbs.	329,342,969	385,985,558	56,642,589 "
Total.....lbs.	1,163,216,627	1,232,084,077	68,867,450 increase.

The exports of petroleum from the seven principal shipping ports from January 1 to December 11, 1880, and for the correspond-

ing portions of the three preceding years, were as follows: In 1880, 331,626,483 gallons; in 1879, 393,616,075 gallons; in 1878, 321,766,-

627 gallons; in 1877, 344,872,422 gallons. The value of the shipments for ten months of 1880 was \$28,829,945, against \$30,087,807, a falling off of six per cent., the falling off in quantities being over thirteen per cent.

The total cotton-crop of the United States for the year ending September 1, 1880, was 5,757,397 bales of 481.55 pounds each. The exports for the year, with the figures of the preceding crop for comparison, are presented in the following table:

EXPORTS TO—	1879-'80.	1878-'79.
	Bales.	Bales.
Great Britain.....	2,554,569	2,058,514
Channel.....	85,657	49,313
France.....	899,324	419,005
Other countries.....	876,041	940,733
Total exports.....	3,865,621	3,467,565

The stock on hand at the seaports on September 1, 1880, was 137,419 bales, against 59,110 bales at the close of the preceding crop year.

The takings in bales of American factories, found by deducting the exports, the stocks remaining in port and at the mills, the burned cotton, and the consumption of the mills estimated on the outturn of goods, are given in the subjoined statement, covering the last six years ending September 1st:

CROP YEAR.	Northern mills.	Southern mills.	Total takings.	Estimated consumption.
1890.....	1,624,805	179,000	1,803,805	1,760,000
1879.....	1,416,960	152,000	1,568,960	1,625,000
1878.....	1,398,298	148,000	1,546,298	1,580,000
1877.....	1,288,418	147,000	1,435,418	1,485,000
1876.....	1,211,598	145,000	1,356,598	1,310,000
1875.....	1,062,522	145,079	1,207,601	1,225,000

The relative position of the several cotton-raising States in the production of cotton is indicated in the following table, giving in round numbers the crop of each:

STATES.	Bales.
North Carolina.....	200,000
South Carolina.....	400,000
Georgia.....	710,000
Florida.....	162,000
Alabama.....	650,000
Mississipp.....	720,000
Louisiana.....	695,000
Texas.....	900,000
Arkansas.....	770,000
Tennessee.....	400,000
All others.....	150,000
Total.....	5,757,000

The average weight of the bales has increased from 468 pounds in 1875 to 481.55 pounds in 1880. The following statement exhibits the number of bales and the aggregate gross weight of each crop since 1873:

SEASON.	Bales.	Pounds.
1879-'80.....	5,757,397	2,772,448,480
1878-'79.....	5,073,591	2,400,205,525
1877-'78.....	4,811,265	2,309,908,907
1876-'77.....	4,455,423	2,100,465,086
1875-'76.....	4,669,288	2,201,410,024
1874-'75.....	3,882,991	1,786,934,765
1873-'74.....	4,170,388	1,956,742,297

For the crops of previous years, as far back

as 1830, see COTTON in "Annual Cyclopædia" for 1877.

Between September 1 and December 31, 1880, the receipts at the seaports were 3,454,099 bales, against 3,120,871 bales in the same four months of 1879; the overland shipments were 331,468 bales, against 342,192 bales in 1879; making the total quantity marketed during these months in 1880, 3,823,567; in 1879, 3,491,063 bales. The quantity taken by Northern spinners was 920,840 bales, against 921,000 bales taken during this part of 1879; the takings of Southern mills are estimated to have been 38,000, against 28,000 bales in 1879 for the four months. The visible stocks in the interior amounted to 4,117,567 bales on December 31, 1880, against 348,000 bales at the end of 1879; making the total quantity in sight at the close of the calendar year 4,117,567 bales, against 3,839,063 bales at the beginning of the year. The average weight of the bales was 485.53 pounds. The estimated extent of the new crop, according to the report of the Agricultural Bureau, is about 5,719,000 bales, and, according to the returns of the cotton exchanges, 5,300,000 bales. The indications gathered by the Bureau predict an increase of 30 per cent. in the crop of Texas; an increased product in South Carolina, Georgia, North Carolina, and Florida; and a falling off in the crops of the other States of from 7 per cent. in Arkansas to 17 per cent. in Mississippi.

The overland shipments of cotton have increased from 497,083 bales in 1873-'74 to 1,181,147 bales in 1879-'80, or 137.61 per cent., while the increase in the quantity raised has only been 38.05 per cent. The recently effected consolidation of railroad lines, and the improvements in rails, road-beds, etc., which have been introduced within a few years, have rendered rail transportation much cheaper than formerly, and promise to lessen the cost still more in the future, and cause greater quantities of cotton to be shipped by rail.

The year has been a busy one for cotton-manufacturers. The first impulse to the revival of the cotton industry in Manchester was given by the signs of returning prosperity in the United States in the last half of 1879 and the beginning of 1880. The sudden demand for English cottons soon ceased in the United States, but was replaced by the reviving markets of other countries. The considerable exportation of cotton cloths from the United States which took place in 1878-'79 was much reduced in value and quantities in 1879-'80, owing to the better prices and active request prevailing at home. In Europe, according to Ellison's statistics, the consumption of cotton during the first three months of the season, beginning October 1, 1880, was 871,000 bales of 400 lbs. in Great Britain, and 689,000 on the Continent. The quantities and value of the leading cotton manufactures exported from the United States for the years 1880, 1879, 1878, and 1874, are given in the following table:

EXPORTS.	YEAR ENDING JUNE 30.			
	1880.	1879.	1878.	1874.
Colored goods.....yards	37,758,166	45,116,058	37,765,318	4,600,447
value	\$2,956,760	\$3,209,285	\$2,959,910	\$660,262
Uncolored goods.....yards	68,821,567	84,081,319	88,928,192	13,227,510
value	\$5,834,541	\$6,288,181	\$7,053,463	\$1,686,297
Other manufactures of.....value	\$1,190,117	\$1,356,534	\$1,422,257	\$744,773
Total cotton manufactures exported....value	\$9,951,418	\$10,853,950	\$11,435,660	\$3,091,832

The price of printing-cloths commenced at $4\frac{3}{8}$ cents per yard in the beginning of September, 1879; declined to $3\frac{1}{2}$ cents at the end of the month; ruled the same the first week of October; rose by gradual stages to $4\frac{1}{4}$ cents at the end of October, and $4\frac{1}{8}$ cents at the end of November; remained at $4\frac{1}{4}$ cents during the greater part of December and January, advancing to $5\frac{1}{2}$ cents in the middle of February, and to $5\frac{1}{4}$ cents in the middle of March, which was the highest point touched during the year. After this the price steadily declined till the middle of August, standing at $5\frac{1}{8}$ cents at the beginning of April, at 5 cents at the end of that

month, at $4\frac{1}{2}$ cents in the middle of May, and then descending by eighths and sixteenths to 4 cents in the middle of June, which price ruled firm until the beginning of August. In the middle of August the declension was arrested at $3\frac{3}{4}$ cents, the lowest rate since the 13th of October, 1879. The price was then raised to 4 cents, and then fell off again an eighth, standing at $3\frac{7}{8}$ at the close of August, 1880. The relative prices of materials and goods are presented in the following tabulated review of the selling rates for ordinary milling cotton, and for sheetings and printing-cloths, on the first day of every month of the last three crop years:

FIRST DAY OF EACH MONTH.	1879-'80.			1878-'79.			1877-'78.		
	Low middling upland cotton.	Standard sheetings.	Printing-cloths.	Low middling upland cotton.	Standard sheetings.	Printing-cloths.	Low middling upland cotton.	Standard sheetings.	Printing-cloths.

July.....	$11\frac{1}{2}$	8 $\frac{1}{2}$	4	$12\frac{1}{2}$	8 $\frac{1}{2}$	$4\frac{1}{2}$	$11\frac{1}{2}$	7 $\frac{1}{2}$	$3\frac{1}{2}$
August.....	$10\frac{1}{2}$	8 $\frac{1}{2}$	4	$11\frac{1}{2}$	8 $\frac{1}{2}$	$4\frac{1}{2}$	$11\frac{1}{2}$	7 $\frac{1}{2}$	$3\frac{1}{2}$

At the close of the calendar year, low middling upland cotton was quoted at $11\frac{1}{2}$ cents in the New York Cotton Exchange, printing-cloths were selling for $4\frac{3}{8}$ cents, and standard sheetings for $8\frac{1}{2}$ cents.

The prevailing rates during the cotton year 1879-'80 were exceedingly favorable for the millers. The cost of manufacturing standard sheetings per pound is approximately, when the price of raw cotton is $12\frac{1}{4}$ cents a pound, 21 cents, counting the waste 2-2 cents, and the expense of manufacture and marketing 6-3 cents; making the cost per yard 7-37, reckoning 2-85 yards to the pound of piece goods: the approximate profit of the manufacturer at the rates which have prevailed is therefore $4\frac{1}{2}$ cents per pound or $1\frac{1}{2}$ cents per yard. On printing-cloths the profit is 1 cent per yard and 7 cents per pound, when the cotton costs 12 cents per pound, and the goods are sold at 4-84 cents, the average rates for the year, counting the waste in manufacture 2-12 cents per yard, and the cost of making and selling 12-76 cents. The prices in the home market being thus favorable, the export trade has languished, while the mills have been pushed to the extent of their capacity, and manufacturing facilities

augmented. Over half a million spindles have been added during the year in the Northern mills, the total number in the United States aggregating nearly 11,000,000, as determined by the census enumeration, which makes the total about 500,000 less than the computations published periodically by the New York "Commercial and Financial Chronicle." The export trade, though likely for some time to fluctuate with the home demand, and to fall off when the domestic market is higher than the export price at which the Orientals will buy, is governed to a large extent by the price of raw cotton, the price of the material being a relatively greater factor in the cost of cotton goods, of which 2-85 yards go to the pound, than in those manufactured in Manchester for the China trade, of which a pound of cotton will make six yards. In December the goods market was somewhat weakened by a decline in cotton, but began to rally at the close of the month.

The following report, made to the Census Bureau, exhibits the manufacturing facilities, the consumption of cotton, and persons employed in the manufacture of cotton goods proper in each manufacturing State, and the aggregates for the whole United States:

STATES.	Looms.	Spindles.	Bales cotton used.	Persons employed.

The above does not include the hosiery-mills, nor any of the mills known as woolen-mills where large quantities of cotton are worked up in woolen mixtures, or in imitations of woolen hosiery and underwear. The consumption of these mills can not fall far short of 200,000 bales.

New England still remains the great center of the cotton industry, manufacturing more than five sevenths of the cotton consumed in the United States. The capacity of the New England mills has increased since 1870 from 114,900 looms and 6,498,000 spindles, to 185,700 looms and 8,806,000 spindles, while the consumption of cotton has risen from 275,639,000 to 503,312,000 lbs.; of the latter amount 260,365,000 lbs. were used in Massachusetts. The most suggestive result shown by the census statistics is the growth of the cotton industry in the South. In 1870 the Southern mills had 11,000 looms and 417,000 spindles. They now have more than 15,000 looms and 714,000 spindles. This is a large increase of mill capacity, but the progress made is more forcibly shown by a comparison of the consumption of cotton. In 1870 this amounted to 45,000,000 lbs., and in 1880 it had increased to nearly 102,000,000 lbs. The population of the cotton-growing States has increased during the ten years from about 8½ to nearly 11½ millions, about 39 per cent.; that of the New England States from nearly 3½ to 4 millions, not quite 15 per cent.; that of the whole United States, 30 per cent.

CONGREGATIONALISTS. I. UNITED STATES.—The following is a summary of the statistics of the Congregational Churches of the United States, as given in the "Congregational Year Book" for 1880:

During the year the denomination has collected contributions for benevolent purposes amounting to \$1,098,691, and for home expenditures, \$2,594,228.

The receipts of the *American Home Missionary Society* for the year were \$266,720, and the expenditures were \$259,709. The Society had employed 1,015 missionaries, who had supplied 2,308 congregations and missionary stations and established 86 churches, and who returned about 6,000 additions to the Church.

The seventy-first annual meeting of the *American Board of Commissioners for Foreign Missions* was held at Lowell, Massachusetts, October 6th. About 1,500 delegates were present. The Rev. Mark Hopkins, D. D., presided. The total receipts for the year had been \$430,752, and the expenditures had been \$495,074. Of the receipts, \$103,657 had been contributed through the agency of the three woman's boards, and \$2,800 had come in the form of special contributions for the new mission in Bihé, Central Africa. The statistics of the mission showed that an increase had taken place in every item except in that of the number of missionaries. A hundred preaching-places had been added, eleven churches organized, 2,500 members added, and 500 additional scholars enrolled in the higher institutions of learning, and 1,000 pupils in the common schools. About \$50,000 had been contributed by members of the churches of the missions.

The following is the general summary of the statistics of the missions for the year:

Number of missions.....	17
Number of stations.....	75
Number of out-stations.....	689
Number of ordained missionaries (seven being physicians).....	156
Number of physicians not ordained.....	6
Number of other male assistants.....	8
Number of female assistants.....	246
Whole number of laborers sent from the United States.....	416
Number of native pastors.....	142
Number of native preachers and catechists.....	425
Number of native school-teachers.....	523
Number of other native helpers.....	174
	1,260
Whole number of laborers connected with the mission.....	1,685
Pages printed, as far as reported (Turkish, Japan, North China, and Zooloo missions only).....	20,606,473
Number of churches.....	272
Number of church-members as nearly as can be learned.....	17,165
Added during the year, as nearly as can be learned, with additions not previously reported.....	2,485

EDUCATIONAL DEPARTMENT.

Number of training and theological schools, and station classes.....	29
Number of pupils in the above.....	1,051
Number of boarding-schools for girls.....	87
Number of pupils in boarding-schools for girls.....	1,361
Number of common schools.....	709
Number of pupils in common schools.....	25,374
Whole number of pupils.....	28,098

The thirty-fourth anniversary of the *American Missionary Association* was held at Norwich, Connecticut, October 12th. The receipts of the Association for the year had been \$187,480, and its expenditures \$188,172, of which \$12,000 were appropriated to the mission in Africa. The following is a summary of the statistics of the missionary work of the Association:

Missionaries.—Among the freedmen in the South, 84; among the Indians, 1; in Africa, 8; total, 93.

Teachers.—In the South, 180; among the Chinese, 22; among the Indians, 6; native helpers in Africa, 5; total, 213; matrons, 11; persons employed in the business department, 13; whole number of workers, 330.

Churches.—In the South, 73; among the Indians, 1; in Africa, 2; total, 76.

Church-members.—In the South, 4,961; among the Indians, 36; in Africa, 87; total, 5,084. Whole number of Sunday-school scholars, 8,073.

Schools.—In the South, 51; among the Chinese, 12; among the Indians, 5; in Africa, 3; total, 71.

Pupils.—In the South, 8,052; among the Chinese, 1,556; among the Indians, 233; in Africa, 179; total, 10,020.

The high-schools at Atlanta, Georgia, and Tongaloo, Mississippi, were aided by the States within whose territories they are situated. Sixteen young ministers from Howard University had gone South to labor among the freedmen. The experiment of educating Indian youth at the schools at Hampton, Virginia, and Carlisle Barracks, Pennsylvania, was pronounced a con-

firmed success. Four Indian agents were still appointed by the Association. Among the Chinese 180 had abandoned idol-worship, against 137 in the previous year; and 127 had given evidence of conversion, against 84 in the previous year. The Mendi mission in Western Africa was now manned by colored missionaries, but a white superintendent was needed. It was declared to be demonstrated that colored men could endure the climate of the country.

The fourth triennial *National Council* of the Congregational Churches of the United States met at St. Louis, Missouri, November 11th. The Rev. H. M. Dexter, D. D., was chosen moderator. A statistical report was presented showing that a net gain had accrued to the denomination, during the three years past, of 165 churches and 17,325 members. A committee appointed by the previous Council to consider and report upon ministerial responsibility and standing and the means of maintaining them, presented a report reviewing the usages of the Congregational churches on the subject, and proposing a system of measures consistent with those usages, to be submitted to the churches and adopted by them, if approved by them. As amended and agreed to by the Council, the proposed plan provides: "1. That a *pro re nata* council is the origin of ministerial standing in our fellowship, and the last resort in all cases of question. 2. That the continued certification of ministerial standing can well be left to ministerial associations or the organizations of churches. 3. That the body of churches in any locality have an inalienable right of extending ministerial fellowship or withholding it from any person within its bounds, no matter what his relations may be in church-membership or ecclesiastical affiliations, the proceedings to be commenced by any church, and due regard being had to equity in the method of proceedings." It further recommends that the name be indicated in the minutes of the State Associations of the local organization to which each associated minister may belong, and that this information be added, together with a list of the names of the scribes or registrars of the said organizations, to the lists heretofore given in the "Year-Book," and suggests a course of proceedings to be adopted in reference to ministers charged with heresy or immorality. The subject of proposing a statement of articles of belief was brought before the Council in memorials from State Associations and Conferences, in an elaborate paper reviewing the whole subject by Professor H. Mead, and in a favorable report of a committee to which the subject was referred. It was generally agreed that a creed could not be imposed on the churches by any kind of authority, but that the object of the proposed statement should be to obtain a doctrinal declaration which all the churches might judge worthy of adoption. The Council decided to appoint a committee of seven persons, who should as soon as practicable select twenty-five persons of ability and piety, representing all

the different modes of theological thought in the Congregational body, and willing to co-operate with each other in the production of an acceptable symbol of faith—a creed or catechism, or both—who should, without specific instructions and with full liberty of time, report the result of their labors to the churches, to be judged by them. A resolution was adopted approving the erection of a memorial tablet to John Robinson, pastor of the Leyden Pilgrims, in the Cathedral of St. Peter's, at Leyden, where he is buried. A report was presented by a Committee on Pastorless Churches and Churchless Pastors, which declared that the principal cause of the evil of vacancies was the smallness, weakness, and poverty of a large number of the churches, 1,272 of them not having more than fifty members each. The Council resolved to address a memorial to the President and Congress asking for the enforcement of the law against polygamy, and to endeavor to procure from the Government a modification of rulings which have led to the restriction and curtailment of missionary work among the Indians. The continued existence of the Council on its present plan was objected to in resolutions sent up by several State Congregational bodies. Answer was returned to these objections that the Council as it is was generally approved by the churches as a safe and useful bond between them, but that suggestions looking toward improvement would be welcomed. Statements were made concerning the work of the American Missionary Association among the freedmen, of the American Board of Commissioners for Foreign Missions, of the Congregational Publishing Society, of the American Home Missionary Society, of the American Congregational Union, of the College and Educational Society, and of the measures that had been taken in different States for the relief of disabled ministers and their families. A delegation of twenty-five representatives was appointed to attend the Jubilee Meeting of the Congregational Union of England and Wales in 1881.

II. BRITISH DOMINIONS.—The following is a summary of the statistics of the Congregational Churches in Great Britain and the colonies, as given in the "Congregational Year-Book" for 1880:

ASSOCIATIONS AND UNIONS.—England, 36; Wales, 16; colonies, 13; total, 65.

CHURCHES.—*England*.—Churches, 2,013; branch churches, 119; preaching-stations, 1,004; evangelists' stations, 78. Of these churches eight are returned as having lay pastors, 136 are variously supplied, and 231 are vacant.

Wales.—Welsh churches, 814; branch churches, 36; preaching-stations, 17; English churches, 82; preaching-stations, 3; vacant churches, 121.

Scotland.—Churches, 106; vacant churches, 12.

Ireland.—Churches, 30; vacant churches, 5.

Islands of the British Seas.—Churches, 17; vacant churches, 2.

Canada and Newfoundland.—Churches, 121; vacant churches, 30.

Australia.—Churches, 172; preaching-stations, 115; vacant stations, 15.

New Zealand.—Churches, 19; vacant churches, 7.

Natal.—Churches, 2; preaching-stations, 10.

Congregational Union in South Africa.—Churches, 27.

Jamaica.—Churches, 14.

British Guiana.—Churches, 16; churches aided by the London Missionary Society,

India.—Churches, 14; churches aided by the London Missionary Society, 9; native churches, 17.

China.—Churches independent of the London Missionary Society, 2.

MINISTERS.—English ministers in England and Wales, 2,119; Welsh ministers, 453; Scotland, 121; Ireland, 20; Channel Islands, 5; English ministers on the Continent, 7; ministers in colonies, 333; missionaries of London Missionary Society, 137; native ordained missionaries, 357; total, 3,552, of whom 672 were without pastorates.

The number of Congregational colleges and institutes for ministerial training were as follows:

COUNTRIES.	Colleges.	Professors.	Students.
England.....	10	33	361
Wales.....	3	7	108
Scotland.....	1	3	11
Colonies.....	4	13	50
Total.....	18	56	530

There are also ten institutions in heathen lands belonging to the London Missionary Society, containing about 300 native students.

The annual meeting of the *Congregational Union of England and Wales* was held May 10th. The Rev. Dr. Newth presided. The Executive Committee reported that much time and attention had been occupied with the question of raising the standard of education of ministers; that two conferences, representative of the colleges connected with the denomination, had been held in the south and north of England; that steps had been taken with a view to the formation of Boards of Education; and that it was anticipated that in a few years at most advantage would be taken of the opening of the colleges and universities to Nonconformists, so as to give to as many of the students of the Congregational body as possible the benefits of a university education. The political action of the committee had been chiefly directed against the proposed Census Bill in so far as it sought to inquire into the religious views and professions of the community. The Memorial Hall had been constructed at a cost of £75,520, of which not more than £2,500 was owing. Within it was a library of 8,000 volumes and 2,000 manuscripts and pamphlets, some of them of

rare value, which was open to the use of the denomination. The Union adopted a resolution of congratulation over the accession of the Liberal party to power, and of Mr. Gladstone to the head of the Government, in which, while approving the reserve which had been maintained by Nonconformists at the late elections in regard to their peculiar questions, it expressed the hope that the new Parliament would promptly grant the redress of the grievances of which Nonconformists had hitherto in vain complained, and that substantial progress would be made toward just and sound legislation on all questions affecting religion and the churches. The Rev. Henry Allon, D. D., was elected chairman of the Union for 1881-'82.

The autumnal session of the Union was held in Birmingham, beginning October 12th. The opening sermon was preached by the Rev. E. R. Conder. Resolutions were passed expressing gratification at the passage of the act respecting burials; expressing anxiety to secure the largest degree of union and coöperation with the members of the Established Church compatible with the manly assertion of the Union's own principles; explaining that the Union felt bound to protest against the continuance of a national establishment of religion, but that that protest was altogether independent of the Church which might enjoy the patronage of the state, and that it felt the highest regard for the Episcopal Church and its religious work. Inasmuch as the next year would be the fiftieth year since the organization of the Union, it was decided to celebrate it as a year of Jubilee, and for that purpose to invite the Congregational churches of other countries and the Evangelical Union of Scotland to send representatives to the autumnal meetings of 1881; also, to found a special fund for the strengthening of the church aid and home missionary operations of the Congregational body, and "for such denominational uses as may seem to be most urgent." A committee was appointed to prepare a scheme for such a fund and report upon it at the meeting of the Union in May, 1881. Many papers were read during the meetings of the Union on subjects relating to religious work.

The eighty-sixth annual meeting of the *London Missionary Society* was held in London, May 13th. Mr. J. K. Welch presided. The contributions to the Society during the year, for special purposes, had been £93,333, and those for general objects had been £8,829, making a total of £102,162, besides which £1,700 had been received from the sale of property in South Africa. The expenditures had been £100,174. The report described the progress of the missions in China, India, and Polynesia as encouraging, but represented that the work in South Africa had been seriously checked. The mission in Central Africa (Lake Tanganyika) was being reënforced.

E. C. Hore visited the south end of Lake Tanganyika, with a view to selecting suitable

locations for mission-stations. In the execution of his commission he passed the Lukuga, and found it to be a true outlet, carrying the overflow of the lake into the Lualaba, as was reported by Cameron, but denied by Stanley. (See GEOGRAPHICAL PROGRESS AND DISCOVERY.) Mr. Hore crossed the lake in a small vessel belonging to the Society from the mission-station at Ujiji, in May, 1879. He found the country of Ulungu, lying between the Zinga and Lofu River, inhabited by a peaceable tribe of distinct nationality, having their own peculiar customs, dress, and ornaments—not, as was supposed, by a mixed population of nomads, living in constant dread of the Watuta; these appear to have left this region. It is a most promising region for the work of evangelization and civilization, as the soil when cleared is exceedingly fertile, and native food is now abundant. The *tsetse* fly, however, is common. On the coast-line of Ulungu the villages are found clustered together in districts, with forest-clothed hills intervening. Each district seems to have a separate and independent chief. Mr. Hore recommends three of these districts as favorable sites for missionary stations—Liemba Harbor, Sombe's country, and the Lofu River. Liemba Harbor (so named by Dr. Livingstone, though *liemba* is only the Kilungu word for lake) and the mouth of the Lofu River are comparatively populous districts. The advantage of Sombe's country (Stanley's Mazombe) is that it lies at the southeast corner of the lake. There is a regular highway from the south end of Tanganyika to Unyamwebe and Ujiji, so that stations planted there would be little more remote and isolated than the present one at Ujiji. The Society has established its new station at Mtowa, on the western shore, just north of the Lukuga outlet, and has given it the name of Plymouth Rock.

The Jubilee of the Missions in the South Seas, which was begun in Samoa in 1830, it was stated in the May meeting of the Society, would be celebrated during the year. The prevalence of malaria had been found to be a serious obstacle to the organization of the mission in New Guinea.

Post Moresby and the neighboring coast-region has proved unhealthy, not only for Europeans but for natives of eastern Polynesia, who act as mission-teachers. Rev. James Chalmers has explored the interior, in order to locate a salubrious site for a station. He ascended the Goldie River and its affluent, Muni-kahila Creek, to the Elkiri district. Here in the valleys between the foot-hills and the main ridge of the Owen Stanley range is a large population, well supplied with sugar-cane and all kinds of native food, with abundant water accessible. From Mount Astrolabe he obtained a view of the finest stretch of country which he has seen in New Guinea. This tract, which is drained by the Laloki, he described as composed of well-watered and fruitful valleys, separated by green ridges.

CONGRESS, UNITED STATES. The second session of the Forty-sixth Congress commenced on December 1, 1879, and closed on June 16, 1880. In the Senate, the Vice-President, William A. Wheeler, presided; and in the House, the Speaker, Samuel J. Randall, of Pennsylvania.

The following is a list of members :

In the House, on February 4, 1880, a bill to amend the act to determine the jurisdiction of circuit courts of the United States and regulating the removal of causes from State courts was considered.

Mr. Culberson, of Texas, said: "Mr. Speaker, I present this bill under instructions of the Committee on the Judiciary, and in doing so I desire to state that while in my opinion it does not present a full and adequate relief for the evils which have followed the legislation of Congress extending the jurisdiction of the circuit courts of the United States, it will, if it shall become a law, afford some relief, and as much, perhaps, as we may reasonably hope to

secure under the circumstances which attend legislation in Congress at this time.

"I propose as briefly as possible to call the attention of the House to the changes in existing law proposed by the bill under consideration.

"The first amendment proposes to change the minimum jurisdiction of the circuit courts of the United States from \$500 to \$2,000, exclusive of costs and interest.

"It will be remembered that the present minimum jurisdiction of the circuit courts was fixed at \$500 by the act of 1789. It is believed, in view of the unprecedented growth of business and the great increase of population since 1789, that \$2,000, exclusive of interest and costs, would not be too large. The present minimum was fixed when the population of the country did not exceed four millions, and when the business of the country as compared with present circumstances was undeveloped.

"In almost all the States of the Union the circuit courts are crowded and overloaded with business. It is almost impossible in many of the States to accomplish an end to litigation in those courts. This condition of affairs is attributable mainly to the small amount at which the minimum jurisdiction is fixed, the enlarged subject-matter of jurisdiction, and the facility and ease by which causes may be removed from State to Federal courts.

"The Supreme Court, with jurisdiction of appeals, with a minimum limit of \$5,000, and a revisory jurisdiction of other causes, without regard to the sum or amount in controversy, is unable to dispose of the business which has accumulated upon its docket.

"I now call the attention of the House to the changes proposed in the law regulating the removal of causes from a State to a Federal court. The committee propose to strike out that part of section 2 of the act of 1875 which reads as follows:

"SECTION 2. That any suit of a civil nature, at law or in equity, now pending or hereafter brought in any State court, when the matter in dispute, exclusive of costs, exceeds the sum or value of \$500, and arising under the Constitution or laws of the United States, or treaties made or which shall be made under their authority, or in which the United States shall be plaintiff or petitioner, or when there shall be a controversy between citizens of different States, or a controversy between citizens of the same State, claiming lands under different States, or a controversy between citizens of a State and foreign states, citizens or subjects, either party may remove said suit into the circuit court of the United States for the proper district.

"And in lieu of it to insert into section 2 the following, as shown by the bill which is now under consideration:

"SEC. 2. That any suit of a civil nature, either at law or in equity, of which the circuit courts of the United States are given original jurisdiction by the last preceding section, but which may be now pending, or which may hereafter be brought in any State court, may be removed by the defendant or defendants therein to the circuit court of the United States for the proper district.

"It will be observed, Mr. Speaker, that the

mischief intended to be remedied by the committee arises from the authority granted by the act of 1875 to either the plaintiff or defendant to remove the cause. It was the opinion of the committee, and I believe unanimous in that regard, that a plaintiff, who, having the right to sue in the Federal court, shall have elected to bring his suit in a State court, ought to be held to his election.

"In this connection I desire to call attention to the amendment offered by me at the outset. My amendment proposes as follows:

"Strike out all from the word 'follows' in line 47, down to the word 'and' in line 54, and insert:

"SEC. 2. That any suit of a civil nature, at law or in equity, arising under the Constitution or laws of the United States, or treaties made or which shall be made under their authority of which the circuit courts of the United States are given original jurisdiction by the preceding section, which may now be pending or which may hereafter be brought in any State court, may be removed by the defendant or defendants therein to the circuit court of the United States for the proper district whenever it is made to appear from the application of such defendant or defendants that his or their defense depends in whole or in part upon a correct construction of some provision of the Constitution or law of the United States or treaty made by their authority. And any other suit of a civil nature, at law or in equity, of which the circuit courts of the United States are given jurisdiction by the preceding section, and which are now pending or which may hereafter be brought in any State court, may be removed into the circuit court of the United States for the proper district by the defendant or defendants therein: *Provided*, Such defendant or defendants are non-residents of the State in which the suit is pending.

"I think that this amendment ought to be adopted, and so much of the bill of the committee as is referred to in the amendment should be stricken out.

"I submit that if the bill of the committee should become the law, any defendant will be authorized to remove a cause whether he is a resident or not of the State in which the suit is brought. I do not believe that the committee contemplated the scope to which that provision in its bill extends.

"By reference to the provisions under discussion, it will appear that any suit, of which the circuit court is given original jurisdiction by the bill, which may be pending or hereafter brought in a State court, may be removed to a Federal court 'by the defendant or defendants.' Suppose a citizen of Illinois sues a citizen of Texas in a State court in Texas, under the provision reported from the committee, such a defendant is authorized to remove the cause. Now, the amendment which I propose obviates such results.

"The next change proposed in the law is a very important one.

"The committee propose to add to section 3 of the act of 1875 the following:

"That the circuit courts of the United States shall not take original cognizance of any suit of a civil nature, whether at common law or in equity, between a corporation created or organized by or under the laws of any State and a citizen of any State in which such corporation, at the time the cause of action ac-

crued may have been carrying on any business authorized by the law creating it, except in like cases in which said courts are authorized by this act to take original cognizance of suits between citizens of the same State. Nor shall any such suit between such a corporation and a citizen or citizens of a State in which it may be doing business be removed to any circuit court of the United States except in like cases in which such removal is authorized by the foregoing provisions in suits between citizens of the same State.

"Mr. Speaker, I desire the Clerk to read the following extract from a late speech made by the Senator from Delaware [Mr. Bayard]."

The Clerk read as follows:

I do not shut my eyes, Mr. President, to the fact that the equal and wholesome distribution of property which it was hoped by the founders of our Government would be attained by the abolition of the rules of primogeniture, of entailments, of perpetuities, and the division of intestate estates among daughters and sons alike, has been greatly defeated. And I am inclined to believe the *system of incorporation* which we have introduced into all branches of industrial pursuits will be found nearly equal to the effects of primogeniture and mortmain combined in its influence upon the aggregation of wealth into a single and never-dying grasp.

Mr. Culberson: "The effect of the amendment is simply to place such corporations upon the same plane with citizens of a State in which they carry on their business. I, for one, believe that the time has arrived when Congress should intervene in every constitutional method to protect the people against 'the never-dying grasp' of associated capital, and to place a check upon the greed, rapacity, and oppression by which corporations dominate the entire business of the country."

Mr. Wellborn, of Texas: "Mr. Speaker, it is claimed that in every suit against a Federal corporation it necessarily has a defense arising under, because chartered by, a law of the United States, and therefore that all suits against these corporations are removable under section 640. Nor is the claim unsupported by authority. As has already been indicated by my colleague, the Supreme Court of the United States as far back as 1824, through Chief-Justice Marshall, enunciated and applied the general principle that a Federal corporation could in no instance have a case for judicial cognizance which did not arise literally as well as substantially under the law of its creation. Fifty years later, in the eighth circuit, Judge Miller, construing this very law of 1868, sustained the right of removal upon this same general principle. Other eminent jurists, without undertaking to determine the question, pronounce it to be a close one. What authoritative construction the Supreme Court will ultimately place upon the law is of course a mere matter of conjecture.

"So we are confronted with this state of things: a Federal corporation probably—not to use a stronger word—probably can remove at its option from a State court into a Federal court for trial any suit commenced against it in the former, no matter what may be the character of the litigation, no matter what may be

the issues which it really presents for adjudication, and no matter whether or not any of those issues involve the construction of the Constitution or any law or treaty of the United States. This unrestricted right of removal, so convenient and valuable to these corporations, so onerous, so hurtful to the general public with whom they deal, constitutes one of the most striking anomalies, most flagrant solecisms in our whole judicial system, and was, as reference to the debates in the Senate of the Fortieth Congress will show, conceived in the interest of those corporations which under different titles of Pacific Railroads have constructed and are now operating our lines of transcontinental railway.

"Now, Mr. Speaker, when we consider the great length of these lines of road, the immense extent of territory they traverse, the innumerable thousands of people with whom they come in contact and have business relations, the widespread wrong and injustice of this law must become obvious to the commonest understanding. All causes of complaint, all grounds of defense, whether they in point of fact involve or not a construction of a law of the United States, can probably be removed into the Federal courts."

Mr. Willits, of Michigan: "When the morning hour closed yesterday I was commenting on the amendment which strikes out the right to bring suits in the United States courts on assigned promissory notes, thereby restoring the law as it was prior to the act of March 3, 1875. I need not make any extended remarks on the evils that have arisen under the law as it now is. Suffice it to say that under it great injustice has been done in what are called patent-right cases, or notes given for patent rights, in nominally assigning in innumerable instances causes of action to citizens of other States than the one in which the contract was made or in which the defendant resides, for the express purpose of their prosecution in the Federal courts. In all these cases the cause is on the removal more than half won by the plaintiff, and in many instances the cause is wholly won by reason of the different constructions of the law given by the State and Federal courts. In my judgment the assigned contract should have the same tribunal that the unassigned contract would have. Section 2 of the bill confers upon defendants the power of removal in all cases of which the United States Circuit Court has original jurisdiction by section 1. The law of 1789 gave this right of removal to defendants only. The law of 1875 gave it to either party, plaintiff or defendant. This bill takes away the right of a plaintiff to remove his cause. He has selected his forum, and let him abide by it.

"The only changes in section 3 of the act of March 3, 1875, preceding line 126 of this bill, are in reference to the time when the defendant may remove his cause and the amount, to wit, \$2,000, requisite for the removal. Under

the law as it now stands, the party seeking to remove his cause may do so before or at the time at which said cause would be tried and before the trial thereof. This bill proposes to amend the law so that the defendant only may remove his cause, and he may remove it at any time before the defendant is required, by the law of the State and the rule of the State court in which said suit is brought, to answer or plead to the declaration or complaint. In other words, the time has been changed from any time before the trial to the time when under the State laws the defendant is required to plead to the declaration.

"The chief amendment, however, to section 3 is from line 126 to line 140 of the bill. That amendment proposes to take away original jurisdiction or removal of causes between a corporation organized or created by or under the laws of any State and a citizen of a State in which said corporation is doing business, except in cases where the subject matter authorizes such jurisdiction or removal in suits between citizens of the same State, to wit, when it is a matter of a treaty or a land grant from different States.

"Mr. Speaker, this amendment is a radical change of existing law. Under the decision of the Supreme Court, a corporation is held to be a citizen of the State in which it is organized or created. The result is that in every State in which it does business, aside from the one in which it is created, the present law authorizes the removal of any case, involving the requisite amount, in which it is a party, from the State to the Federal courts. This amendment cuts off that right, and remits the corporation to the State court alone. The evils arising from the existing practice have for a long time been manifest and the subject of great complaint. There seems to be no valid reason why a corporation that competes with local corporations, that goes into every hamlet and almost every household in the land, should not be the subject of State control in that business, and should have the right to remove its causes to a distant court for reasons that differ in no essential degree from the reasons that obtain in other cases. Insurance companies are persistent in seeking risks and money from our citizens; yet in case of loss are hasty in taking their causes to the United States courts, perhaps hundreds of miles away, the expense of which is a practical denial of justice, and the threat of which is used as a basis of an unjust compromise. The proposed amendment cuts this evil up by the roots and remands the parties to the community in which the liability was incurred and in which it was known it would be incurred when the contract was made.

"It will be observed that one notable feature in the proposed amendment is the curtailing of the use of the United States courts by corporations. It is astonishing to see the amount of time and labor devoted by these

courts to the interests of corporations, to the exclusion of the interests of individual citizens.

"Again, a citizen in his individual contests with corporations is turned over to the tender mercies of a litigation which it is ruin for him to incur, but which these corporations with their accumulated capital can sustain. The United States courts have grown to be largely corporation mills, in which the tolls are largely taken from the individual citizen, and generally amount to his whole interest in the grist. So that it has become the fact that the only party or entity which in the United States represents the old feudal system of property tenure, so unanimously opposed by our fathers, transmitted from generation to generation in increasing value and influence, has sought refuge behind the judicial system of a government that boasts it has no primogeniture, and that large estates are divided up by the natural order of things in one or two generations. As a rule this system of transmitting tenure is strong enough if remanded to the State courts; and the expense of individual litigation will be sufficiently onerous in any event. It seems to me a healthy thing to call a halt in the tendency of accumulating legislation, especially of this kind, in the United States courts."

Mr. Weaver, of Iowa: "Since the passage of the act of 1789, corporations of every description have sprung up throughout the entire country. Their name is legion. The tendency of the wealth of the country is toward associated capital. Colossal insurance companies, gigantic railroad enterprises, and other and multifarious corporate organizations exist in every locality and permeate every avenue of business life.

"Take for illustration a railroad corporation. It is organized, perhaps, under the law of Massachusetts. It stretches its iron arms westward until it reaches the Missouri River, passing through the great States of New York, Pennsylvania, Ohio, Indiana, Illinois, Iowa, and perhaps others. It enters these States, and by the right of eminent domain condemns the property of the citizen, proceeds to build and lay the foundation of a colossal fortune. It builds its roads and occupies the territory, and proposes to occupy for all future time.

"Now, in contemplation of law this corporation should be held to be a citizen of the State or States, respectively, where it is carrying on or operating its business. They come into a State for the purpose of making money, carrying on transactions with citizens of the State, and why should they not be compelled to go into the State courts, there to adjudicate matters arising between themselves and citizens of the State? They are citizens of the State for all other practical purposes; but, when a controversy arises under the law as it now stands, the corporation has only to go into the State court and there set forth the fact that it is a foreign corporation, organized under the law of Massachusetts or of some other

State, and the cause is removed to the Federal court.

"One of the essential elements in the administration of justice in all free countries, Mr. Speaker, is that at all times the citizen shall have the right to be tried, not only for criminal offenses but in respect to his civil rights, by a jury of the vicinage, where he resides, near his home. The construction which has been given to the judiciary act of 1789, however, and the subsequent amendatory acts, has absolutely had the effect to abrogate that sacred right of the citizen, and has placed in the hands of these corporations, and others, powers and privileges never contemplated by the framers of our Government. At the organization of our Government, our fathers had the political chart of the world before them. They undertook to lay broad and deep the foundations of a republic where the power should reside substantially with the great body of the people.

"To accomplish that they threw around the cradle of the young republic certain safeguards. One of these safeguards was that there should be no titles of nobility in this country; another that the right of primogeniture should not obtain here, that there should be no entailed estates, so that the wealth of the country should diffuse itself among the people according to natural and beneficent laws. They did not contemplate the creation of these corporations that are as real entities as are individuals—ideal persons that never die, and yet possess the power to acquire and hold property equally with real persons. They did not, I say, contemplate the rise and progress of these legal Goliaths. Had they foreseen their coming, they doubtless would have made ample provision for their restraint.

"Sir, their influence in this country to-day is tremendous. They are Briarean monsters, and exceed in ferocity and power any or all of the beasts that John saw in his apocalyptic vision. The republic itself will have to struggle with them, and no man can now foresee the result of that struggle. The existence of such corporations seems to be necessary to the progress of our civilization; they are inseparable from it; but they should not be clothed by legislation with exclusive privileges over the citizen. The people must put hooks into the jaws of these leviathans, and control them.

"The accumulation of capital in the hands of these corporations of itself gives them immense power and tremendous advantage over individuals. But if you, in addition to that, load them with exclusive privileges by law—the privilege of shirking and shunning the ordinary tribunals in which the common people have to litigate their rights—and if you allow them the power and the privilege of dragging the citizen to remote tribunals, then, indeed, you more than double or treble their power. The corporation should seek no exclusive privileges, and the citizen should be just to the corporation. Then all will be harmony."

Mr. New, of Indiana: "The first change proposed to be made by this bill in the act of 1875 is to require the sum or value of the matter in dispute to exceed, exclusive of interest and costs, the sum of \$2,000 instead of \$500 exclusive of costs. I believe this increase of the sum or value in dispute to be one of the best provisions in the bill. No good reason in my judgment can be urged against it. The increase from five hundred to two thousand dollars should be made for the same reason that caused the same Congress that passed the act of 1875 to pass another act at the same session, which provided that an appeal should not be had from the circuit to the Supreme Court, unless the amount involved exceeded \$5,000. The minimum amount before that was \$2,000.

"The change from five hundred to two thousand dollars is not out of proportion to the growth of our population and wealth since 1789. Within the last two decades the history of the jurisdiction of the Federal courts has been one of constant and rapid growth; so much so, that you hear from judges of all those courts the opinion expressed that the districts, circuits, and judicial force must be multiplied, and an intermediate appellate court created, unless something can be done to check the surging tide of litigation with which these courts are being overflowed.

"Although our population has increased more perhaps than fifteen-fold since 1789, our wealth still more, and litigation in even greater proportion, yet the three circuits of 1789 have been added to by only six. It is true that the districts and district courts have been increased in a larger proportion. But those courts have had all they could do, the district judges doing largely circuit court duty in addition to holding their own courts. This has come from the overloaded condition of the circuit court dockets, and also from the strong desire on the part of the people and Congress not to enlarge the Federal judicial force beyond the strictest necessity.

"It has also come from the fact that the large litigations of the country have been in the circuit courts of the United States, and the judges of those courts have had their time mostly occupied in the trial of those causes. I know that the number of cases on the circuit court dockets have been reduced by the repeal of the bankrupt law. But the actual work of the judges has not been lightened in anything like the same ratio, for, as we all know, most of the bankrupt work was done by the registers in bankruptcy.

"This bill further provides as follows:

"That the circuit courts of the United States shall not take original cognizance of any suit of a civil nature, either at common law or in equity, between a corporation created or organized by or under the laws of any State and a citizen of any State in which such corporation, at the time the cause of action accrued, may have been carrying on any business authorized by the law creating it, except in like cases in which said courts are authorized by this act to take original

cognizance of suits between citizens of the same State. Nor shall any such suit between such a corporation and a citizen or citizens of a State in which it may be doing business be removed to any circuit court of the United States, except in like cases in which such removal is authorized by the foregoing provision in suits between citizens of the same State.

"That is to say, in a case such as is here named the corporation would, for the purposes of that suit, be deemed to be a citizen of the State in which it had been carrying on business, and of which the defendant was a citizen. I can not doubt but this provision will commend itself to all. Gentlemen will see that this is of the utmost importance to fair dealing and an impartial administration of justice. It will have the effect to make all kinds of corporations careful to contract fairly and squarely with the people. I say it will tend to the impartial administration of justice also, because the corporation, having found it to be the best policy to take no unconscionable advantage of the citizen in the beginning, will not regard it necessary to have unfair advantage upon the trial in order that it may secure a just finding or verdict, and the people thereafter having been dealt with honorably in the main by corporations, and having equal advantages in the forum of trial, will rapidly divest themselves of the bias and prejudice now so strong against corporations.

"Mr. Speaker, I do not believe there can be any serious doubt as to the constitutionality of that part of the bill which I have just quoted. I know, sir, that the Supreme Court has held that a corporation was a citizen of the State that created it, and therefore within the clause of the Constitution which extends the judicial power of the Federal courts to controversies between citizens of different States. But it does not follow by any means that Congress may not constitutionally require a corporation organized under the laws of any State to sue in the State courts, under the circumstances named in that part of the bill which I have just read. With as much and more plausibility, reason, and force might it be said that that part of section 11 of the act of 1789 is unconstitutional, which provided that no district or circuit court of the United States should have cognizance of any suit to recover the contents of any promissory note or other chose in action in favor of an assignee, unless suit might have been prosecuted in such court to recover thereon if no assignment had been made."

Mr. Phillips, of Missouri: "In the very limited time allotted to me, I shall not attempt to speak of the general provisions of this bill; and I should not have obtruded any remarks upon the House at so early a period after my entry into it but for the experience I have had under the administration of this law of 1875. Its general purpose has my unqualified sympathy, for it strikes at an evil in the administration of justice which no man not fresh from the practice of the law can fully appreciate. Step by step has the jurisdiction of the Federal courts

been extended by positive statutory enactment and the construction of the judge on the bench, until these courts have in a large measure taken to themselves the control and trial of cases which in the opinion of the statesmen and jurists of the best epoch of the republic belonged exclusively to the domestic courts of the States. 'This ravenous expropriation of the State' has been accomplished by an insidious process, silent in its operations, stealthy in its approach, and most dangerous in its tendency; for a more cunning and surreptitious method of taking from the citizen his self-government could scarcely be devised. A more effectual instrumentality of despoiling the weak and the timid, and oppressing the poor man, could scarcely suggest itself to the most selfish of governments. The practitioner who a few years ago brought and tried his causes in his home courts, with whose methods of procedure he and his clients were familiar, where he tried his causes before a jury of the vicinage, where the common law and the Bill of Rights gave him a right to be heard, to-day, in the pursuit of his causes, is dragged hundreds of miles from his home to try his cases before a jury who are strangers to him, where the litigant does not get the benefit of his good character, and, while often before judges who are most accomplished jurists and who administer the laws with impartiality, he too frequently finds himself before judges on the bench who, something like the heathen, are a law unto themselves.

"Such was the holding of the Supreme Court in its early history; and the majority of the present Supreme Court are struggling to bring back the law to its original foundation. I beg for one moment to call the attention of the House to two or three decisions of the Supreme Court, for the purpose of showing that the amendment offered by the gentleman from Texas [Mr. Culberson] is no innovation upon the Constitution, and in no manner interferes with the rightful jurisdiction of the United States circuit courts, but is in accord with the earlier and the later decisions of the Supreme Court. In the case of *Cohens against Virginia*, 6 Wheaton, decided by Chief-Justice Marshall, the following language is used:

"A case may truly be said to arise under the Constitution or a law of the United States whenever its correct decision depends upon the construction of either. The title or right set up by a party may be defeated by one construction of the Constitution or law of the United States, or sustained by an opposite construction. In either of these cases the jurisdiction of the Federal court may rightfully attach.

"In *G. W. & W. Co. vs. Keyes*, 6 Otto, a majority of the present Supreme Court say:

"A cause can not be removed from a State court simply because in the progress of the litigation it may become necessary to give a construction to the Constitution or a law of the United States. The decision of the case must depend upon that construction; the suit must, in part, at least, arise out of a controversy between the parties in regard to the operation and effect of the Constitution or the law upon the facts involved.

"So in a late case in 9th Otto, of Hartell vs. Tighlman. That was merely a case arising upon a common-law contract between the patentee and a third party. It was claimed that, because the patent had issued under the patent laws of the United States, therefore the Federal court had jurisdiction to try the matter of contract between the parties, which in no manner involved the validity of the patent. Strange to say, a very respectable and large minority of the Supreme Court delivered a minority opinion in that case, holding that the United States Circuit Court should take jurisdiction over the case simply because the patent originally emanated from the Government.

"Now, it may be said that there is no necessity for the amendment of the gentleman from Texas [Mr. Culberson], in view of these decisions of the Supreme Court. The answer to that is this: the *nisi* judge upon the bench, after all, is human. As such he loves power, and he loves that dignity which as he thinks adheres to enlarged jurisdiction; and where that jurisdiction, under a proper interpretation, is wanting, he too often secures it by the liberality of construction.

"It may be said that the injured party has the right of appeal. He has not this right in some cases, on account of the amount involved, but, even if he had, Mr. Speaker, the moneyless, timid litigant ought not to be driven to the necessity of incurring the extraordinary and ruinous expense and delay of prosecuting his case to the Supreme Court of the land. It would amount practically to a denial of justice. This Congress, as the law-making power of the land, should send out its law with its own interpretation, with its just limitation and cure incorporated in the act itself, so that it may be a shield of protection to the citizen instead of a mere instrument for oppressing, and a snare for despoiling, harassing, and annoying him.

"The bill and amendment under consideration hits the blot, and I trust we have the wisdom and courage to enact it into a law.

"The only criticism to which, in my humble opinion, the amendment of the gentleman from Texas is justly subject, is, that it does not go far enough in its safeguards. It provides that the defendant may have the right of removal by simply stating in his application and making affidavit to the fact that his cause of action arises under the Constitution or law of the United States, and in whole or part involves its proper construction. Now, suppose, as the history of litigation under the act of 1875 shows has frequently been the case, and as will be the case in the future, the applicant falsely makes this statement for the purpose of obtaining delay and getting his cause transferred to the Federal court. The remedy should go one step further and provide that if, upon the trial of the cause in the court to which it is removed, it should be disclosed that in truth the defense or the right of recovery does

not in fact depend upon the proper construction of the Constitution or law of the United States, the United States Circuit Court should *eo instanti* discontinue the trial of the cause and remand it to the State court, at the cost, of course, of the party who has improperly had it transferred.

"The gentleman in charge of the bill has already explained fully the changes which its adoption will make in the law. I shall, therefore, not go into a detailed comment on the provisions of the bill, but direct my remarks to the evils of the present law—the *encroachments of the United States courts* upon the judiciary of the States.

"There are but few questions of more importance than the one we now have under consideration. It pertains to a speedy and impartial trial by a judicial tribunal near parties concerned. It involves the respective rights and powers of the General Government and of the States, and hence the dearest interests of the citizen.

"From the organization of our Government it has been thought that two dangers threatened it. They might appropriately be compared to the centrifugal and centripetal forces in philosophy. One was the tendency of the States to separate and set up for themselves or form new alliances; the other, the tendency on the part of the General Government to usurp or absorb the authority of the States, thereby virtually obliterating their lines and converting the government from one of limited to one of unlimited powers. Scylla on the one hand and Charybdis on the other never gave more just cause of alarm to the mariner than these have given the sages and patriots who founded and maintained our institutions. But one of these dangers is past. The question of dissolving the Union of the States has been submitted to that tribunal from the decisions of which no appeal can be taken—to the arbitrament of war; but has the other peril—that of the destruction of our form of government by consolidation—ceased to exist? Unfortunately, it has not. No million of men have marched forth to impede its progress and crush it. 'No braying horn and screaming fife' have given notice that the march of the Federal Government against the reserved rights of the States was to be stopped; and no booming salute has announced to us that it is ended. On the contrary, the Government of the United States has gradually assumed authority which of right belongs to the States, until they are left the mere skeletons of what they were under the Constitution, and of what it was intended by those who framed that instrument they should be.

"Of all the means employed by those who have either designedly or inadvertently participated in this attempted and partially successful wreck of the States and of their reserved rights, the most efficient have been the Federal judiciary and Congressional legislation

increasing its power and jurisdiction. And in saying this I mean no reflection upon the *integrity* of the individuals who compose the judicial department of our Government. I am glad to bear testimony to the fact that in many instances our Supreme Court has stood as a bulwark against passionate and inconsiderate legislation. The trouble arises in a great measure from Congressional interference and from too great an increase of the jurisdiction of the inferior United States courts.

"That the tendency of Federal legislation for the last fifteen years has been toward the concentration of too much power in the Federal judiciary and to an unwarranted interference with the judicial authority of the States, no candid man acquainted with the history of the country will deny. I am glad to see that Representatives on both sides of this Chamber realize this fact. I was pleased to hear the gentleman from Maine [Mr. Frye], when speaking on this subject, say:

"I agree with the gentleman entirely in the view that in the past we have gone too far in extending the jurisdiction of the Federal courts and allowing the transfer of causes from the State courts. I think that the time has now come when we can and ought to correct this matter.

"To remedy this evil the bill before us was introduced and has been recommended by the committee. It is not and can not be made a sectional question. It is equally important to Maine and California, to Michigan and Louisiana.

"Before coming directly to the sections to be repealed, let us examine what has been said by some of the founders of our Government, and see whether or not they thought there was danger in our situation. Among the signers of the Declaration of Independence was the man who wrote that great charter of liberty; who conceived our form of government and was chief of those who kept it up during the struggle for independence; who presided over the young republic for eight years as Chief Magistrate; and who was spared to witness the operation of our system for half a century. Firm and honest in his convictions, he was not moved by passion nor terrified by peril. He saw the dangers ahead, and, like the faithful sentinel on the watch-tower, warned his people against them. My limited time will not permit me to produce all he has said on the subject, but I quote a few of his utterances.

"Mr. Jefferson wrote to Judge Roan, March 9, 1821:

"The great object of my fear is the Federal judiciary. That body, like gravity, ever acting, with noiseless foot and unalarming advance, gaining ground step by step, and holding what it gains, is ingulfing insidiously the special governments into the jaws of that which feeds them. The recent recall to first principles, however, by Colonel Taylor, by yourself, and now by Alexander Smith, will, I hope, be heard and obeyed, and that a temporary check will be effected. Yet be not weary of well-doing. Let the eye of vigilance never be closed.—*Jefferson's Works*, volume vii, page 212.

"On November 21, 1821, he wrote Nathaniel Macon:

"Our Government is now taking so steady a course as to show by what road it will pass to destruction, to wit, by consolidation first, and then corruption, its necessary consequence. The engine of consolidation will be the Federal judiciary; the two other branches the corrupting and corrupted instruments.

"He wrote to Mr. Nicholas on the 11th of December, 1821, as follows:

"I fear, dear sir, we are now in such another crisis, with this difference only, that the judiciary branch is alone and single-handed in the present assaults on the Constitution. But its assaults are more sure and deadly as from an agent seemingly passive and unassuming. May you and your contemporaries meet them with the same determination and effect as your father and his did the alien and sedition laws, and preserve inviolate a Constitution which, cherished in all its chastity and purity, will prove in the end a blessing to all nations of the earth.

"Still later, on the 25th of March, 1825, after (to use Mr. Jefferson's own language) 'chilling winters had rolled over *his* head and whitened every hair on it,' he wrote to Mr. Edward Livingston:

"One single object, if your provision attains it, will entitle you to the endless gratitude of society—that of restraining judges from usurping legislation. And with no body of men is this restraint more wanting than with the judges of what is commonly called our General Government. . . . They are practicing on the Constitution by inferences, analogies, and sophisms as they would on an ordinary law.

"They do not seem aware that it is not even a constitution formed by a single authority and subject to a single superintendence and control, but that it is a compact of many independent powers, every single one of which claims an equal right to understand it and to require its observance. . . . This member of the Government was at first considered as the most harmless and helpless of all its organs. But it has proved that the power of declaring what the law is *ad libitum*, by sapping and mining slyly and without alarm the foundations of the Constitution, can do what open force would not dare to attempt.

"These are a few of the prophecies of the immortal Sage of Monticello touching the danger to our institutions from the Federal judiciary. They are the predictions of one whose 'Declaration' has controlled the destiny of a hemisphere, turning the tide of the world from the darkness of despotism to the delights of freedom, and whose

'fame on brightest pages,
Penned by poets and by sages,
Shall go sounding down the ages'

as long as man loves to be free.

"We would do well to pause and ponder his admonitions, and not pass by in silence and unheeded the warnings of the greatest political philosopher and prophet of all countries and all times.

"Mr. Speaker, I have said that unwarranted encroachments have been made upon the State courts by Federal tribunals. We have only to look at the United States statutes and the judicial construction of them for painful proof of this fact. Let us first examine the law as to civil cases. By the judiciary act of 1789, Re-

vised Statutes, section 639, subsection 1, it is provided that—

“When the suit is against an alien, or is by a citizen of the State wherein it is brought, and against a citizen of another State, it may be removed on the petition of such defendant filed in such State court at the time of entering his appearance in such State court.

“It will be observed that before the cause could be removed under this act the party removing must be a *defendant*, must also be an *alien* or a *non-resident* of the State in which the cause is pending, and must make his application for removal *at the time of entering his appearance*. These requirements tended to restrict the jurisdiction of the Federal courts. But in 1866 Congress lifted the floodgates, and since that a tide of litigation sufficient to arouse the gravest apprehension has flowed continuously into the United States courts. By the act of 1866 aliens and citizens of other States than that in which the suit was brought are authorized to divide the suit under certain circumstances, removing a portion to the United States courts, and leaving it as to part of the defendants in the State courts, a thing unheard of in former times, and an innovation which should never have been tolerated.

“The next step taken to degrade the State courts was the act of 1869, which authorized *either the plaintiff or the defendant* to remove the cause, and *at any time* before final hearing. In other words, a party might select his court, and commence his suit therein, and after experimenting he might turn his back upon the forum of his choice, and upon his own petition have the cause removed to the United States courts, and there still further harass his victim, till, from exhaustion or want of means to defend his rights, he yielded the matter in controversy. What justice is there in allowing the party bringing a suit to abandon and fly from the forum of his choice? What justice in permitting him to vex his victim by requiring him to dance attendance on every court known to our complex system?

“The Federal court takes jurisdiction of the navigable rivers. What more? The Federal judiciary have not only had their jurisdiction extended over the lands of the United States, but over the waters also. In the earlier history of our Government the Federal court assumed jurisdiction over the waters only so far as tide-water extended. But in this, as in everything else, the jurisdiction of these courts has been enlarged till it extends now over all of our navigable rivers. It is true that thus far the courts have only *exercised* jurisdiction of civil causes on the watercourses; but how long will it be, at their present rate, till they take jurisdiction of crimes committed there?

“The Civil Rights Bill was passed and jurisdiction given to the United States courts of causes arising under it, without any regard to whether the parties to the suit were citizens of the same or of different States, and without any limitation of time within which the appli-

cation for transfer shall be made. By this legislation, for the first time in the history of this or, so far as I know, any other country, the complexion of the suitor determined the court that should administer justice to him, and we had established one court for one color, and a different tribunal for the other, when all the parties were citizens with equal rights and privileges under the Constitution.

“Mr. Speaker, this all-pervading Federal judiciary, by virtue of section 5486, assumes the right to go into our county courts under certain circumstances, take the ward's guardian therefrom, and carry him to the Federal court to be tried for not discharging the duties of his trust. The section is in these words:

“If any guardian having the charge and custody of the pension of his ward shall embezzle the same in violation of his trust, or fraudulently convert the same to his own use, he shall be punished by fine not exceeding \$2,000, or imprisonment at hard labor for a term not exceeding five years, or both, at the discretion of the court.

“Is any man deluded enough to suppose that the founders of the republic ever anticipated that this authority would be claimed by the Government or yielded by the States? If, because the money came from the Government as a pension, the Government may follow up and punish the custodian for embezzlement, why may it not for the same reason follow it for all purposes and control the ward, guardian, and fund, to the exclusion of the county courts of the States? If this assumption of authority goes unchallenged, who can tell but that ere long we shall have the General Government, through its judiciary, directing where the ward shall live, how much shall be paid for support, supervising settlements, directing the investment of the fund, and determining who shall inherit upon the death of the ward?

“But, Mr. Speaker, as if not content while a vestige of exclusive jurisdiction remained to the States, Congress in its wild career went further and provided that corporations and individual members of corporations might remove their causes from the State to the Federal court. This change is made by section 640 of the Revised Statutes, which is as follows:

“Any suit commenced in any court other than a circuit or district court of the United States against any corporation other than an banking corporation organized under a law of the United States or against any member thereof, as such member, for any alleged liability of such corporation, or of such member as a member thereof, may be removed, for trial, in the circuit court for the district where such suit is pending, etc.

“This is the law as to corporations organized under the laws of the United States.

“As to corporations organized under the laws of any State, the courts have held that the residence of all of the persons owning or controlling the corporation within the State where the suit is instituted makes no difference. They are still entitled to the removal if the corporation was organized out of the State. Nor will the court hear evidence upon the

question of residence of the individuals composing the corporation.

"We have reached a point where the citizen is almost powerless in a litigated contest with an immense corporation, and yet we give foreign corporations, or those that are not wholly within a single State, an advantage over the resident citizen in the right to remove the cause to a distant court. Without the people, through their representatives, rise in their legal might and check them, I fear that the day is not far distant when individual property and constitutional liberty may both give way in the *unequal* contest. Let us take railroad corporations for an example. They are allowed the full protection of the law along their lines, as is the citizen, which is right. They even have the privilege of charging the resident on the line more per mile for carrying his freight than is charged for carrying freight the full length of the line. But, when the citizen conceives himself aggrieved and sues, he may find himself suddenly carried into the Federal court, to wait for years, and expend much in costs before he gets justice administered. Year after year the people pour out their treasures and build new roads, and year by year larger corporations swallow them up at reduced prices. They never die. If a small road ceases to exist under its charter name, it is only to begin a state of immortality as a branch of a large corporation. Daniel Webster and the Baltimore and Ohio road were in Washington together. The great constitutional lawyer has been gathered to his fathers a quarter of a century, but the corporation which bore him to 'the Monumental City' is yet in its infancy, and only strengthened by the years which have elapsed. When another century shall have passed, and the United States teem with two hundred millions of people, these roads will be more active and powerful than to-day by the increase of commerce from an increase of population.

'Men may come and men may go,
But they flow on for ever.'

"Where is the necessity for extending superior advantages to those so able to take care of themselves and so able to crush out the individual? Let favoritism for them cease. Let those who build or support corporations be placed on an equality before the law with them. Let corporations be subject to the judicial authority of the State where they do business. If there is no conflict between the citizen and the corporation, no injury can result from this course. If there is a conflict, let us give the people an equal chance in that conflict.

"To illustrate the maternal care with which our Federal system hovers over and protects corporations, let us look to the decisions of the courts concerning them. An act was passed by the Legislature of Wisconsin in 1870, providing—

"That any fire-insurance company, association, or partnership, incorporated by or organized under the laws of any other State or the United States, desiring

to transact any such business as aforesaid by any agent or agents in this State, shall first appoint an attorney in this State, on whom process of law can be served, containing an agreement that such company will not remove the suit for trial into the United States Circuit Court or Federal courts, and file in the office of the Secretary of State a written instrument, duly signed and sealed, certifying such appointment, which shall continue until another attorney is substituted.

"This statute being in force, the Home Insurance Company of New York, a corporation organized under the laws of the State of New York, established an agency in Wisconsin, complying with the requirements of the act quoted, and agreeing as follows:

"And said company agrees that suits commenced in the State courts of Wisconsin shall not be removed by the acts of said company into the United States circuit or Federal courts.

"The Supreme Court of the United States, in the case of the Insurance Company *vs.* Moss, 20 Wallace, 445, have held that notwithstanding this State statute, notwithstanding the solemn agreement of the corporation to the contrary, it may remove the suit to the United States court. The same has been held in the case of the Hartford Fire Insurance Company *vs.* Doyle, reported in 3 Central Law Journal, 41.

"It is not my purpose to enter into any argument concerning the soundness of these decisions. It is sufficient for us to know that they stand. They are a barrier over which no State Legislature or State Constitution can pass and take hold of corporations. The people, after years of patient, hopeful, but unavailing forbearance, cry out for relief. There is but one tribunal on earth which can give it to them, and that is the Congress of the United States. I hope that this, their only city of refuge, will not close its gates against them. They ask nothing more than to be placed on an equality before the courts with corporations, and nothing less should be accorded them.

"Congress can not, and should not attempt to, interfere with the rightful and constitutional jurisdiction of the Supreme Court. There are also some classes of cases which are properly triable in the inferior United States courts. But Congress may regulate the jurisdiction and practice of such inferior courts, and should do so to the extent of relieving us of the hardships which the present system entails.

"The evil does not stop with civil causes. Congress has, by various acts which I will not delay the House by reading, given the district and circuit courts of the United States jurisdiction to remove criminal causes thereto, which arise in the State courts against internal-revenue officers and their assistants for offenses committed by them against the State laws. The gentleman from Indiana [Mr. Orth], in a speech delivered here on this subject, defends the right and propriety of the giving of this jurisdiction to the inferior courts of the United States, and says:

"Such jurisdiction of both civil and criminal cases

carries with it as an inseparable incident the laws of the State so far as applicable and necessary, from whose courts such transfer has been made.

"I insist that this is not in harmony with the genius of our institutions; is not consistent with reason or sound policy, and is in direct conflict with the law as decided by the Supreme Court of the United States. In proof of this position I read from the case of the United States *vs.* Hudson and Goodwin, 7 Cranch Reports:

"The powers of the General Government are made up of concessions from the several States. Whatever is not expressly given to the former the latter expressly reserve. The judicial power of the United States is a constituent part of these concessions. That power is to be exercised by courts organized for the purpose, and brought into existence by an effort of the legislative power of the Union. Of all the courts which the United States may under their general powers constitute, one only—the *Supreme Court*—possesses jurisdiction derived immediately from the Constitution, and of which the legislative power can not deprive it. All other courts created by the General Government possess no jurisdiction but what is given them by the power which created them, and can be vested with none but what the power ceded to the General Government will authorize them to confer. . . . The legislative authority of the Union must first make an act a crime, *affix a punishment to it*, and declare the court that shall have jurisdiction of the offense. . . . Certain implied powers must necessarily result to our courts of justice from the nature of their institution, but jurisdiction of crimes against the State is not among these powers. . . . To fine for contempt, etc., . . . are powers which can not be dispensed with in a court; but all exercise of criminal jurisdiction in common-law cases we are of opinion is not within their implied powers.

"This case is cited and approved in the case of *The United States vs. Cooledge et al.*, 1 Wheaton, 415:

"In the case of the United States *vs. Burr*, which arose in the Circuit Court of Virginia in 1807, the Chief-Justice of the United States declared that the laws of the several States could not be regarded as rules of decision in trials for offenses against the United States, because no man could be condemned or prosecuted in the Federal court on a statute law.—*Kent's Commentaries*, I, section 334.

"Further:

"The great difficulty and danger is in leaving it to the courts to say what is an offense against the United States when the law has not sufficiently defined it. The safer course undoubtedly is to confine the jurisdiction in criminal cases to statute offenses duly defined and to cases within the express jurisdiction given by the Constitution.—*Kent's Commentaries*, I, section 341.

"Under these authorities the district and circuit courts of the United States can not convict its officers after their causes are removed, Congress having never made their 'act a crime' or 'affixed a punishment to it.' No such authority can result by mere implication. Life is not taken nor liberty destroyed in any such slipshod way by implication and resultant criminal jurisdiction. And, as these courts have no power to punish, they become merely tribunals to turn loose those who are charged with high crimes.

"I presume it is not the purpose of any one to go back and change the mode of disposing of cases which are founded upon difficulties

that occurred fifteen or twenty years ago. But for offenses committed recently, in times of profound peace, every man should be amenable to the law he has violated and to the tribunal authorized to vindicate that law.

"The gentleman from Indiana [Mr. Orth] also says of a bill now before the House for the restriction of inferior Federal courts:

"But it goes further, and repeals all laws transferring criminal cases from the State to the Federal courts. That would be the effect of the law if passed.

"The same position has been assumed by others who have spoken in opposition to this bill.

"Mr. Speaker, no such consequence flows from the legislation proposed in this Congress. A complete, ay, the best, remedy for the transfer of all causes containing a Federal ingredient, or against parties on account of any act done as officers or representatives of the Government, is left. Section 709 of the Revised Statutes is not touched by the legislation, and provides for a transfer to the highest court in our republic. I send it to the Clerk to be read, that members may see that we are not attempting any inroad upon constitutional rights, nor to leave officers of the Government without an impartial hearing."

The Clerk read as follows:

A final judgment or decree in any suit in the highest court of the State, in which a decision in the suit could be had, where is drawn in question the validity of a treaty or statute of, or an authority exercised under the United States, and the decision is against their validity; or where is drawn in question the validity of a statute of, or an authority exercised under any State, on the ground of their being repugnant to the Constitution, treaties, or laws of the United States, and the decision is in favor of their validity; or where any title, right, privilege, or immunity is claimed under the Constitution, or any treaty or statute of, or commission held or authority exercised under the United States, and the decision is against the title, right, privilege, or immunity specially set up or claimed by either party, under such Constitution, treaty, statute, commission, or authority, may be reexamined and reversed or affirmed in the Supreme Court upon a writ of error. The writ shall have the same effect as if the judgment or decree complained of had been rendered or passed in a court of the United States.

The Supreme Court may reaffirm, reverse, modify, or affirm the judgment or decree of such State court, etc.

Mr. Philips: "And what are the consequences of these changes in the forum of justice? The expense of litigation is increased enormously. The trouble of attending to it is more than doubled. By the process of dividing the suit already mentioned, there are two suits where there should be but one, and they probably hundreds of miles apart, and possibly standing for trial on the same day. Strong corporations and wealthy individuals are able to attend and litigate in these courts, while the poor are not, and are virtually deprived of their legal 'right to a speedy . . . trial,' on account of the crowded state of the dockets and the impossibility of reaching the courts.

"One of the charges our fathers made against

the King of England in the Declaration of Independence was that of 'transporting us beyond seas to be tried for pretended offenses.' We had as well be tried 'beyond seas' as beyond our county, if in both instances we are alike deprived of the power of obtaining justice. The world has heaped anathemas upon the tyrant who placed his laws so high they could not be read. How much more blamable was he for placing his laws out of sight than we are when we place our courts (through which alone the laws can be enforced) out of reach?

"Again, by the present judicial system the citizen may be twice tried for the same offense—once by the State and once by the Government, where the same act is made criminal by the statutes of both. It is true that this grows out of our anomalous dual system of government. But that fact should restrain us from extending the jurisdiction of Federal courts further than is absolutely necessary.

"If there was one feature of our judicial system in the States held more sacred by our forefathers than all others, it was that which secured to parties a trial before an impartial jury of the county or vicinage where the cause of action arose. So sedulous were they in the protection of this right that most of the States ingrafted it into their Constitutions. It is virtually destroyed in the Federal courts. There the juries are taken from remote parts of the State or district, and had almost as well come from a different State, being total strangers to the parties and their surroundings.

"I have already spoken of the great cost to litigants from the administration of justice in the Federal courts. But this is not all; they are immensely costly to the Government. Under Democratic rule, before the changes of which I have spoken, the cost of these courts was only a few hundred thousand dollars a year. Now it is millions, and increasing yearly. Too true is it, as stated by Judge Dillon in his work on the 'Removal of Causes,' that 'the small tide of litigation that formerly flowed in Federal channels has swollen into a mighty stream.' He might have added, 'and that stream threatens to deluge the country with cost, and bear away the dearest privileges of the citizen.'

"There is another great evil which flows from our present judicial practices. Deputy-marshals and their *posses* may go through the States armed, shooting, destroying property, driving off hogs and cattle of the citizens, beating and killing citizens, and when arrested and prosecuted by the State officials they are permitted to file their petitions in the United States district courts and remove their causes thereto, away from those who witnessed the offense and suffered by it. What more? The district attorney and the Attorney-General for the United States are instructed by the Government to appear and defend the criminal and try to turn him loose. The people of the United States thereby pay officials to

defend those who violate law. Is this right? Is it an effort to terrify criminals, or does it tend to encourage crime? I refer to this not as an evil in which the constituents I have the honor to represent are alone interested; for happily for them they have now administering revenue laws in their midst resident officials who are more observant of their rights than non-residents were; but I mention it as a question which affects all of our people alike.

"The tendency to centralization is so ably described in an article recently published by a distinguished citizen of Indiana that I quote his language on the subject:

"The centralizing tendency of our national legislation is dangerous for another reason, namely: It is creating discontent, and poisoning the affections of the people toward the Government, thus weakening the spirit of patriotism, upon which exists the ultimate hope of that Government for its just authority and long-continued existence. The humble citizen who, for some technical violation of law, is arrested and taken two hundred or three hundred miles to be tried in a United States court, and after much delay is, perhaps, mulcted in the trifling sum of ten dollars, and finds that the expenses attending the same have amounted to several hundred more, very likely causing the loss of his home and the impoverishment of his family, is painfully impressed with the idea that injustice has been done him, and he becomes from that moment a disaffected member of society. He sees in such treatment a wrong that for ever after rankles in his bosom, and causes him to look upon the Government as his oppressor and enemy rather than his protector and friend. In vain may you talk to him of the necessity of a strong government. In vain may you explain that her shield covers him as one of her children. In vain may you point to the insignia of her power and the evidence of her wealth and magnificence. In vain may you contrast the splendor of those granite temples which lavishly multiply so rapidly multiplying all over the land for the dispensation of Federal justice, with the modest courthouse of his home, for, to him, what are they all but the domed and turreted mausoleums of expiring liberty?

"Such courts are not the courts for the people. No matter how learned and impartial their judges may be; no matter how pure the ermine with which they are clothed; no matter how exalted the social position which they occupy, they are the creatures of encroaching power, and, like the magnates of the Church of England, are expected to 'magnify their offices.' Their rules are arbitrary and their predilections are in the line of absolutism. They live in the gilded sphere of power and luxurious splendor and their sympathies are not with the homely virtues of the masses. No system that takes the citizen a long distance from his home to be tried for general offenses can ever be satisfactory to a people imbued with a proper spirit of liberty.

"These are words of warning from a man who is of the political party which has been most instrumental in passing these laws. Surely he can not be accused of political bias. I have seen some of the citizens whom I have the honor to represent arrested and carried more than one hundred miles to be tried in a Federal court for a simple misdemeanor. I have seen them required to attend term after term when there was either no case ever made out against them, or so light a case that a mere nominal fine only could properly be im-

posed. But the poor unfortunates were not liberated till weeks of time and all the money they could get was spent. I have seen those dragged a long distance who were so poor they either had to walk or club together and go in wagons, camping out on the road at night. My object in speaking of these individual cases and their hardships is to show the importance of having justice administered near the parties interested. Why, the gentleman from Ohio told us of two cases in his State where parties had to expend in court costs \$300 each in defending themselves against a simple misdemeanor where they were acquitted.

"Mr. Speaker, unfortunately, the story of the aggressions of the Federal court, backed up by Congressional legislation, does not end even here. There is a glorious privilege for which our fathers fought and died—a privilege 'dearer . . . than light and life' to every freeman through whose veins Anglo-Saxon blood flows. It is the right of local self-government through an untrammelled ballot. Sacred as is this franchise—blood-bought though it was—it, too, has been seized by the Federal court and prostrated by the power which Jefferson predicted would be the destruction of our institutions. Section 2012 of the Revised Statutes, passed in 1871, provides for the appointment of supervisors of elections. By section 2017 they are required—

"To personally inspect, from time to time, and at all times, on the day of election, the manner in which the voting is done, and the way and methods in which the poll-books, registry-lists, and tallies or check-books, whether the same are required by any law of the United States, or any State, territorial, or municipal law, are kept.

"Section 2021, also passed in 1871, provides for the appointment of special deputy-marshals.

"Section 2022 provides that—

"The marshal and his general deputies, and such special deputies, shall keep the peace, and support and protect the supervisors of election in the discharge of their duties, preserve order at such places of registration and at such polls, prevent fraudulent registration and fraudulent voting thereat, or fraudulent conduct on the part of any officer of election, and immediately, either at the place of registration or polling-place, or elsewhere, and either before or after registering or voting, to arrest and take into custody, *with or without process*, any person who commits, or attempts or offers to commit, any of the acts or offenses prohibited herein, or who commits any offense against the laws of the United States, etc.

"Thus it will be seen that a deputy-marshal appointed by a United States court is sent into States to control elections there. He is made the judge of the qualifications of voters and of their good or bad intentions in voting. With no higher process than the policeman's club, he may arrest and carry away from the ballot-box an American freeman about to engage in the exercise of the highest political privilege ever bestowed on man.

"Can these things be and our liberties last? Can they continue and we be other than slaves?

Unfortunately, they can not. They are the handwritings upon the wall which require neither a prophet nor the son of a prophet to interpret, and which tell us that our republican institutions are in danger.

"Under what plea have all these wrongs been perpetrated? What excuse is given for this subversion of the grand system devised and bequeathed to us by the founders of the republic? It is the same plea under which Napoleon I tore down the Republic and built up the Empire of France. It is the same excuse given by Napoleon III for destroying the liberties of his people and placing upon them monarchy. It is the same under which ambitious men and tyrants have worked from the downfall of the first republic to the establishment of the last despotism. 'Necessity for a strong government.' What is the necessity for a stronger government than we have? It is already, when considered in all its bearings, the most powerful upon which the sun shines. It resisted successfully, when much weaker than it is to-day, the greatest shock to which any free government was ever subjected—far greater than can menace it now. When our unfortunate civil war came and scattered the States of the Union, this mighty republic was strong enough to gather them up, replace them in their orbits, and move on the brightest constellation in the firmament of nations. And all of this without the *post-bellum* legislation which I have mentioned. This cry of 'necessity for strong government' is only a subterfuge. It is the cloak under which are working those who are not content with our form of government. Let us meet it by constitutional methods, but firmly, as becomes men. Let us not, after the lightnings of heaven have yielded to our philosophy, permit the temptations of earth to seduce our patriotism.

"The maelstrom on the coast of Norway is the most celebrated whirlpool of the world. Over an area of more than one hundred and twenty-five square miles the circling flood sweeps. It is known now to be very dangerous to navigation, and according to ancient mariners whatever came within the compass of this monster of nature—whether ship or shark, whether whale or whaler—was drawn into the vortex, hurled to the center, and dashed to destruction by the whirling flood.

"When the student of history looks out on Time's broad ocean, he sees a political maelstrom more dire, more destructive, than that on Norway's stormy coast. It has circled since the first republic rose, and has wrecked and borne down all the free commonwealths of ancient times by drawing them to centralization, despotism, and ruin.

'Its doom is like the Dead Sea air,
And nothing lives that enters there.'

"There may be seen the wrecks of Rome, of Greece. Strong as they were when they started toward centralized despotism, they were as powerless to resist as is the straw to

resist the tornado which impels it. Had the proud Roman been asked whether his country's liberties would not be thrown away, he would have replied indignantly: 'No; they are to be perpetual.' Yet the pretorian guards, standing upon the ramparts of 'the Eternal City,' 'with a loud voice proclaimed that the Roman world was to be disposed of to the best bidder by public auction,' and it was done. Didius Julianus became the purchaser, and was thereby made emperor, and mankind were shocked to see the 'mistress of the world' bought, paid for, and controlled by the money of one selfish, scheming, ambitious man. The Appian Way now no longer resounds with the shouts of victorious Roman freemen, and the soft-voiced Italian has sung his sad song in misery and chains in the 'City of the Cæsars.'

"Had the Greek been asked how long his freedom would last, he would have replied with the same infatuation which seems to have seized us, 'For ever!' And yet the matrons who raised up sons for the state, and sent them forth commanding them to 'return bearing their shields or borne on them,' have been succeeded by the groveling tenants of the harem, and slavish degenerate sons have succeeded free and noble sires all over the land of Leonidas and Lyncurgus. Let us take warning by their sad fate, and not permit ourselves to be drifted into this focus of centralized despotism and destruction either by Congressional mal-legislation or by judicial construction.

Mr. Robinson, of Massachusetts: "We have considered this one point thus far, how the business of the court will be diminished by the removal of this one provision from the act. Is there a demand we shall go further? Is there a demand that we shall have no United States courts that shall adjudicate upon the rights of parties, citizens of different States? I think not. Events are so fresh and so powerful in their instruction that it will not be found in this House that it has a standing here, that we are to dismiss the national power—dismiss the national courts and ignore their usefulness. We want to maintain them. We are here to-day with a Union more strongly cemented than ever before, and destined to be perpetual. That Union is not by the agreement of the States, but by the decree of the people of this great country, renewed, ratified, sanctified in the blood of the war. That is accomplished, and with the United States court everywhere in this land I shall look in vain to find any gentleman rise and say he would banish them or shear them of their power. Nay, the lesson of the legislation in the last Congress and in this teaches us volumes as to the opinion of the people and the legislators here assembled. Why, in the Forty-fifth Congress we passed bills securing joint action, giving additional facilities in the United States courts, establishing new courts, making new districts, and divisions of districts—in how many States? Why,

in Colorado, the District of Columbia, Florida, Indiana, Kansas, Michigan, Missouri, Nebraska, North Carolina, Ohio, and West Virginia. That in the Forty-fifth Congress. What is the record in the Forty-sixth? Gentlemen have only to consult the files of the House. Go to the Committee on the Judiciary and you will find there bills in the same direction for Ohio, Indiana, Louisiana, Iowa, Mississippi, Tennessee, Illinois, South Carolina, Texas, Kentucky, North Carolina, Missouri, New York, and Kansas. Does that legislation show that the people tire of the pressure of the national power and the authority of the Federal courts? While I would not divulge the secrets of the consultation of the committee-room, yet I feel that I may say to this House that, in the discussions and testimony before us in regard to the establishment of a circuit court in a certain State in this Union, it appeared that the people wanted the United States court there because they had more confidence in it than they had in their State courts. And I say further, so that the credit may go where it is due, that this was in one of the Southern States of this Union.

"I like that evidence. That is very gratifying. With this legislation accomplished and proposed and with that feeling prevailing I receive any such expression as that with cordiality. Let us have, then, this recognition of the United States power, and let us see to it that we do not here strive to strip it of its authority."

The amendment of Mr. Culberson was agreed to.

Some other less important amendments were made, and the bill passed the House—yeas 162, nays 74, not voting 56. It made no progress in the Senate.

In the House, on February 4th, Mr. Morton, of New York, called up the following joint resolution from the Committee on Foreign Affairs:

"Whereas, all civilized nations take part in the international fishery exhibition to be held in the city of Berlin, Germany, in April, 1880, it is deemed both right and expedient that the prominent and effective action of the United States in the line of the artificial propagation of fish and the stocking of depleted fishing waters should be conspicuously and well exhibited on the occasion: therefore,

Resolved, etc., That, to enable the United States Commissioner of Fish and Fisheries to exhibit America in Berlin in April, 1880, a fair and full collection of the different specimens of American food-fishes, casts thereof, models of, and implements, etc., used in the prosecution of American fisheries, the sum of \$20,000 is hereby appropriated, out of any moneys not otherwise appropriated in the Treasury of the United States, or so much thereof as may be necessary for the purpose, to be immediately available on the passage of this resolution.

SECTION 2. That the United States Commissioner of Fish and Fisheries be, and is hereby, authorized to represent the United States, either in person or by a deputy to be appointed by the President of the United States; and that, at his discretion, he may use any portion of the collections at present forming part of

the National Museum in making up the proposed exhibition by the United States.

SEC. 3. That the United States Commissioner of Fish and Fisheries be, and is hereby, instructed to present to Congress, through the Department of State, a report upon the Berlin Exhibition, showing the recent progress and present condition of the fisheries and of fish culture in foreign countries.

Mr. Morton: "Mr. Chairman, at first glance a proposition to expend money on an international fishery exhibition at Berlin is likely to be viewed with indifference. This indifference to our fisheries and to these exhibitions has existed for years, and was never more manifest than now.

"Other countries do not look upon fisheries as we do. One of these international exhibitions was held at Bergen, Norway, in 1865, at which the fish of all the great countries and many of the lesser ones were well represented. Insignificant Bavaria sent 69 contributions; Great Britain, 174; Sweden, 368; and Holland, 435. How many came from this country? One! Another exhibition was held in France in 1866, and our fish were not presented at all.

"The French Government has given so much material aid to this business of fish-culture that nearly all her waste waters have been turned into nests for the propagation of fish. One of the earliest and most extensive establishments for the culture of fish is that erected by France at Huningen, which went into operation in 1852, and in six months had artificially fecundated three million eggs and produced sixteen hundred thousand living fish.

"In view of the possibilities of our shores, our measureless streams, and our inland seas, we should lead all nations in the world in availing ourselves of every item of information on a subject of such importance to our people and their industries. The annual value of salmon alone in Ireland is now about \$2,500,000, while in this country it averages from thirty to forty cents a pound. The oyster-beds in Virginia alone cover an area of about seventeen hundred thousand acres, containing about eight hundred millions of bushels. The following are a few figures showing the comparative production and consumption of fish by the leading nations in the world:

COUNTRIES.	Annual product.	Annual consumption.
Norway	\$13,600,000	\$1,000,000
France	12,307,000	9,845,756
United States	8,598,000	8,777,000
Great Britain	7,803,500	9,423,000
Russia	5,745,000	8,659,000

"The United States exported in 1874 about twenty-two hundred thousand dollars worth.

"It appears from this statement that in 1874 Norway and France, each smaller than some of our States, produced respectively one-third more fish than the United States. In 1862 the tonnage of American ships engaged in the sea-fisheries amounted to 204,197, in 1874 it had fallen to 78,290 tons.

"In the report of the United States Fish Commissioner for 1877 there is a description of a fish of most excellent quality found on the American coast. It existed in great numbers, and yet was unknown to our fishermen—for the reason that they were not acquainted with the apparatus of European fishermen. This should teach us how important it is for us to be familiar with those improvements and methods which prevail in the Old World.

"In the fish-trade in 1865, Norway had a balance of trade in her favor of \$12,588,975. Why was this? Because she resorted to fish production as it is proposed the United States should do. In this connection the United States Fish Commissioner again says:

"Norway is the only European nation that has a scientific commission occupied officially in the supervision of the fisheries, and in devising methods by which they may be carried on and extended with the least possible waste. To the labors and observation of such men as Dr. Boeck, Professor Sars, and others, is due much of the present efficiency of the Norwegian fisheries.

"Mr. Chairman, I now call attention to some of the results which have been achieved by the United States Fish Commission since its creation in 1872, in respect to which it is safe to assert that the United States is in advance of foreign nations in the methods and machinery of the fisheries; in the use of better equipped vessels, some steam and some under sail, a large fleet being now employed continually on the coast and off the coast; in the use of greatly improved means of taking fish, especially the replacing of the hook and line by means of labor-saving nets, and particularly by the purse-seine, by which a thousand barrels of fish are frequently taken at one haul, instead of depending upon the capture of the fish one at a time.

"In catching mackerel, the United States first used a line with a baited hook dragged along the surface of the water, the vessel being under sail. Sometimes the baited hook was sent below the surface, the vessel being either under gentle sail or anchored. Here only such fish were taken as happened to be in the vicinity of the vessel. Next, the vessel was anchored or hove to, and the mackerel brought up to the boat by means of a lure consisting of finely-chopped fish, thrown overboard, thus attracting the schools from a distance sometimes of several miles. Next, seines or nets of various forms of construction were introduced, and last of all the purse-seines for fishing in deep water were employed, which surrounded the fish and captured an entire school at one operation. The use of similar seines in connection with specially constructed steamers, in the capture of the moss-bunker or menhaden and the conversion of the fish into valuable oil and manure in costly establishments, either floating or on shore, is peculiar to the United States.

"Another peculiar American feature in the capture of sea-fish is the use of the so-called dory, a boat from sixteen to twenty-two feet in length, and much lighter and more secure at

sea, and superior in every way to any boat used in Europe. Applications are being constantly received by the Commissioner for models, drawings, and descriptions of this boat.

"The original methods of fish-culture consisted in allowing the natural current of water, as that from a spring or hydrant, to pass through wooden troughs, having on the bottom a layer of gravel, among which the eggs were placed; this essentially represents to this day the inventive genius of Europe. The next mode was in anchoring the trawls in a river so as to get the natural flow of the water instead of depending upon springs or hydrants. This, as at first applied by Seth Green, rendered the hatching of shad practicable on a large scale.

"Again, advancing on its own method of having the eggs in actual layers and trays, the United States devised the method of placing the eggs in large vessels of a conical shape, and allowing the water to come in at the bottom and flow over at the top, by which means enormous numbers can be hatched on a given area. Such is the apparatus used to a considerable extent by the United States at its salmon-hatching establishments in Maine and California. As the result, with a very small force of operatives, as many as fifteen millions of eggs have been treated in a single season on the Sacramento River hatchery—a product much more than that of all the salmon-hatching establishments, public and private, in Europe combined.

"The funnel apparatus was next placed by the United States Commission on floating scows, so that the water used in developing the eggs could be drawn directly from the subjacent river where they were anchored. With this was combined a form of buckets filled with eggs and plunged up and down in the water continually by means of steam-power. The success of the method of the use of scows led to the construction of a large steamer especially fitted for this purpose and nearly ready for us, by which the amount of work of previous seasons can be increased many fold.

"The efforts of Europe in the artificial propagation of fish have been confined chiefly to the treatment of different species of salmon, trout, and white-fish, and this by the rude methods first indicated—all breeding in fresh water. The United States Fish Commission first conceived the idea and made the experiments of artificial impregnation of and hatching the eggs of the various sea-fishes, which require a totally different treatment from the eggs of fresh-water species, the latter sinking to the bottom of the water, while the former float on the surface. Experiments were prosecuted in the harbor of Gloucester in the hatching of eggs of the cod, during the winters of 1878-'79, which, after many failures, resulted in entire success. The steamer referred to is an essential factor in the work contemplated for the future, being capable of producing hundreds of millions of young fish in a single season.

"The hatching of cod, mackerel, halibut, sea-herring, and indeed any of the fish of our coast, with the exception of the blue-fish and menhaden (which do not spawn at a time when they can be reached), becomes perfectly practicable. Not only can the old off-shore and other grounds be increased in their productiveness, but new stations can be established. It is especially anticipated that productive cod-fisheries can be developed as far south as the Chesapeake Bay or even Cape Hatteras, thus giving lucrative occupation to a large class of the community in the winter season, when the cod would be on the coast and when other fishing would be intermitted. The benefit to the people of the South in this increase of a supply of cheap fish-food during the winter will of course be readily appreciated. The fitful appearance and disappearance of mackerel on the American coast can also, in a great measure, be regulated.

"It is hoped to transfer the general seat of the cod and of the mackerel fisheries from the distant Banks and the Gulf of St. Lawrence to the coast of the United States, thus settling some very serious international fishery questions, and making the American cod-fisheries especially similar to those of Norway, where twenty-five thousand men are employed for four months of the year in fishing in open boats, going out in the morning and returning at night.

"The European nations, especially the Germans and Norwegians, have been kept advised of the success of the United States Fish Commission in the hatching of various species of sea-fishes, through the public papers, but no reports of the commission have appeared later than that for 1877; they are without the detailed information desired, most of the discoveries having been made in 1878 and 1879.

"European nations are aware that all the more recent improvements in the hatching of fish, both fresh-water and marine, have been developed by the United States Commission, and especially by Mr. T. B. Ferguson, the assistant commissioner. The agents of the North German Lloyd's have offered to carry the exhibits of the United States at half rates, and have asked permission of the director of the company in Bremen to take them free of any expense whatever.

"These results show the advantages which have already accrued from the action of Congress in enabling this country to profit by the discoveries and experiences of European nations in the culture of fish."

The joint resolution was adopted in the House—yeas 169, nays 70, not voting 54. It was passed in the Senate and approved by the President.

In the House, on February 24th, the following communication was received:

To the House of Representatives:

I transmit herewith a communication from the Attorney-General with reference to the requisite appropriation for the current fiscal year for the compensation

of the marshals of the United States, including their reimbursement for necessary expenditures in the discharge of their official duties. R. B. HAYES.

EXECUTIVE MANSION, February 24, 1880.

The Speaker: "The communication will be referred to the Committee on Appropriations."

Mr. White: "And printed."

Mr. Conger: "Let the accompanying paper be read."

The Clerk read as follows:

DEPARTMENT OF JUSTICE,
WASHINGTON, February 20, 1880. }

SIR: I desire respectfully to call your attention to the subject of the appropriation for the current fiscal year for the fees and expenditures of the marshals of the United States in the performance of the duties of their offices.

The last Congress, and the present Congress at its first session, adjourned without making any appropriation for these officers. In my annual report I have fully stated to the Senate and House of Representatives the condition in which they were left by this failure. Since the 1st of July last they have carried on their offices without any appropriation, and have not only been without compensation for themselves and their deputies, but have advanced the sums necessary to be expended in order that the process of the United States might not fail, having fulfilled substantially all their official duties. I am informed from many of them that they have now reached the limit of their capacity thus to conduct their offices, and a failure by them in the administration of their offices is necessarily a failure to execute the laws of the United States, which in such case would occur by reason of the want of suitable appropriations. I need not enumerate the vast number of cases in which such failure would be attended with grave results, disastrous in some cases to individuals and in others to the public justice of the United States. Nearly eight months of the current fiscal year have now elapsed. I feel that these officers are entitled to great credit for the exertions they have heretofore made. I have no doubt they will continue to do their best; but, in view of the heavy pressure upon them, I trust that Congress will, as soon as possible, show them that the confidence they have felt that the appropriation would be made for their legitimate fees and expenditures has not been misplaced.

As the head of the Department of Justice, I have felt it my duty to inform you of the condition in which these officers now find themselves, and the consequent effects to be anticipated in the administration of public justice, in order that you may, should you deem it proper, communicate with Congress upon the subject, and urge upon that body, with as much earnestness as it may properly be done, a prompt disposition of this matter.

Very respectfully, your obedient servant,
CHARLES DEVENS, Attorney-General.

To the PRESIDENT.

In the House, on March 12th, the Appropriation Bill was considered.

Mr. McMahon, of Ohio, said: "Mr. Chairman, members will have observed from the reading of the bill that the appropriations it contains are for the current fiscal year only—that this bill is not the general bill which usually comes in at the close of a session to clear up all deficiencies for the past and present fiscal years.

"In this bill the appropriation for the marshals is modified in its language, and differs slightly from the bill as originally presented to the House. The clause in the present bill reads as follows:

"For the payment of the fees and expenses of United States marshals and their general deputies earned during the fiscal year ending June 30, 1880, \$600,000.

"Gentlemen will observe the language—'general deputies.' The bill contains nowhere any appropriation for special deputy-marshals. I call attention to this fact for the benefit of gentlemen on both sides of the House. The Committee on Appropriations thought it advisable to appropriate money for the general purposes of the courts and the prosecution of crimes only. We do not in this bill appropriate any money for special deputy-marshals; and I doubt whether the Democratic party ever will appropriate any money for such special deputies so long as the law stands in its present shape. It will be observed that the committee has confined itself to appropriation merely, and has ingrafted no legislation or words of exclusion. It has, however, failed or refused to appropriate any sum for special deputies.

"Special deputy-marshals are appointed only for Congressional elections and only upon the occasion of such elections. They are creatures unknown to the law except when appointed for an election for Representatives about to take place. The last Congress adjourned without making any appropriation for special deputy-marshals; indeed, it adjourned without making appropriation for any of the fees of marshals, because of a disagreement between the different departments of the Government. Of course the marshals and their general deputies attended to the business of the country without the appropriation, because the marshals of the United States and their general deputies do not derive their chief compensation out of the \$600,000 which we appropriate to them in this bill. They are paid out of fees in admiralty cases and the other civil suits in which the United States Government is not a party. The United States marshals, therefore, continued to perform their duties, serving writs, warrants for private individuals, and for the Government of the United States; looking to Congress to reimburse them for the expenses which they might incur in serving writs, etc., for the United States Government. This was an ordinary, legitimate service, which was never in dispute. And every one is ready to make this amount available for their use at as early a day as possible.

"But, Mr. Chairman, while it was proper for the marshals of the United States to attend to the general business of the country, being already in office and having many duties to perform, it was not proper for any officer of this Government to appoint special deputy-marshals when no appropriation had been made for that specific purpose, and when, on the contrary, all the appropriations for marshals had failed because Congress was unwilling to vote a dollar for special deputies, the President insisting upon the absence of certain restrictive

clauses in the bill containing such appropriations.

"I desire to say to gentlemen on both sides of the House that I have now no letter and know of none to offer to Congress from any officer of the Government stating we owe special deputy-marshals in California anything. Indeed, I do not suppose the Attorney-General would take the responsibility of saying that we did owe United States special deputy-marshals any particular sum of money in the absence of appropriations, because the law is very explicit on the statute-book that no department of the Government has the power to incur an obligation in the absence of an appropriation for that purpose. The law was laid down distinctly by Attorney-General Williams in regard to the printing of postal-cards when no appropriation had been made for that purpose. The President of the United States confirmed the doctrine in a message which he sent to this House in the month of June, 1876; and the Secretary of the Treasury, in an executive document which I have before me, says expressly there is no power to incur any obligation on the part of the Government unless money has been appropriated for that special purpose. Therefore, although we know by report, by telegraph, and possibly by official letters in response to inquiry to the Attorney-General, that we had seventy-six hundred dollars' worth of special deputy-marshals in the State of California at the late election in that State without knowing how many; yet they are not in a shape to claim any relief at the hands of this Government, and, in my judgment, they have long since been paid by the Republican Central Committee. Any proposition to amend this bill by inserting \$7,600 would be simply a proposition for the relief of the Republican Central Committee.

"It is a private debt when certain gentlemen are put, as they have been, upon public duty for which no appropriation has been made, and are told if the Government does not pay them the private purse would. I know no public officer who has a right to create that debt on the part of the Government; the proposition is as plain as that two and two make four, that if any debt exists it is the debt of the Republican Central Committee, and can not, in law, be the debt or obligation of the country. No department can incur an obligation in the absence of an appropriation (except in the Army and Navy), and no public officer will take the responsibility of saying that we owe (in its proper sense) any one in such a case.

"Now, special deputy-marshals are entitled, if properly appointed and there is an appropriation for them, to five dollars a day. General deputies are entitled to the ordinary fees which are specified in the statute. A general deputy-marshall is entitled to be present at elections under the election law (if it be regarded as constitutional), but he is entitled to no compensation for being present. The compensation of

five dollars a day is confined expressly to special deputy-marshals. A general deputy-marshall has no fees even for arresting a man without process on election-day, for there are no such fees allowed. The supposition is that there is always a warrant, an attachment, or process of some kind or other. Of course, if he seizes a man who violates the law in his presence, he may be entitled to the ordinary fifty cents for the commitment of the prisoner. He may be entitled to ordinary fees for attending before a United States commissioner. But these are fees to which he would be entitled if he held a warrant, and are incurred in the ordinary course of judicial proceedings.

"But the Committee on Appropriations thought, so far as their duty extended, that all they could do and all they were willing to do, in view especially of the recent decision of the Supreme Court, was this: that the general deputies' ordinary fees should be paid, but the extraordinary fees of the special deputy-marshals should not, because no appropriation had ever been made for that purpose, and their employment was not authorized and created no obligation.

"There can not be two sides, Mr. Chairman, to the question of law that, whether a law is constitutional or not, we have the right to determine how much shall be appropriated under it, especially where no amount is fixed. For example, if a public building needs \$500,000 to complete it, Congress may say that in the present state of the Treasury, or in the present state of other advanced work, we will give nothing—yet the building ought to be completed; or we will give \$50,000—yet that may not be enough; or we will give \$100,000—and that may not be enough. By committing to the House power to appropriate, the right is absolutely left in the House to determine whether it will appropriate for a certain purpose and how much it will appropriate.

"Of course I understand, as a legislator, that upon us rests the burden of refusing to carry out a law or refusing to carry it out properly. That is a responsibility we must take. We always have taken it, and I hope we always will without fear.

"And I desire to say that because the Supreme Court of the United States has decided that the election law is constitutional by a sort of eight-by-seven decision—and I mean by that a division apparently according to party lines (without impugning the good faith of any member of the Supreme Court, but to show how differently a legal question may appear to persons who have been educated in different political schools)—that although that court has decided the constitutionality of the law, that when we come, as legislators, to appropriate money it is our duty to say, Is this law constitutional? or, if constitutional, is it a good law, and are we bound to appropriate money for it? Beyond that, we have a right to determine whether the exigency for any appropriation exists, or wheth-

er any obligation exists on the part of the Government for past services, or whether in the next fiscal year the country really needs money for this purpose."

Mr. Hawley, of Connecticut: "Mr. Chairman, I am glad the House has decided to take up this bill. It contains some twenty-seven items supplying deficiencies in the service, and they are all, in the judgment of the Appropriations Committee, in which I as a member most heartily concur, immediately indispensable to the service. To pass the bill is a work of necessity, I might say of mercy; that is to say, I speak of the bill as reported from the committee."

"The proposed section for the payment of marshals is to pay the marshals and their *general* deputies. We have a bill pending before the House, reported, I believe, from the committee, proposing to devote \$600,000 to the marshals and their general deputies, and containing a proviso forbidding the use of any of this money for the payment of expenses under the national election laws. I understand it is proposed to drop the latter clause; but, nevertheless, by retaining the term '*general*' the same effect is reached. None of the money can be appropriated for the payment of expenses incurred under the general election laws save as marshals or general deputies may have been engaged, and most of the marshals so employed are special marshals. Therefore, dropping the prohibitory proviso is nearly immaterial so far as the practical effect is concerned."

"It appears, therefore, Mr. Chairman, that at the very first opportunity the Democratic majority of this House renews the tactics that compelled the long, excited, and expensive extra session of last summer. And it does not appear thus far that the Democratic party has learned anything from the debates of that session or from the public opinion of the country. The leaders seem determined to prove all that was charged against the party."

"I propose very briefly to review this practice of tacking or of attaching political legislation to appropriation bills. The attempt was made to justify this by reference to the history of Great Britain. There can be found precedents in that history previous to 1688, when Great Britain was engaged in a great political revolution. Since 1688 it has not been British practice. And since 1710 there has been an absolute rule of the House of Lords prohibiting it. It is regarded there as revolutionary and destructive of the rights of the House of Lords, barring that House from a free expression of its opinion upon bills of supply."

"It is sought to justify it by reference to precedents in the legislation of Congress while it was under Republican control. That can not be done, in my opinion; because while the Republicans, when they had a majority of both Houses, and the President, also, on their side, were in the very bad habit at times of putting

general legislation on appropriation bills, it had not the effect then of thumb-screwing the Executive. And when some of the most illustrious examples of this bad habit occurred they had a two-thirds vote in both Houses, and it was therefore, as far as compelling the Executive was concerned, a mere matter of form; they could pass the bill, whether he approved or disapproved."

"The practice, however, is not justifiable because Republicans were at times guilty of it. The only example furnished by Republicans, which is in reality applicable to the present discussion, is that occurring during the great Kansas agitation, when they proposed to forbid the use of the army in Kansas to enforce certain wicked legislation. In that instance the Republicans, having brought about an extra session and come to a serious consideration of the subject, abandoned the attempt, being satisfied that they were wrong in proposing to coerce the Government in that way; and among the protests against tacking, against thumb-screwing legislation, there are none more logical and impressive than those made by eminent Democratic Senators."

"The judgment of the country is against this. The history of constitutional legislation is against it. Some of the States of the Union condemned it as early as 1776. In their first Constitutions they emphatically condemned it, and for the very reasons that we are in the habit of assigning on this side. As time passed, Constitution after Constitution has been so altered as to prevent it. Twenty-eight of the State Constitutions rendered it impossible by a variety of provisions, but a great many of them containing this simple rule: 'Bills shall contain but one subject, which shall be distinctly described in the title.' Other Constitutions permit the Executive to veto some while approving other sections of appropriation bills. And, when the Confederates came to adopt a constitution, they took the existing Constitution of the United States with certain modifications. Among the modifications which their veteran politicians and legislators thought it necessary to make are clauses that rendered it utterly impossible to do what the Democratic party of this House is seeking to do here to-day. We have the history of the State Constitutions, the general progress of constitutional legislation in the country, the judgment of the Houses of Congress before this agitation in repeated instances, and what I am sure will weigh strongly with some gentlemen, and which weighs somewhat with all, the thoughtful action of the Confederate Convention considering the defects of the Federal Constitution."

"Under this policy of the Democratic party there can be nothing like deliberate legislation. The work becomes a farce; we are not free to vote as we please; bills become a patchwork of general and political legislation and appropriations; the freedom of voting becomes the

freedom of one subject to the highway robber, subject to the black-mailer, subject to the torture of inquisition. The call of the roll in a sense brings with it an insult, because it asks me to vote upon brass and clay, and silver and gold, all mingled in one image. No legislative body has a right to bring a member to that emergency.

"Now, as to the provision concerning the marshals, of which I hope I shall speak still more briefly. The Committee on Appropriations decided to make it an independent bill, which was rightly done. It is now proposed to put it on this appropriation bill, which is wrongly done. There is due marshals and special deputies in California some \$7,500 for labor under the election laws. The supervisors of elections are paid out of the Treasury under a permanent statute. This is not a matter of discretion with us, whether or not we will incur indebtedness of this sort. While the statute stands, any two reputable citizens applying to the marshal have the right to demand that special deputies be appointed, and the marshal is imperatively directed by law to appoint those special deputies, whose very wise and proper duties are very carefully pointed out in the statute, and whose compensation is fixed. The indebtedness, therefore, may be incurred at any time by the marshal and two reputable citizens, without waiting for a specific appropriation. To refuse to pay it is to refuse to pay a lawful debt of the United States, and that is what is proposed in this instance.

"The gentleman from Ohio [Mr. McMahon], of the Committee on Appropriations, says that the majority of this House will appropriate nothing for special deputies, supervisors, or anything of that sort, and will not do so while the election law exists. I call upon this House and upon the country to properly stigmatize the character of that declaration. If the majority had in the first place brought before us a bill repealing or modifying the election laws, I could listen with more charity. I hold it to be their first duty, before adopting this policy, even if they are ever justifiable in doing so, to show us how far they desire to modify the election laws, or whether they desire to entirely repeal them. They have not done that. In fact, by leaving in some of the appropriation bills provisions relating to supervisors, last summer, they admitted the propriety of the law, or at least they declined to put themselves in square opposition to it by supporting a bill repealing it.

"It appears, then, that they declare positively that they will not afford the necessary means for executing laws which they do not like. Now General Grant's doctrine is very much better; that the best way to bring about the repeal of an obnoxious law is to enforce it. I do not say that in some great revolutionary crisis Congress might not declare that it would not appropriate money to carry out existing law. But if it be the deliberate judgment of

the Democracy that the laws protecting elections are of the description that justify revolutionary measures, I shall be glad to have the declaration frankly made, so that the country may understand it.

"The Constitution of the United States provides very clearly that

"The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators. —Article I, section 4.

"Now, the construction of that section of the Constitution was very well understood in the Constitutional Convention. It was very thoroughly debated and defended by Mr. Madison, and other eminent gentlemen, on the exact ground that it is indispensable to the Government of the United States that it should have the power to protect the people in electing members of that Government.

"It has been claimed that this power is to be exercised by Congress only in cases where the States have failed or neglected to provide for proper Congressional elections. That point was made also in the Constitutional Convention, and it was there overruled. When the State Conventions came to consider the new Constitution they were to some extent dissatisfied with this provision; and in six of those conventions the point was again raised, and an amendment to the Constitution was proposed, providing that Congress should not legislate on this subject of elections except in cases where the States had failed to legislate.

"These proposed amendments came before the first Congress of the United States under the Constitution. They were deliberately debated in that Congress; Mr. Madison renewed his own arguments made in the Constitutional Convention. A proposition to submit to the State Legislatures an amendment giving to Article I, section 4, the construction described was voted down by 23 yeas to 28 nays; and the attempt has never been renewed.

"The Constitutional Convention, the State Conventions, and the first Congress under the Constitution understood that subject precisely as the Republican party to-day understands it. Since that time the legislation of Congress has been in accordance therewith. Some of the States were in the habit of electing their Congressional delegates in gross—by general ticket. Congress provided that Representatives should be elected by single districts. The States were in the habit of electing Representatives at different times; Congress provided that Representatives should all be elected on the Tuesday after the first Monday of November. The States were in the habit of electing their Senators at different times and in various ways, and with such irregularities that the people sometimes remained unrepresented in the Senate for long periods, and serious dissensions arose.

"The Congress of the United States provid-

ed in minute detail for the election of Senators of the United States, going into the State Legislatures and prescribing the duties of clerks and presiding officers and members, commanding them to assemble at a certain hour in the day—twelve o'clock—and vote *viva voce* for a Senator; to assemble in joint convention the next day at twelve o'clock and read the distinct record of the ballot in each House; directing them, in case the record showed disagreement, to vote jointly and *viva voce*, and directing that in case they made no choice they should meet in joint convention day after day at twelve o'clock till they had made a choice. It is impossible, therefore, that Congress could have shown any more clearly its understanding of that section and of the right and duty of Congress to supremely regulate the election of Congressmen. And what it can 'regulate' it can protect.

"The Democracy now say that an election law passed by Congress in direct, clear, incontrovertible execution of that section shall not be carried out, and they propose to put what is equivalent to that into this little deficiency bill—a work of necessity and mercy, as I have called it. I am obliged to say that this is a part of the general hostility manifested by a large body of people in this country to Federal power—just and constitutional Federal power of every description—hostility to the army, hostility to the Executive, hostility to the Supreme Court, hostility to the protection of Federal officers by Federal courts while they are executing Federal laws, hostility to any attempt on the part of the General Government to protect the rights of the people in the sacred duty of voting."

Mr. Singleton, of Mississippi: "This bill is not one of our regular appropriation bills. It is what is termed a deficiency bill, a bill to add something to the amount already granted for carrying on the business of the several departments of the Government. And while, Mr. Chairman, bills of this character are regarded by me with great disfavor, the necessity for them growing, as it frequently does, out of the extravagant and unnecessary expenditure of money in these several departments above and beyond that set apart for their use, yet candor compels me to admit that this is not always the case, but that sometimes the necessity for a deficiency bill comes of the fact that Congress has failed to make, at the proper time, sufficient appropriations, and at other times out of circumstances which are unforeseen, and which, as a matter of course, are not provided for in the general appropriation bills.

"Such is the case to a certain extent in regard to the two largest items mentioned in this bill. The six-hundred-thousand-dollar item which it is asked shall be appropriated for the payment of marshals and their regular deputies grows out of the fact that, at the last session of Congress, there was a failure to appropriate for this purpose. The circumstances under

which that failure occurred I do not propose to discuss to-day. The history of the matter is familiar not only to the members of this House but to the whole country. It will be remembered that Congress put on the bill a rider which provided that no part of the \$600,000 which we were ready to appropriate should be used for the purpose of paying special deputies who were to supervise elections, as we on this side believed, in the interest of the Republican party.

"The President was not willing to receive the \$600,000 which we offered him upon the conditions we saw fit to prescribe, and the consequence was that, the President having vetoed the bill, we adjourned without making that appropriation. Now the Committee on Appropriations comes forward and presents a bill proposing to appropriate \$600,000 for the marshals and their regular deputies, without any condition annexed; but gentlemen on the other side of the House, if I understand their purposes, propose to amend the bill and put upon it a provision for the payment of the special deputy-marshals. And the argument is that the law authorizing the employment of these special deputies having been declared constitutional by the Supreme Court of the United States, therefore we should make haste and appropriate money for their payment, and that an amendment should be put on this bill to that end.

"While I admit, the law having been declared constitutional by the Supreme Court of the United States, Congress has no right to resist it, and while in the future it may be deemed right and proper to make appropriations for these special deputy-marshals, I hold that there is no duty imposed upon us requiring that we hasten into the presence as it were of said court with heads uncovered and feet unshod, saying: 'May it please your honors we are ready to do your bidding; to appropriate this money, and to postpone other important business.' These special deputy-marshals are *functus officio*. They are no longer in office, and there is no special necessity for haste in this matter. We want some time to deliberate on it. It may be that we can couple some other provisions with the act making this appropriation which will save us from the presence and dictation of these pimps and spies hereafter, and therefore we ask that you accept the \$600,000 we tender in good faith, and that you do not delay the passage of this bill by any offer on your part to put upon it an amendment such as is contemplated.

"It is true the Supreme Court of the United States has decided the case. Its connection with it has ceased; it can deal with it no further. It is, then, a matter purely for the consideration of Congress, whether it make that appropriation to-day, or whether it will make it at some future day, or whether it will make it at all.

"It may be the pleasure of this House to

amend the bill according to the views of gentlemen on the other side, and make the appropriation in this bill; but if it does not, then no injustice has been done, because the same question will come up some other time during the session when we can all discuss it and vote upon it according to our respective views. We say, therefore, you had better take the \$600,000 that is offered you in good faith and not undertake to encumber this bill with amendments. The purpose of the bill, not being a general but a special deficiency bill, is to meet cases of emergency. This is the view that the Committee on Appropriations has taken, and delay in passing the bill will undoubtedly work great detriment to individuals as well as to the Government. But no such argument can be made with regard to these special deputies, and the question in reference to their payment can be determined at any time hereafter. It is not urgent at this time."

Mr. Baker, of Indiana: "It has been argued that the legislation embodied in the Revised Statutes touching elections is unconstitutional on two grounds: first, because the Constitution does not prescribe the qualifications of electors, and hence that there are no national voters; and, second, because Congress has not the constitutional power to establish a system for the conduct of elections for Representatives. It must be conceded that if Congress has the power to *make or alter all the regulations touching Congressional elections*, it must have the power to enact these provisions of the statute in controversy, as the greater includes the less. It will be my purpose to show that Congress possesses the power, whenever it chooses to exert it, to provide an entire electoral system for Representatives.

"Under the Articles of Confederation the States had sole jurisdiction over the appointment of Representatives. They had the power, which was exerted by one of the States, to refuse to send Representatives to the Continental Congress. This was one of the seeds of dissolution existing under the confederacy which the framers of the Constitution undertook to remove. They undertook to form a more perfect Union, to establish a government of the people having within itself the power to perpetuate its own existence. They provided for the choice of Representatives by the people every two years, and prescribed who should be eligible as electors. The Constitution provides, in Article I, section 2:

"The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

"This provision fixes definitely who are electors, and their qualifications. The several States have prescribed the qualifications of electors for the most numerous branch of their State Legislatures. They have thus invested certain persons with the right of suffrage for

certain State purposes, while this right is denied to the residue of the people. But, being made voters for State purposes, the Federal Constitution expressly invests them with other electoral rights of a national character, namely, the right to vote for Federal Representatives. Now, if the persons who are made voters by State Constitutions and laws possessed the right by being voters in the State to vote for Representatives in Congress, then the framers of the Constitution are chargeable with folly in prescribing who should be electors for Representatives. If the fathers had not thought this provision of the Constitution conferred some new and additional right, what folly to place it in the Constitution! That the framers of the Constitution considered it important to provide who should be voters for Representatives in Congress is apparent from the language employed in No. LII of the 'Federalist':

"The definition of the right of suffrage is very justly regarded as a fundamental article of republican government. It was incumbent on the Convention, therefore, to *define and establish* this right in the Constitution. To have left it open for the occasional regulation of Congress would have been improper for the reason just mentioned. To have submitted it to the legislative discretion of the States would have been improper for the same reason, that it would have rendered too dependent on the State governments that branch of the Federal Government which ought to be dependent on the people alone.

"Of what use would it be to 'define and establish the right of suffrage,' if Congress can not protect the voter in its enjoyment?

"The Federal Constitution having secured to the electors in the several States the right to vote for Representatives, Congress must have the power to guarantee and protect this right. The States are not required to enact laws and provide tribunals to enforce the rights conferred by and existing only under the Federal Constitution. The State governments are provided to protect and enforce State rights; while the Federal Government is established to protect national rights. But, if it was a duty incumbent on the States to guarantee to each of its citizens the enjoyment of every right conferred by the Federal Constitution, still Congress would possess no method of compelling the States to secure this constitutional right to vote against denial or abridgment. It is contrary to sound principle to remit to the States the protection and enforcement of rights conferred by the Federal Constitution. It was upon this very rock that the Articles of Confederation so nearly made shipwreck of the Union. And, notwithstanding the perils and solemn warnings of the past, the State-rights Democrats of to-day would impel the nation on the same fatal rock. If Congress can not guarantee and protect the citizen in the free and peaceable enjoyment of his constitutional right to vote, then the right is a mere glittering generality, dependent for its enjoyment upon the interests or passions of

the party leaders controlling the States. Such is the modern doctrine of State rights—a doctrine which strikes a fatal blow at the power and supremacy of the nation. When the people of this country consent to surrender to the States the enforcement and protection of rights secured to them by the Federal Constitution, the dissolution of the Union can not be long postponed. Those lately engaged in armed rebellion and their sympathizers are now employing the delusive cry of centralization to blind the people to the fatal tendency of the new State-rights conspiracy. The triumph of these doctrines under the specious guise of State rights and local self-government would be fatal alike to liberty and union. But the power of Congress to enact laws to protect and guarantee the rights secured by the Constitution is delegated to it expressly:

“The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

“These are not the only provisions of the Constitution conferring upon Congress the power to guarantee and protect the citizen in his right to vote for Representatives. The first clause of section 4, Article I, of the Constitution confers this power. We copy it:

“The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at *any time* by law make or alter such regulations, except as to the places of choosing Senators.

“It has been strenuously argued that Congress can not make or alter the regulations touching the times, places, and manner of conducting elections unless the States fail or refuse to make appropriate regulations therefor. This claim is shown to be indispensable both by the debates in convention on this clause of the Constitution and by the express language of the clause itself. The words ‘Congress may at any time by law make or alter regulations’ touching the conduct of elections for Representatives are too clear and comprehensive to admit of doubt or debate. The power may be asserted by Congress at any time. Doubtless it was not contemplated that the power would be exerted by Congress unless an emergency arose which seemed to demand it. But Congress alone was made the judge at the time when and the extent to which it would legislate on this subject—whether it would provide exclusively for the election of Representatives, or exert only a portion of its power, leaving to the States a partial control of the elections.”

Mr. Ward, of Ohio: “My colleague [Mr. McMahon], in his speech opening the discussion upon this bill, made the announcement in substance, and it remains uncontradicted and not protested against by any one on his side of the House, first, that ‘we have not hitherto made, do not in this bill, and will not in any future bill, make any appropriation whatever

for supervisors or special deputy-marshals, so far as they have to do with Congressional elections.’ He asserts that it was not proper for any officer of the Government to appoint special deputy-marshals when no appropriation had been made for that specific purpose.

“Then further on he declares—I quote from his printed speech:

“And I desire to say that because the Supreme Court of the United States has decided that the election law is constitutional by a sort of eight-by-seven decision—and I mean by that a division apparently according to party lines (without impugning the good faith of any member of the Supreme Court, but to show how differently a legal question may appear to persons who have been educated in different political schools)—that although that court has decided the constitutionality of the law, that when we come, as legislators, to appropriate money, it is our duty to say, Is this law constitutional? or, if constitutional, is it a good law, and are we bound to appropriate money for it?”

“He undertakes, as will be seen, to throw contempt on that decision by styling it ‘a sort of eight-by-seven decision.’ I remind him that it is a seven-to-two decision, having been adopted by a larger number of the members of the court than the majority of the decisions of that tribunal. It is a decision of a broad, sweeping character, and declares that Congress may take the whole control of Congressional elections, or a partial control, as they choose; that the election law as it stands on the national statute-book is the supreme law of the land on that subject.

“More than that: the Supreme Court, not only in this case, but in another recent case, has made a declaration which ought to be engraven upon the minds and hearts of all the people of this country. And this is its substance:

“That a law of Congress interpenetrates and becomes a part of every law of every State of this Union to which its subject-matter is applicable, and is binding upon all people and covers every foot of our soil.

“This is the voice of the Constitution. Now, therefore, under this decision the election laws of the United States are the laws of every State of this Union. No judge of election, no State officer or other person connected with any Congressional election, no elector who offers his ballot at any such election can, with impunity, lift his hand or do any act against any of the provisions of these laws. They rest down upon Congressional elections in every State like the ‘casing air,’ broad and general, protecting with their dignity every act and penetrating with their authority every function of Congressional elections. They are the supreme law of the land on that subject.

“But now a Representative, speaking for the Democratic party in this House, rises, not with the plea which he could have made with some show of plausibility last year, that the law is unconstitutional, and that therefore they would not enforce it—but, with a constitutional law, declared so by the Supreme Court, covering him and filling the republic from end to end, reaching everywhere and covering every foot

of our soil where a Congressional election can be held—he rises in his place and declares that the Democratic party will not execute that law nor permit it to be obeyed.

“We who are the sworn law-makers of the nation, and ought to be examples of respect for and obedience to the law—we who, before we took our first step in legislation, swore before God and our country that we would support the supreme law of the land—we are now invited to become conspicuous leaders in the violation of the law. My colleague announces his purpose to break the law, and invites Congress to follow him in his assault upon it.

“Mr. Chairman, by far the most formidable danger that threatens the republic to-day is the spirit of law-breaking which shows itself in many turbulent and alarming manifestations. The people of the Pacific coast, after two years of wrestling with communism in the city of San Francisco, have finally grappled with this lawless spirit, and the leader of it was yesterday sentenced to penal servitude as a violator of the law. But what can we say to Dennis Kearney and his associates, if to-day we announce ourselves the foremost law-breakers of the country and set an example to all the turbulent and vicious elements of disorder to follow us?

“My colleague [Mr. McMahon] tries to shield his violation of the law behind a section of the statutes which provides that no disbursing or other officer shall make any contract involving the expenditure of money beyond what is appropriated for the purpose. I answer that I hold in my hand a later law, a later statute, which governs the restrictive law of which he speaks, which governs him and governs the courts. It is the election law itself.

“I invite attention briefly to its substance. Sections 2011 and 2012 of the Revised Statutes provide that upon the application of any two citizens of any city of more than twenty thousand inhabitants to have a national election guarded and scrutinized, the judge of the circuit court of the United States shall hold his court open during the ten days preceding the election. The law commands the judge of the court to do so.

“In the open court from day to day, and from time to time, the judge shall appoint, and, under the seal of the court, shall commission two citizens of different political parties who are voters within the precinct where they reside, to be supervisors of the election. That law is mandatory upon the judge. Should he refuse to obey, he can be impeached of high crimes and misdemeanors in office. He must not stop to inquire whether an appropriation has been made to pay these supervisors. The rights of citizens are involved, and upon their application the judge must act.

“Again, section 2021 provides that on the application of two citizens the marshal of the United States shall appoint special deputy-marshals to protect the supervisors in the execu-

tion of their duty. And the law is mandatory upon the marshal. He must obey it, under the pains and penalties of the law. What then? When the supervisors and special deputy-marshals have been appointed, they find their duties plainly prescribed in the law. And then section 5521 provides that, if they neglect or refuse to perform fully all these duties enjoined upon them, they are liable to fine and imprisonment. They can not excuse their neglect by saying, ‘We will not act because Congress has not appropriated the money to pay us.’ All these officers are confronted by the imperial command of the law—first to the judge and marshal to appoint, then to the supervisor and deputy-marshal to act, and to act under the pains and penalties of fine and imprisonment. Impeachment enforces the obedience of the judge; fine and imprisonment the obedience of the supervisors and deputy-marshals.

“Now comes one other mandatory order: in the last section of this long chapter of legislation, the majestic command of the law is addressed both to Congress and the Treasury. It declares that there ‘shall be paid’ out of the Treasury five dollars per day to these officers as compensation for their services. Here too the law is equally imperious and mandatory; it addresses itself to the conscience of every member of this House, with only this difference: we can not be impeached for disobedience; we can not be fined or locked up in the penitentiary for voting ‘no,’ and refusing the appropriation; we can not be fined or imprisoned if we refuse to do our duty. And so, shielded by the immunity of his privilege as a Representative, my colleague sets the example to all officers and all people of deliberately and with clear-sighted purpose violating the law of the land.

“Thus he seeks to nullify the law. Thus he, hopes to thwart the nation’s ‘collected will.’”

Mr. McMahon: “I wish in all good faith to ask my colleague from Ohio [Mr. Garfield], who has read us all, and me particularly, a lecture, why it is that, on every political proposition upon which he undertakes to alarm the country and lecture the Democratic party, we find that in the past he advocated the very propositions we now make and pursued the very course which he now pretends so much to reprobate? Why is it? Will my colleague look to the history of the Republican party in the country, and particularly in the State of Ohio, with its long record of nullification on the question of the Dred Scott decision and the fugitive-slave law? Gentlemen on the other side are amused. Why? Do they object to my reference to those days? Is it because the Republican party was then only in its infancy, and that it pleads minority for what it did then? In those days actual resistance to the enforcement of the law was one of the cardinal points of the majority of the Republican party, a policy we have never advocated, nor practiced, nor endorsed.

“Or, do gentlemen claim that the great pub-

lie men of their party in that day were unsound statesmen, dangerous to the country and enemies to the Government? The judgment of an impartial public would be to-day in favor of the Republican leaders of twenty years ago in preference to those of to-day.

"When the record of gentlemen has been so different in the past from their present position, on the questions of the effect of decisions of the Supreme Court, the supremacy of Federal law, and riders to appropriation bills, are we to look upon them as reformed statesmen? Does my colleague desire to appear in that rôle? Has my colleague seen the error of his ways? Has he become convinced that in those days he and his party were wrong? Are you willing, gentlemen, to admit that to the country now? Or are we to draw the proper conclusion that you can change your side as the necessities and emergencies of party demand? In 1860 the Republican party was as powerful, as strong, as brainy, as full of great leaders, and as intent upon great purposes as it ever was in the history of this country; indeed, more so; for it had not then been debauched as it has been since by the unlimited possession of power; it had not been corrupted by the handling of millions or rather of thousands of millions of the public money without accountability except to itself. It was then a party for the equal rights of men; a party which a man might well respect, although he might not agree with it in its aims and purposes. In those days one of the corner-stones of the party was placed in the Chicago platform of 1860:

"That the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of powers on which the perfection and endurance of our political fabric depend; and we denounce the lawless invasion by armed force of the soil of any State or Territory, no matter under what pretext, as among the gravest of crimes.

"A similar enunciation of doctrine to-day, by any Democrat, would be denounced as hatred of the Federal Union and hostility to the Federal Government. Will you admit that in 1860 you were for the rights of the States because you possessed a majority of the State governments, and were not in possession of the Federal Government? Do you admit that you were wrong then but right now? I leave gentlemen to decide that before the American people. A party which can maintain both sides of the same important question, with equal vigor, depending only upon where its party interests may temporarily lie, is not well qualified for the position of monitor to any other party, nor are its teachings deserving of the attention of a serious people.

"Mr. Chairman, the ingenuity with which our friends on the other side evade the discussion of all economical questions that look to the real interests of the people is remarkable. When the Belknap investigation was first ordered, the cry went all over the country that

the 'rebel brigadiers' were assailing an honest Union soldier who had helped to put the rebellion down; and, although he was proved to have been guilty beyond all controversy, Republicans did all in their power to protect him. This is only one instance in the past. When we have now under discussion the question of how much money shall be appropriated for the Printing-Office—because the Public Printer has violated law in using up in eight months an appropriation intended for the whole fiscal year—when we discover that the appropriations for that department, if voted as the demands of the office now require, will make an increased expenditure of \$400,000 over former years, when charges of extravagance, inattention to public interests, squandering of the people's money are made, how are we met? Why, the gentleman from Ohio [Mr. Garfield] rises, and, in his dilettant way, says he will not waste any time on the discussion of the Printing-Office. That seems to him to be only a matter of a few hundred thousand dollars to the American people! I suppose, in view of the history of his party, he considers such a deficiency a very small matter. Perhaps it is. But it is the mission of the Democratic party at this time—and for that reason it has been kept in power—to look into the expenditure of the money of the people, no matter how small, and save wherever we can, no matter how small the sum may be.

"This purpose of the Democratic party to economize expenditures and expose the extravagance of the Administration can not be evaded by side issues. It does gentlemen no good to undertake at this late day to flaunt the bloody shirt before the American people. It might do, Mr. Chairman, in the days when our people were distressed, when men were out of employment, when there was no work to do, when our manufacturing establishments were stopped, when every interest and industry in the country was paralyzed, as the result of the policy of the party of gentlemen on the other side. But now if men are out of employment it is simply because the exigency of the occasion authorizes them to demand an increase of 10 or 20 per cent. over the wages of hard times. I say to gentlemen on the other side, when they come before the American people with that same worn-out, tattered, faded, bloody shirt, they mistake the temper of the American people. They will find that the people will put the seal of condemnation on that party which inaugurates these sectional discussions, tending to disturb the business of the country and to increase discord between the two sections.

"The business of the country demands quiet, and the people will have peace. Who teach the rising generation that they should hate their fellow-countrymen? If you put into the hands of the boys of our day the speeches of Republican politicians, they are taught that their natural enemies lie in the South, and the seeds of future civil wars are planted by design-

ing politicians for a mere temporary party advantage. Is this statesmanlike? Is this taking a broad view of the present needs of our country? Is it patriotic to foment divisions at home, to perpetuate sectional hatred, to weaken our country by intestine quarrels?

"Oh, I wish there was a statesman upon the other side? I hope gentlemen will permit me to finish my sentence. I know that we are all apt to imagine ourselves to be statesmen, and therefore gentlemen rebel when I seem to take away the right from any of them. I was going to qualify my statement, if gentlemen had given me time. There are statesmen on the other side of the House. I am not disputing that proposition, either as to my friend from Maine, or my colleague from Ohio. I was about to say to you what kind of statesmen I wish you had on the Republican side. I wish you had a statesman who was able to rise above fomenting all this petty political strife between the North and the South. I wish you had a statesman who would wave the banner of peace, as the President did, for a while, until resistance in his own party became too powerful. I wish there was one who could overlook the past and let this country prepare itself for the great difficulties through which it may have to pass in the next few years. They are difficulties growing out of our increasing greatness.

"What must the people and the rulers of other countries think when they see our so-called leaders, or those who claim to be such, endeavoring to keep alive sectional hate? If the people of this country want to learn any lesson rapidly it is that we are becoming not only the great power on this continent but a standing menace to the world. The success of our free institutions is a constant argument against the despotism of the Old World. Our products, our commerce, and our manufactures have almost brought Great Britain to her knees. Do you think, Mr. Chairman, that this can long be the case without forcing some combination against us? And is our country to be benefited by the appearance of division at home? Are we likely to have continued peace if we proclaim to foreign nations that we are divided; that one half of our people are against the Government; that there is no peace between the North and the South, even though the war has been over for fifteen years?

"A party that foment and proclaims these internal divisions and troubles, and asserts that one half of this country means to overthrow this Government, only invites an attack which some day sooner or later will come from the combined forces of foreign governments. In what position will we then be? Read the reports of your Government officers, and they will tell you that in Boston Harbor there is not a single gun which can keep out the iron-clads of Europe; that the harbor of New York is in the same condition; that there is not a harbor in the United States into which the iron-clads of Great Britain, of France, and of

Spain can not go and take possession of your cities.

"In the midst of these possible dangers, in the midst of the prosperity of our country, in the midst of the increase of business, in the midst of a desire on the part of the people to bury all sectional issues, when we ought to be shouting paeans for our prosperity, and uniting in common energy that nothing shall retard it, the Republican politician comes to the front with his shouts of hatred to the South, his denunciation of the Democratic party as an enemy to the country, as intending to seize the Government by force, if not duly elected by the people; and, as proof of his assertion and the propriety of his hate, he points to the remarkable fact that his pet special deputy-marshals of elections who controlled the polls in San Francisco are not to be paid the \$7,600 which is said to be due them.

"The attempt to unsettle the confidence of the people is atrocious. If successful it would paralyze business everywhere. And the pretense that the Democratic party intends to seize upon the Government under all circumstances comes with a bad grace from a party which robbed us once of our rights and seems disposed to do so again. Our submission to law is proved by the peaceful inauguration as President of one who was not actually chosen by the people.

"Now, sir, there is nothing in this bill which in any way prevents the full execution of the election laws to their fullest extent; nothing to prevent general deputy-marshals from doing duty at the polls; nothing to prevent a United States marshal from appointing as many general deputy-marshals as he pleases at any future election, or to prevent the marshals or their general deputies from arresting on election-day as many persons as they please and carrying them before commissioners where they can be tried. How, then, do we nullify these laws? We simply say that we will not give \$7,600 to pay your special deputy-marshals in California, because you had no authority to appoint them when no money was appropriated for that purpose.

"Now, I want to say to the gentleman again that the fact that the Supreme Court of the United States has decided a particular law to be constitutional is no reason why Congress shall be denounced as a nullifier because it fails to appropriate money under that particular law. What did the Supreme Court decide? Merely that the election laws are constitutional; that it was within the ordinary power of Congress to pass such laws? Did the Supreme Court decide that they were good laws? Did it decide that it is the duty of Congress to appropriate money to carry them out? Did the court decide that they are laws which ought to be carried out? By no means. I call for the reading of anything in the Supreme Court decision putting any obligation upon us in regard to that matter.

"I want to go a little further. My colleague says that we ought to appropriate money for this purpose in the future. It would not be proper on this bill; but, if it was, how much? Five thousand dollars? Gentlemen will say that is not enough, and we are nullifiers still. Ten thousand dollars? They will say that is not enough, and we are still nullifiers. Twenty thousand dollars? They will say that is not enough, and we are nullifiers in spite of the amount voted. The fact is, we are always to be called nullifiers unless we meet the views of the Republican party.

"Congress, Mr. Chairman, holds it in its own power to say for what purposes it will appropriate the public money. We are the judges; the Constitution leaves it with us only. It would be very foolish for us to appropriate money for an unconstitutional law, because in attempting to carry it out the country would be involved in confusion. But there are plenty of laws upon the statute-book that are constitutional, for which Congress fails as a matter of fact to appropriate money. Now, I do not speak for the Democratic party and have not spoken for that party, having no authority to do so; but I repeat what I said before, that I doubt whether the Democratic party ever will vote to pay five dollars a day to special deputy-marshals so long as the law stands in its present shape."

Mr. Springer, of Illinois: "On behalf of the Committee on Elections I now offer the amendment of which notice has been given."

The amendment was read, as follows:

Amend the amendment by adding thereto the following:

For special deputy-marshals of elections, the sum of \$7,600: *Provided*, That hereafter special deputy-marshals of elections, and general deputy-marshals, for performing any duties in reference to any election, shall receive the sum of two dollars per day in full for their compensation; and that all appointments of such special deputy-marshals or of general deputy-marshals having any duty to perform in respect to any election shall be made by the judge of the circuit court of the United States for the district in which such marshals are to perform their duties, or by the district judge, in the absence of the circuit judge, and not less than two nor more than three appointments shall be made for any voting precinct where such appointments are required to be made, and the persons so appointed shall be of different political parties, of good character, and able to read and write the English language, and shall be well-known residents of the voting precinct in which their duties are to be performed.

Mr. Finley: "Now, I desire to say, in the five minutes that I have, a few words in reference to the marshals employed in the last Presidential election. In that election there were employed 11,615 special deputy-marshals, of which number 10,874 were placed in Democratic precincts, as shown by the report of the Attorney-General.

"Now, I want to say that I am in favor of this amendment, protesting as I always have and always will against the appointment of these special marshals as a partisan outrage; pro-

testing against a law that has been used and abused constantly for partisan purposes. I will vote for the amendment of the gentleman from Illinois, for the reason that it is a step in the direction for protecting ourselves from the outrages which we are powerless to prevent in these appointments. When I look into the report of the Attorney-General and analyze it in connection with testimony relating to the kind of men used in those precincts for partisan purposes, I feel inclined to do anything that I can by my voice and vote to procure a fair election at the polls and to procure relief from the political bummers appointed by the Republican party and paid out of the Federal Treasury.

"Now, under the amendment of the gentleman from Illinois, there can be a mitigation of that kind of outrage in this: that instead of five hundred or six hundred Republican marshals, appointed at the polls, as in some cases—for instance, one precinct in Georgia had one hundred and three, one in Missouri had several hundred—instead of that number paid out of the Federal Treasury, every one of them a Republican and a partisan, we can under the amendment of the gentleman from Illinois have a decent number of decent people to attend to the duties."

Mr. Garfield offered the following amendment as a substitute:

For special deputy-marshals of elections, the sum of \$7,600: *Provided*, That hereafter special deputy-marshals of elections and general deputy-marshals, for performing any duties in reference to any election, shall receive the sum of five dollars per day in full for their compensation; and that all appointments of such special deputy-marshals or of general deputy-marshals having any duty to perform in respect to any election shall be made by the judge of the circuit court of the United States for the district in which such marshals are to perform their duties, or by the district judge in the absence of the circuit judge; said special deputies to be appointed in equal numbers from the different political parties.

Mr. Garfield: "I modify the substitute further by striking out the words 'and general deputy-marshals,' as the amendment ought to relate to special deputies only."

Mr. Simonton, of Tennessee, offered an amendment to the substitute of Mr. Garfield, as follows:

Strike out "§5" and insert "§2"; and after the word "judge" insert:

And not less than two nor more than three appointments shall be made for any voting precinct where appointments are required to be made; and the persons so appointed shall be of different political parties; and, if there are more than two political parties having tickets to be voted for, no two of said deputy-marshals shall be appointed from the same party. And the persons so appointed shall be persons of good character, able to read and write the English language, and shall be well-known residents of the voting precinct in which their duties are to be performed.

The committee divided; and the tellers reported—yeas 117, nays 114.

So the amendment to the amendment was agreed to.

The Chairman: "The Clerk will report the substitute as it would read if amended."

The Clerk read as follows:

For special deputy-marshals of elections, the sum of \$7,600: *Provided*, That hereafter special deputy-marshals of elections, for performing any duties in reference to any election, shall receive the sum of five dollars per day in full for their compensation; and that all appointments of such special deputy-marshals having any duty to perform in respect to any election shall be made by the judge of the circuit court of the United States for the district in which such marshals are to perform their duties, or by the district judge of the district in the absence of the circuit judge.

And not less than two nor more than three appointments shall be made for any voting precinct where such appointments are required to be made; and the persons so appointed shall be of different political parties; and, if there are more than two political parties having tickets to be voted for, no two of said deputy-marshals shall be appointed from the same party. And the persons so appointed shall be persons of good character, able to read and write the English language, and shall be well-known residents of the voting precinct in which their duties are to be performed; said special deputies to be appointed in equal numbers from the different political parties.

Mr. Springer: "Is the question pending on my amendment to the amendment of the gentleman from Ohio as amended?"

The Chairman: "It is; and the gentleman from Tennessee has been recognized to discuss the amendment."

Mr. Simonton: "Mr. Chairman, I trust the substitute as amended by my amendment will be incorporated in the bill and become the law of the land."

"Sir, I regard the Federal election laws as hurtful and dangerous, though they have been declared constitutional by the proper tribunal. It is not every constitutional measure that is wise or beneficial or worthy to remain on the statute-book. The election laws are, in my judgment, dangerous innovations on the system of government our fathers gave us; they are calculated in their nature to and do disarrange and destroy the nicely adjusted balance of power between the States and the Federal Government. These election laws are violative of all the honored precedents of this country in the matter of elections for nearly a century. And, as they stand now, they confer on the Administration and its partisans a power to control elections, and consequently to perpetuate its reign indefinitely, that is simply monstrous, and it seems to me a wonder that a free people, alive to the dangers that threaten their liberties, permit them to remain on the statute-book a single day un repealed."

"Indeed, the Representatives of this House, who are the exponents of the popular will of the republic, since the 18th of last March have repeatedly passed an act repealing these election laws, placing the elections back just where our fathers put them, under the guardianship and protection of the people and local authorities, where a long experience has shown to be the safest and most sacred place, freest from frauds and corruptions; but these acts, thus repealing the election laws, have uniformly met the Executive veto, and the will of the

people thus voiced in legislative acts has again and again been annulled. The Republican party, that has contended for keeping on the statute-book these unholy laws, has not dared to do so without expressing a willingness to correct some of their worst deformities. From the President down they have professed a willingness to amend and alter, so as to deprive them of what even they must admit to be unfair and dangerous operations. I desire, for one, to put these professions to the test of sincerity. And, besides, it is always wise and prudent to modify and make less objectionable and less dangerous that which we can not remove altogether. If an apple were in my keeping that I could not rid myself of, and yet I might remove the worst of its reeking and offensive corruption and deodorize the remainder, it would be folly not to do so. And, although I would most gladly remove entirely the dangerous power conferred in these Federal election laws by repealing them outright, since we can not do this, as past experience has shown, I shall vote to cut off as much of this dangerous power as I can and shield as far as I may be able the ballot-box and the purity of elections from the power of corrupt and debauched partisans, and from the absolute control of a party and an Administration whose past history shows them to be reckless and defiant, and unscrupulous of the methods and means by which they retain possession of power."

Mr. Whitthorne, of Tennessee: "Mr. Chairman, I would like to have the attention of the House, and particularly of my Democratic colleagues, upon this proposition. I shall vote for the pending proposition, and in doing so do not concede or mean to concede anything from the position I have heretofore held of the right of Congress, the representatives of the people, to withhold appropriations to the execution of laws they believe to be either unconstitutional, unwise, or unjust."

"But, Mr. Chairman, the attention of my Democratic friends for one moment. We find these laws upon the statute-books. If they are not modified, the administrators of the Republican party in the coming Presidential and Congressional elections can appoint *ad infinitum* deputy-marshals throughout the country. And in doing so, if we believe that they will use them for partisan advantage or for partisan purposes, they can so conduct the election as to secure a majority of the next House, and by securing that majority provide payment for all the marshals and deputy-marshals they may choose to appoint. That brings me to a practical question, and I say here in looking forward now at this moment to the responsibility which may rest upon me and every member of this House during the months of January and February next, when we shall determine who has been fairly, legally, and constitutionally elected President of the United States, and when the distinguished, if I may call him the conservative, member of the Republican party [Mr. Garfield] comes

forward and tenders to the House a compromise on this question, and that compromise, as we have amended it, provides that we shall have a fair and impartial election next November—I say we owe it to ourselves and to the country, its peace and future harmony, to accept the modification and enact it into a law, and let us have under it a peaceful and impartial election. In doing so, we abandon no principle, but govern ourselves by the practical difficulties which we find in our way.

“Mr. Chairman, I have been taught by the logic of events if nothing else; I have been taught in this country that for remedying vicious legislation there are but two appeals under the laws and the Constitution. The first is an appeal to the courts of the country, and the second is an appeal to the ballot-box. Grant, if you please, the courts have declared the law to be constitutional. We have our reserved rights of withholding appropriations, as the representatives of the people, as the remedy. We have, second, the ballot-box to which we can appeal. Take good care—I appeal to the lovers of the country—take good care that we have a fair, impartial election, and I stand here in view of my responsibility and my position as a representative of the people, and say that whoever is elected, fairly and impartially elected, shall be inaugurated by my vote, come from whatever quarter he may. That is all I ask. That is all that should be granted.”

Mr. Springer: “The question pending is on the amendment of the gentleman from Tennessee.”

The committee divided; and there were—yeas 93, nays 15.

So the amendment to the amendment was agreed to.

Mr. Randall, of Pennsylvania (the Speaker): “We are ready to meet that issue. We say that if special deputy-marshals are to be used at elections, whatever may be the opinion as to the constitutionality of such a law, those officers should be divided between the two or three political parties contending at such election. We say that when we come to vote the money to carry out such law we will not vote it to be used for any partisan purposes.

“And in endeavoring to modify that law here to-day we do no more than to ask that it shall be made to exercise its powers upon all alike, and that those who administer the law shall be drawn from the great body of the people, without reference to party associations or affiliations.”

Mr. Garfield, of Ohio: “We are equals here, each having rights equal to every other, and nobody having any authority to bind any but himself. With that preface, I will speak for myself.

“The first object which I try to keep before my mind in legislation is, to be right. And on this question of the election laws, during the long and heated session of debate last summer, in which all sorts of accusations were made

against them by gentlemen on the other side, there was made but one lodgment in my mind of a just criticism upon them. There was one charge made by the other side, and in so far as it was true I consider it a just objection to the law. It was that the law had been used, or was capable of being used, to fill election precincts with men of one party whose time might be employed at the public expense for party electioneering purposes.

“I say in so far as that law can be so used, to that extent it is unjust; and at all times and on all proper occasions I have declared, and I now declare myself, willing to modify the law so that the alleged abuse can not take place. That I say for myself, and will continue to say it. No other valid objection to this law was, in my judgment, made by anybody during the last session of this Congress or since.

“Now, what has happened? In the first place, on this side we objected and do still object, with entire unanimity, to riders on appropriation bills.

“We did all in our power to prevent any rider; but the rider was ruled in order. What then? I hold it always to be my duty to help make a pending measure as decent and harmless as possible, and then we can and doubtless will vote against its final adoption because it is a rider. Yesterday, distinctly disclaiming the right to speak for anybody but myself, I offered a substitute for the proposed amendment, by providing that the special deputy-marshals having their fair pay at five dollars a day should be appointed by the courts, and equally from the political parties, so as to prevent the only evil that could be justly complained of. I will vote to substitute that for the pending proposition, if I vote alone on either or both sides of the House.

“But what has been done? Gentlemen on the other side not only did not accept my substitute but voted it down, and substituted for it a proposition containing these provisions: First, that the compensation of these deputy-marshals shall be cut down to two dollars a day; second, that there shall never be more than three of them in any one election precinct; and, third, that they shall not be employed more than three days, even though the registration under the law of the State lasts ten days. Now, what does this mean? It means that under the pretense of enforcing the election law for scrutinizing and guarding the polls, though there may be a thousand rioters around the polls seeking to break up the election, yet there shall be but three men empowered to keep the peace of the United States against the mob. In other words, the pending amendment proposes to make this law a notice in advance to the mob to come and overwhelm the keepers of the peace and make hell, rather than order, reign and rule at our national elections. If this were a part of the best bill in the world, I would not vote for it, because it cuts the vitals out of the law and makes its enforcement an impossibility.

"But, if you will take the naked proposition that I offered, I will vote for it as a substitute, if I vote alone. I will vote for it as a betterment of the pending amendment, though I say again that it is not proper to put it on an appropriation bill; it is altogether improper. But when an amendment is pending I will vote for the betterment of it. I did not offer my substitute as a compromise. On the question of what I believe just and right I make no compromise anywhere; but I do believe that it strengthens the election law to free it from every ground of charge that it is partisan or can be used for merely partisan purposes. I want the law to insure, so far as law can do it, fair, honest, and peaceable elections, and I want it for no other purpose."

Mr. McLane: "As was said by the gentleman from Pennsylvania [Mr. Randall], the issue in this debate has very much narrowed. There is now no longer any such question at issue as was made by the gentleman from Connecticut [Mr. Hawley], distinguishing between the original bill and a rider to an appropriation bill. The subject before the committee for consideration is the appropriation bill, and the amendment of the gentleman from Ohio, on my right, is an amendment to this appropriation bill. It is, therefore, the appropriation bill prepared, reported, and perfected in pursuance of the rules of this House, and the gentleman from Ohio has well explained, whatever might be his opinion as to the propriety of legislating in this manner, he felt it to be his duty to make the proposition embraced in the bill as reasonable as he could."

"Now, whatever may be the differences of opinion here, however unwilling some gentlemen on this side of the House may be to accept these supervisors and marshals and deputy-marshals under these election laws, or however resolute may be the determination of gentlemen on that side to admit of no amendment at all to these laws as they now exist, or to agree to any compromise whatever on this question, and however much compromise may be repelled and despised by gentlemen on that side, the issue is, nevertheless, a compromise as it is presented in the pending amendment. And as the gentleman from Ohio [Mr. Garfield] on his side is willing to take the marshals in equal numbers from the parties engaged at the polls, so the gentleman from Ohio [Mr. Ewing] on this side has avowed his willingness to accept such an arrangement and such an adjustment, and the other gentleman from Ohio on this side, who reported the bill [Mr. McMahon], concurs in the same view of the question."

"I, for one, do not feel I subordinate in any degree my opposition to the election laws as a whole as well as in detail, if I also take that compromise. I recognize perfectly well that the law has been adjudicated to be a constitutional law, and I am perfectly at liberty to think of the court as the gentleman from New York thinks of the court, yet it is not less my duty to respect the mandate of the court and accept

its adjudication of questions arising under these laws, whether it be a bad court or not, whether it be a court entitled to my confidence and respect or not."

Mr. McMahon: "I propose an amendment to strike out all after the appropriation of \$7,600, and insert the following:

"Strike out all after '\$7,600' and insert:

"Provided, That hereafter special deputy-marshals of elections for performing any duties in reference to any election shall receive the sum of five dollars per day in full for their compensation; and that all appointments of such special deputy-marshals shall be made by the judge of the circuit court of the United States for the district in which such marshals are to perform their duties, or by the district judge in the absence of the circuit judge; said special deputies to be appointed in equal numbers from the different political parties."

The question was taken; and the amendment to the substitute was agreed to upon a division—yeas 106, nays 53.

The Chairman: "The question is now upon the substitute as amended."

Mr. Randall (the Speaker): "I would like to offer a further amendment; to add as follows:

"And the persons so appointed shall be persons of good moral character, and shall be well-known residents of the voting precincts in which their duties are to be performed."

The amendment was agreed to. The proposition as amended was adopted. The bill was then reported to the House with the amendments, which were concurred in. The bill was then passed—yeas 111, nays 104, not voting 77—as follows:

YEAS—Atherton, Atkins, Bachman, Beltzhoover, Berry, Bicknell, Bland, Bliss, Blount, Bouck, Bright, Cabell, Clardy, John B. Clark, Cobb, Coffroth, Cole-
rick, Cook, Covert, Cravens, Culberson, Joseph J. Davis, Lowndes H. Davis, De La Matyr, Dibrell, Dickey, Ellis, Evins, Field, Finley, Forney, Frost, Geddes, Gibson, Gillette, Goode, Gunter, N. J. Hammond, John T. Harris, Hatch, Henkle, Henry, Herbert, Herndon, Hostetler, House, Hull, Hunton, Hutchins, Johnston, Kenna, Kimmel, King, Kitchen, Klotz, Ladd, Lewis, Manning, Benjamin F. Martin, Edward L. Martin, McMahon, McMillin, Mills, Morrison, Morse, Muldrow, Murch, Myers, New, Nicholls, O'Connor, O'Reilly, Persons, Phelps, Philips, Phister, Poehler, Reagan, J. S. Richardson, Robertson, Rothwell, Samford, Sawyer, Scales, Shelley, Simonton, O. R. Singleton, Slemmons, Speer, Springer, Steele, Stevenson, Talbott, Taylor, P. B. Thompson, Tillman, R. W. Townsend, Tucker, Upson, Vance, Waddill, Warner, Weaver, Wellborn, Wells, Whitthorne, Thomas Williams, Willis, Wilson, Wright, Casey Young—111.

NAYS—N. W. Aldrich, William Aldrich, Anderson, Armfield, Ballou, Barber, Bayne, Bingham, Blackburn, Blake, Bowman, Brewer, Briggs, Brigham, Burrows, Butterworth, Calkins, Camp, Cannon, Carpenter, Caswell, Claflin, Conger, Converse, Cowgill, George R. Davis, Horace Davis, Deering, Dunnell, Dwight, Einstein, Errett, Farr, Ferdon, Fisher, Ford, Fort, Frye, Garfield, Godshalk, John Hammond, Benjamin W. Harris, Hawk, Hawley, Hayes, Hazelton, Henderson, Histock, Hooker, Houk, Humphrey, Hurd, James, Jones, Knott, Lindsey, Marsh, Joseph J. Martin, Mason, McCoid, McKenzie, McKinley, Miles, Monroe, Morton, Neal, Newberry, Norcross, Osmer, Overton, Pacheco, Hage, Pierce, Reed, Rice, D. P. Richardson, Robeson, Robinson, Daniel L. Russell, W. A. Russell, Thomas Ryan, Shallen-

berger Sherwin, A. Herr Smith, William E. Smith, Starin, Stone, Thomas, W. G. Thompson, Amos Townsend, Oscar Turner, Tyler, J. T. Updegraff, Thomas Updegraff, Valentine, Van Aernam, Voorhis, Wait, Washburn, C. G. Williams, Willits, Walter A. Wood, Yocum, Thomas L. Young—104.

Nor Voting—Acklen, Aiken, Bailey, Baker, Barlow, Beale, Belford, Boyd, Bragg, Browne, Buckner, Caldwell, Carlisle, Chalmers, Chittenden, Alvah A. Clark, Clymer, Cox, Crapo, Crowley, Daggett, Davidson, Deuster, Dick, Dunn, Elam, Ewing, Felton, Forsythe, Hall, Harmer, Haskell, Heilman, Hill, Horr, Hubbell, Jorgensen, Joyce, Keifer, Kelley, Ketcham, Killinger, Lapham, Le Fevre, Loring, Lounsbery, Lowe, McCook, McGowan, McLane, Miller, Mitchell, Money, Muller, O'Brien, O'Neill, Orth, Pound, Prescott, Price, Richmond, Ross, John W. Ryan, Sapp, J. W. Singleton, Hezekiah B. Smith, Sparks, Stephens, Thomas Turner, Urner, Van Voorhis, Ward, White, Whiteaker, Wilber, Wise, Fernando Wood—77.

The bill was reported to the Senate on March 31st.

Mr. Edmunds, of Vermont, moved to amend by striking out the proviso relating to special deputy-marshals. The amendment was rejected by the following vote:

YEAS—Anthony, Baldwin, Blaine, Booth, Bruce, Cameron of Pennsylvania, Cameron of Wisconsin, Carpenter, Dawes, Ferry, Hamlin, Ingalls, Kellogg, Kirkwood, Logan, McMillan, Morrill, Paddock, Platt, Rollins, Saunders, Windom—22.

NAYS—Bailey, Bayard, Beck, Butler, Call, Cockrell, Coke, Davis of West Virginia, Farley, Garland, Gordon, Groome, Hampton, Harris, Herford, Hill of Georgia, Jonas, Jones of Florida, Kernan, Lamar, McDonald, Morgan, Pendleton, Pryor, Randolph, Ransom, Saulsbury, Slater, Vance, Voorhees, Wallace, Whyte, Williams, Withers—34.

ABSENT—Allison, Blair, Burnside, Conkling, Davis of Illinois, Eaton, Edmunds, Grover, Hill of Colorado, Hoar, Johnston, Jones of Nevada, McPherson, Maxey, Plumb, Sharon, Teller, Thurman, Vest, Walker—20.

The disagreements between the two Houses on other points were settled by a conference committee, and the bill, having passed the Senate, was sent to the President. He returned it to the House with the following message:

To the House of Representatives:

After mature consideration of the bill entitled "An act making appropriations to supply certain deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1880, and for other purposes," I return it to the House of Representatives, in which it originated, with my objections to its passage.

The bill appropriates about \$8,000,000, of which over \$600,000 is for the payment of fees of United States marshals, and of the general and special deputy-marshals, earned during the current fiscal year, and their incidental expenses. The appropriations made in the bill are needed to carry on the operations of the Government, and to fulfill its obligations for the payment of money long since due to its officers for services and expenses essential to the execution of their duties under the laws of the United States. The necessity for these appropriations is so urgent, and they have been already so long delayed, that if the bill before me contained no permanent or general legislation unconnected with these appropriations it would receive my prompt approval. It contains, however, provisions which materially change, and, by implication, repeal, important parts of the laws for the regulation of the United States elections. These laws have, for several years past, been the subject of vehement political controversy, and have been denounced as unnecessary, oppressive, and unconstitutional. On the other hand, it has been main-

tained, with equal zeal and earnestness, that the election laws are indispensable to fair and lawful elections, and are clearly warranted by the Constitution. Under these circumstances to attempt in an appropriation bill the modification or repeal of these laws is to annex a condition to the passage of needed and proper appropriations which tends to deprive the Executive of that equal and independent exercise of discretion and judgment which the Constitution contemplates.

The objection to the bill, therefore, to which I respectfully ask your attention, is that it gives a marked and deliberate sanction, attended by no circumstances of pressing necessity, to the questionable and, as I am clearly of opinion, the dangerous practice of tacking upon appropriation bills general and permanent legislation. This practice opens a wide door to hasty, inconsiderate, and sinister legislation. It invites attacks upon the independence and constitutional powers of the Executive by providing an easy and effective way of constraining Executive discretion. Although of late this practice has been resorted to by all political parties, when clothed with power, it did not prevail until forty years after the adoption of the Constitution, and it is confidently believed that it is condemned by the enlightened judgment of the country. The States which have adopted new Constitutions during the last quarter of a century have generally provided remedies for the evil. Many of them have enacted that no law shall contain more than one subject, which shall be plainly expressed in its title. The Constitutions of more than half of the States contain substantially this provision, or some other of like intent and meaning. The public welfare will be promoted in many ways by a return to the early practice of the Government, and to the true rule of legislation, which is that every measure should stand upon its own merits.

I am firmly convinced that appropriation bills ought not to contain any legislation not relevant to the application or expenditure of the money thereby appropriated, and that by a strict adherence to this principle an important and much-needed reform will be accomplished.

Placing my objection to the bill on this feature of its frame, I forbear any comment upon the important general and permanent legislation which it contains, as matter for specific and independent consideration.

RUTHERFORD B. HAYES.

EXECUTIVE MANSION, May 4, 1880.

The appropriation bill was finally passed without the clause relating to the special deputy-marshals. A separate bill relating to marshals subsequently passed both Houses, and was vetoed by the President. The veto was not considered by the House or entered upon the records.

In the House, on April 10th, the bill making appropriations for the Army was considered.

Mr. Sparks: "Mr. Chairman, I propose to occupy the time of the committee for only a moment. The question of 'troops at the polls' occupied the time of this House in the last Congress for many weeks. It, perhaps, precipitated the extra session, in which the subject was discussed for months. The question originally before the House was this: whether or not a statute allowing the Army to be used by order of its Commander-in-Chief, or those controlling it, at the polls at elections in the States, to control or interfere with those elections, should be wiped out by repeal. A bill unobjectionable, so far as appropriations for the Army were concerned, with this proviso added to it, passed the House of Repre-

sentatives at the last session of the last Congress. It was stricken out in the Senate. A conference of the two Houses was had. There was a failure of agreement by that conference; the term of the Congress expired, and the bill failed. In the extra session a bill embracing the same provisions was introduced, discussed for months, passed by this House, passed by the Senate, and sent to the acting President of the United States, by whom it was vetoed. The same proposition was afterward brought in as an independent measure, unconnected with appropriations, and was fully discussed, passed by the House and by the Senate, and was again vetoed by the Executive. After all this there was added to the Army appropriation bill a clause identical with this amendment, namely :

"That no money appropriated in this act is appropriated or shall be paid for the subsistence, equipment, transportation, or compensation of any portion of the Army of the United States to be used as a police force to keep the peace at the polls at any election held within any State.

"This, of course, did not propose to repeal any law ; it was simply a prohibition upon the use of the Army or a condition that the appropriations should not apply if the Army should be thus used. This was adopted nearly unanimously. Those whom we on this side recognize as the leaders of the other side acceded to it. It was discussed but little, and when the question was taken there were—yeas 172, nays 31, not voting 83.

"Of the members voting upon this proposition, but twelve Republican and nineteen Democratic members voted against it. Now, it seems to me that when a proposition so mild and inoffensive as this has so lately and so unanimously met the concurring sentiment of both sides of this House, it is hardly reasonable and certainly not profitable to enter now into any further discussion of it.

"Mr. Chairman, this proposition does not rise to the measure of my demands by any manner of means. No, sir, this tame, cowardly amendment does not come up to that standard of legislation which (had I the power) I would here and now unyieldingly insist upon. I would wipe out this un-American, anti-democratic, villainous statute, which owes its existence to the inspirations of fanaticism and to an era of hate ; one which disgraces the statute-book, is a shameful parody on republican government, and an insult to the sovereign people of the country !"

Mr. Conger : "Will the gentleman state on which side the 'hate' and 'fanaticism' were?"

Mr. Sparks : "I decline to answer questions. With this I am done. And, now, having occupied five minutes of time to say this, I hope it will end the discussion so far as this side of the House is concerned."

Mr. Hawley, of Connecticut : "Mr. Chairman, I believe we have before us one of the most important questions which has agitated

Congress for years ; not altogether included in the simple amendment which the Committee on Military Affairs has proposed, but in the general policy of which that is a part ; and chiefly, I may say, in the evident determination of the ruling majority of this House to insist upon forcing upon us political riders on appropriation bills. I think that involves a great constitutional right, involves a complete revolution in deliberative legislation. The amendment declares :

"That no money appropriated in this act is appropriated or shall be paid for the subsistence, equipment, transportation, or compensation of any portion of the Army of the United States to be used as a police force to keep the peace at the polls at any election held within any State.

"Now, it is a little difficult to construe that so as to get at the precise meaning of the gentlemen who invented and composed it. It does not say that the Army shall not be paid its full rations, its full allowance for clothing, for transportation, for arms, and all the purposes for which the money is given in the bill. None of it is withheld. It does not even say that the Army shall not be used as a police force to keep the peace. It only says that none of this money shall be used for that. No one doubts the power of the President of the United States to put the Army anywhere he pleases within the limits of our land. He has the right to accumulate two companies, a regiment, ten thousand men, if he chooses, at New York, at Hartford, at Cincinnati, or at Chicago. He is bound to have them wherever he has reason to suppose that the laws and Constitution may be defied. You can not question the motive with which he places men at any particular point. You may say he has what you call a political motive, and we may say this motive is to see that the laws shall be obeyed in any emergency. He may have reason to expect that bad men are about to defy the Constitution and the laws beyond the power of the civil authority to subdue, and therefore he has placed the Army in such a position. You have not, then, forbidden him to use the Army in any way he sees fit under his views of constitutional law. You only intimate that the Army shall not be used as a police force.

"But, as I said, the more important question concerns the alleged right to place general legislation on appropriation bills. It is a persistent endeavor to incorporate here a revolutionary policy, a policy revolutionary of the parliamentary history of Great Britain and of the United States. It is subversive of the freedom of debate, of the freedom of voting.

"What is the use of a discussion of this amendment, if we are to be absolutely compelled to take it? The Army appropriation bill is indispensable to the life of the Government ; the amendment is a political and partisan measure which could wait an indefinite time and could be better discussed indepen-

dently. What good does it do to make argument against this amendment, if it is absolutely certain to pass? The Democrats say that the Army shall not live without it, and we say the Army must live. There can be no freedom of debate or vote. It is our duty and only resort to vote against any political amendment and vote against any appropriation bill containing a political amendment, until this practice shall have been abandoned.

"It is a coercion of the Senate. We do not permit the Senate to originate revenue bills, and it is our claim that the Senate shall not originate appropriation bills, though it may amend those that have originated in the House. But what freedom of debate will the Senate have when political amendments are put on appropriation bills in the House, and it is told by the House that the money can not be granted without those amendments?

"In England the House of Lords discovered this one hundred and seventy years ago. During the long revolutionary period, before the advent of William of Orange, the British Parliament tried all manner of revolutionary pretexts to carry their purposes. After the government was fairly established in 1688, the House of Lords put its foot on this particular practice, and protested, in a rule which remains upon the books, and will remain there, that such practices are subversive of the Constitution and destructive of the rights of the House of Lords.

"Our Senate has taken precisely that ground before this, when a Republican majority in the House of Representatives unwisely and unconstitutionally undertook to do precisely this very thing in connection with the use of the Army in Kansas, and brought on an extra session. And the discussion in the Senate showed Republicans and Democrats, the ablest and best men in the country, arguing against this policy precisely in the line that we, the Republicans, argue against it to-day. The Senate becomes a nullity, the Executive becomes a nullity, the House of Representatives, so far as the minority is concerned, becomes a nullity; and the whole Government is in the temporary majority, or rather the majority of a caucus of the majority. Under this system seventy-five men in this House may absolutely rule this nation. According to the discipline which prevails upon the other side, the majority would all vote with the majority of their caucus; and the majority of the caucus would tell them what political legislation to pass upon an appropriation bill. Then the minority of the House would be helpless; the Senate would be helpless; the Executive would be helpless. It is logically, clearly, distinctly a revolution in free government, and is to be resisted accordingly."

Mr. Robeson, of New Jersey: "Mr. Chairman, I would be glad to have the amendment reported."

The Clerk read as follows:

"SECTION 2. That no money appropriated in this act is appropriated or shall be paid for the subsistence, equipment, transportation, or compensation of any portion of the Army of the United States to be used as a police force to keep the peace at the polls at any election held within any State."

Mr. Robeson: "By a decision of the Supreme Court of the United States, the highest and ultimate tribunal of judicial judgment under the organization of our Government, it has been declared 'that the Government of the United States may, by means of physical force exercised through its official agents, execute, on every foot of American soil, the powers and the functions which belong to it. This necessarily involves the power to command obedience to its laws, and hence the power to keep the peace to that extent.' This is the inevitable, incontrovertible result of right reasoning from established principles. This declares the principle on this subject of the Constitution of our country (a principle which lies at the foundation of all Anglo-Saxon government), and these are the conclusions which follow inevitably from it. All laws of Congress are, and must be held to be, made in the light of those principles which have been settled, adjudicated, and declared by the highest tribunal of the country; and this law, if it becomes a law, must mean and be understood to mean just what is permitted by this declaration; otherwise, if not unconstitutional, it is at least in defiance of constitutional command, and in derogation of constitutional duty.

"This amendment looks to, and is meant to control, the execution of United States law on election-day. Need I pause to say to you, citizens, Representatives, Americans, that if there be a day in the calendar when the laws should have full sway, when that atmosphere of perfect peace and perfect liberty which can only be found in the enjoyment of freedom under the perfect control of law shall surround us and our action like the 'all-incasing air,' that day is the one day which is set apart by the laws of our country, on which the freemen who are to govern this continent act in their individual capacity for themselves, and set in motion, primarily, the political machinery of our Government? We are so familiar with their action on that day that we do not appreciate its significance and force. The orderly gathering together on election-day of the free voters of a great republic, with a continent as an empire and freedom as a heritage, and there exercising their political will under the protection of law, supreme, powerful, efficient, and all-pervading, to keep the peace for the perfect exercise of that will, is as sublime a spectacle in government as the world has ever seen. To accomplish that result, all the agencies of political progress and civilization have culminated here on our shores. That is the day of American freedom, that union of liberty and law which is our heritage, not the day of its celebration, but the day of its exercise. That is the time and there is the place when and where

the American citizen impresses for himself, and not through any representative, his will upon American policy and government. There and then he casts his vote.

"If the laws of the country are to be executed, and for that purpose its peace preserved at all, will you make an exception of election-day? Does the Democratic party of this country choose by its action to say, 'We will reluctantly execute the laws; we will, for very shame, maintain peace; we will sustain the Government on every day except on election-day, but upon that occasion, when the freemen of the country desire freely to execute their will, and without let or hindrance to impress their power upon the Government of the country, we can not afford to keep the peace of the United States?'

Mr. Keifer, of Ohio: "Mr. Chairman, this proposed amendment would, in my opinion, if literally carried out, have the effect to annul the appropriation for the Army to the extent that no part of it could be used to keep the peace at the polls. To use troops in aid of the civil power, all authorities concur in holding, is to use them as a police force. While troops of the United States are being so used, they may possibly be said to be used as an army, but they are none the less used as a police force. The very language, Mr. Chairman, of the proposed amendment indicates that the soldiers are not to be transformed into policemen, but that they are simply prohibited from being used as a police force in keeping the peace.

"One of the early struggles in the history of this Government was during the administration of President Washington, about the right to maintain a navy; and also as to how that navy was to be used. Alexander Hamilton, who was the leader of the Federalists, maintained that it was the right and the duty of the Government to establish a strong navy; and, to use his own language, he said that 'it ought to be established and maintained to be used on the high seas as a police force to protect our flag and our commerce.' He did not mean by that, that the seamen were to be turned into policemen, but that our ships, properly manned, should patrol the seas 'as a police force,' and there maintain the majesty of our Government, etc. That great controversy, which lasted for years, between Alexander Hamilton and the great Secretary of the Treasury, Albert Gallatin, the leader of the then Republican party, resulted in the question being settled (and since maintained) in favor of the United States having a navy to be used on the high seas as a police force. In this amendment is found the precise language used in that controversy; it speaks of using the Army of the United States as a police force to keep the peace at the polls. But I will not dwell further on that point.

"Let us analyze this amendment. I may say, Mr. Chairman, that it is exactly the sixth section of the Army appropriation bill which was passed at the extra session of this Congress,

against which my friend here [Mr. Williams, of Wisconsin] and a few others with myself voted. A fair construction of this proposition drives us to the conclusion that it inhibits the use of the Army at the polls to keep the peace and quell election riots, and that it is purposely gotten up to prevent a quiet and an honest election. By the very terms of the amendment the President of the United States, if he feels bound by it if enacted into a law, and I think it is our duty to oppose it as though it were binding on him, although it might be regarded by him as a nullity, would not have for the ensuing fiscal year the right to use the Army in the discharge of his constitutional duty in enforcing all the laws. I maintain, if we enact this amendment into law, it will have the moral force at least of saying that the Army of the United States shall not be used to put down riots on election-day.

"I hope the House will pardon me, while I read an extract from the syllabi in the case of *Ex parte Seibold et al.*

"I read:

"The national Government has the right to use physical force in any part of the United States to compel obedience to its laws and to carry into execution the powers conferred upon it by the Constitution.

"The concurrent jurisdiction of the national Government, with that of the States, which it has in the exercise of its powers of sovereignty in every part of the United States, is distinct from that exclusive jurisdiction which it has by the Constitution in the District of Columbia, and in those places acquired for the erection of forts, magazines, arsenals, etc.

"The provisions adopted for compelling the State officers of election to observe the State laws regulating elections of Representatives, not altered by Congress, are within the supervisory powers of Congress over such elections. The duties to be performed in this behalf are owed to the United States as well as to the State; and their violation is an offense against the United States which Congress may rightfully inhibit and punish. This necessarily follows from the direct interest which the national Government has in the due election of its Representatives and from the power which the Constitution gives to Congress over this particular subject.

"The right to use physical force in any part of the United States to compel obedience to the laws is thus authoritatively settled. This right must now be regarded as the fixed law of the land.

"From the exhaustive opinion of Justice Bradley, who spoke for the court, I read further:

"The more general reason assigned, to wit, that the nature of sovereignty is such as to preclude the joint cooperation of two sovereigns, even in a matter in which they are mutually concerned, is not, in our judgment, of sufficient force to prevent concurrent and harmonious action on the part of the national and State governments in the election of Representatives. It is at most an argument *ab inconvenientis*. There is nothing in the Constitution to forbid such cooperation in this case. On the contrary, as already said, we think it clear that the clause of the Constitution relating to the regulation of such elections contemplates such cooperation whenever Congress deems it expedient to interfere merely to alter or add to existing regulations of the State. If the two governments had an entire equality of jurisdiction, there might be an intrinsic difficulty in such cooperation. Then the adoption by the State government of a system of regulations might

exclude the action of Congress. By first taking jurisdiction of the subject, the State would acquire exclusive jurisdiction in virtue of a well-known principle applicable to courts having coördinate jurisdiction over the same matter. But no such equality exists in the present case. The power of Congress, as we have seen, is paramount, and may be exercised at any time, and to any extent which it deems expedient; and so far as it is exercised, and no further, the regulations effected supersede those of the State which are inconsistent therewith.

"As a general rule it is no doubt expedient and wise that the operations of the State and national Governments should, as far as practicable, be conducted separately, in order to avoid undue jealousies and jars and conflicts of jurisdiction and power. But there is no reason for laying this down as a rule of universal application. It should never be made to override the plain and manifest dictates of the Constitution itself. We can not yield to such a transcendental view of State sovereignty. The Constitution and laws of the United States are the supreme law of the land, and to these every citizen of every State owes obedience whether in his individual or official capacity.

"And quoting further from this opinion:

"In exercising the power, however, we are bound to presume that Congress has done so in a judicious manner; that it has endeavored to guard as far as possible against any unnecessary interference with State laws and regulations, with the duties of State officers, or with local prejudices. It could not act at all so as to accomplish any beneficial object in preventing frauds and violence, and securing the faithful performance of duty at the elections, without providing for the presence of officers and agents to carry its regulations into effect. It is also difficult to see how it could attain these objects without imposing proper sanctions and penalties against offenders.

"And in another place Justice Bradley, in the opinion, says:

"Without the concurrent sovereignty referred to, the national Government would be nothing but an advisory government. Its executive power would be absolutely nullified.

"In speaking of the fair and obvious interpretation of the Constitution and the mode of reaching it, the Judge says:

"We shall not have far to seek. We shall find it on the surface, and not in the profound depths of speculation.

"The greatest difficulty in coming to a just conclusion arises from mistaken notions with regard to the relations which subsist between the State and national Governments. It seems to be often overlooked that a national Constitution has been adopted in this country, establishing a real government therein, operating upon persons, and territory, and things; and which moreover, is, or should be, as dear to every American citizen as his State government is. Whenever the true conception of the nature of this Government is once conceded, no real difficulty will arise in the just interpretation of its powers. But if we allow ourselves to regard it as a hostile organization, opposed to the proper sovereignty and dignity of the State governments, we shall continue to be vexed with difficulties as to its jurisdiction and authority. No greater jealousy is required to be exercised toward this Government in reference to the preservation of our liberties than is proper to be exercised toward the State governments. Its powers are limited in number and clearly defined, and its action within the scope of those powers is restrained by a sufficiently rigid bill of rights for the protection of its citizens from oppression. The true interest of the people of this country requires that both the national and State governments should be allowed, without jealous interference on either side, to exercise all the powers which respectively belong to

them according to a fair and practical construction of the Constitution. State rights and the rights of the United States should be equally respected. Both are essential to the preservation of our liberties and the perpetuity of our institutions. But, in endeavoring to vindicate the one, we should not allow our zeal to nullify or impair the other.

"I am tempted to read another extract from this most admirable exposition of the constitutional powers of this Government:

"It is argued that the preservation of peace and good order in society is not within the powers confided to the Government of the United States, but belongs exclusively to the States. Here, again, we are met with the theory that the Government of the United States does not rest upon the soil and territory of the country. We think that this theory is founded on an entire misconception of the nature and powers of that Government. We hold it to be an incontrovertible principle that the Government of the United States may, by means of physical force exercised through its official agents, execute on every foot of American soil the powers and functions that belong to it. This necessarily involves the power to command obedience to its laws, and hence the power to keep the peace to that extent.

"This power to enforce its laws and to execute its functions in all places does not derogate from the power of the State to execute its laws at the same time and in the same places. The one does not exclude the other except where both can not be executed at the same time. In that case the words of the Constitution itself show which is to yield. 'This Constitution and all laws which shall be made in pursuance thereof . . . shall be the supreme law of the land.'

"And still another:

"Why do we have marshals at all if they can not physically lay their hands on persons and things in the performance of their proper duties? What functions can they perform, if they can not use force? In executing the process of the courts, must they call on the nearest constable for protection? must they rely on him to use the requisite compulsion and to keep the peace while they are soliciting and entreating the parties and bystanders to allow the law to take its course? This is the necessary consequence of the positions that are assumed. If we indulge in such impracticable views as these, and keep on refining and re-refining, we shall drive the national Government out of the United States, and relegate it to the District of Columbia, or perhaps to some foreign soil. We shall bring it back to a condition of greater helplessness than that of the old Confederation.

"The argument is based on a strained and impracticable view of the nature and powers of the national Government. It must execute its powers or it is no government. It must execute them on the land as well as on the sea, on things as well as on persons. And, to do this, it must necessarily have power to command obedience, preserve order, and keep the peace; and no person or power in this land has the right to resist or question its authority so long as it keeps within the bounds of its jurisdiction. Without specifying other instances in which this power to preserve order and keep the peace unquestionably exists, take the very case in hand.

"There are other extracts which might be read to the same effect, but I will not stop to read them now.

"The power to keep the peace at elections is here expressly recognized, and it is a necessary power; otherwise the foundations of our republic would crumble away. A government without power to protect all of its people from lawlessness and violence at all times and places is unworthy to exist, and of all other times

and places it should have and exercise the power of preserving the peace on election-day at the polls.

"On the necessity of this Government having ample power and the right to exercise it in all fundamental matters which concern its life, I read a single extract further from Justice Bradley's opinion:

"The true doctrine, as we conceive, is this, that while the States are really sovereign as to all matters which have not been granted to the jurisdiction and control of the United States, the Constitution and constitutional laws of the latter are, as we have already said, the supreme law of the land; and, when they conflict with the laws of the States, they are of paramount authority and obligation. This is the fundamental principle on which the authority of the Constitution is based, and unless it be conceded in practice, as well as theory, the fabric of our institutions, as it was contemplated by its founders, can not stand. The questions involved have respect not more to the autonomy and existence of the States than to the continued existence of the United States as a government to which every American citizen may look for security and protection in every part of the land.

"Mr. Chairman, I believe in State sovereignty in purely State matters. But I believe in United States sovereignty in all United States matters. I believe States to be creatures of the Constitution, and in all matters not reserved by the Constitution to the States they are subordinate to the United States. Some of these States the United States bought and paid for with both treasure and blood. We bought from the first Napoleon the territory comprised in the States of Louisiana, Arkansas, etc., and in due time we erected this once French territory into States. Later some of these States set up for themselves the pretense that the thing created was superior to their owner and creator. The Republic of Texas, not quite able to stand alone, knocked at the door of the United States, and it was admitted within the portals of the Union and habilitated with the garb of a State in the Union with a republican form of government; and in a few years she, too, proposed to turn the United States out and set up a new government on the same mistaken notion that the created was superior to the creator."

The bill passed the House and Senate, and was approved by the President.

In the Senate, on May 10th, the bill to provide for a tariff commission was considered, a measure looking toward tariff reform from a protective standpoint, brought in by Senator Eaton, of Connecticut.

Mr. Dawes, of Massachusetts, said: "I present the petition of a large number of business firms and individuals transacting almost every variety of business in Massachusetts, in Maine, in New Hampshire, and in Vermont, representing a very large capital in this great variety of business, and also representing, in what they ask, 24,700 laborers. They pray favorable action upon what is called the Eaton bill.

"I desire for a moment to call the attention

of the Senate to that bill. The Senate can not have failed to observe that very many petitions of this character are now upon the table. They have come here since the Committee on Finance has reported that the bill ought to pass. The bill is upon the calendar. It can not be brought before the Senate in the short time remaining of this session in the order in which it stands upon the calendar. I desire the attention of the distinguished chairman of the Committee on Finance [Mr. Bayard] to the importance of asking the Senate to act upon this bill out of its order. The petitioners whom I represent, it is true, are mostly persons engaged in the manufacturing industries and those whom they furnish with employment. Probably fifty thousand men who are furnished with employment are petitioners, whose petitions are upon the table of the Senate at this moment, praying for favorable action upon this bill. They do not ask for any special legislation. They recognize every industry of this country as constituting a part of one whole, in which there should be no antagonisms, and no one of which should ask at the hands of Congress legislation at the expense of any other; that all must stand or fall together; that what shall contribute to the permanent prosperity of any one industry must contribute in like manner, if not in equal degree, to the permanent prosperity of every industry in the land.

"They ask, in view of the evident desire and manifest justice of a revision of the tariff that affects all industries in this land, that it shall be done in a manner which shall most contribute to do justice to all industries, and therefore to permanency.

"It is in that hope and that desire that the manufacturing interests of the country (now spreading all over it and not confined, as in former times, more largely to one section than another) are solicitous that that revision, which changes constantly going on in the industries of the land make necessary in the tariff, shall be by such legislation as would be more likely to come from a commission, wisely appointed, to review the whole matter in all its bearings to the interests of the United States and to the interests of each and every industry in the land."

Mr. Bayard, of Delaware: "I will merely say that the Committee on Finance have made the best response possible to the desire of the Senator and his constituents for an early hearing of this question, by reporting back the bill introduced by the honorable Senator from Connecticut [Mr. Eaton] favorably, and having it placed on the calendar.

"The history of the Senate's business is of course well known. Here is the calendar. The number in the order of business last reached was No. 304. The bill for a tariff commission, known as the Eaton bill, is No. 510. The Senator and the Senate well know, when any attempt has been made to take up a bill out of its order which seems likely to lead to any debate, how promptly objection has been made.

"I can only say, as far as I am concerned, that I shall be very glad to have this important question taken up and discussed at the earliest possible moment. Of course it touches the revenue. We all know the sensitiveness of the other House of Congress on this subject, and that any attempt upon the part of the Senate to diminish a duty or to add a tax is at once looked upon by them as an invasion of their prerogative, and they find occasion to disagree with us. Here is a bill which proposes to submit the whole of this question to a commission, which is certainly indicative of the desire of the Senate to see a systematic revision of the tariff in preference to considering it piecemeal. I have no doubt in my own mind that that is the proper way that it should be considered, and have signified that view by giving my assent individually and reporting, as the organ of the committee, the bill favorably to the Senate."

Mr. Garland, of Arkansas: "Two years ago yesterday, I believe, I introduced a bill into the Senate for the purpose of organizing a commission on the subject of the tariff, which received, I believe, the favorable indorsement of the Committee on Finance. I introduced another also at this session, the same bill in fact. That bill was before the committee, and also the bill reported from the committee, introduced by the Senator from Connecticut. I have been anxious, in fact, extremely so, to have this subject brought up and considered, on account of the very great want of information we have upon it, deeming it necessary that the subject should go to a commission in order to furnish the Congress of the United States the proper information in detail upon which to legislate permanently. The Committee on Finance reported favorably upon the bill introduced by the Senator from Connecticut, and adversely upon the bill that I introduced. The distinctive difference between the two bills is that the bill of the Senator from Connecticut provides for a commission outside of Congress, and the bill that I had the honor to introduce provides for a mixed commission, composed of members of each branch of Congress, and three members outside of Congress. I am of the opinion that that feature is better than the one introduced by the Senator from Connecticut."

Mr. Beck, of Kentucky: "Mr. President, I desire only to say that, while the report of the Committee on Finance presents the bill of the Senator from Connecticut, it is not a unanimous report. I shall oppose that bill to the best of my ability, and shall insist upon the passage of the bill which will be moved as a substitute by the Senator from Arkansas. I am one of those who believe that the two Houses of Congress ought not to put themselves into the hands of any body of experts outside, who may make reports favorable or unfavorable, as they may happen to be selected by the President, but that the men who make the reports should be members of the respective Houses, who can be able to tell the reasons why they acted, so

as to give all the information they can before the respective Houses, and state the reasons why. Outside commissions, I think, are generally managed (and I think it is very apparent from the number of petitions presented before us all containing a single letter from a single man) for the purpose of advancing some special interest. However, I merely desire to say that the bill was not a unanimous report from the Finance Committee."

Mr. Eaton: "The Senator from Kentucky is very much mistaken when he says that the petitioners here are represented by the same class of petitions. There has been one petition offered by gentlemen of every shade of opinion upon the question of the tariff; a petition that represents more than five hundred thousand people; a petition that represents an industry that consumes 1,500,000 bales of cotton; a petition that is represented by \$200,000,000 of capital, and these men are of every class and shade of opinion with regard to the tariff. Therefore, the Senator from Kentucky, however much he may antagonize the bill which I had the honor to introduce, ought not to say that they are machine petitions, for, when the petitions that are upon the table of the Senate come to be examined, they will be found not to be machine petitions at all. I ought to say to my friend from Kentucky that in the bill which he proposes to introduce there are three of these very outside men, as it proposes a commission to be composed of three members of the Senate, three members of the House, and three gentlemen not members of either branch of the national Legislature."

Mr. Dawes: "I now ask for the consideration of the regular order."

The Presiding Officer: "The regular order is the bill known as the tariff-commission bill, on which the Senator from Massachusetts is entitled to the floor."

Mr. Kirkwood, of Iowa: "I desire to offer an amendment to the pending bill. I understand the Senator from Massachusetts intends to direct his remarks to the bill introduced by the Senator from Connecticut (Mr. Eaton). I desire to offer an amendment to that. I do it that the Senator from Massachusetts may direct his attention to it."

"My amendment is to the text of the original bill, in section 3, line 7, after the word 'tariff' to insert 'and the existing internal-revenue laws.'"

Mr. Dawes: "Mr. President, I am in favor of the bill reported by the Committee on Finance, because I am in favor of a revision and reform of the tariff. Great inconsistencies and incongruities exist in the tariff. A great many excessive duties remain upon the statute-book. Many dutiable articles should be on the free list, and many of the provisions of the tariff have become obsolete and inoperative. The present is a favorable time for such a revision. The increased prosperity of the country and of all business in it has so increased

the receipts of the Government, both from sources of internal revenue and from customs duties, as to render such a revision desirable and possible, keeping in view first the primary object of the imposition of duties, a revenue for the maintenance of the Government, and keeping that revenue as near as possible to its current and necessary expenses. There is an opportunity to revise and reform not only the duties but the methods of enforcing the law and collecting them. Some of the circumstances justifying this course have sprung up without any reference to legislation. Changes in business, changes in the relations of industries to each other, as well as changes in the sources of revenue to the Government, require the Government to look now to one quarter and now to another from which little was expected or received in former times. We should conform our legislation to the changes going on all the time in the methods of business as well as in the sources of revenue. All these invoke at our hands attention to the question whether we shall permit the revenue system of the Government to remain as it is, or address ourselves to the best method of producing out of it a state of things that shall answer as well the demands of the Government as the expectations and necessities and claims of those under the Government whose business pursuits it is impossible to reform the revenue laws without affecting.

"If I desired the continuance of the present state of things, if I wished to perpetuate these incongruities and these excesses and these defects, I should desire that the ideas submitted on Friday last by the Senator from Kentucky (Mr. Beck) should prevail; for it is by the attempt to enforce just such ideas in the past that has come this condition of things. Since the tariff of 1846, before the tariff of 1846, yea, before from the time of the tariff of 1842, the effort has been made to establish a tariff system by precisely the same means as those suggested by the Senator from Kentucky. All the industries of the land affected by the imposition of duties, or by the relief of industries from their imposition, have been summoned before committees from 1842 to to-day in precisely the same manner suggested by him. They have been in a great measure also under the control of party organizations.

"Sir, I am not about to discuss the comparative claim of one of the two parties to the confidence and support of the people on this question of the tariff. I am not here now to say that to the Democratic party or to the Republican party the country may most safely turn for relief or for reform. I do not think that it is a part of my duty, resulting from the conviction of an experience in this matter somewhat extended, to undertake at this time to stake the great questions involved in the bill and the substitute before the Senate upon the merits of either party. Out of these contests of parties have come the evils of which

we complain. We have had the struggle of the one party or the other to take to itself and appropriate the work of so adjusting the tariff in this country between the Government and those affected by it as to seek and obtain from the people some support that the adversary should not be entitled to; and out of that has come the shifting from party to party of this question and these measures; and the Government on the one hand and the many industries of this country on the other have suffered in this conflict of party. It is only from the possibility now presented, that the wise men of both parties can take up this question without reference to its effect upon political parties and determine it upon its merits, that anything like permanency, built upon justice and fairness, will ever result from legislation.

"A duty for the purpose of revenue must be imposed in one of two ways: indifferently, hap-hazard, by blind folly, or with discrimination. I take it that neither the Senator from Kentucky nor any other Senator proposes to impose duties for revenue blindly and indiscriminately, without regard to what will be the effect either upon the revenue or upon the subject-matter upon which the duty is imposed. Then it must be imposed with discrimination. And one other question arises immediately and settles the whole matter: it must be imposed either upon the raw material or upon the manufactured article, and no man can address himself one moment to the consideration of this question, but must settle at the threshold the point whether he will impose that duty upon the raw material or upon the manufactured article.

"These men represent the manufactured article who are invited before a committee of Congress, by the side of whom in the proposition of the Senator from Arkansas two or three experts are invited to take seats. They are producers in this land. According to the census of 1860 their products amounted to \$1,800,000,000, and in 1870 to \$4,000,000,000, an increase in value of 102 per cent. in ten years. Making all due allowance for the disturbance of prices by inflation, in actual quantity during those ten years the increase had been 52 per cent. Fifty-two per cent. more in actual quantities was produced at the end of that decade. According to that rate of increase, wellnigh eight billion dollars' worth of fabrics will have been produced and developed in the year 1880, as shown by the census. This is represented by men who must appear before this committee. This is the production in this land consumed here, made here for our own people, under such an adjustment of duties as the Government was under the necessity of imposing, so imposed that they could be produced here rather than brought here already produced; for where the production is, there is the manufacture, there are the people whose hands fashion these fabrics; and where the people are whose hands manufacture these

fabrics, there is the capital which moves the thousand busy fingers of industry, and there is the town built up by those whose time is employed in these productions; and where the town is, there is the schoolhouse and there is the church and there is the State.

"These are productions which, under a proper adjustment of the tariff, as I conceive, every Senator I apprehend would say it were better should be on this side of the Atlantic than on the other. The men who appear before these committees are citizens of the United States, part and parcel of the body-politic, having all sorts of politics and political affiliations, with their thoughts turned to the productions of these industries which are required for consumption by the people of this land. They furnish employment for the people, the thousands and tens of thousands and millions of people who find employment in these establishments, fashioning for our own people the fabrics our own people consume. They are those most interested in this question. They furnish employment.

"Sir, the condition of things which I have described renders a revision of the tariff not only possible, but necessary. We have arrived at that condition in production that puts it in our power to take off these large and excessive duties, for I hold that, keeping to the idea that revenue is the object and purpose in laying the duty upon the manufactured article as against the raw material, that should never rise one penny above a perfect equality with this. Put the American producer, in levying your duties, simply upon an equality with the foreign producer; make up the difference between the interest on his money, the cost of his living, and the wages which he pays; just even them up and no more; lift up and not pull down; for if you desire an interchange of produce, he who can manufacture the cheapest will in the end triumph over his neighbor. On any other basis, if you maintain these industries in this land, you must cut down the pay of the laborer to a level with the pay of him with whom you compete, or you can not compete with him.

"The question is all summed up in this single aphorism: To the American laborer belongs the labor which is to be performed for Americans; whatever is to be performed for us should be done here among us. I desire for one to see an effort made to frame a revenue tariff upon this principle. See to it that the Government is supplied; take that which it is necessary to levy upon production and levy it upon manufactured articles, so distributed upon each and every article as well as you may until you bring up our own producers to a level in cost with the foreign competition, and let the raw material come in free. Sir, to that work, involving the growth and prosperity and development of this country, all men of all parties, the wisest and the most discreet and expert, ought to be invited. No one party can accomplish it. The doctrine thus developed does not

exist in this or that party exclusively. It has come to be every day more and more the common sentiment and conviction of economists throughout the country."

Mr. Maxey, of Texas: "I desire, Mr. President, without entering into a discussion and comparison of the merits and more especially the demerits of the present protective tariff with such as might be presented by a tariff bill for the raising of revenue only, to present to the Senate briefly the reasons which will induce me to vote for the raising of a committee or commission. I shall, if here when a tariff bill is laid before the Senate, present my views fully. At this time my only purpose is to present my reasons generally in favor of the principle of a tariff for revenue only. In my judgment the question is a simple one. The Constitution grants to Congress the power 'to lay and collect taxes, duties, imposts, and excises.' Had that power stopped there, it might be said that the discretion was in Congress to appropriate revenues thus raised according to the best judgment of Congress; but in the same sentence there is a complete expressed limitation upon that power. The objects for which the grant of power 'to lay and collect taxes, duties, imposts, and excises' was given is limited in the same sentence, namely, 'to pay the debts and provide for the common defense and general welfare of the United States'; and that is in itself a limitation upon the grant of power 'to lay and collect taxes, duties, imposts, and excises.' The very objects for which this taxation is to be laid and collected being specified in the grant of power are a limitation upon the application of the money thus to be raised; for the objects being specified, all others, upon well-known principles, are excluded.

"So far as paying the debts is concerned, that explains itself; so far as providing for the common defense goes, that explains itself; but those who favor the doctrine of a protective tariff fall back upon the clause providing for the 'general welfare of the United States.' The general welfare of the United States, so far as it is intrusted to the Congress, is specifically laid down by appropriate grants in the Constitution, not only in the eighth section, but in various other portions of the Constitution. Congress has power 'to raise and support armies,' 'to provide and maintain a navy,' 'to establish post-offices and post-roads.'" It is the duty of Congress to see to the proper conduct by judicious appropriations of the executive department in all its ramifications, and in like manner of the legislative department and of the judiciary department. These are the objects for which the money raised by taxation is to go. The Supreme Court, all courts and commentators, so far as I have examined, agree that the general-welfare clause of the Constitution refers to the general welfare as to the objects set forth by grants of power on the face of the instrument. Any other construction would practically annihilate the very design and purpose of a written

constitution. Therefore, when you come to examine that clause of the Constitution—clause 1, section 8, Article I—where the power of taxation (which is never liberally construed, but always strictly) is given, it was so given for specific purposes—'to pay the debts and provide for the common defense and general welfare'; and hence it follows that we have no right by law to go beyond that and say that that tax shall be laid and collected for the special welfare of a specific portion of the community engaged in certain pursuits as against the general welfare of all the people of the community, and more especially when the Constitution by specific grants shows how far Congress can legislate, and, to prevent misconception, goes on to provide that 'the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.' No power is delegated to lay a tax upon the people generally to protect a few industries. Therefore the power does not exist. I am speaking of constitutional power, not upon constructions which may have been placed by courts upon tariff laws, for when a bill comes up every man should be governed by his own conscience and not by somebody else's in his vote upon this bill.

"It is clear, therefore, in my judgment, that any tariff bill should be a tariff for revenue, and for revenue only, and that we can not constitutionally or in sound policy make any other character of a tariff than a tariff for revenue, for the purpose of raising revenue to support the Government and to carry out the various objects for which the Government was created. In laying a tariff looking alone to revenue it is within the sound discretion of Congress to select the articles for taxation. Any tariff will, in its nature, to a certain extent, protect incidentally; but revenue should be the object, and protection but the inseparable incident. Under the present oppressive tariff, protection, as it seems to me, is the principal object, and revenue the incident.

"Two different plans have been presented for securing information with the view to a new tariff bill. I have been here for more than five years patiently looking to the House of Representatives for the discharge of the duty of originating a revenue bill, which under the Constitution is in the House of Representatives. This body can not originate a revenue bill; it is not in the power of this body to do it; but if the House will send us a bill we have the right under the Constitution to amend; but no bill is sent. Hence, I have sat here with such patience as I possess, for five years, waiting for a revenue bill, such as is demanded by the best interests of the country, to come up to us. It has not come. The people all over this land are demanding that there should be at least a revision of the tariff and large reduction of duties; and thousands and hundreds of thousands of men throughout the country believe as I do, that the only just, the only honest, the only

fair, the only constitutional tariff law that can be made is a tariff for revenue, and for revenue only.

"The purpose of the committee bill is in that direction. That is as far as we could go. We can not originate a bill here, but a commission to consist of nine members from civil life to be appointed by the President, by and with the advice and consent of the Senate, is authorized by the bill as reported by the Committee on Finance for the purpose of investigating all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and other industrial interests of the United States so far as may be necessary to a judicious tariff revision, and of reporting the result of that investigation to this body. That commission is to be raised by nominations by the President, and by confirmation if so advised and consented to by the Senate.

"Mr. President, I want a revenue bill; I want all the light that can be thrown upon this great question, and I believe that the clearer the light shed upon this great question by free, conscientious, intelligent investigation, the greater will be the reasonable probabilities in favor of a just tariff, for revenue and revenue only. In my judgment, the justness and sound policy of a revenue-tariff bill can be made clear and palpable—so manifest that the American people will demand the adoption of such a bill. I do not expect such a bill from men who do not believe in the doctrine of a tariff for revenue only. Therefore I do not propose to place the nominations in a power of this Government (the President) that does not, so far as I know or believe, believe in that doctrine.

"The Senator from Arkansas [Mr. Garland] has presented a proposition in the nature of a substitute to the committee bill having in view the same object of investigating this tariff question, the commission to consist of three members of the Senate, three members of the House, and three others, not members of either House. As between the proposition presented by the Senator from Arkansas and that presented by the committee, I shall unquestionably support that presented by the Senator from Arkansas, because it comes nearer my view than the other proposition does, and as I think more completely defines the duties of the commission; but I would favor over his proposition or that of the committee a joint committee of the Senate and of the House, raised in such mode and manner as the Senate may determine so far as its part is concerned, and the House as to its part, and let the committee be invested with full power to employ a stenographer, the best in America, and I think we would not have to go outside of this Chamber to get him, and if he will pardon me, I say to Mr. Murphy, Thou art the man. My idea is to employ first-class clerks and stenographers, and invest the committee or commission, as the case may be, with ample power to send for books, persons, and papers, and to employ experts in matters relating to the tariff to

aid them, if need be, because this is a question which goes way down into the pocket of every man in this country. It involves untold millions of money, for however we may doubt about some things, death and taxes are certain, and the people can well afford the trifling expense of investing this committee with ample power and facilities to investigate this whole subject to the bottom, and bring all the light that it is possible to be brought upon it.

"It does not meet my views, it does not strike me as a strong argument, to say that there is not ample capacity in the two Houses to obtain this light; that we have not got enough men of commercial and industrial information, men of business attainments, to investigate the subject. If we have not nine men with general acquaintance with business pursuits, then we had better be turned out and send somebody here who has got such information; and I beg to say that knowledge of the constitutional powers of Congress is as important as special knowledge of commerce or other industry. If we have the information to take up this report and intelligently act upon it, to frame a bill based upon the information, we surely have the intelligence to obtain the information, and you have then a body directly responsible to the States and the people for what they do, unencumbered by any outsiders.

"Therefore—and I say it with all deference to my friend from Arkansas, whose sound judgment I recognize—I believe the suggestion I make would be an improvement upon his substitute; but I am so much better satisfied with his substitute than the original bill, I will not endanger it by amendments."

Mr. Eaton: "I now call for the regular order."

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. No. 900) to provide for the appointment of a commission to investigate the question of the tariff.

Mr. Kernan, of New York: "The bill reported provides for the appointment by the President of the United States, by and with the advice and consent of the Senate, of nine commissioners from private life—from civil life, as the bill says—who are to make this investigation and report from time to time to Congress, making their final report not later than December, 1881. The other bill introduced and referred to the Committee on Finance provides that there shall be a commission of three Senators to be appointed by the Senate, three members of the House of Representatives to be appointed by the Speaker of the House, and three others, not members of either House, to be selected by and associated with them. I have great respect and full appreciation of the ability that there is in the House and in the Senate, but in my judgment we shall have the information better, more fully, more thoroughly collected and matured by a commission of persons selected from civil life rather than by members of the two Houses, with three selected from civil life.

VOL. XX.—12 A

"First, we all know that members sitting here many months each year will not have the time to devote exclusively to this subject which is requisite to get the information in order that there may be timely action by Congress upon the question. Secondly, I prefer to get the facts, the figures, the views of men not in Congress, from this commission, that we may have them before us and examine them before we get to debating or examining the subject. I think it is better that these facts, figures, and information should come from men not on the floor of either House, because if any of us on the floor of either House be upon the commission, we shall be disposed naturally to seek to carry out the preconceived views we have on the various phases and sides of this question; but a commission of experts who are not here will represent all views of the tariff, the free-traders, the protectionists, and men who think it should be only for revenue without protection. I presume we shall have on this commission appointed by the President and the Senate men who will represent fairly the intelligence and the experience of experts on all these subjects, and when their report comes to the two Houses we shall all start to examine and make up our minds on the subject without being committed by having been on the commission and engaged in the struggle there.

"Human nature is human nature everywhere. Suppose we appoint men from the two Houses representing different views. They will struggle on the commission. They are intelligent men, but each will be seeking rather to carry out the preconceived views that he has on the subject; whereas if we take these experts, these political economists, these business men, representatives of all these interests, from private life, and let them examine, argue, call out the facts making for the one theory or the other, they will doubtless be committed in favor of the one view or the other; but the two Houses will have their facts, their figures, their arguments, their recommendations, to commence the argument with, and I think, therefore, it will be more useful.

"The information they will give us, the views they will send us, the recommendations they may make, the facts and figures they will lay before us, derived from experience of our own and other countries, will aid us and will assist us in making up our opinions at the outset by examination, and we shall not get a little of the partisan on the one side or the other before we come into an examination of the question for ourselves in the two Houses.

"For that reason I think it better to have these representatives of the various views on the tariff question selected from civil life, and let them send their majority and their minority or their individual views to us, giving us the facts and the figures and the information which they gather upon which they base their recommendations.

"I think that the practice and experience of

the British Parliament on great questions of this kind is strongly in support of the bill reported by the committee, and which was introduced by the Senator from Connecticut."

Mr. Coke, of Texas: "Mr. President, it is not my intention to make a speech upon the tariff question, but simply and very briefly to give the reasons for the vote that I shall give upon the measure now before the Senate. I shall vote against the bill known as the Eaton bill and in favor of the substitute proposed by the Senator from Arkansas [Mr. Garland]. I would vote against any measure looking to a tariff commission at all if it were not that we are now at the conclusion of the session of Congress. If these bills had been before the Senate at the beginning of the session I should have opposed the passage of either of them. I prefer the bill of the honorable Senator from Arkansas for one reason above all others, that it proposes that the commission shall report to the next session of Congress, and I particularly oppose the Eaton bill because the commission provided for under it is not to report until December, 1881, jumping over the next session of Congress.

"This question is one which I think demands immediate action. There is a sufficient number of enormities in the existing tariff to call for action at once without information, without light from anybody. We all know that there are many items in the existing tariff laws upon which duties have been placed that should be removed, because prohibitory and destructive of revenue, which tax the people heavily, put nothing in the public Treasury, but enrich enormously a few manufacturers. We want no information from any source as to the propriety of putting an end to this spoliation of the great body of the people for the benefit of a privileged class. I believe that if the commission is created as contemplated by the Eaton bill there will be no action at the next session of Congress upon such items as I speak of. There will be no action at all on the subject until this commission reports, and we will pass over the next session of Congress, as we have passed by this, without giving any such relief as is demanded by the interests of the country.

"We find upon the files of the Senate a great number of petitions; I have not counted them, but there is a very great number, praying for the passage of the Eaton bill. Four fifths of these petitions are sent by firms and parties engaged in the manufacture of iron and steel in the various shapes in which these metals are manufactured. The remainder are gotten up by persons and firms engaged in the manufacture of wool. There may be a few engaged in the manufacture of cotton, but manufacturers of iron and steel and the manufacturers of wool have inundated the files of the Senate with petitions praying for the passage of the Eaton bill."

Mr. Eaton: "If my friend will permit me,

as he said there might be some petitions with regard to cotton, let me say that there is one petition here representing men who consume fifteen hundred thousand bales of cotton, operating ten million spindles, with \$300,000,000 capital, employing one hundred thousand hands and giving food to five hundred thousand souls, and that on the one item of cotton."

Mr. Coke: "I stand corrected. I knew that some of these petitions were from cotton manufacturers; I did not know how many. When I turn to the tariff I find one hundred and sixty-two items upon which there is a duty of more than 50 per cent., the duty running sometimes as high as 200 per cent. I find the various products made of iron and steel, I find the products made of wool, included in this list of one hundred and sixty-two articles. Then this case is presented: Here is a bill known as the Eaton bill proposing a revision of the tariff; it is advocated by a combination of manufacturers who are the most heavily protected of all the classes who are protected at all under the tariff. I find these heavily protected manufacturers evidently by concert between themselves combined to produce an impression upon the Senate in order to effect the passage of the Eaton bill.

"The Eaton bill leaves to the President of the United States the appointment of the commissioners by and with the advice and consent of the Senate. Who is responsible for the existing tariff, a species of class legislation which enriches a few at the expense of the great body of the people? Who is responsible for it? The Republican party. Who is the chief, the official head of the Republican party? The President of the United States. He is to be given the appointment of commissioners to revise and modify a tariff imposed upon the people of the country by his own party, and here we are surrounded by the chief beneficiaries of this most odious class legislation vociferously demanding that this power be granted to the President. What do they expect? They expect him to uphold the policy and action of his party evidently. They expect beneficial results to themselves. As I remarked before, they expect to control the commission, and will do it. Instead of tariff reform, we can expect from such a body of men nothing else than a report whitewashing the present tariff.

"It is said that the Democratic Senate must advise and consent to these nominations. It is very well understood here that any set of commissioners the President will nominate will be confirmed; nobody doubts that. The reasons for it are not necessary to be stated, but could be given if it were necessary. The President's nominees will be confirmed. What will be the state of the case then, suppose the Eaton bill passes? We will have nine commissioners appointed by the President in harmony with the views of the party which created this tariff, who are to sit and to collect testimony throughout the country and present their views to

gether with this testimony in 1881 to Congress for action.

"Sir, this is a contest between the people on one side and the monopolies on the other; between equal rights on one side and privilege on the other; and in this contest if you allow the defendants, the monopolists, the privileged classes, to prepare the testimony, to take the depositions and to get up the case, it will not be their fault if they should lose it when the trial comes on. The plaintiff who would bring a suit and allow the defendant to dictate what testimony should be introduced, what points should be made, who would allow the defendant to prepare the points, prepare the case, prepare the testimony and submit it, would be regarded among lawyers in ordinary litigation between individuals as a very foolish person, one who would be very certain to lose his case before the court and jury. Yet this is the very thing which in this great contest between the people and manufacturing privilege it is proposed by the Eaton bill shall be done. It is proposed to place in the hands of the President a power which the manufacturers of the country demand shall be placed there by their petitions on file. I am opposed to that, sir.

"The people who are taxed demand relief. Out of more than \$1,000,000,000 paid annually by the people under the tariff laws only about \$150,000,000 go into the national Treasury; the remainder goes into the pockets of the parties to whom it is proposed by the Eaton bill to hand over the subject of reducing their own profits—the manufacturers. I protest, sir, against this surrender; the lamb can as safely be committed to the care of the wolf. Sir, it is unheard of, that a measure of great and vital importance like this should be committed to its enemies to be perfected and consummated. The Republican party created the existing tariff, and the Democracy have always denounced it, as it has every other than a strictly revenue tariff; yet the Eaton bill surrenders to the Republican party and the manufacturers the care of a measure said to be intended to destroy the great evil. Will the parent turn upon its own progeny?

"I prefer the substitute of the Senator from Arkansas. That proposes to leave the subject in the Halls of Congress, among the experts sent here by the people, and not to place it, as the Eaton bill would do, in the hands of men outside of Congress to make up a case in the interest of the manufacturers and the tariff. The bill offered by the Senator from Arkansas proposes to retain the subject in Congress among the representatives of the people, adding three outsiders representing three great interests. The very gentlemen whom the Eaton bill would empower to examine this question and report upon it can be called as witnesses before the representatives of the people composing the commission under the Garland bill. We do not lose the benefit of their services simply because they are not permitted to prepare the testimony

and make up the case. They can be called as witnesses, and if they are experts they can tell all they know as witnesses to the Congressional commission. Sir, the sworn and trusted representatives of the people should never surrender to any body of men the high duty devolved upon them of acting upon this great question.

"As I was proceeding to say, the producing people of this country are taxed from the soles of their feet to the crowns of their heads, from their hats to their shoes, and from their shoes to their hats. Everything they wear, nearly everything they eat, every utensil they work with is taxed. You can not name an article entering into consumption among the producing classes of our people that is not heavily taxed under the tariff, and yet we must wait until 1881 before we can be permitted to see the report and the testimony which these learned experts are going to present to Congress upon this subject. I am opposed to it, sir. I am opposed to the bill, and would be if no other reason existed than that for my opposition to it. I am opposed to it because it puts in the hands of the President of the United States a power to thwart the demand of the people for tariff reform by appointing a commission which will make a case against it. I am opposed to it because it takes out of the hands of Congress, where it legitimately belongs, the tariff question, and places it in the hands of those who may be, and I believe will be, enemies of the people's interests. I favor the bill of the Senator from Arkansas because it keeps the question in Congress, the people's representatives; because it proposes that the commission shall report at the next session of Congress so that it may be acted on then."

Mr. Eaton, of Connecticut: "There is but one idea, I believe, in regard to the importance of this legislation. We simply differ as to the details of the measure. My honorable friend from Arkansas has introduced a bill. He says if he can not get the support of the Senate for his bill he will vote for the one reported by the majority of the Finance Committee. I recognize a true patriot in a man who says that. I say while I shall undertake to show that it is impossible that a Congressional committee shall intelligently report on all the facts in this great case, that if the bill I had the honor to introduce can not be passed let the other be passed; let us do something. The House of Representatives has refused to act, and now let the Senate take the initiatory step.

"This question should be met fairly, kindly. What is the difference between the two bills? Now, let me give a little history, and I know the Senate will not think I am egotistical. I drew the pending bill without consultation with a single man in the world save one friend in Connecticut. I said to my friend the Senator from Delaware [Mr. Bayard], three years ago, that something ought to be done, and if the House would not move in this matter it

was the duty of the Senate to do it; but years passed by, and I determined that if nothing was done this year I would introduce a bill and send it to the committee to be perfected, and then let us see if we can not do justice to all the people of this broad land. I do not want a tariff bill passed for the purpose of enriching the State of Connecticut. I desire no such thing. I shall be found not voting for any such thing. I may be mistaken, but I believe that there is not a Senator on this floor who can give his time to this question. That is the first thing. Can my distinguished friend from Delaware, the head of this committee, give six months' time, a year's time, to this work? No. Can my friend from Georgia? No. Can my friend from South Carolina? No. Can my friend from Missouri? No; not one man of you can do it. It is impossible. One would suppose, to hear my distinguished friend from Texas, that all that was needed was a little jaunt, to go to Saratoga or Long Branch or somewhere else, and eat dinners, and that would be all. That does not help to discriminate between all the great interests of the country. It relates to consumption, as my friend from Delaware suggests. The gentlemen who have this matter in charge have got to take up and examine four thousand different articles; have got to see what enters into the manufacture of every great thing in this country.

"Here are dye-stuffs, with a high tax upon them. In the British market they are purchased free, brought here and a high tax imposed, and these dye-stuffs used to color the fabrics produced by American industry, and yet you expect those fabrics to be produced just as low as they could be if there was no tax whatever on the raw material.

"I have a history about wool that I wish right here to direct the attention of the Senate to. One of the great agricultural subjects, nearly the greatest subject, is sheep industry, dependent entirely upon manufacturing industry, whether the commission be established under my bill or under the bill of the Senator from Arkansas—dependent upon it entirely to the last clipping of the last sheep. In the United States there are to-day forty million sheep. The clip this year is estimated to be two hundred and twenty million pounds. It was two hundred and eleven million pounds in 1878.

"Of this the State so ably represented by my friend from California [Mr. Farley] has 6,561,000 sheep, with a clip of more than 50,000,000 pounds, dependent entirely upon the manufacturing industries of the country. Texas has 3,674,700 sheep, with a clip of over 30,000,000 pounds. Well might my honorable friend say, 'Oh, no, I will not take the tax off wool unless you take it off iron.' New York has 1,518,000 sheep, with a clip of 10,000,000 pounds. Ohio has 4,000,000 sheep, with a clip of 35,000,000 pounds, dependent entirely

upon the great manufacturing industries of the country. Pennsylvania has 1,600,000 sheep, with a clip of 10,000,000 pounds. Indiana has 1,100,000 sheep, with a clip of 7,000,000 pounds. Illinois has 1,260,000 sheep, with a clip of 7,000,000 pounds. Oregon has 1,100,000 sheep, with a clip of 7,000,000 pounds. Wisconsin has 1,300,000 sheep, with a clip of 8,000,000 pounds. Iowa has 600,000 sheep, with a clip of 4,000,000 pounds. Colorado has 700,000 sheep, with a clip of 4,000,000 pounds. It will be, next to Texas, the great sheep-walk of the world. I do not except Australia. I say Texas, New Mexico, and Colorado will be the great sheep-walk of the world, all dependent upon manufacturing industry, all dependent upon a proper revenue tariff. Michigan has 2,000,000 sheep, with a clip of 12,000,000 pounds. North Carolina has 500,000 sheep, with a clip of 3,000,000 pounds. Georgia has 400,000 sheep, with a clip of 2,000,000 pounds. Alabama has 300,000 sheep, with a clip of 1,000,000 pounds. Mississippi has 300,000 sheep, with a clip of 1,000,000 pounds. Tennessee has 1,000,000 sheep, with a clip of 5,000,000 pounds. West Virginia has 600,000 sheep, with a clip of 4,000,000 pounds. Virginia has 500,000 sheep, with a clip of 3,000,000 pounds. Vermont has 500,000 sheep, with a clip of 3,000,000 pounds. Arkansas has 300,000 sheep, with a clip of 1,000,000 pounds. New Hampshire has 250,000 sheep, with a clip of 1,000,000 pounds. Maine has 550,000 sheep, with a clip of 3,000,000 pounds. There are very few in some of the States, very few in my own little State.

"Let it be understood I am not arguing for taking the tariff duties off, no matter what my views may be upon that subject; but the Senator from Kentucky in the close of his speech goes one step further than I have ever been willing to go, and I only want to take this very illustration of wool. The clip this year will be nearly two hundred and twenty million pounds. This great industry, covering the whole country, is dependent entirely upon the manufacturing industries of the country. Now, when these commissioners assemble, whether they be under my bill or the bill of the Senator from Arkansas, they have got to take into consideration—what? How little duty can be put upon this great agricultural industry of the country. There are forty million sheep, with a clip of two hundred and twenty million pounds to be taken care of, because the wool of Continental Europe can be brought here and sold cheaper than we can raise it; and therefore there would be an utter destruction of forty million sheep except for butchering purposes unless a tariff were put upon wool.

"How little can it be? My friend said there was 104 per cent. duty on blankets. The honorable Senator from Kentucky has not examined that question. There is nominally 104 per cent. duty, but there is not really 50 per

cent. duty. Why is there not? Because the blanket that is produced in the State of Massachusetts and in the State of Connecticut that can be bought for \$5 is a great deal better than the English blanket which is produced for \$3.50. No matter what the tariff is; I am speaking of the quality. I will state another fact right here, and defy contradiction anywhere by anybody. Take your duty off wool and we can undersell Great Britain in the Liverpool market with blankets to-morrow. It will not do, sir, to simply pick up the tariff law and say here is 104 per cent. duty on a woolen fabric without knowing how much difference there is in the price of the article abroad and here. There was a duty two years ago and is now, perhaps, I do not remember of how much, on pig-iron, and you could buy it in the United States and in the State of Pennsylvania for less money than the duty. My former colleague, so long known and so highly respected here, carried millions of pounds of pig-iron, when he would have had to sell it for less than the duty if he had sold. No, Mr. President, what we want is absolute intelligence on all these questions.

"I will not speak now of iron and steel, though I am somewhat acquainted with the product, because all I want is a commission of intelligent gentlemen, experts. I drew the bill with a meaning. I put in nine with a meaning. There are six great industries in the country, and but six. The ramifications of those six may be sixty. I would, if I had the power, appoint thoroughly educated experts in every one of those six industries. I would then take the two ablest statisticians in the United States, and, as my friend from Kentucky said, such men as David A. Wells, of Connecticut, and R. M. T. Hunter, of Virginia, and I would, if I had the power, place at the head of the commission one of the great governing minds of the country, not an expert in anything except in all that makes men great. To go back to another generation, I may say I would place a man as near as possible to such men as Calhoun, Clay, and Webster, at the head of this commission, so that all this broad land would know that all these experts and all these statisticians were under the guiding power of a great governing mind.

"Thus I would constitute this commission if I had the power. But then we are met at once by my friend from Kentucky and my friend from Texas, who say they will not give this power to the hands of a Republican Executive. Sir, I was a Democrat before the Senator from Kentucky was, because I am older than he; I was a Democrat earlier than the Senator from Texas, because I am older than he. Now, I leave this appointment in the hands of the Executive. I know his Administration, I know the men he has called around him, and I have a right to say here that I believe if this power is left where the finance bill leaves it there will be the names

of nine intelligent gentlemen presented here, not belonging all to one political party nor to one shade of opinion on the tariff question. I think I have a right to say it. The confirmation of these gentlemen rests with us. Let us have faith in one another.

"I do not want to read the platform of the Greeley Democratic party, for I never did take very much stock in that [laughter]; nor the platform of 1876, nor the platform which may be reading to-day, or the one that will be reading twenty days hence. I would, so far as I could, divorce this whole question from politics. It is a great economic question; it is a question upon which hinges the welfare of all our people, agriculturists as well as manufacturers.

"Where does Kentucky, where does Tennessee, where does Texas find the great market for agricultural products except such as go abroad? Here. There are seven hundred thousand people in my State, and the hundreds of thousands of beeves and of sheep that come to us from the agricultural States of the Union, the hundreds of millions of pounds of wool, and the thousands and hundreds of thousands of bales of cotton that come from your sunny land [turning to Mr. Hampton] find a market in New England and New York. There are consumed in this country, as I before said, one million five hundred thousand bales of cotton, and that great industry is not to be whistled down the wind by anybody. The manufacturing industries of the United States give employment to-day to more than three million people; the manufacturing interests of the United States give food and raiment to more than ten million souls; and, sir, you dare not strike a blow at an industry of that character. I say 'dare not,' because the honest, upright, thinking, patriotic man dare not do wrong. What was the amount of products last year? As near as it can be ascertained, the amount of products of the various manufacturing industries of the United States was over six thousand million dollars. It is estimated this year that they will be over eight thousand million dollars. I have no doubt that they will be more than that. And are we, Senators of the United States, to strike a mortal blow at these great industries? We are not. The Senator from Kentucky says that he will nourish them if they require it. More than three quarters of them do not want any dandling on the knee of the nurse. They can go alone. If you take your impost duties off that you put on the raw material, more than seven eighths of them can go alone.

"But the great expenditure that was forced upon the country by reason of the terrible civil conflict through which we have gone has imposed a tariff upon the country that is greater than it ought to have. Therefore revise it, therefore cut it down where you can and as you best can. If I am here I shall be found in the front line of the foremost men in this body to do it. I do not belong to that party that my friend calls the introducers of machine pe-

titions. I have my own well-grounded convictions upon this great subject. I have given it forty years of patient, careful thought, and I believe I know something about it. I know enough to know this, Mr. President, that I do not know enough about it to undertake to make a report between this and the 1st day of next December, so that if that provision passes I beg to be considered out of the line of promotion.

"Again, nobody knows better than my friend from South Carolina [Mr. Hampton] that wherever a great manufacturing industry has been built up in a State, it has brought wealth to its people, whether it be in Alabama or South Carolina or Georgia, not always enriching them immediately; for, take the great industries of my State, and as nearly as they could be classified last year, my friend and colleague will join me when I say to the Senate that those industries did not pay 3 per cent. last year on the investment. 'Bleated corporations!' We have in our State some pretty large 'bleated corporations.' We have the celebrated establishment that Colonel Colt left, and it paid 3 per cent. for the last year. We have there one of the largest machine industries in the country, and it has paid, because it has built in the last two years more than four hundred thousand dollars' worth of machinery for Europe, competing with Great Britain and beating her on her own ground.

"Mr. President, let us say as members of this body that we desire, all of us I hope, a revenue tariff with its protection as an incident, as it must have; it can not be any other way. If it is necessary to raise 20 per cent. for revenue, that is an incidental protection, and, in that much and no further, am I in favor of a protective tariff. I go no further than my friend from Kentucky, not one step—hardly as far. Let us do what is just and right. I put this question, then, to the intelligence of the Senate, and I would that every Senator were here to answer to his own judgment: Can you point me to one single member of the Senate that can give the time to report upon this great question by the 1st of December? Is there one man here who would dare to do it? Sir, there is a year's work here. I know whereof I speak. There is a year's work before you can complete it, and the amendments placed on the bill by the Committee on Finance are eminently judicious and proper in this regard, that this commission shall report from time to time."

The President *pro tempore*: "The question is on the amendment of the Senator from Iowa."

The amendment was agreed to.

Mr. Jones, of Florida: "Let me ask the Senator from Kentucky a question. Does a reformation of the tariff necessarily involve a question of revenue?"

Mr. Beck, of Kentucky: "I do not think it touches it at all in any shape or form. I suppose there is not an intelligent man in this Chamber who does not know that the tariff

taxation of this country—for that is what it is—can be reduced one half and the revenue doubled. I suppose there is no intelligent man in the country who does not know that for every dollar that goes into the Treasury for tariff taxation to-day it costs the people of this country \$5. I think I can show that from the statisticians of the Republican party, some of them high officials of the Government. The object of raising this commission is to see if that condition of things can not be stopped. The object of the Garland bill is to see if members of the Senate and House can not, by the aid of such experts as they can call in, ascertain whether that alleged fact is true.

"It is proposed to empower the President of the United States, the chief of the party that brought about this condition of things, to select a body of men to whitewash all that has been done and to write out a report to make it all appear good. The President knows he can have anybody confirmed. He had a Postmaster-General confirmed yesterday, and after that he can have anybody confirmed. He will put men there who will make all appear right that has been done. These men can neither be cross-questioned nor examined as to any report they may make, but it will be delayed until December, 1881. The present condition of things will be allowed to exist from now until then without relief, and then written reports will be made which these men can not be questioned about. They are to be appointed by the President, who has nothing to do with the legislation. They are to be appointed without the consent of the House, which has under the Constitution the right and the only right to act in the first place upon that information; and if they dare to run counter to the information thus furnished by their enemies they will be denounced as going against the best interests of the country. The evidence of experts selected to furnish evidence against them will have been provided in advance; and, as I say, they can neither cross-question nor examine them on the floor of either House, or require them to give a reason for what they have done.

"The simple proposition presented by the two measures is, shall the House of Representatives be ignored and all the information they have to act upon be transferred to a department of this Government that has nothing to do with the raising of revenue except by the interposition of a veto to stop anything that he may not approve? This body we know will confirm anybody the President sends here, and the question is, shall he appoint nine men to tell us what he and his men thus selected want to have done—selected, if you please, in the very interest of the men who are now receiving the taxes instead of the Government receiving them? The House is to be taunted and charged with being against the best interests of the country if it dares to do anything contrary to the report that these men thus picked submit, against its will and against its interests, and against the

interests of the great mass of the people it represents, because in the interest of a few protected monopolists the commission may report against the people, and the House can not even question the men who make the report. I say it is an insult to the House of Representatives to tender to them such a proposition. As a member of that House, if I were there, I would return it to the Senate. If I were a member of that House, and it was to be ignored in ascertaining the information necessary for the House to act upon, the measure should never enter that House longer than to have it sent back to the body whence it originated, and to tell that body that the President of the United States should not select and pick men to tell them what to do; that they should have something to say about it themselves."

The vote on the passage of the bill was as follows:

YEAS—Anthony, Bailey, Baldwin, Bayard, Blaine, Brown, Burnside, Butler, Cameron of Wisconsin, Dawes, Eaton, Ferry, Groome, Hampton, Hill of Georgia, Ingalls, Kernan, Kirkwood, McMillan, McPherson, Morgan, Morrill, Paddock, Pendleton, Platt, Ransom, Rollins, Saunders, Slater, Vest, Withers—81.

NAYS—Beck, Call, Cockrell, Coke, Davis of Illinois, Harris, Johnston, Jonas, Jones of Florida, McDonald, Pryor, Saulsbury, Thurman, Walker, Williams—15.

ABSENT—Allison, Blair, Booth, Bruce, Cameron of Pennsylvania, Carpenter, Conkling, Davis of West Virginia, Edmunds, Farley, Garland, Grover, Hamlin, Hereford, Hill of Colorado, Hoar, Jones of Nevada, Kellogg, Lamar, Logan, Maxey, Plumb, Randolph, Sharon, Teller, Vance, Voorhees, Wallace, Whyte, Windom—30.

In the Senate, on April 19th, Senator Cameron, of Pennsylvania, moved that the Senate proceed to consider the following resolution:

The Chief Clerk read the joint resolution, as follows:

Resolved, etc., That a commission is hereby constituted, to consist of three Senators, to be appointed by the President of the Senate, and three members of the House of Representatives, to be appointed by the Speaker, and three commissioners, to be appointed by the President, who shall sit during the recess and inquire generally into the conditions that will most favorably affect the transportation of the commerce among the States carried by land and water routes, securing thereby to the people the required facilities at the lowest charges with the greatest certainty and economy in time, and that will avoid and prevent any unjust discrimination, unnecessary burdens, or impediments in its transportation, in order to ascertain whether these conditions can be secured by legislation by Congress, and, if so, in what particulars and by what measures, and report their recommendations to Congress at its next session. That said commission shall have power to send for persons and papers, to administer oaths, and examine witnesses; shall have power to appoint and employ one clerk and two stenographers, to be paid such usual compensation as shall be fixed by the Secretary of the Treasury; and each commissioner shall be paid his actual reasonable expenses, and each commissioner appointed by the President shall, in addition thereto, receive a compensation of \$10 per diem while engaged in the performance of his duties; and the sum necessary therefor is hereby appropriated out of any money in the Treasury not otherwise appropriated.

Mr. Hereford: "Mr. President, I move to amend, in line 4, by striking out 'appointed by the President of' and inserting 'selected by,' and also, in line 6, to strike out 'appointed by the Speaker,' and insert 'selected by the same'; so as to read:

"That a commission is hereby constituted, to consist of three Senators, to be selected by the Senate, and three members of the House of Representatives, to be selected by the same, etc."

The Vice-President: "The question is on the amendment proposed by the Senator from West Virginia [Mr. Hereford]."

The amendment was agreed to.

Mr. Davis, of West Virginia: "I move to strike out 'three,' in line 6, and insert 'one.'"

Mr. Conkling: "One what?"

Mr. Davis, of West Virginia: "One commissioner appointed by the President, so as to make the whole number seven instead of nine."

The Vice-President: "The question is on the amendment proposed by the Senator from West Virginia [Mr. Davis]."

Mr. Saulsbury: "Personally I see no necessity for the appointment of a commissioner by the President. It strikes me that the members of the two Houses on the committee are fully competent without the aid of an appointee of the President of the United States. I think the whole thing is unnecessary; but if we are to have an investigation into this subject, I do not see why members of the Senate and members of the House, who are paid for the services, may not perform all the duties which a commission composed of Senators, members of the House, and commissioners appointed by the President, may perform.

"I believe the proposed investigation entirely unnecessary. I see no good that can come from it. I have not heard the Senator who introduced the resolution explain any necessity for it. I do not know what it proposes; I do not know what evils are to be remedied by this investigation; and whatever we may do, people will inquire why we appoint this commission and what is to result from it."

Mr. Conkling, of New York: "Mr. President, having concurred as a member of the Committee on Commerce in reporting this joint resolution—indeed, the report was the unanimous work of the committee—I think I am able to answer the suggestions or questions of the Senator from Delaware.

"The purpose of the investigation is twofold; first, to acquire information, and were that its only purpose, the Senator from Delaware might have warrant in saying that members of the two Houses would be found quite adequate to conduct it; but the other purpose is to invoke from this commission recommendations, advice, suggestions, a *projet* of legislation if they shall think legislation would be useful in securing the very important objects in view. When you come to that, you must see the object of going beyond the members of the two Houses. It is that the President, if he se-

lects wisely, as the presumption must be he will, will select experts, if I may so say, will select for one of these commissioners a man specially taught or instructed in regard to the subject. For example, although I do not know that he ever will be thought of, Mr. Henry V. Poor, who has devoted so many years to railway investigations, to writing on the subject, would be in respect of many of the incidents falling within the scope of this investigation a very proper selection. So I might mention other men whose lives and pursuits have trained them to do that which I may say without offense to the honorable Senator from Delaware he could not do for lack of the practical training, which certainly I could not do, and which it would be very difficult to find any member of either House who could do as well. Therefore, that we might employ and utilize the special facilities and the special fund of information pertaining to those who in particular are instructed in this regard, it was thought wise by the committee to authorize in the mode proposed the selection of three of these nine persons to bring in such fund of instruction and aid as they could.

"Now, if ten dollars a day be an inordinate compensation, it would be true of one as well as of three; but, then, I submit that any Senator who so thinks should make his amendment a reduction of the compensation.

"My honorable friend from Connecticut [Mr. Eaton] said that this might provoke a good deal of discussion; some other Senator said it ought to be considered at large; and another Senator that it was a very important matter. All that may be true; and yet this is a mere preliminary inquiry; merely using a hand to gather up facts and recommendations to be in the future submitted to Congress. It certainly can do no great harm beyond the expenditure of the money, and considering how much has been said and how much remains to be said, how enormously the country would be advantaged if the strifes and hardships growing out of the want of adjustment of railway and other freights could be brought to an end, it seems to me that this is not an unwise or extravagant expenditure of money. Indeed, I would be willing to vote for the extreme amount if I thought the chances were nine to one that it would fail for the remaining one chance of success in the attempt to acquire this information to enlighten us all to the end that hereafter we may profit by it. I would vote for what must be (unless this shall fall into improper hands, as I can not suppose) a very limited expenditure at most to enable such a commission to acquire this information."

Mr. Gordon, of Georgia: "Mr. President, the records of the Senate will show that upon this question probably more than any other has the Congress of the United States been memorialized, I think from almost every State in the Union. Our files in the Committee on Commerce are absolutely burdened with petitions

from every section of the country upon the subject of interstate commerce and the regulation of railroads, and the committee thought that in dealing with such a vast subject, embracing so many conflicting interests, railroads built necessarily at such different costs, railroads running necessarily at such different rates of expense, varying according to the topography of the country and the amount of freight, it would be impossible for gentlemen sitting here at a central point like Washington to determine what was due on the one hand to the great mass of shippers and on the other hand to the railroads, and they thought, therefore, that as little as Congress could do to meet the wishes of the great mass of the people of this country was to make some investigation into this subject, and the question was how we should go about it.

"It will be difficult to frame a bill, as every Senator can see at once, to meet the wants of the country; and the very first element of success in doing that would be to get information upon this subject, and at the same time to get suggestions from men who are eminently practical and qualified to give opinions on the subject.

"I was led myself very largely, indeed almost entirely, to vote for this resolution by the consideration that it had been already tested in my own State. Georgia has recently appointed a commission upon this very important subject to determine railroad freights through that State, and I believe I may say that the report of that commission, recently made, has given almost universal satisfaction to the people and to the railroads. There was great clamor from different sections of our State, one section complaining that there was discrimination against it, another section complaining that through freights were destroying the business of that particular locality. Our Legislature was burdened, as Congress is, with petitions to do something which would relieve the country and give satisfaction to the people. The Legislature, after mature consideration, decided that it was best to have a commission appointed to make report, to get up facts, and to suggest legislation, and, as I said awhile ago, that commission has acted; it has produced quiet and peace and satisfaction, I think, to almost everybody in that State."

Mr. Beck, of Kentucky: "Mr. President, I am opposed to this resolution, for reasons which I will briefly state.

"I believe that the Congress of the United States ought to control any commission it may appoint, therefore it should be made up of its own members. It ought to be composed of men who can explain on the floor of the respective Houses the information that may be obtained by the investigation. Stenographers are provided for in this resolution; they can take down whatever testimony men belonging to both Houses shall elicit, so that all the views of the experts can be obtained and reported on.

"There is no design, as I understand the

proposition, to select men who will give us only their individual views; but these men are to take the testimony brought before them from all parts of the country, and then lay it before the Senate and before the House, and tell both Houses what manner of men they were that came before them, what influenced their action, under what influences they were brought to appear before the committee, and all other facts necessary for us to know. I think the members of the commission who make the investigating committee should be men who on the floors of their respective Houses can tell all they saw and heard, and give us advice according to the facts.

"All the eminent men in the country are not to be selected, I presume, on the commission to give their personal views. Each man, I do not care how eminent he may be, who desires to give his views or is interested in the great questions to be inquired into, can come before the commission and have his testimony taken down and reported to us; I desire to say frankly that I wish the Senate and the House to hold the control of this commission, and, if anybody is to be appointed by the President, I would let him appoint only one man, and he should be appointed by the advice and consent of the Senate. I would hold the power in the body of the Senate and the House, that are responsible for the legislation looked to under the resolution."

Mr. Blair, of New Hampshire: "Mr. President, the statements of the chairman of the Committee on Commerce [Mr. Gordon], and of the Senator from New York [Mr. Conkling], seem to show very clearly the necessity of some action on this subject-matter, and as the original resolution was sent to the Committee on Commerce for its consideration, it would seem of course to be the sense of the Senate that that committee should primarily consider the question. The only reason, so far as I gather from the debate, why that committee does not consider it fully and finally and make its recommendation to the Senate and to the country, is the press of other matters. It seems to be conceded that there is no more important matter connected with the internal commerce of the country than this, and if the Committee on Commerce was obliged to neglect any, it should not be this, but some other of the pressing or perhaps not as pressing subjects which are referred to it.

"But if that were so, the Senate will observe that the duties originally referred to the Committee on Commerce have been divided, and the Senate has one select committee already, that on Transportation Routes to the Seaboard, which, so far as I can understand the matter, has nothing whatever to do unless it is when the Committee on Commerce is unable to consider a question like this to take charge of it. I observe the honorable Senator from Kentucky [Mr. Beck], the chairman of the committee, who has just spoken, and I should like to inquire of

him if there has been a single meeting of that committee called during the present or the past session. Has that committee had a single bill referred to it for its consideration? If not, I would inquire of him and of the Senate, if any one can conceive of a subject proper to be considered by the Committee on Transportation Routes to the Seaboard, if this is not that subject-matter? A few of the committees of the Senate seem to be overworked; there are other committees that if they have anything whatever to do, my limited observation of this Chamber has failed to discover what it is.

"Now, upon the general question whether it is necessary to have incorporated with members of the two Houses of Congress to consider this matter persons outside of Congress, I wish to offer a suggestion or two. It must certainly be considered that whatever legislation is to be taken must be taken by the two Houses of Congress; and to incorporate with these investigating committees of Congress men outside, men who are to testify or are to act as experts, is, it seems to me, entirely unnecessary, because they can not legislate, they can only recommend; and to incorporate them with the legislative power of the Government is to give to men who are not a portion of the Legislature of the Government an undue influence, an influence beyond that which should properly be given to the opinion of the citizen. It seems to me it is entirely a wrong practice, perhaps objectionable on higher grounds than the matter of propriety.

"I hardly see how such an act can itself be a constitutional act, for it must certainly be delegating to those outside of the legislative branch of the Government a certain degree of influence beyond that of a mere opinion which they otherwise would possess. This branch of the Government can avail itself of all the knowledge which any man whatever in the land may have upon this subject. He can be summoned. The most intelligent gentlemen, knowing the most upon this general matter, can be summoned to testify as witnesses, and thus the committee can avail themselves of all the knowledge that there is upon the subject; and it is improper to give any one outside of the House or of the Senate any influence beyond that which he would exert simply as a private citizen.

"I am aware, and I think any one can perceive, that by incorporating in a commission of this kind, prominent and influential men connected with the transportation interests of the country—and nobody knows who will be appointed—we may give to these men and to certain influences in the country an undue power in fashioning the legislation which may be the result. If this commission is simply to gather knowledge, to obtain information to be laid before the Senate and before the House, what real occasion is there to do more than simply appoint a committee of members in the ordinary way, and endow them with the power of summoning persons and obtaining papers in the usual way

and for the purpose for which information is sought by the committees of Congress?

"It may be said that a regular committee of the Senate is too numerous and too cumbersome for the purpose; but it is the common practice to make investigations through the agency of sub-committees. And if from the Committee on Commerce of the Senate there can be no three gentlemen selected, can there not be from this other committee that I have referred to or from the Senate at large? Is it not possible to find three intelligent gentlemen in the Senate, if they are not connected with the Committee on Commerce, who possibly might be able to give their time and attention to the investigation of this matter? And then there is the special committee, of which the honorable Senator from Kentucky is chairman, with nothing in the world to do as a committee. It does seem to me that if the chairman is too busy there could be two men taken from the majority of that committee; and the honorable Senator from Pennsylvania, who introduced this resolution, is also a member of the minority of that committee.

"The occasion for the constitution of this commission or this new committee seems to me to be altogether imaginary. I do not see what good it will do, how it can throw any light on the subject that we can not obtain otherwise; and it does seem to me that it is but a continuation and aggravation of the old bad practice."

Mr. Beck: "I desire only to say on the part of the committee of which I have the honor to be chairman that it has had very little to do, and it is composed of members (leaving myself out of view) who are perfectly competent to attend to this matter. The Senator from Pennsylvania [Mr. Cameron] is a member of it; the Senator from Minnesota [Mr. Windom] is a member of it; the Senator from Indiana [Mr. Voorhees]; and others. That committee, in my judgment, can take all the evidence; can make a report; can hear all the experts that can be brought, and will do it, and do it perfectly, and gather all the information that any outside committee can gather, and then give their reasons before the Senate for the action they shall propose to take and the recommendation they may make at the next session of Congress, just as well as any set of men that can be selected.

"It is because I believe that, that I am opposed to this resolution. We have had to do with many as important things, and two years ago the whole subject was investigated by that committee, and two large volumes printed, the Senator from Minnesota then being chairman of it. We have had before us all the matters connected with the navigation of the Mississippi, the Eads jetties, and so on; and we have now. We have delayed action in regard to a very important subject, connection between the Chesapeake and the Delaware by a ship-canal, because the House is considering it, and we did not think it important to press it before us now, as the House committee was acting.

"If this question has to be looked into by any committee, I have no hesitation in saying, I do not care how much labor it involves or what time it takes, that committee can do it and will do it, and will make a report that will embody all the views that any gentleman who may see fit to come before the committee shall give."

Mr. Maxey: "I move to amend the amendment offered by the Senator from West Virginia by striking out in lines 6 and 7 of the resolution the words—

"And three commissioners, to be appointed by the President.

"And, as a necessary corollary of that, I move in lines 24 and 25 to strike out the words—

"And each commissioner appointed by the President shall, in addition thereto, receive a compensation of \$10 per diem.

"The importance of interstate commerce is thoroughly appreciated, not only in Congress, but by the whole country. It has received a very large share of attention by appropriate committees in both Houses of Congress; not only in this Congress, but in past Congresses. I can see no reason why Congress should go outside of its own bodies for the purpose of getting persons to aid them in the discharge of this duty, for they have the power to summon witnesses, send for books and papers, and receive all the light that can possibly be thrown upon this great subject from any source whatever.

"The members of the Senate and of the House are responsible to their constituents and the whole country for the important duties which they perform here. They are supposed to have the intelligence to discharge any duty whatever incumbent upon them in the way of legislation. Therefore I can not see for the life of me why we should go outside of these bodies for the purpose of selecting three persons, to be named by the President, as the joint resolution has it, to aid Congress in doing its duty.

"If the amendment which I have had the honor to offer is not carried, then I would favor amending the amendment of the Senator from West Virginia further, by providing that one commissioner, selected by the President, shall be appointed by and with the advice and consent of the Senate.

"But still behind all that, I have never yet seen the good flowing from these special roving commissions sent about through the country to Saratoga Springs and the White Sulphur, to test the qualities of those two springs, and the *cuisine* of the Fifth Avenue Hotel, and other places of that kind; and that is about all I have ever known to result from these commissions. Let Congress do its own duty, do it through its appropriate committees, and I have no fear whatever that a bill will not be presented such as, after receiving the due consideration of the two Houses, will meet the approbation of the people and the needs of the case."

Mr. Davis, of West Virginia: "It was said by the Senator from Kentucky that there is a transportation committee, and that that committee is willing to take this work. It will be recollected that three or four years ago, in 1875 I believe, the Senate appointed a committee on this very question, and that committee went over almost the entire territory of the United States, and perhaps into Canada. There are two large volumes now in the document-room containing their report and testimony. That committee was composed, among others, of the Senator from New York [Mr. Conkling], and had the benefit of his information and advice. The present Secretary of the Treasury, I recollect, was on it. The Senator from Minnesota [Mr. Windom] was the chairman. They went fully into the very subject that is now proposed this special commission shall take charge of. The Committee on Transportation grew out of that, and it has grown into a standing committee upon this very question and no other question—commerce among the States, commerce with the seaboard. That special committee was organized for that purpose, and, as I said, it went over the whole territory of the country, and made a report which is now in the document-room.

"In addition to that, we know that the House of Representatives at this session has heard almost every eminent railroad man in the country, and has had his views taken down in writing. Those views are now in evidence before the House. I do not know of an eminent railroad man in the country who has not been summoned before the House. The information is there, and there is no necessity for this resolution in order to get a committee. If there is any particular man wanted by any committee, he can be summoned and brought here."

Mr. Cameron, of Pennsylvania: "Will the Senator permit me to interrupt him a moment?"

Mr. Davis: "Yes, sir."

Mr. Cameron: "The Senator is arguing against the appointment of a special committee."

Mr. Davis: "The Senator is arguing that in part. He has many objections to the resolution. That is one."

Mr. Cameron: "On that part I should like to call his attention to a special committee, of which I think he is chairman, that has been in session now for three years, during which time the Senator took a trip to Europe and returned, and I should like to know what is going to be the result of that special committee."

Mr. Davis: "The Senator will find out in a very few days now, and I think he will not be as well satisfied as he is now on that."

Mr. Cameron: "I will be satisfied with anything that comes from that committee or the Senator from West Virginia."

Mr. Davis: "The Senator will hear from that committee in due time, and it will not be very long either. But if the forming of that committee has anything to do with this committee

I fail to see it, and if the Senator thinks he can push his scheme forward, if it is a scheme, or push his committee because there was a committee appointed two years ago or more, that is a question that does not enter into this."

Mr. Cameron: "This is not my committee, and I do not expect to be a part of the committee; therefore I have not any scheme to push forward of a personal character."

Mr. Davis: "I correct that. I do not believe the Senator has a scheme. I think it was a wrong word, and I corrected it immediately; but still the Senator had as well let the question alone about another committee. I think that has nothing to do with this matter. There are, as is well known, among the four great trunk lines of this country two that are entirely in one State; there are two others that pass into and through different States. We all know that the question of whether or not Congress can control the railroads in either case is a doubtful one, but certainly there are very few persons who claim that Congress can in any way legislate for or control a road that is entirely in one State. The Pennsylvania Central Railroad and the New York Central Railroad, I believe, each starts and ends in the same State, while the Erie, and the Baltimore and Ohio, and the Chesapeake and Ohio go into two States or more, and so they are in a very different position as to the legislation of Congress, as is thought by a great many people. A very different state of things exists as to them.

"It may be possible that some legislation may be presented that would affect a part of these lines and not affect the others, for there are very few persons in the country who claim that when a road starts and ends in the same State Congress has anything to do with it. That is the case with two of the great railroads of this country to-day. I think it best to allow the States and the railroads to control their own affairs, and Congress ought to have very little to do with them."

The resolution failed to pass.

In the Senate, on February 25th, the following bill was considered:

Be it enacted, etc., That James Monroe Heiskell, of Baltimore City, Maryland, be, and he is hereby, relieved from the operation of section 1218 of the Revised Statutes of the United States, being in chapter 1, title 14 of said Revised Statutes.

Mr. Edmunds, of Vermont: "Let us hear the section of the Revised Statutes read from the operation of which it is proposed to relieve this person."

The Chief Clerk read as follows:

SECTION 1218. No person who has served in any capacity in the military, naval, or civil service of the so-called Confederate States, or of either of the States in insurrection during the late rebellion, shall be appointed to any position in the Army of the United States.

Mr. Edmunds: "I should like to inquire, just for information, why it is that we do not take up in lieu of this special bill the bill reported by the Senator from Indiana [Mr. McDonald]

on the 8th of December last, to repeal that section of the Revised Statutes? The Judiciary Committee has considered that subject, and by a majority, of which I was not one, has reported to the Senate a recommendation to repeal section 1218 of the Revised Statutes entirely, so as to readmit into the Army of the United States every person who is now obnoxious to the prohibition of that section by reason of having been engaged in making war upon the United States."

Mr. Bayard, of Delaware: "Mr. President, I was instructed by the Committee on the Judiciary to report this bill, because we thought that, independent of the policy of entire repeal of section 1218 of the Revised Statutes, the case now presented was one of individual exigency. The individual in question, at the age of sixteen, went into Virginia, and was under age when the war ended. He had taken no oath of allegiance, and held no office, but, nevertheless, would be ineligible, by reason of military service in the South, to be nominated for any position in the Army of the United States under existing law. He has petitioned for the removal of this disability, and the committee thought proper under the circumstances to recommend to the Senate the passage of the bill removing that disability.

"I can not see why an individual case, so entirely unobjectionable, on the contrary, so far as I can see, advisable in every way, should not be favorably acted on by the Senate. It is not a denial of the principle, it is simply an affirmation of the principle in the instance in question.

"I can only say for my own part that I do desire to speed the day when the men, the young men all over this country, and their relatives and friends, may be enabled to testify their devotion to the Government by serving in every branch of its service. We have them in the Legislature; we have them in the executive branch; we have them in the Navy, and I say it is in all respects to be desired that they may be allowed as soon as possible to be enlisted in the Army and follow the flag of their country. It is for that reason that I think we should take every opportunity to encourage the youth of the country, in every section and of every shade of political opinion, by every act of Congress, whether general or special, to help make this what we all should wish it to be, a government strong in the hearts of the people."

Mr. Edmunds: "We are not able apparently to get any very clear statement of the special and separate ground on which this individual suspension of the statute is to rest, still preserving its principle, so far as I can understand the Senator from Delaware, except that in this special instance, instead of doing as General Lee did in Virginia, after great pain, as I am told, go with his State, and as many others felt it to be their duty, conscientiously I have no doubt, to go with their State, the particular object of the grace and favor of this bill felt it to be his duty to go against his State and away

from it to fight the cause which his State was engaged in supporting.

"I am not criticising the conscientiousness of the particular conviction of the young man. They say he was only sixteen. What figure does that bear? He was old enough apparently to have a will of his own, and to be able to render service to the enemies of the United States and to the enemies of his own State, by leaving his own State and the loyal side of the line (if it is proper to use the word 'loyal,' it has now got so unfashionable), and to go on the other side of the line and fight his own flag and the flag of his own State, borne gallantly, Mr. President, by many a regiment from that State itself.

"This is the special case that the Senator from Delaware says is to affirm the principle of the law as it stands, or recognize it, and on account of special equities to suspend it for the time being. I am not able to see how that strengthens the case of this young gentleman at all.

"If there is anything in what the Senator from Delaware says of hastening the day when nothing that existed on the statute-books and in the course of history during the four years from 1861 to 1865 shall remain, it does not appear to me that this is the best possible occasion and the best possible way to hasten that day. I understand perfectly well—we all do—that that day has been apparently hastening for some time, for I think it may be safely affirmed that there is no single statute that has been passed either to support the war for the preservation of the Union or to protect the liberties and the rights of the people preserved by the Union as a part of this nation, that has not been assailed within the last two or three years, and of which it can not be truthfully said that there has not been presented and pressed a measure to repeal and set aside. Every safeguard of liberty and equal rights (not hostile to the States in rebellion, but having the same force and scope in every State of the Union—only the liberty and equal rights that Magna Charta defended in England) has been assailed, and it is proposed to wipe it from the statute-book. That is true; the day has been apparently hastening when every bulwark of liberty under law and secured by law in every State, so far as the Constitution of the United States would permit it to be secured, is to be swept away. Nobody can question that. Even the security of judicial rights under plain provisions of the ancient Constitution (if we are dissatisfied with the new amendments, as a good many of us are) it is proposed to wipe out, and to leave to what is called State sovereignty the lives, and the fortunes, and the safety of citizens of the United States who are endeavoring to execute the authority of the United States in those States, entirely to the State courts, and to declare that the supremacy of the State, not under the Constitution of the United States, but against the Constitution of the United States, shall go so

far as that her courts, and hers alone, shall have jurisdiction in matters of national concern and in cases arising under the national Constitution."

Mr. Whyte, of Maryland: "Mr. President, the reason why this bill was put in its present form as a separate bill was to avoid unnecessary discussion in regard to this peculiar case, because it is a case in which I supposed nobody would have any objection to relieving this young man from the disability under which he labors. He is the great-grandson of James Monroe, formerly President of the United States, and representing in his day, in his administration, that 'era of good feeling' which I supposed prevailed in this body at the present time. His father was for many years the Surgeon-General of the United States Army, and rendered most distinguished service in that capacity. The youth was born of a Virginia mother and resided in Virginia, and when the war broke out Virginia was his home. He was but temporarily in the State of Maryland, and returned, as General Johnston returned, who now honors a seat in the House of Representatives, to the home of his nativity, and although but sixteen years of age, with that military ardor which had belonged to his father and which he inherited, he felt that his duty was to the State that gave him birth. At sixteen he entered the army. He was not twenty-one when the war closed. He has been since then a resident of my State, and I have watched him since he has been within its borders. He has been faithful to every duty which the Constitution or the law required of him. He has been eminently a good citizen, of the highest character, and having learned that there was an opportunity of his getting some small appointment in the pay department of the Army, he applied to me to aid him, when I discovered this impediment to his appointment to such a place, and therefore offered this bill, and I supposed that there would be no objection to relieving this young man of the disability imposed upon him by an act passed long ago, when it was proper to have passed such an act."

Mr. Logan, of Illinois: "May I ask the Senator what the appointment is in the Army that this young man seeks?"

Mr. Whyte: "Paymaster. He is applying for an appointment as paymaster in the pay department, and is recommended by some of the best Republicans in the United States."

Mr. Garland, of Arkansas: "Mr. President, for the reasons which have been so well assigned by the Senator from Maryland, I gave my hearty support to this bill before the Judiciary Committee, and I am still in favor of it. But at the same time that I did so I propounded the question there that the Senator from Vermont has propounded to the Senate to-day: Why hesitate and go on doing this act of amnesty by piecemeal? I quite concur with the Senator from Vermont that it is time to repeal section 1218 and get rid of it. I think he is strictly and eminently correct in his position on that.

"I propose now, Mr. President, that we get rid of section 1218, so that Mr. Heiskell, who is a meritorious young man, may have the benefit of it, with all the others that may be under disability, or that may come under the infliction of this statute.

"It is true, as the Senator from Maryland has said, that we have granted these amnesties by piecemeal; we have granted them to individuals from time to time; and he has mentioned, in particular cases, the distinguished services to the Confederate States rendered by gentlemen who now occupy responsible places in the service of the United States. This is a remnant of the statutes born and generated out of the war; and as such gentlemen hold positions all through the service of the United States I can not see for the life of me any use in this statute any longer; and therefore, as the Senator from Kentucky who now sits to my right [Mr. Beck] has persistently and consistently, ever since he has been in the Senate, introduced and pressed a bill for this general purpose, I ask leave to offer it as an amendment to this bill in the nature of a substitute. I move to strike out all after the enacting clause and insert what I send to the Chair."

The Chief Clerk: "It is proposed to strike out all after the enacting clause of the bill, and in lieu thereof to insert:

"That section 1218 of the Revised Statutes of the United States, being in chapter 1, title 14, of said Revised Statutes, which provides that 'no person who has served in any capacity in the military, naval, or civil service of the so-called Confederate States, or of either of the States in insurrection during the late rebellion, shall be appointed to any position in the Army of the United States,' be, and the same is hereby, repealed."

The Vice-President: "The question is on the amendment proposed by the Senator from Arkansas [Mr. Garland]."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading; and it was read the third time.

The Vice-President: "The question is, 'Shall the bill pass?'"

Mr. Thurman, of Ohio: "I have supposed that the people of this country have a right to the service of every able-bodied man in time of war, and that if we should get into a war again—and no country can say it will always be at peace—we should have a right to the service of the men who were lately in the Confederate service; and I supposed that so long a time had elapsed, and there was such a sufficient evidence of the fact besides the lapse of time, to quiet the fears of anybody who is not harassed by a nervousness that never harasses me about the loyalty of the people of the South.

"How can any of these men get positions in the Army of the United States? Only by nomination by the President and confirmation by the Senate. Who of them are likely to get positions? Certainly not the old men, certainly

not the men who are verging on three-score years and ten. Who are likely to be needed in case we should get into a war again? Not those old men; not the men alluded to by the Senator from Vermont; men who he says left our own Army and went into the Confederate service. They are not at all likely to be called into the service of the United States should we again become a belligerent. No, Mr. President, but there is a large body of young men, men of military experience, men of military talent, who are as ready to fight now for the Star-spangled Banner as any man between here and Canada, and we are asked to exclude them or reject their services in order simply to put a braud upon them for which there is no political or other necessity whatever.

"I am not afraid of the Southern people on this question—not the least bit of it, sir. The Northern people want, the best of them, a majority of them want to bury the hatreds of the war; they want peace, they want fraternity once more. That is what they want, and they do not want to reject the services of any competent and now loyal man by inquiring whether or not he did at some time or other bear a musket in the Confederate service."

Mr. Beck, of Kentucky: "Mr. President, reference has been made by the Senator from Arkansas to the fact that the bill which is now before the Senate is a substitute for an original bill which had been introduced by myself and urged upon all proper occasions, and sometimes, perhaps, I may add, when it was not quite proper. I desire to say one word as to my motive for so doing. I will first read the section itself:

"SECTION 1213. No person who has served in any capacity in the military, naval, or civil service of the so-called Confederate States, or of either of the States in insurrection during the late rebellion, shall be appointed to any position in the Army of the United States.

"It so happened that a year or two ago a young man living in southern Kentucky sought to apply for a place in the Army of the United States, but he had been a page in the Tennessee Legislature during the war, when he was too young to be either loyal or disloyal. That was a civil office under one of the States then in rebellion. His father was so poor that he could not educate him without making the boy work for a living, and as there was little else doing but public matters at that time, he accepted the position of a page in the Legislature of Tennessee, and was therefore disqualified by law from applying even for a place in the Army of the United States; that seemed to me to be obviously wrong when I saw the Vice-President of the Confederacy sitting in the other end of the Capitol, when the men who occupied the highest positions during that war are here and at the other end of the Capitol, and when the sons of those gentlemen, not being compelled to accept any service either under the Confederate government or under any State in rebellion, can all enter the United States Army because their fathers were able to educate them themselves,

and only the poorer boys, who were obliged to work for a living and had to do whatever was required or could be obtained either under the Confederate States or under the States, were excluded. As all the higher, richer, great, and important persons were allowed to fill places of the highest honor and profit in this Government, it seemed to me the Congress of the United States was not acting justly to itself or to the people to exclude by law even the right to apply for a place in the Army from the younger, poorer men who were obliged to work at whatever they could get to do during the years of war. Hence, I thought it was a proper thing to repeal this statute, and I had hoped it would be done unanimously. No law should remain for a moment on the statute-books under which such a condition of things is possible."

Mr. Logan: "Mr. President, I should have no objection myself to the application of the principle that the Senator from Kentucky speaks of to persons like the one that he mentions from his State; but this law to-day is no greater hardship on a person who served in the Confederate service than it is on one who served in the Union Army, for if the Senator will examine the law in reference to appointments in the Army he will find that all those persons are now over the age that would allow them to be appointed in the Army. So this in itself does not act as an inhibition solely upon those parties."

Mr. Jones, of Florida: "Then it is useless."

Mr. Logan: "The repeal of it is useless, certainly, because by the repeal of this law you do not authorize their appointment in the service unless you appoint them as brigadier-generals or major-generals, because up to that point men rise by promotion in the Army; and appointment in the Army now can not be made except of persons who are not over a certain age. This statute was passed, as I understand it, for the reason that the people of this country, certainly not differing from the people of other countries in that particular, concluded that persons who served in the Confederate army against the Government were not as likely to be as faithful to the Government as those who were on the other side of the question."

Mr. Thurman: "May I ask my friend a question?"

Mr. Logan: "Certainly."

Mr. Thurman: "If my friend from Illinois were President of the United States, as he may at some future time be, and we were in war, would he not call into the service Southern men? As a brave soldier, would he be afraid to go into battle commanding those men?"

Mr. Logan: "No, I would not be afraid to go into battle commanding any men that had volunteered on my side, while they were under my command, nor would any man who had command of soldiers.

"But the point I am getting at is this: This law was passed for the purpose of making a distinction in the Army between those who pre-

ferred the Union side and those who preferred the Confederate side, or who were in rebellion against the Government. I think it was a proper distinction. Whether that distinction in time of war shall be wiped out or not is another consideration. We are not in war.

"The repeal of this law does not strike me as being very well in this respect: We find that recently the Congress of the United States has authorized the President to appoint certain persons in the Army, that they might be placed on the retired list, who resigned at the beginning of this war in order to keep themselves out of the war. Being out of the Army for fifteen years, the Congress of the United States has passed a law authorizing their appointment in the Army that they may be placed on the retired list.

"I see in this repeal the very same thing reenacted here in Congress, that men who were in the Army prior to the war may be restored, if they are to be considered on an equality (which I do not say anything about) with these other men, and certainly they ought to be on an equality with men who resigned to keep themselves out of the way of bullets. It may be said there is no reason why Congress should not authorize the President to place them in the Army that they may go on the retired list, because they are to-day above the age at which they can be appointed in the Army. There is no good ground at all for the repeal of this law, except for the placing of these men in the Army again that they may be retired, as has been done in some instances.

"No, sir; if the Congress of the United States shall attempt to put back into the Army all the men, or part of them, who were dismissed on account of unfaithfulness to their country, or men who had been in the Army and resigned and went on the other side because of their want of good faith to their country, then I say we are doing a wrong not only to the Army but to the country which supports the Army. There can be no reason for this, unless it is that these men may be placed in the Army again that they may be retired and supported by the Government, because there is no other way, they being beyond the age in which they can get into the Army, except by act of Congress.

"Then, sir, I say further, not out of any bitterness or feeling, that I do claim, and I claim it in this Senate Chamber in the presence of Senators whom I have a high respect for who were on the other side in the contest, that there should be a distinction made in our Army in time of peace between those who fought for the Union and those who fought to destroy it. I have always maintained it, and ever shall maintain it, not because I have any feelings of animosity against these men; no such thing. They may have been misguided; that is not the question. They were found in a certain position against the Government. Being found there, they are not entitled again to wear the uniform of this country and draw its sword in preference

to the men who have always been faithful to it. In time of war, the Senator from Ohio says, would you not allow these men to fight? 'Sufficient unto the day is the evil thereof.' When war comes we will consider the question; but in time of peace I say, without giving any opinion as to the future, I would not place men in the Army who fought for the destruction of this Government by the side of men who struggled for its existence. I would not do it, and I never will do it."

Mr. Thurman: "Mr. President, I can not help saying a word more on this bill, though I did not intend to say a word about it originally. I can not let the remarks of the Senator from Illinois pass without a word. The Senator would not remove this brand from these men in time of peace; but when war comes, should it come with any foreign power or a dozen foreign powers, then the Senator will be willing to say to these men, 'Here, we branded you during all these many years of peace, and all the while when you were perfectly loyal, and now in the hour of need of the country we appeal to your patriotism to come out and fight for us.'"

Mr. Logan: "The Senator will allow me to remark that I did not say that."

Mr. Thurman: "No, but that is exactly what it comes to."

Mr. Logan: "No, sir, I beg the Senator's pardon, I said no such thing. I said it would be time to consider that question when war came, and if the Senator now wants to call me out on that question I will answer him honestly. Peace or war, had I the appointing power, I would give commissions to those men who never failed when their country called."

Mr. Thurman: "That sounds very well indeed, and we know now what the programme of the Senator is, that in time of war he would not commission one single man, however loyal, however eminent, however distinguished his military talent, if that man twenty or thirty years before had been on the Confederate side. I am perfectly willing that the Senator may take that ground and stand on it."

Mr. Logan: "I did not say that, either."

Mr. Thurman: "And, Mr. President, there was another thing that struck me as a little curious. The Senator said that the object of this bill must be to put a parcel of officers who were once in the Army of the United States and went into the Confederate service upon the retired list of the Army of the United States. How, indeed, the Senator could get such an idea as that in his head passes my comprehension. Certainly it is not supported by the few instances he gave, that of Colonel Haller and that of some Maryland colonel. In respect to Colonel Haller we are told by the Senator from Oregon that he did not resign. In regard to the Maryland man, I know nothing about him; I never heard his name before; but if he did resign in order to escape exposing his person to bullets, as the Senator from Illinois said if I understood him correctly, how comes it that a Republican Senate,

as this Senate was a year ago, voted to put that man back into the Army of the United States on the retired list?"

Mr. Logan: "That is an astonishing thing to me."

Mr. Thurman: "It is very surprising. I can not understand it at all."

Mr. Slater: "Allow me to state that Colonel Haller is on the active list, with the rank of major."

Mr. Thurman: "I leave that matter with the explanation of the Senator from Oregon; but this other thing, it strikes me as marvelous indeed. The explanation I make of it, without knowing anything of it, is that the Military Committee of the Senate, then overwhelmingly Republican, that the majority in the Senate then overwhelmingly Republican, did not find the facts to be as the Senator from Illinois supposes. They did not find the fact that this man had been guilty of any such cowardice or any such disloyalty, or that committee would never have reported the bill to restore him to the Army, and the Senate would never have passed such a bill."

Mr. Logan: "I did not say the committee found the facts to be so. I only stated what I knew of the case when I was on that committee as chairman. I stated my own conclusion, and I came to that conclusion from the evidence. Others perhaps would have come to a different conclusion. That was my conclusion, and it was so understood by the committee, certainly as long as I was on it. I only stated that. I do not know what might have been in the man's mind when he resigned."

Mr. Thurman: "I can not pretend to say who are the best judges of the facts, the Senator from Illinois or those who succeeded him on the Military Committee; nor can I pretend to say whether the evidence was the same before both committees; but here stands the fact upon the statement of the Senator from Illinois, if that statement be correct, that a Republican committee of this body reported in favor of restoring a man to the Army of the United States, who was not only a traitor at heart but was a greater traitor because he was a coward—to put both a traitor and coward back into the Army of the United States. A Republican committee of this body reported a bill for that purpose; a Republican majority in this body passed it into a law! I do not believe it, Mr. President. I believe that the facts were really different, for there is not a Senator on this floor who would do such a thing as that."

Mr. Edmunds: "Mr. President, in the first place I wish to say to the Senator from Ohio, and to everybody else who is willing to listen to me, that I think he is greatly mistaken every time—and it is not very infrequent in such discussions as this—when he uses the word 'hatred' as apparently imputed to gentlemen who differ with him in opinion."

Mr. Thurman: "Upon my word, if I used that word to-day I do not know it. I certainly

did not impute it to any Senator on that side."

Mr. Edmunds: "I know the Senator did not mean personal hatred, but the idea that is continually paraded here when those of us who do not agree with gentlemen on the other side oppose or support a particular measure is that it grows out of a sentiment of animosity to many of our colleagues and their friends who, as we think, contrary to the Constitution and in violation of their duty to it, went into a rebellion. Now, I want to state, as I have stated I presume a hundred times, that any man North or South who imputes to any Republican anywhere that ever I heard of any such sentiment of hatred or animosity, makes a great mistake. It is not true. We are only, when we oppose these measures, doing what we consider to be necessary for the security and good order of the whole Union, and it is not through any animosity or hatred, or, as we can see it, any prejudice to these gentlemen. We have labored under the impression—undoubtedly the Senator from Ohio can convince us it is a wrong impression—that in every controversy there must be a right side and a wrong side, and the delusion that we are under is evidently that we were on the right side of that controversy, which prevailed, and that the consequences that flow from being on the right side are those which the Senator from Ohio desires that those who turned out to be on the wrong side shall reap, and not those who were on the right side."

Mr. Burnside: "Mr. President, I beg to make a statement to correct a wrong impression which may have been created by the remarks of the Senator from Ohio [Mr. Thurman] and the Senator from Illinois [Mr. Logan]. The Senator from Ohio stated that the Committee on Military Affairs of the last Congress was a Republican committee. He knows as well as I know that the committee was composed of five Republicans and four Democrats, and that many of its meetings were ruled by the minority party. For instance, a quorum consists of five Senators, and might have been made by three Democrats and two Republicans, or four Democrats and one Republican. What were the exact conditions of that committee on the mornings that Colonel Wyse's and Colonel Haller's cases were recommended favorably I am not going to say, because it is not proper for me to speak of what occurred in committee, and much less proper would it be for me to criticize the action of that committee."

"The Senator from Illinois has chosen to say something of what the committee did when he was a member of it, and when he was in the Senate, and has said that during the time he was out the committee did a certain thing which he thought was very wrong. As to the propriety of this course I will leave it to the Senator himself and to the Senate."

Mr. Logan: "If the Senator will allow me, I think I can state exactly what I did say."

Mr. Burnside: "The substance of it was that."

Mr. Logan: "No, I said that the Senate and the House, the Congress of the United States, had passed the bill referred to within the last two years or during the last Congress. I made no reflection upon the committee whatever. I only stated that my knowledge of the case grew out of the fact that it was presented to the committee several times while I was chairman. I said nothing about what the committee did when I was chairman, or what they did when somebody else was chairman; I only stated that I knew the fact because it was presented there several times when I was the chairman."

Mr. Burnside: "Mr. President, I have said what I have to say on that subject. Now I will say with reference to these two men, Colonel Haller was dismissed, I believe, peremptorily by the Secretary of War without any trial. If I remember aright, he was dropped from the rolls for disloyal talk at a convivial meeting one night in camp. The Military Committee, for reasons best known to its members, upon an argument presented—which I am not going to speak of here, because it would not be proper for me to do so—decided to allow the President to act as he thought proper in that case. Inasmuch as this man had been dismissed without even the formality of a court martial, it was thought to be fair to allow his case to be opened. I must say, without reference to my own vote, that I was in command of the Army of the Potomac at the time the occurrence took place, and I did not believe Colonel Haller was a disloyal man. I do not believe to-day he was disloyal. He fought gallantly in every battle he was engaged in; but for some reason the Secretary of War took that action, and I am not going to criticise it. He has gone to a higher court than we can create here, and to a better Judge. I am willing to let that matter stand just where it is. Colonel Haller was placed before a board of officers, created by authority of Congress, and that board of officers made a certain recommendation to the President of the United States, and he has taken action by nominating Colonel Haller as colonel in the Army, and the Senate has confirmed that action."

"Now, in reference to Colonel Wyse, he resigned from the Army because he was ordered on a duty which he could not perform, and which it is well known he could not, and he resigned. I do not mean to say how I voted in his case. The Secretary of War held his resignation for more than a year, I believe, or certainly a year, and the whole thing had passed out of consideration. Colonel Wyse thought that he was as much an officer of the Army as I was at the time; and suddenly, after this long space of time had passed, his resignation was abruptly accepted. He did struggle for reinstatement, and his wife struggled to aid him, as in duty bound. The Military Committee considered the case. It thought in its best judgment that it would be well to allow the

President, if he thought proper, after investigating the case, to reinstate Colonel Wyse and place him on the retired list."

"That was the action of the Military Committee on these two cases. I do not mean to say that it was right; I am surely not disposed to say that it was wrong. I mean to say that it is not legitimate and fair criticism to criticise the action of the committee."

Subsequently, on June 7th, the bill was again considered.

The Presiding Officer: "The question is on the passage of the bill."

Mr. Allison, of Iowa: "I ask that the bill be read."

The Chief Clerk read as follows:

Be it enacted, etc., That section 1218 of the Revised Statutes of the United States, being in chapter 1, title 14, of said Revised Statutes, which provides that "no person who has served in any capacity in the military, naval, or civil service of the so-called Confederate States, or of either of the States in insurrection during the late rebellion, shall be appointed to any position in the Army of the United States," be, and the same is hereby, repealed.

Mr. Dawes: "Before the Senate votes upon this bill in its present shape, I desire to have the statute read which it proposes to repeal, so that we can all understand clearly what is being done in this summary manner and with so little apparent attention to what seems to me a very important matter."

The Chief Clerk read as follows:

SECTION 1218. No person who has served in any capacity in the military, naval, or civil service of the so-called Confederate States, or of either of the States in insurrection during the late rebellion, shall be appointed to any position in the Army of the United States.

Mr. Dawes: "If I understand the bill in its present shape, it proposes to remove that barrier and open the Army to being filled, if the appointing power shall deem it proper, by any person who has proved himself recreant to the flag and to the oath of office which he took to serve his country faithfully in the Army of the United States without exception. I desire, before a vote shall be taken upon it, without arguing the question over and over again, that the Senate shall distinctly and clearly understand what is proposed."

"If the Senate are prepared to strike down this last barrier or last distinction between the officers of the Army faithful to the flag and those who were faithless to it, if they are prepared so to vote, then let them vote for the passage of this bill."

Mr. Davis, of Illinois: "The Senator from Maryland [Mr. Whyte] introduced this bill for the benefit of a particular person. The Senator is not here, but is sick in bed. My understanding was that he wanted the bill to pass for the benefit of this particular man and not any general bill; and it was agreed between the Senator from Arkansas [Mr. Garland], who offered the amendment, being spurred to it by the Senator from Vermont [Mr. Edmunds], that that should be non-concurred in, and that this bill for the

benefit of a grandson of Mr. Monroe should be considered. Now, sir, he is absent, and I object to any further consideration of the bill."

The bill was then laid aside.

Subsequently, on June 15th, Mr. Whyte said: "I ask to take up the bill (S. No. 1191) for the relief of James Monroe Heiskell, of Baltimore City, Maryland."

The President *pro tempore*: "The question is on the passage of the bill as amended."

Mr. Garland, of Arkansas: "I offered an amendment to the bill under a conviction that it was high time to get rid of section 1218 of the Revised Statutes, and I judge that was the view also of the Senator from Vermont [Mr. Edmunds], who really invited the amendment, as stated by the Senator from Maryland [Mr. Whyte]. I did not offer it with a view of obstructing or weighting down the bill, because this is a very meritorious and very worthy young man, and I am very anxious that he should be relieved. If there is any difficulty in the way of passing the bill as amended, I appeal to the Senator from Wisconsin to withdraw his objection and let us pass the bill for this young man, who was hardly old enough really to have incurred the disability from which we now seek to relieve him; but if that can not be done, I think we had all better shake hands on this and pass the amended bill, and relieve all of this class from the operations of section 1218."

Mr. Cameron, of Wisconsin: "I withdraw my objection."

The President *pro tempore*: "The Senator from Wisconsin withdraws his objection. The question now is, Will the Senate give unanimous consent to reconsider the vote by which this bill was ordered to a third reading? Is there objection? The Chair hears none, and the vote by which the bill was ordered to be read a third time is reconsidered. The question now is upon the amendment offered by the Senator from Arkansas [Mr. Garland]."

The amendment was rejected.

The President *pro tempore*: "The question is, Shall the bill be engrossed and read a third time?"

The bill was ordered to be engrossed for a third reading, and read the third time.

The President *pro tempore*: "Shall the bill pass?"

The result was announced—yeas 29, nays 12; as follows:

YEAS—Bailey, Beck, Brown, Butler, Call, Cockrell, Davis of Illinois, Davis of West Virginia, Eaton, Groome, Hampton, Harris, Herford, Jonas, Maxey, Morgan, Pendleton, Pryor, Randolph, Ransom, Sanlisbury, Slater, Thurman, Vest, Voorhees, Wallace, Whyte, Williams, Withers—29.

NAYS—Allison, Anthony, Blair, Booth, Burnside, Cameron of Wisconsin, Dawes, Kirkwood, Logan, McMillan, Saunders, Teller—12.

ABSENT—Baldwin, Bayard, Blaine, Bruce, Cameron of Pennsylvania, Carpenter, Coke, Conkling, Edmunds, Farley, Ferry, Garland, Grover, Hamlin, Hill of Colorado, Hill of Georgia, Hoar, Ingalls, Johnston, Jones of Florida, Jones of Nevada, Kellogg, Kernan, Lamar, McDonald, McPherson, Morrill, Paddock,

Platt, Plumb, Rollins, Sharon, Vance, Walker, Windom—35.

So the bill was passed.

The bill was received in the House, but not acted upon.

On June 15th the President sent to the Senate a message vetoing the bill vesting the appointment of deputy marshals for elections in the United States courts.

On June 16th both Houses adjourned.

CONNECTICUT. The session of the General Assembly began January 7th, and adjourned March 25th. The Speaker of the House of Representatives was Dwight Marcy. Lieutenant-Governor Gallup presided over the Senate.

No questions of exciting interest were brought before this Legislature. The business of the session was accomplished in a smooth, methodical manner, without haste or delay. Most of the work was done in committee. Many of the more important subjects of general legislation were postponed for future consideration. In some of these the two Houses had failed to concur, in others the reluctance toward premature legislation, which was strongly manifested in both Houses, prevailed. One or two weighty acts were recalled and rescinded after they had passed both houses. Party spirit was excited by the action of the majority in two cases of contested elections and in the repeal of an act of the last Legislature affecting the representation of Middletown; but none of the succeeding acts of the Assembly were tinged with partisanship. The most important measures passed were the ratification of the boundary-line agreed upon by the New York and Connecticut commissioners; a constitutional amendment providing that Judges of the Supreme Court shall be nominated by the Governor, and the nominations submitted to the General Assembly for approval; a more stringent law regarding the incorporation of joint-stock companies; and bills making special appropriations of magnitude.

The amendment to the Constitution, to be submitted to the people, is as follows:

The Judges of the Supreme Court of Errors and of the Superior Court shall, upon the nomination of the Governor, be appointed by the General Assembly in such manner as shall by law be prescribed.

The power to both select and appoint the Supreme Court Judges is at present given to the Assembly by the Constitution. The reasons for taking the nominating power out of the hands of the legislative majority are that men ambitious of becoming judges may intrigue to procure their nomination in the party caucuses of the Legislature, and no personal responsibility attaches to any one for nominations which may be arranged on political or personal grounds in the secret conclaves of the party. The high standard of character sought in the choice of a Governor, and the reputation which he naturally wishes to maintain, would prevent his nominating judges upon purely political

grounds or out of favoritism. The bar of the State favor this change, deeming that it will raise the standard of the bench, without transferring the power of electing the judiciary, which by the traditions of the Constitution reposes in the representatives of the people.

The New York and Connecticut joint boundary commission agreed upon a boundary-line between the two States. This gives to New York a small strip on the west, 4-68 square miles in area, called the "oblong tract," on the Connecticut side of the straight-line boundary running north and south twenty miles east of the North River, agreed upon in 1685, but which was given to New York by a faulty survey made about a century ago, and first came into controversy in 1856. The settlement draws the more important southern boundary through the middle of Long Island Sound. Difficulties and disputes have many times arisen over the islands and fisheries along the Connecticut shore, which were added to New York by the Duke of York's grant, but which by earlier charters and by maritime law belong to Connecticut. The authorities of each State have sometimes claimed, sometimes avoided jurisdiction over these lands, according as immediate interest dictated. Fisher's Island, about seven miles long and one broad, and lying within two miles of the shore, was left in the possession of New York by the settlement. Against this the citizens of Stonington earnestly protested, who represent the island as a resort of prize-fighters and refuge of thieves from New York. The General Assembly ratified the settlement of the commissioners, as the New York Legislature did also; but a new commission was appointed to negotiate with the State of New York for the cession of Fisher's Island to Connecticut.

The new law relating to the incorporation of joint-stock companies requires twenty per cent. of the capital to be paid up in cash, and demands that any portion of the remainder which is paid in property must be taken at its real value. Charters are not to be granted for the buying and selling of real estate, the trust, insurance, or banking businesses, or for trafficking in patent rights. Directors must be elected by the stockholders annually; and the secretary and treasurer, or an assistant treasurer, must be residents of the State. The books must be kept on hand for the inspection of stockholders. The capital may be increased or reduced by the vote of the owners of two thirds of the stock. A report of the financial condition of each company, and a list of the shareholders, must be lodged with the town clerk of the place where the business is located, and a financial statement be filed in the office of the Secretary of the State every year. The directors render themselves jointly and severally liable for the debts of the corporation by paying dividends when it is insolvent, or which cause it to become so, and all officers become liable for the company debts who fail to per-

form the duties required of them by law. Delinquent subscribers may be sold out; or the equity of redemption of their stock may be sold, if they have pledged it to third parties. On the petition of stockholders owning one third of the stock, the company may be dissolved and its affairs placed in liquidation by the courts; and any stockholder or creditor, or the district attorney, may have the business wound up, unless proof is brought of solvency, if the annual statements have been twice omitted; if shown to be solvent, the court may fix a limit within which the statement must be filed. The charters of 1,298 joint-stock companies incorporated under the laws of Connecticut, which had ceased to exist or had failed to make reports to the State Secretary, were repealed.

The fees of receivers of banks, savings-banks, and trust companies were fixed by an act passed by the Legislature this year at one per cent. of the dividends paid to depositors and creditors, which shall be in full for all personal and clerical services, all other expenses to be taxed by the court, which may also allow additional fees when the dividends fall short of a total sum of \$250,000. The law which prescribes the character of the investments and securities which may be purchased by savings-banks was amended so as to allow investment in Indiana, Missouri, Kansas, and Nebraska State bonds, in the bonds of Philadelphia, Chicago, and certain other cities, in guaranteed bonds of the District of Columbia, and in the bonds of railroads which have paid dividends on their stock of five per cent. or more for at least five years. The restriction which debar savings-banks from investing more than half of their deposits in bonds and personal securities is relaxed, United States and Connecticut State and municipal bonds being taken out of this class and counted with real-estate securities. Another act requires savings-banks to carry one eighth of one per cent. of deposits to surplus semi-annually, instead of the reserve of a quarter of one per cent. required by the former law, which was suspended two years before.

An amendment was made to the insolvency law. A bill was passed requiring bank cashiers and treasurers of trust companies to give bonds of at least \$10,000. A bill to reduce the taxation of life-insurance companies from one half to three eighths of one per cent., on the ground that eleven millions out of their eighty million dollars capital consists of property outside of the State, which is already taxed twenty-seven mills on the dollar, passed both Houses, but was reconsidered afterward and revoked. A freight bill forbidding railroad companies to charge more for transportation for shorter distances than their through-line freight rates, passed the House, but the Senate refused to concur. A law was made prohibiting the adulteration of sugar with glucose, terra alba, or other substances. Among a number of liquor

laws was one including any beer requiring a revenue stamp (Schenk-beer) among "intoxicating liquors." A bill passed the Senate, but failed of final enactment, according to which the selectmen could forbid the sale of liquor to any individual at the request of one of his immediate relatives, and likewise on the complaint of any resident in the town. Both Houses concurred in a bill giving female citizens the right of the ballot upon the liquor question, but afterward rescinded the law. A bill to allow women to vote for school-officers was rejected. An education bill requires schools to be maintained thirty-six weeks in the year in every district containing one hundred and ten or more children of school age. Another demands that children between eight and fourteen years of age be sent to school at least sixty days in each year. An act concerning the employment of children prohibits any one from employing a child under fourteen years of age not furnished with a certificate that it has attended school as the law requires. An act regarding convict-labor provides that the directors of the State Prison shall give public notice in the newspapers of all the cities of the State for four weeks before making any contract for the labor of fifty or more of the prisoners in any trade or occupation, and shall inquire into the effect of such proposed employment upon the interest of the State, the moral and physical condition of the prisoners and upon free labor, and give a hearing to all who may wish to be heard in the matter; and if it shall appear upon inquiry that such employment will not be for the interest of the State, or will be detrimental to the moral or physical condition of the prisoners, or will seriously injure the citizens of this or any other State engaged in that trade or occupation, it shall be prohibited. It was adduced in the debate over this bill that the hatting industry of Connecticut suffered in consequence of the employment of over 800 convicts in the New York prisons at hat-making, as there are only 7,000 felt hat-makers in the country.

The law of Connecticut on the conduct of criminal trials has heretofore been different from the law and practice in the courts of all the other States and in the United States courts. The defense has been allowed the advantage of the opening and closing arguments in criminal cases, making it a much more difficult thing to procure a conviction than in other States. The Assembly this year enacted a statute making the procedure in Connecticut courts conform in this regard with the usual practice. A new jury law was made, providing that the selectmen of each town shall draw twice the number of names required, and that county jury commissioners shall erase half the names from the list; it is contempt of court to solicit that one's own name or the name of another be placed on the list. The qualifications of the juror are that he shall be an elector, of good character, and over thirty years of age.

A law was enacted for the prevention of contagious diseases in cattle, especially tuberculosis or pleuro-pneumonia. The cattle commissioners are given the discretionary power to condemn and slaughter cattle afflicted with the disease. The State pays half the value of the condemned animals. A resolution was passed praying the Legislature of New York to repeal the law which compels the masters of vessels sailing through Hell Gate to pay half pilotage to the pilot tendering his services in case a master requires no assistance and pilots his own ship. A second resolution begs Congress to correct this injustice by the passage of an equitable general pilot law.

A tax levy of one and a half mill on the dollar was ordered to be paid by the 10th of November. The principal appropriation bills were \$130,000 for new buildings for the insane poor at Middletown, and \$113,500 for the contractor for the new State Capitol, to compromise claims amounting to \$200,000, of which the commissioners had awarded only \$45,000.

The total appropriations of \$2,000,000 from the State and \$500,000 from the city of Hartford have been exhausted in the building and fitting up of the Capitol.

The second annual report of the Board of Health and Bureau of Vital Statistics covers the year 1878. The total number of registered births was 13,499, of deaths 9,352, of marriages 4,285, of divorces 401; showing a decrease in the births of 378, in deaths of 344, in marriages of 24, and in divorces of 26. The ratio of male to female births was 109.74 to 100, the ratio of 1877 having been 109.18, and the mean ratio of the twenty years anterior 110.44 male to 100 female births. In 2,855 marriages, the contracting parties were of American, and in 721 of foreign birth; in 674 they were of mixed nationality.

The educational statistics of 1879 show a registered attendance in schools of all kinds of 130,597 out of a total population of school age, or between four and sixteen years of age, of 138,428 children: the percentage of children attending school being, therefore, 94.34. In the public schools the number of scholars on the rolls was 99,662 in winter, and 91,860 in summer. The number of public schools was 1,638; teachers in winter 2,741, of which number 1,968 were females; average monthly salaries for male teachers \$57, for female teachers \$35. The total expenditure for public schools was \$1,390,972, against \$1,509,158 in 1879, and an average expenditure of \$1,563,016 for the five years previous.

The valuation of the principal cities and towns in the grand list of 1879 was as follows: Hartford, \$45,558,490; New Haven, \$45,760,809; Norwich, \$13,431,430; Bridgeport, \$11,422,483; Meriden, \$8,890,848; Waterbury, \$7,810,731; Stamford, \$6,648,145; New London, \$6,531,494; Middletown, \$6,298,444; Norwalk, \$5,593,218; Danbury, \$5,185,300; Stonington, \$4,851,163; New Britain, \$4,589,304; Derby,

\$3,705,405; Greenwich, \$3,590,067; Windham, \$3,505,539.

The twelve joint-stock fire-insurance companies of Connecticut possess assets amounting to \$18,216,944. The premiums received by these in 1879 amounted to \$6,340,940, the losses paid to \$3,772,182, or 59.49 per cent. of the receipts; there was a decrease of \$282,238 in premiums, and an increase of \$338,011 in losses, compared with the preceding year. The sixteen mutual fire-insurance companies of the State cover risks amounting to \$80,692,616, wholly on houses and stores; the entire assessed value of these classes of property aggregates only \$166,437,696, the valuation of dwellings aggregating \$125,021,813, of stores and mills \$41,415,883. As the mutual companies do not assume city risks, they probably cover considerably more than one half of the country and suburban buildings with their insurance.

The now extensive cultivation of Havana seed-tobacco in Pennsylvania, New York, and in the Miami River Valley of Ohio, and Rock County in Wisconsin, makes tobacco a less profitable crop in Connecticut than formerly. This agricultural specialty was introduced in Connecticut before 1850. A demand grew up for this kind of tobacco for cigar-wrappers, and as the price advanced to twenty or thirty cents a pound the cultivation was extended, until it reached its highest point in 1874, when about 10,000,000 pounds were produced in Connecticut and 4,000,000 pounds in the other New England States. In 1879 the total crop of New England was not much over 12,000,000 pounds, while in the Middle States and in the Western districts named the culture of seed-leaf had developed within a few years from the first experimental beginnings to a total product in 1879 of about 50,000,000 pounds.

The Republican Convention for the choice of delegates to the National Convention met in New Haven, April 7th. The following single resolution was adopted:

Resolved, That this Convention pledges itself and the constituency which it represents to the hearty, vigorous, and loyal support of the nominees of the Republican National Convention at Chicago.

The Democratic State Convention for the same purpose was held in Hartford, April 28th. The platform was as follows:

Resolved, That the Democratic party of Connecticut steadfastly adhere to the principles of the Constitution, at all times admitting its obligations and respecting its limitations.

Resolved, That we demand that the administration of our Government shall be restored to its former standard of economy and honesty.

Resolved, That we denounce the great conspiracy of 1876 by which Samuel J. Tilden and Thomas A. Hendricks were deprived of the high offices to which they were elected, as a plot dangerous to free government, and a crime against that public morality upon which our free institutions are dependent.

Resolved, That as the Democracy of the Union are about to discharge the high and responsible duty of selecting candidates for President and Vice-President of the United States, we appeal to them to nominate citizens whose devotion to the Constitution and honest

government is well defined; whose upright public services and strict personal integrity commend them to the Democratic and conservative voters of the country, who will unite those voters enthusiastically in their support, and lead the Democratic party to a triumph which shall result in the overthrow of corrupt rings and designing schemes to establish a personal government over that of the Constitution and the people.

Resolved, That in selecting such candidates the delegates who shall represent Connecticut in the National Convention are hereby requested to vote as a unit; and also to support the well-established two-thirds rule of past Democratic National Conventions.

The Convention of the Prohibition party was held at Hartford, April 21st. Delegates to the National Convention were chosen, and the following State ticket was nominated: Governor, George P. Rogers; Lieutenant-Governor, Abel S. Beardsley; Secretary of State, William S. Williams; Treasurer, Edmund Tuttle; Comptroller, Dr. E. B. Lyon.

The Republican Convention for the nomination of State officers met at Hartford, August 11th. Hobart B. Bigelow, of New Haven, was nominated for Governor; William H. Bulkeley, for Lieutenant-Governor; Charles E. Searls, for Secretary of State; David P. Nichols, for Treasurer; Wheelock T. Bachellor, for Comptroller. The following platform was adopted:

Resolved, That we heartily ratify the nomination of James A. Garfield and Chester A. Arthur for President and Vice-President of the United States.

Resolved, That we endorse the principles affirmed by the last National Republican Convention.

Resolved, That the election of Republican candidates and the triumph of Republican principles will insure a continuance of that sound financial policy to which we owe our revived prosperity; will secure the full protection of free American labor from all unjust competition; will spread free education over every portion of the country; and place beyond all peril the civil and political rights of every citizen in every State.

Resolved, That we present to the electors of Connecticut our candidates for State officers; they are worthy the suffrages of every freeman, and we pledge them our hearty support from this day until their election in November.

Resolved, That the State Board of Health are requested to make such immediate modifications of their rules and regulations under the act of March, 1880, concerning color-blindness, as will permit all such employees as are now able to distinguish the colors and signals used by railroad companies in this State at practical distances, to continue in their several places of duty until after the next session of the General Assembly.

Resolved, That if any legislation is necessary on the subject of color-blindness it be demanded that the next Legislature make such alteration in chapter 95 of the Public Acts of 1880 as will require only the examination of railroad employees by practical tests in the hands of practical men.

The regular Democratic Convention for State nominations assembled at New Haven, August 18th. The following ticket was nominated: Governor, James E. English; Lieutenant-Governor, Charles M. Pond; Secretary of State, Stephen S. Blake; Treasurer, Merrick A. Marcy; Comptroller, Charles R. Fagan. The following platform was adopted:

Resolved, That we reaffirm the principles adopted by the national Democracy at Cincinnati, believing that the success of those principles will bring peace, harmony, and prosperity to the whole people, and will in-

sure a permanent reconciliation between once discordant States.

Resolved, That we enthusiastically ratify the nomination of the soldier-statesman, Winfield Scott Hancock, of Pennsylvania, and of his accomplished colleague, William H. English, of Indiana, and pledge them the electoral vote of Connecticut.

Resolved, That as Connecticut cast her electoral vote in 1876 for the legally and constitutionally elected President, Samuel J. Tilden, so she will in 1880, in casting her electoral votes for Hancock and English, set the seal of her condemnation upon the conspirators who defrauded the people at the last Presidential election and committed the greatest political crime of modern times.

Resolved, That we hold the Republican party responsible for the sweeping and unjust law regarding color-blindness passed by the last Republican Legislature and approved by a Republican Governor. The law is harsh, and serves no legitimate end as it stands, and should be modified to conform to the demands of reason.

Resolved, That legislation tending to make our penal institutions self-supporting should be so framed as to prevent the sacrifice of the interests of the honest, industrious, and non-criminal classes.

Resolved, That we heartily endorse the ticket nominated this day, and recommend it to the voters of the State as a guarantee of an honest, capable, and economical administration of State affairs.

Resolved, That the State Central Committee is hereby authorized to fill any vacancies which may occur in the electoral or State ticket.

The vote for the constitutional amendments, providing for the nomination of the higher judiciary by the Governor, was taken at the town elections, October 5th. By an act of the General Assembly the ballots for and against the amendment were marked simply with "Yes" or "No." The amendment was approved by a large majority, 20,313 votes being cast in its favor, to 8,340 for its rejection.

The State election fell on the same day with the national election. The total vote for President was 132,490, of which the Garfield electors received 66,823, the Hancock electors 64,239, the Weaver ticket 1,101, and the Dow ticket 327, giving Garfield a majority of 1,156, and a plurality of 2,584 more votes than Hancock. The gubernatorial vote was 65,732 for Bigelow, 63,901 for English, 774 for Baldwin, Greenback-Labor candidate, and 389 for Rogers, giving Bigelow a plurality of 1,831 over the Democratic nominee, and a majority over all of 668. Buck, Wait, and Miles, Republican candidates, and Phelps, Democratic candidate, were elected to Congress. The State Senate for 1881 is composed of 16 Republicans and 5 Democrats; of the 10 Senators voted for, 7 were Republicans and 3 Democrats. The composition of the new House of Representatives is 155 Republicans, 76 Democrats, and 3 Independents and Greenbackers.

The population of the State, as ascertained by the census enumeration, is 622,683, divided in point of sex into 305,886 males and 316,797 females; in point of nationality, into 492,879 of American birth, and 129,804 of foreign birth; in point of race, into 610,884 white and 11,799 colored inhabitants. The increase of the total population since 1870 has been from 537,454, or in the ratio of 15.9 per cent. The

ratio of increase in the different classes of the population is as follows: Males 15.2 per cent., females 16.4 per cent.; native-born 16.3 per cent., foreign-born 14.2 per cent.; whites 15.8 per cent., colored 19.1 per cent. The population of the principal towns published in the census reports gives New Haven 62,882 inhabitants, compared with 50,840 in 1870; Hartford, 42,553, against 37,743 in 1870; Waterbury, 23,019, against 13,106; Bridgeport, 29,148, against 19,835; Meriden, 18,340, against 10,495; Norwich, 21,145; Norwalk, 13,956, against 12,119; New Britain, 13,978; Danbury, 11,669, against 8,753; Derby, 11,649, against 8,020; Stamford, 11,298, against 9,714. Out of the 167 townships into which the State is divided, 77 show a loss since the last census which aggregates 12,749; the aggregate gain in the other 90 towns amounting to 98,128. The greatest decrease was in the town of Fairfield, which fell off from 5,645 to 3,748 inhabitants. The greatest numerical gain was Hartford, and the most rapid relative increase in Meriden, which gained 75 per cent. in population. The aggregate population of the cities has increased from 172,568 to 226,187, or 31 per cent.; that of the rural districts, 31,608, or not quite 9 per cent.

CONNOLLY, RICHARD BARRETT, died in Marseilles, France, on May 30th. He was born in 1810, in Ireland, of respectable parentage. In 1826 he emigrated to America. His political career was closely connected with Tammany Hall. He was a delegate to the nominating convention for the Eleventh Ward in 1836. In 1839 and 1840 he was secretary to the General Committee. In 1846 he became its chairman. During the Polk Administration he was appointed to a clerkship in the Custom-House. Collector Lawrence made him chief of the Statistical Bureau. Robert J. Walker, Secretary of the Treasury, intrusted to him and Collector Bogardus the revision of the tariff of 1846. In 1849 Connolly left the Custom-House. In 1852, and again in 1855, he was elected County Clerk. In 1859 he represented the Seventh District in the State Senate. He was reelected in 1861. In 1867 he was elected Comptroller of New York City, which office he filled when the Tweed charter was passed. Under its provisions he continued to hold the office of Comptroller, Tweed being Commissioner of Public Works and Sweeny, City Chamberlain. At the time of the disclosures in 1871 he resigned, and was succeeded in the comptrollership by Andrew H. Green. Connolly left the city and spent the rest of his life in Europe.

COSTA RICA (REPÚBLICA DE COSTA RICA). For situation, area, territorial division, population, etc., reference may be made to the "Annual Cyclopædia" for 1877.)

The President of the Republic is General Tomás Guardia; the Vice-President is General Pedro Quiroz; and the Cabinet was composed of the following Ministers: Interior, War, and

Marine, Señor Rafael Machado; Foreign Affairs, Justice, Public Instruction, and the Poor-Commission, Dr. José María Castro; Finance and Commerce, Señor Salvador Lara; and Public Works, Licentiate M. Argüello.

The Bishop of San José is the Rt. Rev. Bernhard Thiele.

The Consul-General of Costa Rica at New York is Señor J. M. Muñoz; the United States Minister (resident in Guatemala, and accredited to the five Central American Republics—Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador) is Dr. Cornelius A. Logan; and the United States Consul at San José is Mr. A. Morrell.

The military force of the republic consists of the militia, comprising all male inhabitants between the ages of eighteen and thirty, numbering (according to recent returns) 15,225, of whom 900 constitute troops usually engaged in regular service. The reserves are made up of men between thirty and fifty-five.

The following tables show the amounts and various branches of the national revenue and expenditure for the year ending April 30, 1880:

REVENUE.

National Bank (capital and deposits in)...	\$5,189
Puntarenas custom-house.....	965,005
Limon custom-house.....	19,202
Monopolies.....	1,241,951
Government property.....	280,169
Taxes, etc.....	101,587
Sundries.....	289,176
Total.....	\$2,502,279

EXPENDITURE.

Ministry of the Interior.....	\$251,733
Ministry of Finance and Commerce.....	127,586
Foreign Affairs.....	15,736
War and Marine.....	712,594
Justice.....	71,170
Public Works.....	138,592
Public Instruction.....	132,245
Public Worship.....	18,063
Railways.....	1,255,961
Police.....	40,552
Monopolies.....	316,052
Debt to Peru.....	178,585
Aqueduct of Heredia.....	24,972
San José Hospital.....	13,575
Paper money.....	15,744
Sundries.....	152,137
Total.....	\$3,460,597

By comparing the totals of these two tables, it will be observed that there was a deficit of \$658,318 in the finances of the year referred to. In the budget for 1880-'81 the revenue and expenditure were estimated at \$3,164,051 each.

The yield of the customs department in 1879-'80 was but \$984,207, against \$1,088,890 for the year immediately previous, and \$1,010,787 for 1877-'78.

The item "monopolies" in the above table of the revenue comprises the spirit-tax, \$766,321, the tobacco-tax, \$469,140; and the powder-tax, \$2,193. Under the head of "Government property" are included the Post-Office, \$37,139; railways, \$106,328; telegraphs, \$9,302; the National Printing-Office, \$6,567; interest on Government lands, \$12,155; tolls,

(Barranca bridge), \$9,832, etc. The item "taxes" comprises stamp-duty, \$23,430; licenses for the sale of spirits, \$20,401; mortgage imposts, \$18,767; abattoirs, \$19,430, etc. In virtue of a decree issued toward the end of the year, guano and other phosphates for agricultural purposes will not only be entered free of customs duty and wharf-dues, but the importers of the same will be entitled to a premium of \$5 per ton. Mining machinery is also to be free of duty. According to the report of the Finance Department, under date of April 30, 1880, the national debt stood as follows: Liabilities, \$6,258,269, comprising—Foreign debt, \$5,463,285; bills of exchange, \$176,886; paper money, \$105,915; sundry consolidated funds, \$161,682; home debt, \$140,774; sundries, \$210,087; and assets, \$10,918,062, made up of, immovables (including railways), \$10,281,778; tobacco, spirits, etc., in warehouse, \$155,321; bank capitals, \$156,788; municipal funds, \$30,805; other funds, \$203,370.

On August 14th the Government made a second issue of Treasury bonds, to the amount of \$50,000, thus completing \$100,000. The Union Bank was commissioned to dispose of them, and did so immediately, among the leading bankers and merchants of the capital, at the rate of 25 per cent.

Of the foreign commerce of Costa Rica little can here be said, no complete statistics of that branch having been published since the date of those given in the "Annual Cyclopædia" for 1878. The imports through the port of Puntarenas (on the Pacific seaboard) in 1879-'80, appear to have been of the value of \$2,669,861; and those through Limon (on the Atlantic coast), for the first four months of 1880, of the value of \$133,500. The exports, through the same ports and for the same periods, respectively, were of the value of \$3,524,810 and \$211,142.

The quantities of Costa Rica coffee sent to San Francisco in the four years last past were as follows: 1877, 62,306 bags; 1878, 30,460 bags; 1879, 17,125 bags; 1880, 38,027.

In his annual report for 1879, the Minister of Public Works states that \$1,255,960 has been expended on the railway during that year—that is to say, on the three sections of the road which the country possesses, and which, writes a journalist, the Government assures the public it is its fixed purpose to unite into a grand interoceanic highway. At present they are isolated and detached, and the benefits accruing from them are local and unimportant. The Pacific section, from Puntarenas to Esparza, a distance of thirteen miles, has been finished, at a cost of nearly a half a million of money. The principal item of expense in its construction has been the iron bridge over the Barranca, a stream which has hitherto offered considerable difficulties to travel during the rainy season. These will now, probably, be at an end for a time. The central division is the only portion which pro-

duces a revenue at present, which is stated at something like \$100,000 per annum, while expenses, etc., are placed at \$150,000. The Minister of Public Works urges the early completion of the road on the Pacific side, and also the construction of the remaining portion between San José and Limón. He furnished figures showing that the enterprise, on its own footing, will be a success, but a slight examination of these fails to convince us of the correctness of his estimates. In his calculation of expenses, etc., he has forgotten several important particulars, among which is the probable cost of maintenance, renewals of stock, and working expenses on the Atlantic division, which, from its heavy grades and sharp curves, will always be considerable. His judgment is also decidedly at fault as to the relative cost of railway operation in the high and comparatively dry lands of the interior, and the low, damp, swampy lands of the coast, with their innumerable rivers, which, in the rainy season, are practically uncontrollable. His estimates of revenue discuss probabilities concerning the entire commerce of the country, while his considerations of expense, maintenance, renewals, and contingencies concern only the Pacific division. The Government, according to reports current in September last, had made a contract with a Mr. J. Mosca Chiarin, for the construction of an elevated railway from San José to Rio Sucio, to connect at the latter place with the surface railway now in course of preparation thence to Limón. The line was to be finished in six months from the date of the contract (August 9, 1880), and to cost \$200,000, payable in monthly installments of \$25,000, bearing interest at 12 per cent. per annum.

There are at present in operation in the republic 392 miles of telegraph, with sixteen offices.

Costa Rica has been without a Constitution for the past two years, that of 1871 having been suspended in 1878. The Constituent Assembly was convoked in 1880, Señor Valio presiding, for the purpose of framing a new Constitution, but their deliberations were brought suddenly to a termination in less than three weeks, by Dictator Guardia, on the plea that an appeal had been made to armed force to sustain the Constituent Assembly in its determination to depose him.

Though at peace with the neighboring states, the relations of the republic were by no means harmonious with all. Besides the old boundary question with Colombia, referred to at the commencement of the present article, she protested against the canal contract made by the latter without consulting her, and in violation, she claims, of the treaty of April 15, 1858, qualifying at the same time that act as an infringement of her territorial rights. The protest elicited from Nicaragua a lengthy reply, in substance briefly as follows: That, even admitting as still in force the treaty alluded to, and in pursuance of the eighth article

of which no canal was to be contracted for without first hearing the opinion of the Costa Rican Government, the circumstances attending the present contract had been of a nature so urgent as to leave no time for consulting any government without the risk of losing, perhaps for ever, a favorable opportunity for the realization of a colossal enterprise of so much promise for Central America; that, while granting the right that one nation possesses to demand that another should keep her engagements, and that the existence of a pact is sufficient to render its fulfillment a necessity, if loyalty and good faith are to form the basis of international relations, yet when the omission of a formality involving no principles of fundamental importance has been caused simply by circumstances at once exceptional and unavoidable, and the nature of which has been clearly and frankly explained, there was here no reason for condemning the conduct of a nation, if peoples in their mutual relations are to be actuated by a spirit of fraternity and reciprocal regard; and that, as to the claim that Costa Rica's territorial rights had suffered, such claim could readily be proved to lack foundation, inasmuch as the projected canal would nowhere touch upon the limits of that country.

The aggregate attendance at all the schools of the republic was reported to have been 26,000 in the past year. Copious educational statistics were given in the "Annual Cyclopædia" for 1879.

CREMIEUX, ISAAC ADOLPHE, French statesman, born of Jewish parents at Nîmes, April 30, 1796; died at Paris, February 10, 1880. After studying law at Aix, he was, at the age of only twenty-one years, admitted to the bar of his native city, and soon gained great reputation by his brilliant speeches, especially in the case of the murder of Marshal Brune. He moved to Paris in 1830, and defended before the Court of Paris M. de Guernon-Ranville, one of the Ministers of Charles X. In this case he was not successful, as, overcome by too great exertions, he fainted, and was unable to complete his defense. Soon, however, the prestige which he had previously acquired was restored. After purchasing from M. Odilon Barrot his office and functions as advocate, he defended a number of Liberal journals and several distinguished republicans who were prosecuted by the Government of Louis Philippe. In 1837 he paid the debts of his father, who had died a bankrupt, and secured his rehabilitation. In 1842 he became a member of the Chamber of Deputies for the arrondissement of Chinon, and took his seat on the extreme left. Having been reelected in 1846, he took a prominent part in the reform agitation of that time, and was among those who signed the demand for the impeachment of M. Guizot. When the Revolution of 1848 broke out, he urged Louis Philippe and the Queen to leave France immediately. He was reported to favor the regency of the Duchess

of Orleans, but when subsequently interpellated on the subject he declared that his intention had only been to induce the Duchess to read a declaration stating that she left to the people the right of proclaiming its government. On February 24th he declared himself in the Chamber of Deputies against the project of a regency, and proposed a provisional government. This proposition having been adopted, he was appointed a member of the Provisional Government and Minister of Justice. He was confirmed in these functions by the Constituent Assembly, but resigned on June 7th, when the Constituent Assembly ordered the prosecution of Louis Blanc. He was a member of the Constituent Assembly for the department of Indre-et-Loire, which also reelected him to the Legislative Assembly. In this Assembly he voted on all important questions with the Left, and made himself particularly conspicuous by his energetic opposition to the bill forbidding the clubs. He separated, however, from his political friends on the question of the Presidency, supporting the candidature of Prince Louis Napoleon. Soon, however, he regretted this step, and he became in the Legislative Assembly one of the foremost opponents of the policy of the Prince-President. He voted against the *coup d'état*, and was one of those who were arrested on December 2d and taken to Mazas; he was, however, liberated after a few days. Returning to the bar, he occupied again the distinguished position which he had held before 1848. At the general election of 1869 he was defeated in the department of Drôme by the official candidate, but in November of the same year one of the Paris districts returned him at the supplementary elections. He took his seat on the extreme left, voted against the *plébiscite* of April, 1870, and was one of the seventeen members who signed the "anti-plébiscitary address." When the surrender of Sedan led to the overthrow of the Napoleonic dynasty, he was, on September 4th, appointed a member of the Government of the National Defense and Minister of Justice. With Glais-Bizoin he left for Tours to constitute the provisional delegation, to which soon Gambetta was added. Crémieux as well as Glais-Bizoin readily conceded to their younger colleague the leadership. Crémieux took, however, an active part in the organization of the Army of the Loire, and especially in the deposition of the magistrates who had formed part of the notorious "Commissions mixtes" since December 2, 1851. At the general elections of 1871 he again failed to be elected, and after the meeting of the National Assembly, he resigned as member of the Government and as Minister of Justice. He then proposed to the nation to pay to Prussia the five milliards im-

mediately by a national subscription, to which he offered to contribute 100,000 francs. In 1872 the city of Algiers elected him a member of the National Assembly over his radical competitor, Bertholon. In his address to the electors he had declared himself in favor of a permanent republic; of separation between Church and state; of secular, compulsory, and gratuitous instruction; of the dissolution of the Assembly of Versailles; and of a general amnesty. As his voice was enfeebled by age, he but rarely took part in the discussions of the Assembly, except in questions relating to Algeria, which found in him an eloquent champion. In December, 1875, he was elected by the National Assembly Life-Senator. During his entire life he showed an indefatigable zeal in behalf of his co-religionists, not only in France, but all over the world. In 1840 he undertook a journey to Egypt and Turkey, to look personally after the condition of the Jews, and he succeeded in clearing the Jews of Damascus from the charge of having murdered a Catholic priest. He founded the Universal Israelitic Alliance, which under his able and devoted guidance has become the most cosmopolitan and most influential Jewish organization of the world. He was also regarded as one of the foremost representatives of French freemasonry. Few men were more generally and more highly esteemed than Crémieux. His wife had died only a few days before him, on the eve of the celebration of their golden wedding.

CURTIS, WILLIAM EDMUND, Chief Justice of the Superior Court of New York, was the son of Judge Holbrook Curtis, of Litchfield, Connecticut, where he was born in 1826. He graduated with honor from Trinity College, Hartford, and in 1847 was admitted to the bar. He settled in New York, and rose rapidly in his profession. He was Commissioner of the Board of Education, and was for four years its President. He received the degree of LL. D. from Trinity College. He was Vice-President of the Geographical Society. In 1871 he was elected Judge of the Supreme Court of New York. His decisions increased his reputation as a jurist. One of the most notable was adverse to the extradition, under existing treaties, of Vogt, the Belgian, who murdered the Chevalier de Blanco. The treaty of commerce between Belgium and the United States was suspended for a time, but finally Vogt was extradited and hung. He also dissolved the injunctions which prevented the establishment of rapid transit. His ability and integrity resulted in his elevation to the position of Chief Justice of the Superior Court of New York, which he filled at the time of his sudden death on July 6th, at Watertown, Connecticut.

D

DELAWARE. As set forth in the biennial report of the State Treasurer, Robert J. Reynolds, the amount of State bonds outstanding at the end of 1880 is \$869,000, \$106,000 of bonds having been canceled within the two years. The interest-bearing investments held by the State, on account of the general fund, amount to \$673,050, consisting of a loan of \$400,000 to the Junction and Breakwater Railroad, and one of \$200,000 to the Breakwater and Frankford Railroad, both secured by mortgages, and the balance in bank-stock. The State has also investments amounting to \$448,999 for the benefit of free schools, consisting for the main part of bank-stock. The State thus has a balance of assets over and above its indebtedness amounting to \$253,049, to which is to be added interest on investments payable January 1, 1881, to the amount of \$77,702. The estimated receipts of the Treasury for the year 1880 were \$168,655, and the estimated expenditures \$97,530. Of the receipts for the year up to the date of the report, amounting to \$122,019, \$50,549 were derived from licenses, \$20,250 from the tax on the earnings of railroads, and \$13,647 from the passenger-tax on railroads. Of the disbursements, amounting to \$82,769, the principal items were: redeemed bonds, \$30,000; interest on the State debt, \$27,540; judiciary, \$10,275; salaries, \$5,687. The receipts for the maintenance of free schools amounted to \$31,736.

The receipts for the year, reported at the opening of the Legislature, amounted to \$187,747, including interest due on investments still to be paid in, and the whole of the interest due of the mortgage of the Breakwater and Frankford Railroad, of which \$35,886 was in arrears and not collectable, the Legislature having passed a joint resolution excusing the railroad from the payment at present of the moiety of the interest on the loan. The actual expenditures for the year were reported as \$150,409. The Governor recommends the conversion of the State bonds, which mature in 1885, \$441,000 in amount, into four per cent. interest-bearing bonds running twenty years, but redeemable at the option of the State after ten years, and a similar conversion of the remaining bonds, due in 1890 and in 1898.

On January 19th and succeeding days, Judge Bradford, of the United States Circuit Court, listened to an argument for the appointment of United States supervisors of elections to attend in the Levy Court and control the listing of voters, which, under the State laws, is a function of this body. Anthony Higgins, representing the Republicans, made the argument in favor of the application, and Attorney-General George Gray and George H. Bates

spoke against their appointment. Judge Bradford decided that supervisors of election could be appointed, upon due application, under the act of Congress to guard and scrutinize the assessment-lists and the lists of electors made out from these and furnished to the inspectors of elections. The United States statute makes it the duty of the Judge of the Circuit Court to appoint two supervisors in each voting precinct, who shall be of different political parties, at the request of two citizens in any town, or of ten citizens in any county, the office of these supervisors being to guard and scrutinize the registration, "if one there be," of voters for members of Congress; or, in case there is no system of registration, shall open the court ten days at least prior to the election and hear any case brought before it relative to the election. The Constitution gives the right of suffrage to every free white citizen twenty-two years of age, or older, who has resided one year within the State and one month in the county, and has paid within two years a county tax assessed six months at least before the election, citizens between twenty-one and twenty-two years of age being entitled to vote without having paid a tax. The enrollment of the name of a citizen on the assessment-lists of the assessors of the different hundreds and those of the Levy Court in each county is a legal condition of the exercise of the right of voting; and, unless so enrolled, no citizen, however well entitled on other grounds, can cast a ballot under the Constitution. Although in a literal and technical sense the making out of these lists by the assessors and the Levy Court is not a registration of voters, according to the sense and intent of the act of Congress, it is an act of registration more absolutely determining the rights of citizens with respect to the franchise than registration is in States which have specific registry laws. An enabling act, like that authorizing the appointment of supervisors, should not be subjected to a narrow and literal construction. The registration of voters must vary widely in the different States. Any method of making up the list of voters which allows of the occurrence of the evils and abuses which the Congressional act was intended to guard against, affords fit and sufficient subject-matter for the act to work upon, and constitutes a registration of voters within the meaning of the law. From the assessment-list of tax-payers made out by the assessors the Levy Court compiles the assessment-roll of the county; and from the latter the Clerk of the Peace makes out the lists of voters for each hundred or election district, upon which he writes the word "naturalized" opposite the name of each naturalized citizen, and the word "voted" opposite the name of every citizen who has already

voted, and also gives the residence of each voter. The laws of Delaware give to every citizen the right to challenge any name inscribed by the assessors on their list, and to demand the insertion in either list of the name of any citizen who has been improperly omitted. The Clerk of the Peace, in making out the alphabetical lists of voters for the use of the inspectors of elections, exercises *quasi-judicial* powers when he determines the fact of naturalization and determines and certifies to the residence of electors; but the prerequisite of assessment demanded by the Constitution is determined by the assessors and the Levy Court. The Judge decided, consequently, that their lists are subject to the scrutiny of the Federal officers which the act of Congress empowers the Circuit Judges to appoint for the supervision of national elections. The Democrats had submitted the names of candidates for supervisors, protesting at the same time against the appointment of such officers; and Judge Bradford appointed supervisors of elections from each party, subject to a revision of his action by the Court in banc.

The supervisors, after having as many names added to the lists as the assessors could attend to during the time of their sessions, still had a long list to present to the Levy Courts. A great number of citizens, mostly colored, who had not paid taxes nor voted for several years, or had been previously assessed, were added to the lists. It had been the practice of the managers of both parties to see that the names of poor voters were inscribed in the assessment-lists, and to take care that their taxes were paid. Owing to divisions among the Republicans, and to repeated defeats at the polls, this party had for some years remitted its activity, and allowed the names of its poor voters to be dropped from the lists by the assessors, who usually belonged to the opposite party. Formerly it was the custom to apply to the assessors for the addition of omitted names, the Levy Courts confining their attention to the rectification of mistakes in the lists. Having a large number of supplemental names to present to the Levy Courts, delegations of citizens soon after the opening of these courts requested that certain days should be set apart for the sole business of correcting the assessment-lists; and considerable dissatisfaction was created among the Republicans by the refusal of this request, and also by the delays in adding the names presented, occasioned by the necessity of examining the lists of the two preceding years, to ascertain whether the proposed were any of them delinquents, and therefore incapacitated under a statute passed a few years previously.

Several United States deputy-marshals were arrested on election-day, or were subsequently indicted for offenses against the State laws, which they were accused of having committed on that day. Those cases in which an indictable offense was charged were promptly trans-

ferred to the United States Court on writs of *habeas corpus*, it being held that these officers were not indictable before the State courts for any acts committed by them while in discharge of their duties; but the Wingate case was remanded by Judge Bradford to the Mayor's Court, the State tribunals having the power to require bonds for keeping the peace or otherwise act in cases where no indictable offense is charged.

The case of the negro, William Neal, who was tried and convicted of murder, and sentenced to death, was taken up by the United States Supreme Court in a way which, like the treatment of the deputy-marshal cases, was deeply resented by the State authorities and jurists of the dominant party. After a regular trial and conviction the counsel of the prisoner applied to the United States Courts to stay the execution of the sentence pending an investigation of the Supreme Court into the constitutionality of the mode of trial, and obtained an order to that effect from the Federal Judge. This lawyer, Anthony Higgins, had previously applied to the State bench to transfer the case to the Federal Courts, a demand which the Judges, Comegys, Houston, and Wales, all concurred in denying. The plea upon which he invoked the interference of the Federal judiciary was that there was no negro on the jury which tried Neal, and that the trial was vitiated by the studied omission of colored men from the jury-lists, which amounted to a breach of the Fifteenth Amendment of the United States Constitution.

Touching the mooted question of the limits of Federal and State authority and jurisdiction respectively which had repeatedly cropped up in the course of the year, and the unwelcome assertions of the power of the central Government conveyed in the several rulings of the Federal Court noted above, Governor John W. Hall used the following expressions in his message to the Legislature:

The repeated exercise of jurisdiction by Federal authorities over affairs purely of a domestic or local nature, such as the appointment of officers to supervise the assessment of persons in this State, and the interference with the administration of criminal justice, by challenging the State methods of constituting and organizing juries, have forcibly suggested allusion to this subject. It was hoped that these, and kindred other arbitrary expedients, which were ostensibly devised for the attainment of temporary ends, would disappear with the excitement out of which they were born. But in this we have been disappointed. The reaction of public sentiment which followed the partial subsidence of the unreasoning passions of men, did not reënthrone in the popular heart that sentiment of patriotism which alone is capable of subordinating the lusts of ambition to the sober dictates of reason, and of inspiring and shaping a governmental policy in accordance with the genius and spirit of our free institutions—a policy which raised this country from the condition of a few feeble States to the greatest power among the nations of the earth.

This unwarranted assumption of power clearly belonging to the States, which was first demanded as a temporary concession to the exigencies growing out of physical strife, is now claimed as a permanent

right, based as it appears on no higher ground than the absurd notion that the States are mere *quasi* corporations, subject to the control of a central, visitatorial power, lodged in the Federal Government. If this theory, which is at variance with all our ideas of republican government, is followed out to its logical conclusion, then those local institutions with which our dearest and fondest traditions are associated will be gradually drawn into the unyielding grasp of the Federal Government, and the State governments will be nothing more than mere shells or empty forms in which despotism will mask its hideous plots and conspiracies against the rights and privileges of humanity.

The national banks have refused to pay the State tax on bank-shares imposed by an act of the Legislature passed April 8, 1869. They communicated their refusal to the State Treasurer in July, basing it upon an act of Congress limiting the taxing powers of the States. The Treasurer did not proceed against the banks, but deferred the matter until the Legislature should take action upon it. The Governor in his message calls upon the Legislature to instruct him to collect the taxes, the Attorney-General having expressed the opinion that the position of the banks is untenable.

A serious election riot occurred at Wilmington on Saturday, the 16th of October, during a Democratic parade. While the procession was opposite a hall which served as a political rendezvous for colored Republicans, a fight commenced which soon developed into a bloody encounter in which pistols were freely used by the paraders and shot-guns by the negroes. The latter sought shelter in the houses and behind fences, from which points of vantage they were speedily dislodged by their assailants, who were much the more numerous party. Accounts differ as to which side commenced the attack. Both parties were suspiciously well armed, particularly the blacks, who had evidently equipped themselves either in anticipation of being attacked or with the intention of assaulting the procession. After the negroes were routed, the mob committed many excesses, breaking into houses, and making a start to burn the hall; but they became less dangerous and violent shortly, although the angry feelings aroused on both sides did not subside until after Sunday. A large number of men received wounds, but no lives were lost.

The peach-crop of Delaware in 1880 amounted to about 4,109,000 baskets, or about 3,000,000 baskets less than the great crop of 1875, and about the same as the crop of 1879, which aggregated 3,981,000 baskets. The bulk of the crop of 1879 was harvested in the southern part of the peninsula. In 1880 the most prolific section was the belt of country stretching from one bay to the other, north of North Murderkill, and south of Pencader and Red Lion hundreds. The largest shipments were from Middletown and Smyrna. The Delaware railroad shipments aggregated about 1,700,000 baskets; 1,287,000 went to Baltimore, 565,000 to Philadelphia, and 120,000 to New York, by

water; and 437,000 were canned and dried in the State.

A company was started at Riverside, near Wilmington, for the manufacture of sugar from beet-roots, and began work in 1879. Only about 300 tons of beets of indifferent quality were brought to the factory the first year. But in 1880, by widely advertised instructions and estimates, the farmers were induced to give their attention to the culture, and 3,000 to 4,000 tons of better quality were worked up in the mill. The roots yielded from 8 to 14 per cent. of saccharine matter, and the company paid for them from \$3.50 to \$7 a ton. A new and improved process of manufacture was used. The product was expected to be about 550,000 lbs. of raw sugar, 200,000 lbs. of molasses, and 1,700 tons of pulp, which latter the farmers buy for manure.

The Republican State Convention to select delegates to attend the National Convention at Chicago, met at Dover, May 6th. The following resolutions were adopted:

Resolved, 1. That being in entire accord with the Republican party of the United States, we are content to refer to the authoritative enunciation of its conventions for an exposition of our principles, and to point to the history of its acts as a most conclusive evidence of its usefulness.

2. That while the selection of its candidates should be considered simply as a choice of agents to administer the functions of government in accordance with those principles, the necessary condition of popular approval forbids the nomination of any person so liable to public censure as to render his election probably impossible, and under this absolute limitation regulating the action of political parties in a free government, any Republican who shall receive the endorsement of the National Convention will be entitled to the undivided support of the Republicans of the State of Delaware.

3. That the delegates chosen by this Convention from the State of Delaware to act in the National Convention, to be held in Chicago, on the 2d day of June next, are invested with power to vote on all questions according to their individual sense of right; that we send them for consultation and trust them without qualification, only reminding them that as nomination without election would be in vain, in their endeavor to discover the candidates who should be selected they should regard the preferences expressed by those States upon which we must rely for success, rather than the indications of those from which electoral votes can scarcely be hoped, much less expected.

The Greenback party held a convention at Dover, May 6th. The platform adopted contained the following declaration of principles:

We, therefore, pledge ourselves to work unitedly and heartily for the accomplishment of the following results.

The General Government alone to issue money for the benefit of all.

That all rights and privileges given to national banks to issue currency as money, or in lieu of money, or as a circulating medium, be at once withdrawn, that the people may have a currency of their own, free from the control of cliques and rings, and which can be supplied them, backed by the security of the entire nation, and free from extortion of interest.

The United States bonded debt was conceived in injustice, and has been perpetuated through the ignorance of the people, fostered by politicians for personal

ends, and the benefit of financial rings and corporations. We, therefore, demand, in the name of the people, the immediate calling in of all United States bonds and payment of them, principal and interest, either in gold or silver coin, or in legal tender green-back paper money of the United States—every dollar of such issue to be protected and receivable at par with other lawful money, never to be converted into bonds of any rate or class, and no more bonds of any rate or class to be issued. We fully approve the resolutions recently before Congress, that all currency, whether metallic or paper, necessary for the use of the people, should be issued and its value controlled by the Government, and when so issued be full legal tender for all debts, public or private. The public lands shall be reserved for actual settlers.

Military rule means despotism. We therefore protest against drilling and equipping more men for such service than are necessary for the navy-yards, and the protection of the frontier.

The ballot should be the expression of a free will. We oppose all attempts to deny its exercise on account of poverty, making a property qualification the test of one's right to vote, or limiting its action by the present system of tax-receipt requirement, which may be, and often is, used unjustly to favor party power.

We advocate such modification of the laws of this State that power will no longer be given whereby an unfortunate debtor can be stripped of every means of self-support, and in no case shall the homestead of a family, to the extent of \$700, be liable to sale for debt.

The Democratic Convention for the selection of delegates to the Cincinnati National Convention assembled at Dover, on the 25th of May.

A Democratic State Convention which assembled at Dover, August 24th, renominated E. L. Martin for Congress, and adopted a platform ratifying the nominations made at Cincinnati, and containing clauses on State affairs, declaring as follows:

That the rapid reduction of the public debt in this State, and the maintenance of her credit with a low rate of taxation, are attributable to wise and economical administration of the State government, which entitles the Democratic party to the continued confidence and support of the people.

That experience demonstrates that the continuance of the government of the State of Delaware in the hands of the Democratic party is absolutely necessary to the proper administration of her own internal affairs, State and county, and the protection of the rights and liberties of the people against the efforts of the leaders of the Republican party to encroach upon the same.

That they denounce the appointment of Federal supervisors of elections in this State as an unauthorized assumption of power, and the result of a deliberate conspiracy on the part of the leaders of the Republican party to intimidate the sworn officers of the law in the performance of their official duty, and to destroy the freedom of the ballot. That they utterly denounce the efforts made by the Republican party to awaken sectional animosity and strife, by their speakers and press, for the purpose of retaining power at the expense of national peace and prosperity, thus showing that they prefer a sectional victory to the harmony of the whole nation.

The Republican Convention, which met at Dover, September 2d, nominated John W. Houston as candidate for Representative in Congress, and adopted a platform containing the following clauses:

Touching matters pertaining to our State government, we declare—

1. That representation on the basis of population is in consonance with true republican principles, and should be given.

2. That the State should be divided into senatorial and representative districts, and the Senators and Representatives should be elected in such districts by the people thereof, and that the counties should be divided into districts, and the Levy Courtmen elected therefrom by the people thereof.

3. We favor the election of all county officers directly by the people thereof, and the reduction of the pay of such officers to a reasonable compensation for the services rendered.

4. Believing that neither public virtue nor intelligence has any connection with the soil, we are heartily opposed to freehold qualification for public office.

5. That a more liberal exemption law should be enacted, applicable to all debts hereafter contracted, and that in any such system all debts due for wages, for the current year, shall be wholly exempt from attachment or execution process.

6. The present assessment laws were conceived more in the interests of the Democratic party than of the people, and largely at the expense of the tax-payers. Their administration by the Levy Courts of the several counties is in derogation of the rights of freemen, is unjust, partisan, and dishonest.

7. That we may urge upon the Republican party of this State, and all persons having at heart its success, to give to the State Central Committee their full and hearty support in its efforts to place Delaware in the line of Republican States.

The returns of the November election gave a majority for the Hancock and English electors of 1,039, out of a total vote of 29,444; the Weaver electors receiving 129 ballots; and a majority for the Democratic candidate for Congressman over the Republican of 692 out of a total vote of 29,356, of which the Green-back candidate received 51. The Republican candidates for State Senator, Representatives, and local officers were elected in New Castle County, and the Democratic candidates in the other two counties. Judge Houston gave notice that he would dispute the seat of Mr. Martin, in the national House of Representatives, on the ground that some nine thousand votes which had been thrown and counted for the Democratic nominee were illegal, and that about the same number of citizens who possessed a constitutional right to the franchise, and who would have given him their suffrages, were prevented, through the irregularities of the registration, from voting. The object was to invite a Congressional inquiry into the supposed disfranchisement of the negro, worked by the assessment laws of the State. He subsequently withdrew his objections to the seating of Martin.

The census returns show the population of the State to be 146,654, an increase of 21,639 since 1870; the male population numbers 74,153, the female 72,501; of the total, 137,182 are of native birth, and only 8,723 of foreign; the whole population is divided into 120,198 whites and 26,456 of negro extraction. The city of Wilmington contains 42,499 inhabitants, against 30,841 in 1870; the whole county of New Castle 77,746, against 63,515; Kent County, 32,877, against 29,804; and Sussex County 36,031, against 31,696.

DENMARK, a kingdom of Northern Europe. The reigning sovereign is Christian IX, fourth son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, appointed to the succession of the Danish crown by the Treaty of London of May 8, 1852, and by the Danish law of succession of July 31, 1853. He succeeded to the throne on the death of King Frederick VII., November 5, 1863. He was married May 26, 1842, to Louise, Princess of Hesse-Cassel. The heir-apparent is Prince Frederick, born June 3, 1843, and married July 28, 1869, to Louisa, only daughter of King Charles XV of Sweden. Their children are three sons, born in 1870, 1872, and 1876, and three daughters, born in 1875, 1878, and 1880. The second son of the King is King of Greece. The oldest daughter, Alexandra, is wife of the Prince of Wales; the second, Dagmar, wife of the Czarevitch; the third, Thyra, wife of the Duke of Cumberland, who is the claimant to the throne of Hanover.

The King has a civil list of 500,000 rigsdalers, and the heir-apparent of 60,000 rigsdalers.

The Ministry of 1879 continued in office throughout the year, with the exception of the Minister of Worship and Public Instruction, in whose place J. F. Scavenius was appointed on August 24, 1880.

The area of Denmark proper, inclusive of the lakes, is according to a new measurement * 38,302 square kilometres (1 square kilometre = 0.386 square mile); population, according to the census of 1880, 1,969,454. The area and population of the dependencies were reported in 1880 as follows:

TERRITORIES.	Area in square kilometres.	Population.
Faroes.....	1,383	11,221
Iceland (habitable only 42,068 square kilometres).....	102,471	72,000
Greenland (Danish part).....	88,100	9,531
West India Islands.....	358.9	87,600
Total.....	132,262.9	130,352

Area of the entire kingdom, 230,565 square kilometres, with a population of 2,099,800.

The annual financial accounts, called *statsregnskab*, for the years 1877-'78 and 1878-'79 (the financial year closes on March 31st), were as follows (in crowns—1 crown = 27 cents):

YEAR.	Revenue.	Expenditure.
1877-'78.....	46,956,231	43,880,407
1878-'79.....	46,065,263	42,113,656

In the budget estimates for the financial year ending March 31, 1881, the revenue was estimated at 47,246,558 crowns, the expenditure at 41,672,448 crowns, and the probable surplus at 5,574,110 crowns. The chief sources of revenue and expenditure were as follows:

* See Behm und Wagner, "Bevölkerung der Erde," vi (Gotha, 1880), p. 12.

The national debt of Denmark has been in the course of reduction since 1866, and from 1876 to 1879 was as follows:

DEBT.	1876.	1877.	1878.	1879.
Internal debt.....	159,655,045	153,950,192	158,974,096	159,382,773
Foreign debt.....	22,118,200	17,289,250	15,449,650	15,376,650
Total.....	181,773,245	176,248,442	174,423,746	174,759,423
State property.....	58,372,655	56,218,569	59,949,359	96,056,278
Debt proper.....	98,400,560	90,029,873	84,474,387	78,703,145

The total strength of the Danish army in 1880 was as follows:

ARMY.	REGULAR ARMY.		ARMY OF RESERVE.	
	Officers.	Rank and file.	Officers.	Rank and file.
Infantry.....	801	26,992	245	10,925
Cavalry.....	189	2,180
Artillery.....	175	4,755	48	2,068
Engineers.....	61	624
Total.....	1,176	84,551	293	12,993

The staff of the army was composed of 25 commissioned and 16 non-commissioned officers.

The navy in 1880 consisted of 33 steamers, of which 8 were armor-clad ships, and the rest unarmored vessels, mostly of small size. The navy is recruited by conscription from the coast population.

The movement of shipping during the year 1878 was as follows:

VESSELS.	SAILING-VESSELS.		STEAMERS.		TOTAL.	
	Number.	Tons.	Number.	Tons.	Number.	Tons.
Entered. { Coasting-vessels.....	14,174	162,051	7,164	148,695	21,338	810,746
{ Ocean-vessels.....	12,773	635,661	6,541	410,536	19,314	1,046,197
Cleared. { Coasting-vessels.....	15,029	140,637	7,264	140,308	22,293	280,995
{ Ocean-vessels.....	12,139	135,651	6,256	200,859	18,425	886,540

The following table exhibits the value (in crowns) of Danish commerce in 1878:

COUNTRIES.	Imports.	Exports.
Great Britain.....	41,316,000	63,131,000
Germany.....	75,661,000	46,394,000
Sweden.....	20,232,000	22,777,000
Norway.....	5,202,000	10,554,000
Russia.....	7,223,000	753,000
Holland.....	6,178,000	1,200,000
Belgium.....	3,369,000	839,000
France.....	3,172,000	1,317,000
Iceland.....	3,465,000	2,865,000
Greenland.....	740,000	583,000
United States.....	8,143,000	17,000
Danish West Indies.....	1,898,000	83,000
Brazil.....	10,000	1,000
Faeroe Islands.....	233,000	356,000
Other countries.....	13,477,000	1,517,000
Total.....	190,419,000	153,222,000

The commercial navy was as follows in 1878:

VESSELS.	Number.	Tons.
Sailing-vessels.....	3,096	210,763
Steamers.....	190	46,651
Total.....	3,286	257,419

The aggregate length of railroads in operation was 1,366 kilometres (1 kilometre=0.62 mile); of these, 811 kilometres belonged to the state and 555 to private companies. The number of post-offices was, in 1878, 159; the number of letters and postal-cards mailed, 25,463,599. The aggregate length of state telegraph lines was 3,376 kilometres; of wires, 9,016.

According to the census of 1870, there were only 14,614 persons, or less than one per cent. of the population, not belonging to the Lutheran Church. Of this number 4,400, or nearly one third, were Jews; the remainder comprised 1,857 Roman Catholics, 1,430 members of the Reformed Church, or Calvinists, 2,069 Mormons, 3,157 Baptists, 57 members of the Anglican Church, and 1,181 members of a sect called "Frimenighed," or the Free Community. In 1880 the Baptists had in Denmark 17 churches, 116 preaching-stations, 2,114 (adult) members, 697 Sunday-scholars. The Methodist Episcopal Church, in the same year, had 618 (adult) members and 121 probationers, the Seventh-Day Adventists 80 members, the Disciples of Christ 70 members, the Brethren or Tunkers 8 members.

Soon after the publication of the census of 1880, an agitation was begun in the Government papers in favor of an increase in the number of representatives to be sent by the city of Copenhagen to the Folkething. The capital was at present represented by nine members, that being the number to which it

was entitled under the census of 1850, according to the law of apportionment, allotting one representative for every 16,000 inhabitants. The population of Copenhagen had increased since 1850 from 130,000 to 235,000 inhabitants, and six additional representatives were claimed for it on the basis of the increase. The demand was supported by the Government and the Conservative party, because, it was said, the constituency of Copenhagen is a conservative one, and the proposed increase of representatives would add to the strength of that party in the Folkething.

The Finance Committee of the Folkething reported at the end of 1879 that, in the estimates for 1880 presented by the Government, the amount to be expended on military and naval account was estimated at 3,047,000 crowns as against 1,974,900 crowns which were voted under those heads for the previous year. Both branches of the Left proposed to make a great reduction in this amount, the moderate Left favoring a limitation of the appropriations to 1,570,600 crowns, and the radical Left desiring to fix them at 1,846,000 crowns. A deputation, including the Speakers of both of the Legislative Chambers, waited upon the Premier during January to present an address urging the Government to complete the defenses of the country at whatever cost. The Minister of Marine stated in the Landsting, at the beginning of June, that the plans of the Government contemplated a fleet composed of eight armored batteries, four large unarmored vessels, ten corvettes and schooners, twelve gunboats with heavy cannon, and thirty torpedo-boats, all of which were to be completed within ten years.

In connection with the subject of the defenses of the kingdom, a military writer in the "Cologne Gazette" remarked in February that the strategical position of Denmark might be of great importance in the event of a European war. The harbor of Copenhagen and several good anchorages on the coast of Zealand would afford to a fleet operating in the Baltic a secure basis which would be very useful in a war against Russia; while, in a war against Germany, Jutland would afford a place of disembarkation for a large army, which, marching southward, could cause a diversion that might be very awkward for the German commanders. It was, therefore, not improbable that some great power might attempt to imitate the achievements of the British fleet against Denmark in 1801 and 1807. During the Crimean War there was no suspicion as to the neutrality of Denmark, and it was consequently not attacked by any of the belligerents; but its neu-

trality might be doubtful in the event of a war between Germany, France, and perhaps Russia, in which case it would probably be deemed necessary "to set all doubts at rest by decisive action." The approaches to Copenhagen are very difficult for ships of war. The town could be most readily bombarded from the southeast, but on that side also great natural obstacles would have to be encountered. The channel between the island of Saltholm, in the middle of the sound, and that of Amager (on which a part of Copenhagen stands), is divided by the great Middelbank into two passages, the eastern one of which is called the Great Passage, and the western one the King's Passage. It was through the latter that Nelson penetrated on April 2, 1801, in order to attack the Danish fleet. No such dangerous achievement would now be necessary for bombarding Copenhagen, as rifled guns could reach the center of the town with their shot if fired from ships of war stationed in the Great Passage.

The relations between Denmark and Germany have become more pleasant. The King having paid a visit to Berlin in January, shortly afterward, the deputies from Schleswig, who had persistently refused, since that province was annexed to Prussia, to take the oath of allegiance to the Prussian Government, signified their willingness to comply with the prescribed formality. It was believed that the dispute about North Schleswig had been brought to a close, and that the visit of the King to the Prussian court might be regarded as an outward proof that he had accepted the new order of things. The deputy Larsen, who was elected as a deputy from North Schleswig to the German Parliament, published a statement declaring that, while he still adhered to his political opinions, he would, in consequence of the changes brought about by the abrogation of the fifth article of the Treaty of Prague, take the oath of allegiance to the German Constitution.

A trifling incident, which happened at Copenhagen in August, became the occasion of some embarrassment in the social relations between the representatives of Denmark and Germany. At a public dinner given in honor of a French actress, Baron Magnus, the German ambassador, proposed a toast to France in terms complimentary to the actress. The actress replied in a speech, at the close of which she expressed a hope that the toast of the German Minister had been to the whole of France—including Alsace-Lorraine. The Danish members of the party cheered this remark, and the actress responded to the cheers by intoning the "Tapfere Landsoldat," the well-known war-song of 1863. A member of the French legation then spoke of the intimate relations which formerly existed between Denmark and France, and was also greeted with cheers. At this moment the Danish gentleman who presided at the banquet thought it was time to rise from

the table. Prince Bismarck was said to be much vexed at the affair, and Baron Magnus was given a leave of absence on account of it.

The credentials of Nagaska Meringoshi, as Envoy Extraordinary and Minister Plenipotentiary of the Japanese Government to the Danish court, were received in November.

The project of law relative to the purchase of the railways of Zealand by the state was adopted by the Chambers in July.

A meeting of merchants was held at the exchange at Copenhagen in the first week of July to consider what steps could be taken for the protection of Danish commerce against the consequences of the changes that were being made in the German customs duties, and of the proposed withdrawal from Hamburg of the privileges of a free port. Among the measures discussed were, the reduction of certain duties, the abolition of harbor dues, and the formation of a treaty with France. A commission was appointed to make definite proposals.

A formal meeting of the Rigsdag was called and opened October 4th, but was immediately prorogued till November 9th, the time for the opening of the regular session. At the opening of the Folkething on the latter day, it was announced that the estimates of the budget, which were balanced at 50,000,000 crowns, showed an estimated increase in the revenues of 2,750,000 crowns, and in the expenditure of 5,500,000 crowns as compared with the previous year, the additional outlay being due to the purchase of the railways of Zealand by the state, and the carrying into effect of the new military law.

DEPHOSPHORIZATION OF IRON. A process for eliminating the phosphorus of iron while being converted into steel in the Bessemer retort or the Siemens furnace, thus admitting a large class of ores in the manufacture of soft steel, notably many Cleveland and German ores, which were before unworkable, is the joint invention of two young Englishmen, Sidney Thomas and Sidney Gilchrist, the one a practical chemist, the other an amateur student of metallurgy, who were efficiently aided in the development of their idea by Windsor Richards, a well-known English metallurgist, the superintendent of works belonging to Bolekew, Vaughan & Co. The inventors were first permitted to experiment in the smaller establishment of that house at Blaenavon; then Mr. Richards tested it at Eston, and devoted much time and study to perfecting it, finally putting it in practice with a full plant at the same firm's Cleveland Steel Works. The process has been brought to a point where it can be commercially applied, although by the removal of some remaining difficulties it will prove much more profitable. The metallurgists of Germany, where there are large quantities of phosphoric ore, have done much to improve the process, and are now employing it on a large scale. It is called the basic process, and is characterized by replacing

the ordinary refractory lining of the converter of silicious materials with a basic lining. The first successful blow, after considerable trouble had been found in obtaining a good lining by burning magnesian limestone in a kiln, was made April 4, 1879, the news of which awakened the intensest interest of metallurgists all over the world. Thomas and Gilchrist explained their invention in a paper read at the next convention of the Iron and Steel Institute. Massenez and Pink, of the Hoerde Company, in Westphalia, and Brown, Bayley, and Dixon, of Sheffield, were the next to adopt the process. At first, charges of lime and oxide of iron, varying from 15 to 25 per cent. of the pig, were placed in the converter before the molten metal was poured in. Afterward the oxide of iron was discovered to be superfluous.

The material used in the lining of the old converter, called *ganister*, is nearly pure silica, which is an acid (Si_2O_4), being the oxide of the metalloid silicon. When lime is roasted with iron in the converter, the phosphorus is removed; but it is necessary, apparently, not only that the lime should be properly mingled and blown together with the metal, but that the converter should be entirely lined with lime or some alkali. The use of the acid lining would be fatal to the process, because the silica and lime would eagerly combine and form a kind of glass, which would go into the slag, leaving the phosphorus as it was. The silicic acid is the great enemy of the basic lining, causing the lining, and especially the bottom, to rapidly alter and degenerate. After many costly experiments, a practicable basic lining was obtained by wetting and molding magnesian limestone ground into powder, and then burning the dolomite bricks thus made at the highest attainable temperature. Another mode of forming the lining is, to ram into the converter hard-burned pulverized dolomite, mixed with ten per cent. of coal-tar. The *tuyères* used in lime-lined converters are either of the ordinary fire-brick kind, or the lime-bottoms are rammed around rods which form *tuyère*-holes. The lime-bricks as they are made are exceedingly expensive, and not always trustworthy, and yet are subject to rapid and certain destruction. The dolomite bricks are built up to form the lining with mortar of similar composition. The only material which has produced satisfactory basic bricks so far is magnesian limestone or dolomite. It was hoped that the afterblow—that is, the continuance of the blast for two or three minutes after the decarbonization has been completed—could be avoided, and the wear on the bricks, which takes place chiefly at this period, be greatly reduced; but when the chemistry of the process was better understood through the revelations of the spectro-scope, it was seen that the afterblow was the necessary and characteristic condition of dephosphorization. The phosphorus at the high

temperature of the Bessemer converter is converted into phosphoric acid, which will combine with the lime or other base only after the carbon and silicon and a large proportion of the sulphur have been eliminated. The preservation of the basic lining depends largely on shortening the period of the overblow as much as possible. Yet in Cleveland it is found necessary to continue it three or four minutes, producing a most destructive wear and tear. The corrosive action of the silicic acid is directly proportional to the amount of silicon contained in the iron; and the pig which is lowest in silicon can consequently be made into steel by the basic process the most economically. According to A. L. Holley, iron is best adapted for the basic process which contains under 1 per cent. of silicon, $2\frac{1}{2}$ per cent. of phosphorus, and from $\frac{1}{2}$ to $2\frac{1}{2}$ per cent. of manganese, which is useful as a heat-giver as well as a valuable ingredient in steel. The ferro-manganese or spiegeleisen is added to the blown metal; and, before it is poured in, the slag is run out of the converter, to prevent the manganese from taking the phosphorus out of the slag again, and carrying it back into the iron. The basic process is, in other respects, conducted precisely like the ordinary process, except the afterblow.

The absence of any indication when the dephosphorization was completed, such as the drop of the carbon-flame in the ordinary process, necessitated the troublesome and time-consuming proceeding of taking out samples to test during the afterblow. If the blast were continued too long, the quality of the product would be impaired by oxygenation. The inconvenient accumulation of slag and metal, clogging the nose of the converter, while the samples were being taken out, was only partially avoided by reducing the size of the aperture and lining the nose with fire-brick. With increased experience it was possible to stop blowing at the right stage by timing the blast, without the necessity of sampling. The wear of the lining was much more uniform after this, as many as six hundred and thirty tons of steel having been made in one lining without repairs. J. Massenez has observed closely the chemical changes which take place during the basic process, in the works at Hoerde, in Westphalia. The silicon is reduced to a mere trace in about two minutes, a portion of the carbon burning out at the same time. While the silicon is in combustion the phosphorus not only is not attacked, but increases proportionately to the bulk of the mass while the silicon and carbon are being reduced. After the silicon is expelled, the carbon commences to burn off rapidly. The manganese oxidizes slowly and regularly during the whole blow. The trace of copper disappears at the commencement. The sulphur-curve rises until the beginning of the afterblow, and descends only slowly and partially at its end. The phosphorus is energetically attacked after decarbonization has

been completed. Its rapid combustion is the cause of the high temperature at the end of the process. After the reduction of the silicon, and while the carbon is being reduced from 2.72 to 0.16 per cent., the diminution of the phosphorus is only from 1.32 to 1.18 per cent. Then a rapid combustion of phosphorus takes place, leaving only a trace. The Germans succeed in more completely dephosphorizing pig-iron than the English. In the Hoerde works pig containing 2.75 per cent. carbon in combination, 0.50 per cent. manganese, 0.9 per cent. silicon, 0.31 per cent. sulphur, 1.51 per cent. phosphorus, gave on analysis after three minutes' afterblow 0.13 per cent. of phosphorus, and in twenty-five seconds longer 0.10 per cent., with 0.17 per cent. manganese, 0.12 per cent. sulphur, and of carbon a trace; and after the addition of the spiegeleisen the steel produced gave 0.19 per cent. of carbon, 0.57 per cent. of manganese, 0.10 per cent. of sulphur, and 0.10 per cent. of phosphorus. In Bolckow, Vaughan & Co.'s works a new six-ton converter is in use, especially adapted to this process. The lime and iron are lifted up by the force of the blast, but do not cling to the nose of the converter, and the metal can be poured into the converter when turned upon its side. The converter is first heated with coke, then about 16 per cent. of the weight of the metal of well-burned lime mixed with some coal is put in and blown until well heated, and then the molten pig-iron is poured in, and a blast of twenty-five pounds' pressure is turned on. It is decarbonized in about ten minutes. The method of sampling is still used in these works. After two and a half minutes' afterblow a sample is taken out, beaten into a sheet, cooled, and broken. If not ductile enough, the blast is continued some time longer before the spiegel is added. Another process is in use in the same establishment, which can be applied to Cleveland pig of different qualities, while special grades are required for the other. This is called the transfer system. The metal is desilicized in a converter with a silicious lining, and then poured into another with a dolomite lining, the silicious slag being carefully kept out, in which the afterblow of about three minutes is conducted, enough lime having been placed in the converter to absorb the phosphorus. Not expecting that the basic lining will through any improvements in the process become as lasting as the silicious lining, Mr. Holley, who has adopted the basic process in the United States, has devised an apparatus which works by means of an hydraulic ram, by which the converter-shells can readily be lifted off their trunnions and newly lined ones set in. The acid lining was not brought up to its present state of perfection without passing through a long period of experimentation and gradual improvement. The acid linings also are subject not only to wear from the mechanical action of the charge, but are chemically attacked by the various slags.

The silica linings have been perfected to the point where sixty charges can be got out of each pair of converters in twenty-four hours. This is their duty in the Bessemer works of the United States, where appliances have been devised for rapidly shifting interchangeable converter-bottoms, and for removing a burned-out converter, and placing a new-lined one on the trunnions, which are not yet introduced in Europe. The repairing of the fixed linings just above the tuyères, and the removal of the incrustations of slag which accumulate on certain parts of the lining, are the main problems in maintaining acid linings in order; and the conditions of the basic lining are precisely similar, only the chemical decomposition is much more rapid and general, so that the difficulties are increased about threefold. The bottoms and tuyères employed in the basic process can stand ten to fifteen charges, being nearly equal to the silica bottoms; but the lining near the tuyères, and in other parts of the converter, is soon eaten out by the decay and abrasion; and the converter must frequently be cooled off, and the lining repaired by inserting new bricks, or by patching, occasioning a stoppage of twenty-four hours, which is a more serious drawback in the United States than in Europe, where the average output of Bessemer converters is less than half that of American steel-works, and where the plant can be suffered to lie idle during the repairs of ordinary converters, whereas American iron-masters are obliged to employ mechanical contrivances to keep their whole force and plant busy every hour. The basic lining is seldom run above sixty charges without a thorough overhauling being necessary; and some of them must be repaired every time a new bottom is set. The adaptation of the basic process to American methods, until the basic materials can be obtained with enduring qualities equal to those of the acid linings, requires a contrivance of the nature of that devised by Holley, by which converters that are disabled can be replaced without loss of time by sound ones. Holley's converting plant differs from a system which is being tried in the Cleveland Steel Works, by Richards, in that the latter apparatus is designed to transport the entire converter, taking it off the pillow-blocks and conveying it, by means of an overhead traveler, to the repair-shops, replacing it by a fleshly-lined converter by the same apparatus; while Holley contemplates making the shell of the converter detachable, and lifting it out rapidly by a lift, lowering it to the ground-level, and rolling it to the repair-shop in a car.

In many parts of the United States phosphoric ores, adapted to the basic process, are abundant, and usually very cheap. In some districts, especially in the South, they are common in the same localities in which coal and excellent dolomite are found in great quantities. The occurrence of all the materials for cheap steel-making in immediate proximity in

these localities opens up the possibility of a great industrial development.

DISCIPLES OF CHRIST. The first detailed report of the statistics of the Disciples of Christ was made to the General Christian Missionary Convention in October, 1880. The following is a summary of its principal items:

STATES AND TERRITORIES.	Churches.	Preachers.	Members.
Alabama.....	85	28	3,250
Arkansas.....	56	45	5,928
California.....	49	88	5,775
Colorado.....	16	12	1,750
Connecticut.....	6	4	775
Dakota.....	7	4	675
District of Columbia.....	1	2	425
Florida.....	14	11	900
Georgia.....	75	48	9,850
Illinois.....	725	650	85,250
Indiana.....	675	580	78,950
Iowa.....	200	78	16,860
Kansas.....	125	98	15,500
Kentucky.....	595	485	79,525
Louisiana.....	12	7	1,680
Maine.....	7	5	725
Maryland.....	5	4	1,095
Massachusetts.....	7	5	1,240
Michigan.....	75	49	6,000
Minnesota.....	7	5	725
Mississippi.....	15	12	2,870
Missouri.....	565	395	60,900
Montana.....	6	4	675
Nebraska.....	75	41	18,550
New York.....	49	89	5,950
North Carolina.....	95	79	14,700
Ohio.....	425	217	45,500
Oregon.....	45	24	4,750
Pennsylvania.....	95	88	18,400
South Carolina.....	25	18	2,825
Tennessee.....	275	195	38,550
Texas.....	165	135	16,500
Vermont.....	8	2	425
Virginia.....	150	115	16,500
Washington Territory.....	1	1	75
West Virginia.....	65	48	7,750
Wisconsin.....	21	12	2,575
Wyoming Territory.....	1	1	95
Total.....	4,768	3,488	568,928

The floating membership is estimated to consist of 50,000 persons. Adding this, gives a total of more than 600,000 members in the United States.

The annual meeting of the *General Christian Missionary Convention* was held in Louisville, Kentucky, October 21st. Mr. T. P. Haley presided. The whole amount of the receipts of the Board representing the Convention for the year had been \$16,123, of which \$9,373 were in cash, the rest in notes and bequests. The Board had employed seventeen missionaries, and had carried on its work in Dakota, Washington, and Montana Territories, Oregon, Kansas, Nebraska, Tennessee, South Carolina, Virginia, West Virginia, Pennsylvania, Colorado, Iowa, and New Mexico. Its missionaries had organized nineteen churches and twenty-one Sunday-schools, and returned 791 additions of members. Besides this work, sixteen State societies had received \$85,559, and returned 2,280 baptisms and 1,573 other accessions resulting from their labors.

The *Foreign Christian Missionary Society* had received \$12,887, and had expended \$11,807. It had missions at Southampton, England; Copenhagen, Denmark; Paris, France; Chester,

Southport, and Liverpool, England; and Constantinople, Turkey—all of which together returned 291 additions during the year, 514 members in all, 735 attendants at Sunday-school, and a total average attendance at church of 3,000 persons. The services in Liverpool were to be temporarily suspended, and a new station was to be opened at Bury, near Manchester; services had been begun at Frederickshald, Norway, with a congregation of sixty Free-churchmen owning their own house. A paper called "The Evangelist" was published at Southport, England, and a monthly periodical was published at Copenhagen, Denmark.

The *Christian Woman's Board of Missions* had received \$7,223, and had expended \$4,958. It employed five missionaries in Jamaica and two missionaries in Paris, France.

DOMINION OF CANADA. The Conservative Government still preserves a large and harmonious majority in Parliament. Sir John Alexander Macdonald is still Premier and Minister of the Interior, and the principal members of the Cabinet are the same as in 1879—Sir Samuel Leonard Tilley remaining Minister of Finance; Sir Charles Tupper, Minister of Railways and Canals; James Colledge Pope, Minister of Marine and Fisheries; and John Henry Pope, Minister of Agriculture. Among the changes in the Cabinet the principal one was the appointment of John O'Connor, previously President of the Council, to the postmaster-generalship, the office which he held at the time of the fall of the Conservative Ministry in 1873. The leader of the Opposition, Alexander Mackenzie, the late Prime Minister, who had headed the party in and out of power for over twenty years, felt compelled by failing health to resign the active leadership into the hands of his coadjutor, Edward Blake, who had been his supporter in debate for many years. Mr. Mackenzie did not cease, however, to take part in the debates of the House upon the main questions in controversy between the Conservative Government and the Liberal minority.

The Dominion Parliament was convened on the 12th of February, and prorogued on the 7th of May.

For the creation of the office of a resident representative agent in the United Kingdom, to be called the High Commissioner for Canada, which post is to be filled by Sir Alexander T. Galt, the vote of Parliament was obtained by the Premier.

A change was made in the currency law, reducing the specie reserve held against the Dominion currency notes and augmenting the issue. Under the old law the Government was permitted to issue notes, secured by a partial reserve in specie, up to the amount of \$12,000,000. Against the first \$9,000,000, a gold reserve of 20 per cent. was required to be held, and against all above that amount, up to \$12,000,000, a reserve of 50 per cent. For all notes placed in circulation beyond that amount

a reserve of dollar for dollar was required. By the new currency regulations the Government may issue \$20,000,000 in paper currency, and is required to hold only 15 per cent. in gold with 10 per cent. in bonds of the Dominion, guaranteed by the Imperial Government, as security for the redemption of the whole amount issued. New regulations were also made regarding the issue of notes by the banking institutions. In a conference with the bankers, Sir Leonard Tilley was dissuaded from the project of establishing a Government bank of issue which he proposed, and also from introducing the American national-bank system requiring a deposit of Government bonds to secure the circulation. The new banking law makes the notes of each bank a prior charge upon its assets, and requires the bank to keep a reserve of 40 per cent. of its circulation in Dominion notes, and to make full and clear statements of its financial condition to the Government every month. The banks were directed furthermore to cancel their notes of all denominations under five dollars, in order to make room for the new issue of \$8,000,000 by the Government, which is intended to be in notes of small denominations.

In connection with the increased tax on imported cigars, a change was made in the excise for the purpose of encouraging the cultivation of tobacco and the manufacture of the domestic leaf, by which special licenses are granted to manufacturers of Canadian tobacco only, for which the excise duty is reduced from forty to thirty cents a pound on cigars, and twenty to fourteen cents per pound on other manufactures; the license-tax for manufacturing Canadian tobacco exclusively is fifty dollars, instead of seventy-five dollars as in the case of other manufacturers. The increase of ten cents per gallon on spirits had the effect of considerably reducing the revenue from that source, owing either to a reduced consumption or to illicit distillation. The tax on distilled liquors is one dollar per gallon; there is a duty of fifteen cents per gallon on methylated spirits, and one of four cents on vinegar.

The revised estimate of ordinary expenditures for 1879-'80 was \$24,978,000; the estimate of revenue \$24,450,000. A supplementary estimate of expenditures increased the estimated deficit for the year to \$623,000. The estimated revenue for 1880-'81 is \$25,517,000, and the estimated disbursements, revised at the close of the sessions, are \$25,318,734, not including the item of the survey of Dominion lands, estimated at \$300,000, which was formerly charged to consolidated revenue, but is now transferred to capital account. The revenue of 1880 fell considerably below the estimate of the Finance Minister, the deficit reaching \$1,700,000. The actual expenditures for the year were \$25,161,712. The expenditures of the preceding year were \$24,455,381; before that, during the five years of the Liberal Ministry, they had remained at about \$23,500,-

000 each year, excepting 1876, when they reached nearly \$24,500,000, and before that, between 1867 and 1873, they had risen progressively from \$13,500,000 to \$19,000,000.

The following comparative statement of the receipts of the Treasury in 1879-'80, and the preceding year, shows an increase of \$1,298,463:

RECEIPTS ON ACCOUNT OF	1878-'79.	1879-'80.
Consolidated fund.....	\$22,517,883	\$23,307,406
Loans.....	23,189,908	28,316,878
Open accounts.....	6,771,574	1,558,849
Total.....	\$52,479,165	\$53,177,628

The customs receipts increased from \$12,900,659 to \$14,071,343; the excise receipts decreased from \$5,390,763 to \$4,232,427, and the stamp duties from \$185,190 to \$175,806; the post-office revenues increased from \$1,172,418 to \$1,252,498; public works revenues, including railways, from \$1,863,149 to \$2,167,401; and receipts on public lands increased from \$23,828 to \$120,479. The total expenditures increased from \$47,456,421 to \$50,879,241. The ordinary expenditures were \$6,963,852, against \$6,941,577 in 1878-'79. The principal items of controllable expenditure were civil government, \$893,505; administration of justice, \$574,311; legislation, \$598,105; department of public works, \$1,051,926; lighthouse and coast-service, \$425,304; ocean and river steam-service, \$385,334; mounted police, \$332,865; post-office, \$1,818,271; customs, \$716,126; public works, \$2,329,626. The total expenditure on account of consolidated fund was \$24,850,634, or \$1,543,228 in excess of the receipts.

The chief transactions of the Treasury for the year, were the placing of the £3,000,000 4 per cent. loan on the English market, which was taken up at £95 1s. 10 $\frac{1}{2}$ d. Out of the proceeds £1,208,000 of 6 per cent. debentures were retired. The only other operation was the conversion of \$3,005,095 of the Dominion 6 per cent. stock into a 5 per cent. loan, and the redemption of \$693,946 of the same, leaving a balance of \$422,197. By these operations the interest on the gross debt has been reduced from the average rate of 3.95 per cent. to 3.82 per cent.; that on the net debt from 4.51 to 4.37 per cent.; and that on the English loans from 4.57 to 4.45 per cent. The amount of debt outstanding which matures before 1885 is \$40,642,872, of which \$39,375,402 is payable in London: \$33,419,089 of the total amount does not mature until January 1, 1885. The total liabilities of Canada increased from \$188,974,753 on June 30, 1879, to \$199,125,323 on June 30, 1880; while the total assets increased from \$36,493,683 to \$42,182,852. The total debt, funded and unfunded, increased during the year from \$158,745,580 to \$173,673,929. The expenditures for the year on capital account for internal improvements, were \$8,241,173: \$2,123,366 on ca-

nals; \$8,730 on public buildings; and \$6,109,077 on railroads, of which latter amount \$2,048,014 were expended on the Intercolonial, and \$4,044,522 on the Pacific Railway.

Numerous changes were made in the tariff, nearly all of them in the direction of extending and increasing the protection of home industry. The malt duty of two cents per pound was reduced in the interest of the brewers to fifteen cents per bushel. In the original tariff a high duty was imposed upon woollens, while wool was left on the free list. To disarm the opposition to the national policy which was gaining ground among the farming population, a protective duty was placed upon certain grades of wool, without, however, materially benefiting the farmers, since the Canadian sheep-growers have bred their stock to mutton, and must export the greater part of their wool-clip, which is only used in the manufacture of blankets in Canada, while the woollen manufacturers have to import most of their material. The duty is three cents per pound, and covers "Leicester, Lincolnshire, Cotswold, Down, combing wools, or wools known as luster wools, and other like combing wools, such as are grown in Canada." A drawback of one and a half cent a pound on blasting explosives was allowed to miners. The duty on brown and common papers was raised from one to one and a half cents a pound. Paris green, before on the free list, was subjected to 10 per cent. duty *ad valorem*. Duties of 25 per cent. were placed upon emery-wheels and on gold and silver leaf. A discriminating duty was placed upon bituminous coal in the interest of the Nova Scotia miners, the ten cents additional duty raising the rate on soft coal to sixty cents per ton. An additional duty of five per cent. was imposed upon pianos and organs, and on billiard-tables, making the duty 15 per cent. A duty on cans was levied in retaliation for the famous lobster-can duty imposed by Congress; it is the same as the American duty, one and a half cents on quart-cans containing fish under the Washington Treaty, and a proportionately increased duty on larger cans. The duty on demijohns containing vinegar, wine, or acids was reduced from 20 to 10 per cent. China and porcelain are taxed 25 instead of 20 per cent. The duty on raw sugar was fixed upon the import price, including the export taxes of the exporting countries. The duty on trunks was raised to 30 per cent. The duty on books was raised from six cents per pound to 15 per cent. *ad valorem*, including British copyright books. Steel remains on the free list for another year. The duty on cigars and cigarettes was changed from 50 to 60 per cent.

In reply to inquiries of the Governor-General, made in a letter dated May 3, 1879, Sir Michael Hicks-Beach thus defines the policy of the Imperial Government with respect to the protective tariff:

In connection with the new customs tariff now under the consideration of the Dominion Parliament

it has been asked whether the royal instructions issued to you omitted for the first time the clause requiring that bills imposing differential duties should be reserved for her Majesty's approval. It will be apparent from a perusal of the papers that the clause in the former royal instructions requiring that certain classes of bills—and among them bills imposing differential duties—should be reserved for her Majesty's approval was, at the instance of the late Government of the Dominion, omitted from the revised royal instructions because her Majesty's Government thought it undesirable that those instructions should contain anything which could be interpreted as limiting or defining the legislative powers conferred in 1867 on the Dominion Parliament. It was, therefore, not with reference to the fiscal policy of your present Ministers, which indeed was not at the time in contemplation, that this particular alteration was made, nor does it in any way diminish the powers of reservation and disallowance which are fully and clearly set forth in the "British North America Act of 1867."

The dominion and jurisdiction over all the British possessions, with the exception of Newfoundland with its dependencies, which colony has not yet entered the Confederation, have been formally transferred to the Dominion by the Imperial Government.

A boundary question between the Ontario and Dominion governments, which had been adjusted by a commission under the previous Ministry, composed of Sir Edward Thornton, Sir Francis Hicks, and Chief Justice Harrison, subject to the ratification of the two Legislatures, was again unsettled by a bill brought into the Dominion Parliament providing for the administration of justice in the disputed territory. The arbitrators had fixed the western boundary of Ontario at a line running due north from Hunter's Island, and had drawn the northern boundary-line connecting the point on Hudson Bay, struck by a line running north from Lake Temiscaming as the northeastern limit, with a northwestern point on the Lake of the Woods. The delineation of the northern boundary involves an historical investigation of the treaties and laws defining the frontier between the Hudson Bay Company's possessions on the one hand, and on the other the old French colony, and the provinces of Upper and Lower Canada which were formed therefrom. It establishes, therefore, not only the northern limit of Ontario, but that of Quebec as well. The Hudson Bay Company claimed, in their controversies with the British Government on this question, that their territory was bounded by the "height of land," or the watershed between the Great Lakes and Hudson Bay. In the controversies between the British and French Governments in the beginning of the last century, the French colony claimed the fifty-fifth parallel of latitude as its northern boundary, and the company insisted on the fifty-third, which is coincident with the Albany River. The northern boundary of Ontario, defined above, was determined in accordance with the act of the British Parliament dividing the colony into two provinces in 1791, which fixed the eastern boundary of the Upper Province and its northeastern point on the line

running north from Lake Temiscaming to the shore of Hudson Bay.

The manifold schemes devised by the Government for the speedy completion of the Pacific Railway have one after another ended in disappointment. The mission to England undertaken by the Ministers in 1879 to induce the British Government to pledge its credit for the completion of the road was a total failure. The plan was, to intrust the direction of the enterprise to a joint commission appointed by the Imperial and the Canadian Governments, which should raise the funds for extending the works by the sale of 100,000,000 acres of land in the Northwest, set apart for the purpose, and upon Canadian bonds guaranteed by the British Government. The prospect of opening up a wide and fertile territory for immigration was advanced as a sufficient inducement to the Imperial Government to come to the relief of Canada in her helpless efforts to establish rail communication between the grain-fields of the Northwest and the seaboard, and to carry the road across the Rocky Mountains, and discharge her promise to British Columbia. As might have been expected, the Canadian Cabinet officers obtained nothing more substantial than good words from the Imperial Government. No direct negotiations took place; but in an informal conference with the Canadian representatives, the Secretary for the Colonies, Mr. Forster, expressed the opinion that the Imperial Government ought, perhaps, to aid the Dominion in completing her great public undertaking, but not if the Canadians recognized no mutual obligations, and continued to impose prohibitory and protective duties upon imports to the prejudice of British manufacturing and exporting interests. In the summer of 1880 Sir John A. Macdonald and Sir Charles Tupper again visited Europe with the purpose, this time, of inducing private capitalists to take the enterprise off their hands. It had been reported, before their departure, that negotiations had commenced with reference to such a plan with Lord Dunmore and Mr. Brown, of London, who visited Canada for this object. On September 27th, after his return, Sir John A. Macdonald announced in a speech at Montreal, that he had concluded an arrangement with an association, including certain of the leading capitalists of England, Germany, France, the United States, and Canada, by which the road was to be completed in ten years, and kept running for ten years after its completion "without the cost of one cent to the people of Canada." It was afterward understood that the European capitalists, among whom are supposed to have been the houses of Baring, Erlanger, and Rothschild, had not entered into an actual agreement with the Canadian envoys; but a syndicate of Americans, it was given out, the chief members of which were Morton, Rose & Co., the American Banking Agency in London, and Mr. MacIntyre, of Montreal, the principal shareholder in the Canada Central Rail-

way, had engaged to build the road on the same terms. These were understood to embrace the transfer of the portions of the road at present completed and contracted for, the cost of which, including surveys, is estimated to amount to \$34,834,618, the payment of a bonus of \$25,000,000, and a grant of 25,000,000 acres of land along the line of the railway.

The division of the line traversing the fertile plains of the Northwest, from Selkirk to the Rocky Mountains, 900 miles, and the Thunder Bay branch, now nearly completed, 404 miles, connecting it with the head of navigation on Lake Superior, are generally regarded as a sound commercial undertaking, which will return good profits in a short period; also the Sault Sainte Marie branch connecting the prairie division with the American network of railroads. The Rocky Mountain and British Columbia division, 550 miles in length, which is expected to cost \$30,000,000, or as much as it will to complete the whole 1,400 miles from Lake Superior to the foot of the Rocky Mountains, and the division around the shore of Lake Superior to connect the Northwest with old Canada, 620 miles in length and running through a barren wilderness, which is almost as costly to build as the British Columbia road, are justifiable only from a political standpoint, and could hardly be expected to pay their running expenses for a long time to come.

The portions of the Pacific Railway under contract at present are the section of the main line from Fort William to Selkirk, 404 miles in length; from Emerson to Selkirk, the Pembina branch, 85 miles; 100 miles on the main line and the Winnipeg branch west of the Red River; and 127 miles in British Columbia: altogether 722 miles. The total expenditure on account of the road up to the end of 1879 had been \$14,159,165. The Yale-Kamloops line in British Columbia was let in four sections, and the contracts were subsequently transferred to Andrew Onderdonk, of San Francisco, contractor and civil engineer, who acted for a syndicate of American capitalists, consisting of L. P. Morton and H. B. L. Laidlaw, of New York; S. G. Reed, of Portland, Oregon; D. O. Mills, of San Francisco, financial agent of the association, and Onderdonk himself, who superintends the construction. The disposal of their contracts at a profit by the Canadian contractors was made the subject of strictures upon the Government. The contract price for this difficult division, which involves much bridging, excavation, and tunneling, amounts to \$8,000,000 or \$10,000,000. The work was commenced the 15th of May with a numerous force of white and Chinese laborers brought from California.

The route of the Canada Pacific over the Rocky Mountains had to be selected from three only known passes. These are the Yellowhead Pass, at an elevation of 3,645 feet; the Pine River Pass, whose elevation is about 2,800 feet; and the Peace River Pass, with an elevation said to be only 1,650 feet. The dif-

facilities to be overcome in carrying the road through the tremendous cañons of the Cascade Mountains down to the Pacific are not greater in the route which has been adopted—over the Yellowhead Pass and along the courses of the Thompson and Frazer Rivers to Burrard Inlet—than by either of the others. The perpendicular cliffs or deep slopes down which terrific avalanches descend, and the rushing and variable mountain-torrents which sweep through the deep gorges, will make this part of the route a trying task for the engineers.

After surveys made in the Peace River district, in the Skeena River Valley, and the different passes leading to Port Simpson, the Government have returned to the Burrard Inlet and ratified its adoption. The route from Lake Superior to Port Moody, Burrard Inlet, by way of Yellowhead Pass, is 1,945 miles long, 190 miles less than the shortest route to Port Simpson. The estimated cost for the entire completion and equipment of the road from Ottawa to Burrard Inlet is about \$84,000,000, according to the latest statement of the Government. The cost of the line from Thunder Bay, on Lake Superior, to the Pacific terminus, is estimated at \$64,869,618, estimating the Fort William and Selkirk division at \$17,000,000; the 1,000 miles across the prairies, from Selkirk to Jasper Valley, at \$13,000 per mile; the section from there to Kamloops, 336 miles, at \$43,660 per mile; the Yale-Kamloops section, 125 miles, at \$80,000 per mile; and the section from Yale to Fort Moody at \$38,838 per mile. The cost of the extension from Fort William along the northern shore of Lake Superior to the terminal point at Lake Nipissing, about 600 miles, is roughly estimated at from \$30,000 to \$40,000 a mile, which would make the capital outlay for the entire road, not quite 2,600 miles in total length, between \$82,000,000 and \$88,000,000. The Pacific Junction Railway Company are engaged in building a line of road between Gravenhurst and Southeast Bay, on Lake Nipissing, a distance of 107 miles, which will connect the existing system of railroads with the Pacific Railway. This extension of the Canada Central will connect with both the main line and the Sault Sainte Marie branch of the Canada Pacific when completed, and in the mean time will open up a valuable country for lumbering and colonization. The time set for the completion of the railroad, to which the Government solemnly pledged itself in 1874, and which was the principal condition under which British Columbia entered the confederation, has already nearly expired. The aggregate length of the sections built at the end of 1880 is about 800 miles, of which 264 miles are opened to traffic.

The prices set upon the railroad lands, extending 110 miles on each side of the road, average \$2.12½ per acre for the railroad reservation. They are graduated as follows: for belt A, along the railroad, 5 miles on each side, \$5 per acre; belts B, 15 miles wide each, \$4;

belts C, 20 miles wide, \$3; belts D, 20 miles wide, \$2; belts E, 50 miles each, \$1. Pre-emption land is \$2.50 an acre in belts A and B, \$2 in belts C and D, and \$1 in belts E. The terms for pre-emptions are four tenths of the price at the end of three years, and the rest in six annual payments, with six per cent. interest from the time of taking up the allotment added. The quantity of land which the Government expected to be sold and pre-empted and disposed of by free grant was calculated to be 32,640,000 acres. According to a sanguine estimate of Sir Charles Tupper, the railroad could be completed by the Government in eleven years at the cost stated above; there would be a probable immigration of 500,000 people into the Northwest during that period, who will be paying \$1,800,000 a year in customs, and who will have paid toward the completion of the railroad for the lands upon which they settle \$38,000,000 in cash, with \$32,000,000 still due to the Government upon mortgages. The following lands have been disposed of within the railway belts in Manitoba and the Northwest Territory: Belt A, 34,932 acres; B, 28,213; C, 6,392; D, 12,085; E, 47,631; total sales, 129,303 acres. The scrip lands amount to 451,133 acres; free grants amounting to 229,721 acres have been taken up; free culture grants, 36,840 acres; pre-emptions, 590,240 acres; and homestead grants, 1,142,400 acres. The total area taken up amounts to 2,578,677 acres.

The contract for the building of the prairie section, and that connecting it with the Canada roads, signed by the Ministers, is with a syndicate composed of George Stephen and Duncan MacIntyre, of Montreal; J. S. Kennedy, of New York; R. B. Angus and J. J. Hill, of St. Paul, Minnesota; Morton, Rose & Co., of London; and Cohen, Reinach & Co., of Paris. The road is divided into four sections; the first extending from the western terminus of the Canada Central to the east end of Lake Nipissing, and called the Eastern Section; the second, from Lake Superior to Selkirk, called the Lake Section; the third, from Selkirk to Kamloops, called the Central; and the fourth, called the Western Section, running from Kamloops to Port Moody. The contractors are required to place a deposit with the Government of \$1,000,000, immediately after the organization of the company, as security or caution money for the construction of the road, on which the Government agrees to pay to the company 4 per cent. per annum interest, payable half yearly. Work must be commenced before the 1st of July, 1881, on the Eastern Section, and before the 1st of May on the Central Section. These two sections must be completed and in operation before May 1, 1891. The section in British Columbia now under contract must be finished by June 30, 1885. The other part of the British Columbian division, extending from Yale to the Pacific terminus, must be finished before

May 1, 1881. Both of these latter divisions are to be built by the Government and delivered over. The subsidies, amounting to \$25,000,000 and 25,000,000 acres of land altogether, apportioned to the different parts of the road, are to be handed over in the following amounts: for the first 900 miles of the Central Section, \$10,000 a mile and \$1,000,000, and 12,500 acres of land for each mile; for the next 450 miles, \$15,333 a mile and \$6,000,000, and 16,666-66 acres of land per mile; making the total money subsidy for this section, \$15,000,000, and the land subsidy, 18,750,000 acres. For the Eastern Section the syndicate is allowed a subsidy of land equal to 9,615½ acres per mile, or for the whole 650 miles, 6,250,000 acres. The company is to be called the Canada Pacific Railway Company, and to have its central place of business in Montreal. The directors are to be George Stephen, Duncan MacIntyre, J. S. Kennedy, R. B. Angus, J. J. Hill, H. Stafford Northcote, P. P. Grenfell, C. D. Rose, and Baron Reinach. Besides the Lake Superior Section, already partly constructed, the Pembina branch, and the Yale-Kamloops stretch under contract, the Government agree to complete and hand over to the company the 90 miles of road from Yale to Port Moody, the cost of which is estimated at \$3,500,000. The materials to be used in the construction of the permanent way are to be admitted free of duty. The company may select their own route between the termini. No other company shall have the right to construct other lines in the Northwest to compete with the road within a period of twenty years. The road and all its appointments shall remain free of taxation for ever, and no taxes shall be collected from the company on the lands included in the cession for twenty years. The road-bed must be as good as that of the Union Pacific when first built. The subsidy in money and land belonging to each twenty-mile section will be delivered upon the completion and equipment of such section, save a drawback of one fifth of the land, which will remain in the possession of the Government as a security for the maintenance of the railroad for ten years after completion. The company is authorized to raise money to build the road either by selling the land to settlers, or by issuing bonds secured by the land grant, or by mortgaging both the railway and the land; \$5,000,000 of the company's bonds may be held by the Government as a pledge until the operation of the road for the stipulated ten years is fulfilled. The grant of land consists of alternate sections of 640 acres extending back 24 miles on each side of the line. When any of this land is not fairly fit for settlement, the company may choose instead an equal number of sections lying within the same distance of branch or side lines, which it shall locate anywhere within the fertile belt, or between the forty-ninth and fifty-seventh parallels of latitude. Upon the completion of the contract

the railroad is to be the property of the company in perpetuity.

The Dominion Parliament was convened on the 9th of December, some two months earlier than usual, in order that the Ministry might obtain their ratification of the Pacific Railway contract. The speech from the throne contained the following references to this and other subjects of public concern:

During the recess my advisers thought the time opportune for making another attempt to carry out the declared preference of Parliament for the construction and operation of the Canadian Pacific Railway by means of an incorporated company, aided by grants of money and land, rather than by the direct action of the Government. Three of my Ministers, therefore, proceeded to England for the purpose of carrying on negotiations. I am pleased to be able to inform you that their efforts were so far successful that a contract has been entered into, subject to the approval of Parliament, with men of high financial standing in Europe, the United States, and Canada, for the speedy construction and permanent working of this great national enterprise. The contract and the papers connected therewith will be submitted to you without delay, and I invoke for them your early and earnest consideration. With this view I have summoned you before the usual period, as no steps can be taken by the contractors to prosecute the work, and no permanent arrangement for the organization of a systematic emigration from Europe to the Northwest Territories can be satisfactorily made till the policy of Parliament with respect to the railway has been decided.

Steady progress has been made in the construction of those portions of the railway now under contract. Two additional sections have been recently opened for traffic—one from Winnipeg to Portage La Prairie; the other from Cross Lake to Keewatin—so that there are now in all two hundred and sixty-four miles in operation.

You will be glad to learn that the measures adopted to promote economy in the working of the Intercolonial Railway and Prince Edward Island Railways, have resulted in a large reduction of the difference between the revenue and expenditure, and that the steadily increasing traffic warrants the expectation that during the current year these railways will be self-sustaining.

I have the gratification of informing you that her Majesty's Government has generously presented to Canada for training-school purposes the steam-corvette *Charybdis*, lately returned from service in the Chinese seas. The correspondence on this subject will be laid before you.

I have thought it well, in consideration of the increasing duties thrown by the development of the country upon the civil service, and for the more efficient organization of the service, to issue a commission to examine and report on the whole question. The report of the Commissioners will, I believe, be ready to be laid before you at an early day, and I ask for your consideration of such report and of the whole subject of civil service reform.

A measure for the enlargement of the boundaries of the province of Manitoba will be submitted to you.

I greatly regret being obliged to state that the entire failure of the usual food supply of the Indians in the Northwest Territories, to which I called your attention last session, has continued during the present season, and has involved the necessity of a large expenditure in order to save them from starvation. Several of the bands have, however, already applied themselves to the cultivation of their reserves and the care of their cattle. No effort will be spared to induce the whole of the aboriginal population to betake themselves to agricultural pursuits.

Immigration from Europe into Canada is

now increasing with rapid strides year by year. The heaviest immigration in any one year occurred in 1847, the year following the Irish potato-famine, when about 70,000 persons entered Canada for permanent settlement. The next greatest immigration took place in 1873, when 41,079 people landed. In 1866 only 10,091 immigrants settled in the Dominion. From that year up to 1873 there was a progressive increase. In 1874 the number fell off to 25,263; in 1875 it further declined to 19,243, and in 1876 to 14,499, the lowest ebb during the period of depression. In 1877, 15,323 persons from across the sea took up their abode in Canada; in 1878, 18,372; and in 1879 the number leaped up to 30,717. The arrivals for the first three months indicate a total immigration of nearly double that number in 1880. This influx is more than neutralized by the exodus of Canadians to the United States, which has been growing constantly larger for several years past, owing to the returning prosperity and higher wages in the United States and the continued depression in Canada, which the protective tariff failed to relieve; though good crops and revival of the lumber exports to the United States have in 1880 caused the tide to turn. The number of Canadians who crossed the border to settle in the United States in the fiscal year 1878 was 25,568; in 1879 the number rose to 31,268; and in 1880 it mounted up to nearly 90,000.

Among the multitude of unemployed laborers in the cities of the older provinces in the earlier part of the year were many immigrants who had been assisted in their passage over the ocean by the Government, which had undertaken to pay to the steamship companies a portion of the fare of such as declared a purpose to become farmers or agricultural laborers. To remedy this evil an order in council was issued for the winter months, prohibiting the landing of any passenger not possessing twenty dollars in cash. The practice of partly paying emigrants' fares from Europe was subsequently restricted, as it had been under the former Government, to farm-laborers and domestic servants.

The obnoxious land regulations in the Northwest caused many of the emigrants to the new Canadian wheat-lands to cross the American frontier and transfer their labor and their capital to the equally fertile prairies of Dakota and Minnesota. The number of settlers who took up lands in the Northwest in 1879 is estimated to have been about 16,000. Of these the number who settled in Manitoba was 11,665. The larger share of this immigration came from the older provinces of the Dominion, a few from the United States, and about 2,000 from the British Islands. The Government land policy provoked many complaints from settlers, and was criticised severely by the Opposition in Parliament, especially the plan of reserving one half of the railroad lands for speculators. The lands along the line of the railway are divided

into belts, the first on either side of the line being five miles broad, the next ones fifteen miles in breadth, and those farther back broader. The prices of the land for purchase or preemption were fixed at different figures for the different belts in the order of their remoteness from the railroad. Each belt was surveyed into square-mile sections, of which only one half are subject to homestead and preemption rights, each alternate section being held as a reserve, the proceeds of the sale of which are to be devoted to the building of the railroad. Of the portion open to settlers 160 acres in each section are given free as a homestead, and each homesteader is allowed a preemption right to 160 acres more. The reserved sections are salable to non-settlers, who are required to pay the purchase-money in ten equal annual installments. The plan of reserving the alternate sections to be disposed of to non-residents in the open market, which was adopted as a convenient means of raising money to aid in the extension of the railroad, was vigorously denounced by the Opposition, on the grounds that it would defeat its object by retarding the settlement of the country, and that it was unjust to actual settlers, doubling the cost of roads and schooling for them, and locking up a large portion of the reservation in the hands of land-speculators who would be enriched by the labor of the pioneers. The area of fertile lands in the Northwest Territory is differently estimated at from 150,000,000 to 220,000,000 acres. Professor Macoun estimates the extent of land adapted for agriculture and stock-raising between Manitoba and the Rocky Mountains at 150,000,000 acres, interspersed with 30,000,000 acres of sterile lands, of which two thirds are probably reclaimable. Of the tillable land 46,000,000 acres lie between the fifty-first parallel of latitude and the American boundary, the forty-ninth parallel, 88,000,000 acres north of the fifty-first degree, and 16,000,000 acres in the Peace River district. The Premier made the statement, based on reports of officers of the survey, that there were 220,000,000 acres in the Northwest east of British Columbia, exclusive of the northern part of the Montana desert, or the belt of dry lands immediately north of the American boundary-line, which, however, Professor Macoun thought was quite fertile, as the rainfall is found sufficient when the soil is plowed up and the moisture is allowed to penetrate the soil, although the rain evaporates and the herbage withers on the unbroken land.

The law relating to the survey of public lands in the Dominion requires that the eastern and western boundaries of each township shall be true astronomical meridians, and that the sphericity of the earth shall be allowed for, so that the northern boundary of every township is less than the southern. In carrying out this operation the surveyors are obliged to go over every line twice with chains of unequal lengths, and to regulate their measurements by frequent

astronomical determinations. In the survey of the railroad lands five principal meridians have been accurately determined, and partly traced, viz., the 97th, 102d, 106th, 110th, and 114th; and fourteen base-lines have been measured and marked connecting these, one of which, on the parallel of $52^{\circ} 10'$, has a length of 183 miles. Since 1876 eleven astronomical stations have been determined; and from these the latitude of sixty-six determinate points and the longitude of forty-five have been calculated.

The Fortune Bay fishery outrage which occurred in 1878 gave rise to a controversy between the British and American Governments concerning the meaning of certain clauses of the fishery treaty, which has not yet been settled. The cause of the dispute was a trifling one; but the different interpretations of the treaty are of material import. On Sunday, January 6, 1878, a mob of Newfoundland fishermen attacked the crews of several American fishing-smacks in Fortune Bay. They compelled the Americans to desist from seining for herring, which they were engaged in doing, and, in the struggle, cut and destroyed the nets and tackle. The fishing fleet sailed for home and laid their case before the authorities at Washington. In the bill for damages which they presented, they included the probable loss which they sustained from not being able to continue fishing through the season, owing to the destruction of their tackle, as well as the cost of their tackle and equipment. The entire amount of the claim was something over \$103,000. This claim was formally presented to the British Government, but Lord Salisbury, then Minister for Foreign Affairs, refused to consider it. His reasons, given in a note dated November 7, 1878, were based principally on the ground that the Americans were at the time engaged in drawing their seines from the shore, that being an infringement of the obligations of the treaty, which forbids American fishermen to trespass or interfere with private property. He pleaded secondarily the fact that they were violating a provincial law against fishing on Sunday, and other acts prohibiting the seining for herring on the coast between October 20th and April 26th, and requiring that seines shall be drawn immediately after being set. Mr. Evarts, in his statement, contended that the rights given to American fishermen by the treaty can not be limited by statutes of the local Legislature. Restrictions can be imposed only by the joint agreement of the two contracting Governments. The definite reply to the American demands was not made until April, 1880, shortly before the retirement of the Beaconsfield Government. Lord Salisbury refused positively to recognize the claim for \$103,000 damages on the ground that the American fishermen were exceeding the rights accorded them by the treaty in pulling their seines for bait from inshore. He took the ground that the term shore-fishing in the treaty does not include the

right to land for the purpose of drawing nets from the strand, and that the provision forbidding American fishermen to trespass upon private property forbids their landing. He also held that in fishing with seines the Americans violated local laws which were in force at the time of the conclusion of the treaty, which were the conditions subject to which the Americans received their fishery privileges; admitting at the same time that the local acts broken by the Fortune Bay fishermen, which had been passed later than the date of the treaty, were not binding upon the Americans. Lord Granville's note in answer to the second communication of the American State Department insists upon the construction that the local laws must be equally binding upon the Americans and the Canadian fishermen. (See UNITED STATES.)

A transatlantic line of steamers sailing from the western side of Hudson Bay, connecting with a railroad from Winnipeg, would give the fertile Northwest, which is now almost shut out from the world's market for want of the means of transportation, the most direct communication with the European ports of any portion of the American continent. To test the practicability of this route, Professor Bell embarked in a sailing-vessel from York Factory, on Hudson Bay, the prospective terminus of the projected railroad, in the spring, and landed in England in the middle of December. He reports that Hudson Strait is open for navigation five and a half months of the year. The vessel was wind-bound for three weeks in the strait, and no traces of ice were seen. This route was the one by which the furs of the Hudson Bay Company were transported to Europe, their vessels reaching York Factory in August, and sailing again in September. The severity of the climate on the western shore of Hudson Bay will probably determine the period of navigation rather than Hudson Strait, bad as its reputation has always been since Hendrik Hudson found it filled with floating bergs in August, at its discovery in 1610. York Factory is one of the coldest spots on the globe. The ground remains frozen the year round, and the shore is fringed with ice till August. The port will probably not be accessible longer than from the beginning of August to the middle of October. It might, nevertheless, become possibly the most advantageous shipping-port for the grain of the Northwest, if large storehouses were built for the accumulation of grain during the year, such as have been proposed for the Siberian ports.

An attempt has been made to solve the Indian problem, and induce the savages to settle upon the lands appropriated to them, by establishing model farms amid the reservations conducted by salaried instructors in agriculture. About twenty such instructors were appointed, and went out to their posts during the summer, provided with outfits of farming imple-

ments and live-stock. In some places the Indians suffered from famine; owing to the tardiness of the supplies, they felt resentment against the Government, and several times during the year broke out into hostilities. The presence of the mounted police in the Northwest Territories, the appointment of a regular magistracy, and the execution of the prohibitory liquor law, have greatly increased the security of life and property.

The Tilley tariff has proved at least as productive of revenue as the revenue tariff of 17½ per cent. which was introduced in 1874, when the rate was changed from 15 per cent. The latter rate had taken the place of a 20 per cent. tariff a few years before, and had proved itself a much better revenue-paying tariff than the higher one, yielding enough to change the annual balance from a deficit to a surplus, although the returns increased also when the average rate was raised again by 2½ per cent. The duties collected during the year realized the prediction the Minister of Finance made at the commencement of the Parliamentary session. The imports showed a sufficient increase over those of 1879 to indicate a return of prosperity, but remain far enough below the average for the previous eight years to show that the protective tariff exerts a powerful deterrent influence. The relations of the different tariff systems to the foreign trade and to the exchequer may be seen from the following table of the imports and duties collected each year since 1867:

YEAR.	Imports.	Customs receipts.
1867-'68.....	\$73,469,644	\$8,578,380
1868-'69.....	70,416,165	8,272,879
1869-'70.....	74,814,369	9,384,212
1870-'71.....	96,092,971	11,841,104
1871-'72.....	111,430,527	12,787,982
1872-'73.....	128,011,251	12,964,164
1873-'74.....	128,213,682	14,325,192
1874-'75.....	123,070,283	15,351,011
1875-'76.....	93,210,346	12,323,587
1876-'77.....	99,327,962	12,546,987
1877-'78.....	93,081,787	12,782,824
1878-'79.....	81,954,427	12,900,659
1879-'80.....	86,346,088	14,151,565

The exports exceeded the imports in 1880 for the first time in many years. The increase in exports was mainly in agricultural produce. The value of manufactured goods exported, notwithstanding a rise in prices, was less than in the year immediately preceding the protective tariff. The live-stock trade with England has largely increased, owing partly to the restrictions imposed upon the importation of neat-cattle into Great Britain from the United States. The exports in 1878 were 18,665 cattle, 41,250 sheep, and 2,027 swine from Canadian ports. In 1879 the exports from Canadian ports were 24,682 cattle, 79,085 sheep, and 4,745 swine, besides a considerable export by way of Boston. In 1880 the trade attained much larger dimensions; the exports of cattle for the first half year were nearly double those of the entire preceding year. The embargo placed

upon the importation of live cattle from the United States has worked detrimentally in the sections where American stock is required for breeding purposes. A ninety days' quarantine is deemed sufficient in the case of English cattle, although pleuro-pneumonia is endemic in that country in several infected districts, whereas in the United States it is of sporadic occurrence, and has not spread beyond a few circumscribed localities in the Eastern States.

The following is a comparative statement of imports and exports by the various provinces during the fiscal years 1878 and 1879: Ontario, in 1878, imports entered for consumption, value, \$38,628,697; duty, \$4,702,982; exports, \$22,937,060; in 1879, entered for consumption, \$34,260,205; duty, \$4,955,476; exports, \$23,854,549. Province of Quebec, in 1878, exports, \$37,392,287; entered for consumption, \$31,063,335; duty, \$4,526,460; in 1879, exports, \$29,740,512; entered for consumption, \$29,172,722; duty, \$4,733,248. Province of Nova Scotia, in 1878, exports, \$7,500,783; entered for consumption, \$8,180,750; duty, \$1,217,491; in 1879, exports, \$7,364,234; entered for consumption, \$6,828,972; duty, \$1,133,093. Province of New Brunswick, in 1878, exports, \$6,268,027; entered for consumption, \$8,474,047; duty, \$1,448,638; in 1879, exports, \$5,371,471; entered for consumption, \$5,338,022; duty, \$1,049,009. Prince Edward Island, in 1878, exports, \$1,700,752; entered for consumption, \$1,293,225; duty, \$231,386; in 1879, exports, \$1,831,389; entered for consumption, \$910,987; duty, \$206,245. The total exports for the whole Dominion of Canada decreased from \$79,323,667 to \$71,491,255; imports entered for consumption decreased from \$91,199,577 to \$80,341,608; the duty increased from \$12,795,693 to \$12,939,540; increase, \$143,847.

According to the report of the Chief Engineer of Canals, there are seven different stretches of canal between Lake Erie and Montreal, with a total length of 70½ miles and a total lift of 533½ feet, distributed over 54 locks. The enlarged locks will allow of the passage of vessels of 1,000 tons burden. The least depth of water in the locks is 9 feet at present. When the Welland Canal is enlarged there will be one lock less, and the distance will be shortened one mile. The Galop Rapids section of the canal is to be abandoned for the river-bed, which will be excavated from 10 to 16 feet. This work is now under contract. The purpose of the Government is to enlarge and deepen the canals so as to accommodate vessels drawing 14 feet of water throughout the route. That will be the minimum depth of water on the mitre sills of the locks, and their smallest size 270 by 45 feet. The distance between Lake Erie and the head of ocean navigation at Montreal, which is now rendered navigable by this system of canals connecting stretches of navigable waters, is 365½ miles. Lake Erie is connected with Lake Ontario by

the Welland Canal, 27 miles in length. To the head of the St. Lawrence are 160 miles of free navigation across Lake Ontario, and then 66½ down the St. Lawrence. The route then passes for 7½ miles through the Galop Canal, then down the river for 4½ miles, through the Rapide Plat Canal for 4 miles, and in the natural bed of the river again for 10½ miles, through Farran's Point canal ¾ mile long back into the river, which it follows for 5 miles, to enter the Cornwall Canal. This is 11½ miles in length, after which comes a stretch of free navigation through the Lake of St. Francis for 32½ miles, and then the Beauharnais Canal, 11½ miles long, a free course over the Lake of St. Louis for 15½ miles, and the Lachine Canal, 8½ miles long, which leads into Montreal. The expenditures on canals up to the beginning of 1880 were, \$4,699,248 on the Lachine Canal, \$412,916 on the Cornwall Canal, and \$10,233,320 on the Welland Canal.

The report of the Minister of Education for the year 1878 gives as the expenditure for public schools in Ontario \$2,889,347, a decrease from the previous year's expenses of \$184,142; the total number of children of school age, five to sixteen years old, was 492,350, a decrease of 2,444; the number attending school was 467,433 within the school age, and 21,582 of other ages; the average attendance was 224,588. The number of schools was 4,990, of teachers 6,473, 3,060 male and 3,413 female. There were 177 Roman Catholic separate schools, with an average attendance of 13,172 pupils, an increase of 623.

The report of the Minister of Justice for 1879 shows a marked increase in the number of convictions over those of the preceding year. The total number of convicts in the penitentiaries was 1,159 on June 30, 1878; during the next twelve months, 568 were received under fresh sentences, and 1,318 remained in confinement on June 30, 1879—an increase of 159. Want of employment is assigned as the principal cause for the continued increase of criminals. The sanitary condition of the prisons is as good as could be desired, only eight deaths having occurred during the year. J. G. Moylan, Inspector of Prisons, in his report, defends the employment of prisoners and the teaching of useful trades in the reformatories, saying that convicts should be instructed in order that they may earn an honest living after their release; that they could with propriety be employed upon articles used in the public service; that the desire among them is strong to learn trades, and permission to be taught is held out as the reward for good conduct; that the competition of convict with free labor is not noticeable, except when a large number of prisoners are suddenly engaged upon a branch of manufacture employing a limited number of hands, as an instance of which he cites the employment of convicts in New York State in the hatting trade; that many convicts maintain themselves before conviction, and that, in the cases of

such, their productive labor in prison can not disarrange the labor market; and that it is in the interest of the whole social body that convicts should be made to reimburse by their labor the expense caused by their punishment.

The paid-up capital of the chartered banks in April was \$60,558,822; notes in circulation, \$19,864,343; total liabilities, \$106,005,581; assets, \$179,551,651.

The deposits in the Post-Office Savings-Bank show a gratifying rate of increase. By the terms of the law, no depositor is permitted to place more than \$300 in the bank in any one year, or to increase the amount of his deposits beyond \$1,000. In the year ending June 30, 1880, the total amount on deposit was \$3,945,669, the highest total of any year since the establishment of the system, and \$740,000 more than the next highest, which occurred in 1873. The amount on deposit in the fiscal year 1879 was only \$3,105,051. The number of depositors had increased from 27,445 in 1879 to 31,365 in 1880; the average amount standing to the credit of each depositor was \$125.80. The annual interest allowed is four per cent. The cost of maintaining the bank since its foundation in 1868, during which period nearly \$23,000,000 have been received on deposit, has been one half of one per cent. upon the balance in the hands of the Government.

The Superintendent of Insurance reports that there are 63 active companies, with deposits in the hands of the Receiver-General amounting to \$6,479,092. The fire-risks covered aggregate \$407,357,985, of which Canadian companies have taken \$265,799,425. The average rate of premium charged in 1879 was \$10.51 on \$1,000 of risk; the average losses paid on the same, \$5.42. Owing to competition, the percentage of the amount received for premiums paid out for losses rose from 54 per cent. in 1878 to 66 per cent. in 1879. The life-risks covered aggregated \$86,273,702, 38 per cent. in Canadian, 39 per cent. in American, and 22 per cent. in British companies. The deaths were 6.94 per thousand—a low rate. The insurance paid was \$50 on every \$100 of premium; 11 per cent. of the policies were forfeited by lapse.

In the speech from the throne, at the opening of the Legislative Assembly of British Columbia, April 5th, the Lieutenant-Governor expressed satisfaction at the commencement of the Columbia Division of the Pacific Railway, and stated that demands had been made upon the Dominion Government for the construction of the section from Esquimalt to Nanaimo, and also for a subsidy toward the completion of the Graving Dock at Victoria, but without success. He requested that measures be taken to restrict Chinese immigration.

The Parliament of the Province of Manitoba met January 2d. Lieutenant-Governor Cauchon delivered the speech from the throne. Among the measures were an act to complete municipal organization throughout the prov-

ince, an act to provide for the drainage of low lands, and a bill relating to electoral lists.

The Legislature of the Province of Quebec was opened by Governor Robitaille, May 28th. The entire line of the Quebec, Montreal, Ottawa and Occidental Railway has passed into the hands of the Provincial Government. The cost of building the Provincial Railway has consumed the consolidated railway fund and a considerable sum beyond. The liabilities incurred in this and other public works have been partly funded and converted into a loan, which has been successfully negotiated in the Paris market. This loan of \$4,000,000, bearing five per cent. interest, was disposed of at two per cent. below par. The Government brought forward several measures imposing taxes on licenses, mining privileges, the public offices, etc., the object of which was to increase the revenue without resorting to direct taxation, which is regarded with great aversion in the Canadian provinces. Steps were also taken to somewhat reduce the cost of the civil service. The new loan had increased the debt of the province to \$11,000,000, and an additional loan was yet to be raised which would make it \$15,000,000. The principal part of the large debt of Quebec, which presents a striking contrast to the handsome surplus of Ontario, is owing to the larger subsidies granted in Quebec to railways, and the expenses incurred in constructing public institutions and local improvements, which, in the other province, are borne chiefly by the municipalities. Of the cost of construction of the twenty-three railways, aided in Ontario, with a total mileage of 1,357 miles, which amounted to about \$24,000,000, the subsidies granted by the Legislature amounted to less than \$3,000,000; the municipalities aided them to the extent of \$7,000,000, and private capital furnished \$14,000,000. In Quebec, on the other hand, there were twelve roads built, with a total length of 877 miles. The total cost was about \$20,000,000, one half of which went into the Quebec, Montreal, Ottawa and Occidental Railway, now in the hands of the Government. Of the total amount, nearly half was paid by the Government, \$7,000,000 by municipalities, and only \$7,000,000 by private capitalists. A proposed means of extricating the province from its financial difficulties is to transfer the North Shore Railway to the Dominion Government.

The Ontario Legislature was prorogued on March 5th, after a two months' session. The measures passed embraced the consolidation of the superior courts of law and equity, alterations in the jurisdiction and practice of the Division Courts, the readjustment of the rights of lumberers and settlers on free-grant lands, and the abolition of priority among execution creditors. The jurisdiction of the Division Courts was extended to claims on written evidence of liability up to \$200, instead of \$100 as before, for the settlement of which judgment is given by the Court upon the written vouch-

ers, without the allowance of law costs. The game-protection law was rendered much more stringent by numerous amendments. This measure excited strong opposition in the legal profession. The law had the intended effect, transferring nearly two thirds of the cases which were formerly brought in the County Courts to the Division Court, where they are more speedily and inexpensively settled. A needed act was passed, exempting the goods of a lodger from an execution taken out by the house-owner against the lessee for rent. An act was passed with reference to the granting of bonuses by municipalities for the construction of railways, making the expressed consent of a majority of all the rate-payers necessary to secure a bonus by-law. An enactment changes the respective rights of lumberers and settlers on free-grant lands. By the former law the licensed lumberer was obliged to vacate the standing timber to the settler after five years. The new act abolishes the five years' limit, and in return the settler is allowed one third of the Crown dues paid after the issue of his patent.

The revenue of the province for the year 1879 amounted to \$2,250,269, of which \$1,333,569 came from the subsidy, etc., and \$457,340 from woods and forests and public lands. The expenditures amounted to \$2,285,282. Only a few more miles remain to be completed of the railways to which subsidies have been granted. Deducting all liabilities on account of these, and on other accounts, and the deficit for the year, there remains a surplus fund of \$4,309,027.

An Agricultural Commission was appointed, which visited the different districts of the province, and collected a large mass of valuable information upon the state of agriculture and the best approved methods of farming.

The Nova Scotia Legislature was prorogued by Lieutenant-Governor Archibald, after authorizing the Government to raise a loan of \$500,000. The estimated revenue for 1880 was \$490,240,000, and the estimated expenditure \$486,798,000. The Nova Scotia coal-mining industry suffered an increasing depression in 1879, according to the report of the Commissioner of Mines, in spite of the protective duty of 50 cents per ton. Some experimental shipments of coal were made to Montreal before the general revival of trade; but this was only possible with unusually low freight-charges, and was not repeated. The sales in 1879 were 688,824 tons, a decrease of 4,883 tons as compared with 1878. The number of men and boys employed in the mines was 3,034. The total out-put was 788,273 tons. There were 40 gold-mines in operation in the province, and 28 quartz-mills, crushing 159,346 tons of quartz. The total yield of gold during the year was 13,801 ounces, an average yield per ton of 17 pennyweights 8 grains. The average product per man employed was \$2.34 per day. In the Montague district the product reached \$6.13 per man.

Prince Edward Island advanced a claim for \$1,250,000 as its share in the fisheries award, basing it upon the relative importance of its mackerel-fisheries, and pleading that it was a separate party to the Washington Treaty, and that it did not abandon its right to a separate share by entering the Confederation. This claim was refused by the Privy Council.

Newfoundland is the only part of British North America not now under the Dominion Government. The revenue of the colony in 1879 was \$962,921, of which a surplus remained of \$14,648. The deposits in the savings-bank at the beginning of 1880 were \$1,134,505, having nearly doubled in ten years. The profits of this institution go into a reserve fund for discharging the debt of the colony. A general duty of 15 per cent. has been imposed upon imports.

DU MOTAY, CYPRIEN TESSIÉ, was born in 1815, of an old Breton family. His education was received at Nantes. His opinions were molded by the celebrated De Lamennais, who was on intimate terms with his friends in Brittany. Du Motay's academic course completed, he went to Paris and devoted himself to literature. His poems gained him admission to the *salon* of Madame Récamier. He was thrown into association with Alfred de Musset, Chateaubriand, Victor Hugo, Dumas,

and other writers of that day. Financial troubles induced him to leave Paris for Germany. His attention was turned to science, chiefly to industrial chemistry and metallurgy. He secured patents for several inventions still in use. One for bleaching and dyeing fabrics was purchased by an English manufacturer for sixty thousand francs. He returned to Paris and became consulting chemist in a large laboratory. He opposed Napoleon III and the restoration of the Empire, and was exiled. Reduced to the greatest straits, he offered a London apothecary a simple process for bleaching wax, for which he received £2,000. Enabled to resume work, he invented a method of producing light by oxygen gas. The Emperor, then established on the throne, and intent upon embellishing Paris, recalled the inventor and granted him not only amnesty but a decoration. The outbreak of the Franco-Prussian War prevented the practical inauguration of his new lights in Paris. Du Motay, under the standard of the Geneva Cross, had charge of an ambulance. After the war he settled in New York. He was the consulting engineer and chemist of the Municipal Gas Company. He suffered from a disorder superinduced by his devotion to scientific pursuits. On the 6th of June he died in that city, of apoplexy, at the age of sixty-five.

E

EARTH, THE. *Comparative Statistics.*—We present below, as in some former volumes of the "Annual Cyclopædia" (1875, 1876, 1877, 1878), comparative statistics of area and population, as well as of some other subjects:

I. AREA AND POPULATION.—Of Behm and Wagner's well-known publication, "*Die Bevölkerung der Erde*," the sixth volume was issued in 1880. This periodical has now come to be universally recognized as the great fountain from which all other statistical works are supplied, so far as relates to the area and population of all parts of the globe. In the following table we reproduce the estimates of the area of the large divisions of land as given by the learned editors, to which we add, for the sake of convenience, the equivalent in English square miles:

DIVISIONS.	Area in	
	Square kilometres.	English square miles.
Europe (without Iceland and Nova Zembla).....	9,710,840	8,749,813
Asia.....	44,572,250	17,210,055
Africa.....	29,909,444	11,548,550
America.....	38,389,210	14,822,650
Australia and Polynesia.....	8,953,727	3,457,179
Polar territories.....	4,520,400	1,745,394
Total.....	136,055,371	52,593,171

The figure now given exceeds that of the fifth volume of the "*Bevölkerung der Erde*" by 1,-

594,601 square kilometres, or 615,704 square miles. The increase is owing to the new discoveries of land which have been made in the polar regions.

The following table, giving the estimated population of the large continents, likewise reproduces the figures given by Behm and Wagner, except in the case of America, which they credit with 95,495,500 inhabitants. To this figure we have added 3,000,000, as Behm and Wagner estimate the population of the United States at only 47,000,000, whereas a preliminary statement of the census of 1880 gives more than 50,000,000:

Europe.....	318,484,000
Asia.....	834,707,000
Africa.....	205,679,000
America.....	98,495,500
Australia and Polynesia.....	4,081,000
Polar regions.....	82,000
	1,461,428,500

The estimates made by Behm and Wagner, in their former volumes, of the population of the earth,* were as follows:

Year.	Population.
1879.....	1,377,000,000
1873.....	1,391,000,000
1875.....	1,397,000,000
1876.....	1,424,000,000
1877.....	1,426,000,000
1878.....	1,439,000,000

* For an account of former estimates of the total population of the earth, beginning with Isaac Vossius, see "Annual Cyclopædia" for 1875, article **EARTH**.

The claim of the above population statistics to accuracy becomes better from year to year, as the number of countries which take an official census steadily increases, and the method of taking the census continues to be improved. However, the aggregate population of all the countries in which an official census is taken was in 1880 estimated at only 626,000,000, and for the majority of the total population of the earth we are still dependent on mere estimates. (See CENSUS.)

II. RELIGIOUS DENOMINATIONS.—In most of the European countries as well as in their colonies, in which an official census is taken, the religious denomination of the inhabitants is among the inquiries which have to be made by the census-taker. There has been of late a tendency in several countries to omit the religious feature of the enumeration, but we have for nearly every country at least one census which includes the religious denomination of the inhabitants. As it can be shown that the percentage of the religious denominations in the European countries has not been materially

changed during the last fifty years, the results of one census containing the religious statistics of a country are sufficient to form an estimate of the present strength of the religious denominations, which may be accepted as nearly correct. In the United States the bishops furnish annually an estimate of the Catholic population, while nearly all the Protestant denominations publish the statistics of their actual (adult) members. For the non-Christian countries, the number of the Christian inhabitants can be ascertained with tolerable accuracy from missionary accounts. As the immense majority of the Christian population lives in countries where statistical investigations are steadily improved, we are on the whole well informed on the statistics of the Christian population of the globe. A revision of the religious statistics published in former volumes of the "Annual Cyclopædia," on the basis of the official statements above referred to, gives the following results in regard to the numerical strength of the Christian population of the globe at the close of the year 1880:

DIVISIONS.	Roman Catholics.	Protestants.	Eastern churches.	Total Christians.
America (inclusive of Greenland).....	49,780,000	45,200,000	10,000	94,980,000
Europe (inclusive of Iceland).....	154,479,500	78,875,000	71,405,000	304,759,500
Asia.....	8,829,000	2,866,000	9,402,000	21,097,000
Africa.....	2,148,000	1,092,000	8,200,000	6,440,000
Australia and Polynesia.....	702,000	2,296,000	2,998,000
Total.....	215,983,500	130,329,000	84,007,000	430,324,500

Christianity is the prevailing religion in every state of Europe, except Turkey; in every State of America, in the Australian colonies, and most of the Polynesian Islands. In Africa, the independent Christian states are Abyssinia, Liberia, Madagascar, and the Orange Free State; while Christianity also prevails in the European colonies. The largest empire in Asia—Russia—is also a Christian country. India, the third Asiatic country in point of extent and the second in point of population, is under the rule of a Christian government, and so is a large portion of Farther India.

As regards non-Christian forms of religion, the number of Jews can be ascertained with about the same degree of accuracy as that of Christians, and is now generally estimated at from 7,000,000 to 8,000,000. The number of Mohammedans is conceded to be much larger than it is represented in former estimates, and may be assumed as not falling short of 230,000,000. (See MOHAMMEDANISM.) No trustworthy statistics can be given of Buddhism, which prevails in Farther India, China, and Japan. Recent reports from Japan claim, however, nearly the entire population of that country for Buddhism. (See JAPAN.) Brahmanism is the prevailing religion in British India.

III. STATISTICS OF SEX.—According to the latest accounts, the number of females for 1,000 males was in the countries from which statistics on this subject could be obtained as follows:

COUNTRIES.	No. of females to 1,000 males.	COUNTRIES.	No. of females to 1,000 males.
Norway.....	1,060	Greenland.....	1,181
Great Britain and Ireland.....	1,058	Martinique.....	1,091
Sweden.....	1,054	Colombia.....	1,058
Switzerland.....	1,046	Guadeloupe.....	1,039
Spain.....	1,044	Chili.....	1,006
Finland.....	1,042	Salvador.....	1,000
Portugal.....	1,041	Surinam.....	988
German Empire.....	1,036	United States.....	978
Austro-Hungary.....	1,035	Peru.....	977
Denmark.....	1,032	Canada.....	976
Russia.....	1,018	Argentine Republic.....	942
Netherlands.....	1,008	Brazil.....	938
France.....	989	Uruguay.....	934
Italy.....	989	St. Pierre and Miquelon.....	841
Luxemburg.....	989	AMERICA.....	977
Belgium.....	985		
Servia.....	963	Samos.....	1,009
Roumania.....	987	Japan.....	971
Greece.....	906	British India.....	944
EUROPE.....	1,024	Siberia.....	882
Lagos.....	1,161	French East Indies.....	914
St. Helena.....	1,081	Russian Central Asia.....	909
Natal.....	1,059	Caucasus.....	898
Egypt.....	1,021	Ceylon.....	877
Cape Colony.....	973	Labuan.....	618
Gambia.....	942	Straits Settlements.....	587
Mauritius.....	684	Hong-Kong.....	875
Mayotte and Nossi Be.....	619	ASIA.....	944
Reunion.....	608		
AFRICA.....	990		
Dutch West Indies.....	1,200	Australia, New Zealand, and Tasmania.....	812
Ecuador.....	1,189		

IV. RAILROADS OF THE WORLD.*—The following table shows the aggregate length of railroads in the several large divisions of the earth in the years 1875, 1877, and 1879, the length being expressed in kilometres (1 kilometre = 0.62 English mile).

DIVISIONS.	1875.	1877.	1879.
Europe	142,689	152,954	164,801
America	135,573	146,536	153,733
Asia	12,370	13,943	15,176
Australia	2,708	4,490	6,407
Africa	2,438	2,907	4,065
Total	295,783	320,830	344,182

V. POSTAL AND TELEGRAPH STATISTICS.—The following table shows how many millions of letters were mailed in the principal countries during the last year of which the statistics could be obtained:

COUNTRIES.	Letters.	COUNTRIES.	Letters.
Austro-Hungry	287,100,000	United States..	956,700,000
Belgium	79,900,000	Argentine Re-	
Denmark	25,500,000	public	5,000,000
France	453,300,000	Brazil	16,200,000
Germany	627,800,000	Canada	53,700,000
Greece	2,700,000	Chili	7,000,000
Great Britain ..	1,128,000,000	Mexico	3,400,000
Italy	152,100,000	Uruguay	1,000,000
Netherlands ..	54,700,000	British India ..	115,100,000
Norway	13,300,000	Japan	30,400,000
Portugal	15,700,000	Dutch India ..	3,900,000
Roumania	7,100,000	Egypt	3,900,000
Russia	103,300,000	Algeria	6,900,000
Servia	1,300,000	Australia (in-	
Spain	78,400,000	clusive of N.	
Switzerland ..	71,700,000	Zealand and	
Turkey	2,400,000	Tasmania) ..	71,700,000

The "World's Postal Union" was established by an international postal treaty concluded at Berne, October 9, 1874, and enlarged by the Paris Treaty of June 1, 1878. It embraces at present a territory of 73,000,000 square kilometres (1 square kilometre = 0.386 square mile), with a population of 755,000,000. The following countries belong to the Union:

In *Europe*: All the countries.

In *Asia*: Asiatic Russia, Asiatic Turkey, Persia, British India, Japan, the British, French, Dutch, Spanish, and Portuguese colonies, and the British post-offices in China.

In *Africa*: Egypt, Algeria, Tripoli, Tunis, Liberia, Zanzibar, the French, Portuguese, and Spanish colonies, and a part of the British.

In *America*: The Argentine Republic, Brazil, Canada and Newfoundland, Chili, the United States of America, Greenland, Honduras, Mexico, Peru, Salvador, Venezuela, Ecuador, Uruguay, San Domingo, the Danish, French, Dutch, and Spanish colonies, and a part of the British.

In *Australia and Polynesia*: The French, Dutch, and Spanish colonies.

The rapid progress of the electric telegraph all over the world is illustrated by the following table giving the aggregate length of lines

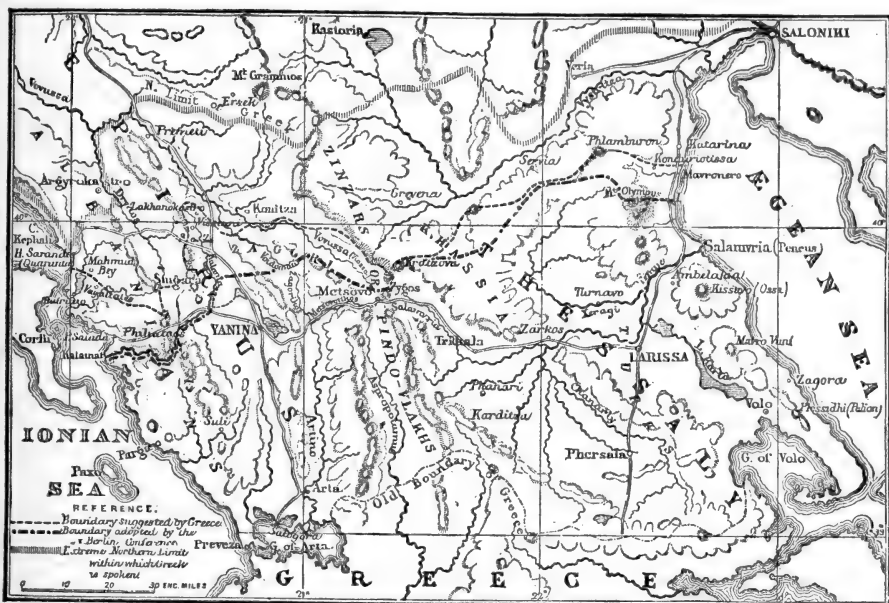

in all the important countries from which reports have been received:

COUNTRIES.	Miles.	COUNTRIES.	Miles.
Austro-Hungary...	48,932	Costa Rica	627
Belgium	5,410	Cuba	4,500
Bulgaria	2,057	Guatemala	1,867
Denmark	3,376	Honduras	1,046
France	56,500	Mexico	11,997
Germany	66,679	Paraguay	72
Greece	3,068	Porto Rico	750
Great Britain ..	14,334	Uruguay	1,033
Italy	25,538	United States ..	152,425
Netherlands ..	3,761	Venezuela	539
Norway	7,506	French Cochín-Cha	2,011
Portugal	3,711	British India ..	29,806
Roumania	5,238	Ceylon	1,803
Russia	75,082	Dutch India ..	5,654
Servia	1,461	Japan	2,934

EASTERN QUESTION, THE.* Most of the provisions of the Treaty of Berlin were successfully carried out in the course of the year 1879. The organization of Bulgaria as a semi-independent principality was completed. East Roumelia, though not as independent, likewise began its autonomous existence, with so strong a predominance of Bulgarian influence as to make the future reunion of the province with Bulgaria highly probable. Austria added the occupation of Novi Bazar to that of Bosnia and Herzegovina, which had been effected in 1878. Russia evacuated in August, as had been stipulated, Bulgaria and East Roumelia. Previously a special treaty between Russia and Turkey had made provision for the indemnity to be paid by Turkey to Russia. The British Government instructed Sir Henry Layard to make an energetic representation to the Porte on the subject of the reforms promised in the Anglo-Turkish Convention, and, when a British fleet was ordered into Turkish waters, the Turkish Government deemed it necessary to appoint Baker Pasha to a mission of inquiry in Asia. Two important provisions of the Berlin Treaty remained, however, unexecuted at the close of 1879. Neither Greece nor Montenegro had at that time obtained the territorial concessions which were promised at Berlin. The accession of a Liberal Government to office in England seemed to deprive Turkey of its only protector among the great powers of Europe, and to hasten the reorganization of the Balkan Peninsula. Lord Granville's appointment to the Foreign Office was, however, generally accepted as a pledge that the Liberal Government would be cautious and moderate. Mr. Goschen's mission to Constantinople, preceded by a visit to the capitals of some of the great powers, was the first step toward the formation of a European concert

* For detailed statistics of the railroads of each country, and of the increase since 1830, see "Annual Cyclopædia" for 1878, p. 251.

* Continuing the article in "Annual Cyclopædia" for 1878, p. 252.

for the execution of the unperformed parts of the Treaty of Berlin, which Lord Granville's circular on assuming office had indicated as the immediate object to be aimed at by the friends of international peace. Two main questions were to be settled. The Porte had not given effect to any of the numerous compromises suggested for solving the Montenegrin frontier difficulty, on the pretense that the opposition of the Albanians made it impossible to execute the transfer of territory acknowledged in principle to be a part of the settlement imposed by the treaty; and had all along refused to accept as binding the recommendation of the protocol adopted at Berlin, that a large part of Thessaly and Epirus should be ceded to Greece. Both questions were taken in hand by the powers shortly after the change of ministry in England. On June 12th the representatives of the great powers at Constantinople handed to the Porte the following identical note, which bears date of June 11th:

M. LE MINISTRE: The delay which has occurred in the execution of certain of the provisions of the Treaty of Berlin has led to an interchange of views between the signatory powers. The result of this step has been the recognition on their part that it is an object of European interest that an end should be put to this delay, and the conclusion that the union of their efforts would be the surest means of securing the objects aimed at by the act of the 13th of July, 1878.

Convinced of this twofold necessity, and in complete agreement with the Cabinets of Berlin, Vienna, Paris, Rome, and St. Petersburg, her Majesty's Government have instructed me to acquaint your Excellency with the point of view from which they look at the various questions raised by the non-execution of certain clauses of the Treaty of Berlin.

VOL. XX.—15 A

As regards the rectification of the Turco-Greek boundary, the Porte has for some time had before it a proposal made by the Marquis of Salisbury, which had received the assent of the other powers, that an international commission should proceed to the frontier provinces to determine this rectification.

Although the Government of the Sultan have pointed out the difficulty which might be encountered by such a commission in the execution of the arrangement to which they were asked to agree, they have not yet given a definite reply. The mediating powers have consequently found themselves under the necessity of treating this silence as a refusal, and they have been obliged, as the next step, to consider the means by which the solution of the Greco-Turkish frontier question—a solution which the powers had in vain tried to arrive at in concert with the Sublime Porte, and which the interests both of Turkey and of Greece require—might now be secured as speedily as possible.

They have accordingly decided that their representatives at the court of his Imperial Majesty the German Emperor should meet in conference at Berlin on the 16th inst., in order to decide by a majority of votes, and with the assistance of officers possessed of the necessary technical knowledge, the line of frontier it will be best to adopt.

They have likewise agreed that, when a decision shall have been come to by the conference, a commission may proceed to the frontier to settle the questions of detail arising out of the general plan.

The state of things created in another quarter by the question of the Montenegrin frontier requires, in the opinion of the powers, more pressing attention and an immediate solution.

The Turkish authorities have failed to carry out the engagement entered into between the Porte and Montenegro, and adhered to by the representatives of the powers in the protocol of the 18th of April, 1880. They have compromised the agreement accepted by his Imperial Majesty the Sultan, by allowing the Albanians to occupy certain frontier positions assigned to the Montenegrins, and a collision may at any time occur between the Montenegrins and the Albanian forces opposed to them.

The powers, therefore, consider themselves abso-

lutely bound to request the Government of his Imperial Majesty to state in the most explicit terms what their intentions are as regards the Montenegrin frontier, and to put into immediate execution the arrangement come to between the Sublime Porte and Montenegro. The powers hold the Sublime Porte responsible in advance for the grave consequences that might be produced by a further delay in giving satisfaction to the rights acquired by the principality.

In conclusion, the attention of the powers has been drawn to a third point.

By the sixty-first article of the Treaty of Berlin of the 13th of July, 1878, the Sublime Porte undertook to carry out, without further delay, the improvements and administrative reforms demanded by local requirements in the provinces inhabited by the Armenians, and to guarantee their security against the attacks and the violence of the Circassians and Kurds, and periodically to make known the steps taken to this effect to the powers, who are to superintend their application.

So far as her Majesty's Government are aware, nothing has been done by the Sublime Porte to make known the steps which it may have taken in order to meet the stipulations of Article LXI of the Treaty of Berlin; nor have any measures been adopted by the Porte for the superintendence to be exercised by the powers.

All the reports furnished by the agents of the powers show that the state of these provinces is deplorable, and her Majesty's Government can not admit that the clauses of the Treaty of Berlin relating to the amelioration of this state of things should remain any longer a dead letter. They are convinced that only united and incessant pressure on their part will induce the Sublime Porte to fulfill its duties in this respect. Her Majesty's Government, therefore, as one of the signatory powers of the Treaty of Berlin, must demand the complete and immediate execution of Article LXI of that treaty, and call upon the Government of his Imperial Majesty the Sultan to state explicitly what the steps are which they have taken in order to fulfill the provisions of this article.

In bringing these views to the knowledge of your Excellency, I consider it my duty to call your most serious attention to the grave responsibility the Porte would incur by any fresh delay in the execution of the measures which the powers agree in considering to be essential to the interests of the Ottoman Empire and of Europe.

I have, etc., G. J. GOSCHEN.

The conference, as indicated in the preceding note, met at Berlin, on June 16th, under the presidency of Prince Hohenlohe, the Prussian plenipotentiary. The other members of the conference were Count Szechenyi, ambassador of Austro-Hungary; M. de St. Vallier, ambassador of France; M. de Saburoff, ambassador of Russia; Lord Odo Russell, ambassador of England; Count de Launay, ambassador of Italy. The work of suggesting to the plenipotentiaries a new frontier between Greece and Turkey, in accordance with the general geographical idea thrown out in the thirteenth protocol of the Berlin Congress, was intrusted to a so-called "Technical Commission." Colonel Blume, previously of the German general staff and War Office, and at the time commanding the Thirty-sixth Brandenburg Fusiliers, was unanimously elected president, a post which was also conferred upon him by the Technical Commission which sat in Berlin during the Congress. The conference had its last sitting on July 2d, in which a collective note which had been drafted by the French

ambassador was unanimously adopted. The text of the note is as follows:

The undersigned, ambassadors or ministers accredited to the courts of his Majesty the Sultan of Turkey and of his Majesty the King of the Hellenes, have the honor, in accordance with the wishes of their respective Governments, to submit to the Ministers of Foreign Affairs of the Sublime Porte and of Greece the following note: The Congress of Berlin having indicated in its thirteenth protocol the principal points of the frontier line which it deemed necessary to establish between Turkey and Greece, the powers have, in the first place, called attention to the direct negotiations on this subject between the two states. At the two sittings of the conferences at Prevesa and Constantinople, the Turkish and Greek commissioners, after several long *pourparlers* had taken place, only succeeded in making more apparent the differences between them. In view of these unfruitful attempts at a solution of the question, the Powers named by the Treaty of Berlin have considered it necessary to interpose their mediation. This mediation, in order to be effectual, it was necessary to exercise in all its fullness, and the Cabinets, in view of the reciprocal dispositions of the two interested states, have authorized their representatives assembled in conference in Berlin to fix, according to the general indications of the thirteenth protocol, a line which would form a good and solid boundary between Turkey and Greece. The plenipotentiaries, after a most searching discussion, in which they were aided by the advice of the Technical Commissioners appointed by the various Governments, have unanimously voted, according to the terms of their mandate, the following tracing of the frontier line, which resumes and closes their deliberations: As the *pourparlers* between Turkey and Greece did not lead to any result, the undersigned plenipotentiaries of the powers appointed by the provisions of the act of July 13, 1878, to exercise a mediation between the two countries, have assembled in Berlin, in conformity with the instructions of their Governments, and after a long and earnest deliberation, inspired by the spirit of the thirteenth protocol of the Treaty of Berlin, have adopted unanimously the following line of demarkation: The frontier line will follow the valley of the Kalamas from the mouth of that river, in the Ionian Sea, to its source in the neighborhood of Kalbaki. It will proceed to the north of the Vonitza, the Haliaemon, and the Mayroneri and their tributaries, and to the south of the Kalamas, the Larta, the Aspropotamos, and the Salamyrias and their tributaries, over the Olympus, the crest of which it will follow as far as its eastern extremity on the *Ægean Sea*. This line leaves to the south the Lake of Janina and all its affluents, and also Metzovo, which thus remains in the possession of Greece. The Governments of Germany, Austria, Hungary, France, Great Britain, Italy, and Russia, therefore invite the Governments of the Sultan and of the King of the Hellenes to accept the frontier line as indicated in the above document. The mediating powers thus assembled in conference have acted in strict conformity to the terms of the Treaty of Berlin and of the thirteenth protocol of the conference.

(Here follow the signatures.)

The territory which, according to this collective note, is to be ceded to Greece, has an area of 8,500 square miles, with about 535,000 inhabitants. This would be an important accession for a kingdom whose present extent does not exceed 20,000 square miles. Of these 535,000 inhabitants about 470,000, or 88 per cent., are Greek Christians, 60,000 are Mohammedans, and 4,000 Jews. But few of the inhabitants are unable to speak Greek. The Berlin Congress of 1878 had vaguely indicated the rivers Kalamas and Salamvria (Peneus), the

one tributary to the Ionian, the other to the Ægean Sea, as forming a suitable base for direct negotiations between the two powers principally concerned. But while Turkey objected to yielding anything except a small slice of territory on the Gulf of Volo, Greece, encouraged by France, not only claimed the whole of the basins drained by the two rivers referred to in the Berlin Treaty, but also several districts lying to the north of those basins. The boundary suggested by Greece in December, 1879, embraced a territory of 9,400 square miles, with a population of 650,000 souls. It will be seen that Greece claimed about 900 square miles, with 115,000 inhabitants, more than the Berlin conference was found willing to concede. Greece, however, is to be put in possession of Janina, which lies within the basin of the Kalamas. Its lake, draining into that river through underground channels, has been allotted to Greece, but not the main road which connects the capital of Epirus with the coast opposite Corfu. The district of the Zagory, on the upper Vovussa or Viossa, which has been, since 1850, in the enjoyment of autonomous institutions, is cut in twain by the new boundary. In Thessaly, on the other hand, Greece has obtained nearly all she demanded, and the valley of Tempe and the lofty ranges of Olympus are to lie within the territory of the Hellenes. According to nationality, there live in the territory to be ceded to Greece, in accordance with the Berlin conference, about 366,000 Greeks, 80,000 Zinzars, 50,000 Albanians, 45,000 Turks, and 4,000 Jews. In Thessaly the fertile plains extending between Larissa, Pharsala, and Volo are almost wholly in the occupation of Turkish agriculturists. The ranges of the Pindus, which separate Thessaly from Epirus, are inhabited by Zinzars, Kutzo, or Pindo-Wallachians, a Latin race akin to the Roumanians, and, like them, supposed to be the descendants of Roman legionaries. These Zinzars are a thrifty people, who readily amalgamate with the Greeks. In Epirus, though the Greeks are in a majority, there exists a strong Albanian element. The Mohammedan Albanians, not exceeding 15,000 in number, seem to be averse to be severed from their countrymen in the north; but not so the Christian Albanians. None fought more vigorously for Greek independence than the Albanian Suliotes. Greek is universally understood throughout Epirus.

The Berlin conference, by directing Turkey to cede the disputed districts to Greece, hoped to avoid the outbreak of another apparently impending war between the nationalities of the Balkan Peninsula. The Turkish Government contested, however, the validity of this mandate, and was resolute in its resistance. As the powers were unable to agree upon an enforcement of the award of the conference, the frontier question remained undecided at the close of the year 1880. (See GREECE and TURKEY.)

In the mean while the powers had dealt more peremptorily with the Montenegrin question. Separate attempts to bend the Sultan's will having failed, a collective note was presented, which was met with dilatory pleas. Ultimately the powers decided upon insisting that the town and district of Dulcigno should be peacefully surrendered to Montenegro by a fixed date, and, when Turkey still held back, a conjoint squadron, under the English admiral, Sir Beauchamp Seymour, assembled at Ragusa. As the admirals of the squadrons were, however, not empowered to give active aid to the Montenegrins, the Porte, on October 4th, issued a defiant note, but when England proposed to send the squadron to Smyrna with a view to putting pressure upon the Sultan by the sequestration of the customs revenue, the menace sufficed to bring the Turks to a sudden submission, and only four days after the issue of the defiant note, it was announced that the Porte would unconditionally surrender Dulcigno. Again new difficulties were raised by the Turks, when they found out that the powers would not have proceeded to coercion, but at length Dervish Pasha handed Dulcigno over to the Montenegrins. (See MONTENEGRO and TURKEY.)

EASTERN ROUMELIA, an autonomous province of Turkey, created in 1878 by the Treaty of Berlin; area, 35,387 square kilometres; population in 1880, 815,513, of whom 573,231 are Bulgarians, 174,759 Turks, 42,516 Greeks, 19,524 gypsies, 4,177 Jews, and 1,306 Armenians. According to an estimate made by the Servian statistician Jakshitch, about three fifths of the population are Christians. The Governor General is Prince Alexander Vgorides (Aleko Pasha), appointed May 18, 1879, installed in office May 30, 1879.

According to the Constitution of 1879, drawn up by a national convention, and consisting of fifteen chapters, with 495 articles, the legislative power is in the hands of a single Chamber, called the Provincial Assembly. It is partly official, partly elective, and partly nominated by the Governor. The official members are the chief judicial and ecclesiastical dignitaries, to the number of nine; the elective members numbering thirty-six, and the nominated ten. Half of the elected members vacate their seats every two years. The electoral body consists of all men of Roumelian nationality who are of full age and of a certain property qualification, either individually or through their parents. The minimum age of candidates for election is twenty-five, but otherwise their qualification is the same as that of electors, public functionaries being excluded. The Assembly meets annually on the second Monday in October, at the capital. During the administration of Eastern Roumelia by the Russians, till the end of March, 1879, a reserve of 12,000,000 lei, or \$2,328,000, was formed and handed over to the new Government, to be expended in the execution of public

works. It is estimated that the public revenue in future years will amount to 22,606,000 lei, or \$4,384,000 per annum, and the expenditure to 21,000,000 lei, or \$4,074,000, leaving an annual surplus of 1,606,000 lei, or \$310,000.

Eastern Roumelia was created by the Treaty of Berlin, signed June 13, 1878. It was ordered that the province to be formed south of the Balkans should remain under the direct authority of the Sultan, but should have a Christian governor-general. It was further ordered that no irregular troops should be used in the defense of the province, while internal order was to be maintained by native troops. According to the Constitution of 1879, the legislative power is in the hands of a single Chamber, called the Provincial Assembly. It is partly official, partly elective, and partly nominated by the Governor. The official members are the principal judicial and ecclesiastical dignitaries, nine in all; the elective members number thirty-six, while ten are nominated by the Governor. The Assembly meets annually.

The agitation for a union of the province with Bulgaria grew in importance in 1880. The gymnastic societies, which had been organized during the Russian occupation, were the principal promoters of this movement, and in their ardor committed some great excesses on the Mohammedan population. As early as September, 1879, the International Commission had advised their dissolution, and Aleko Pasha, before his journey to Constantinople in November, 1879, issued an order to that effect. But the societies continued to exist, new outrages were perpetrated, and the Pan-Bulgarian movement increased daily in importance. In consequence of the new complications of the Porte in the Greek and Albanian question, in the spring of the year, the movement began to assume formidable proportions. A tax was openly collected from the inhabitants, Russia sent money and arms, and Bulgaria loaned forty thousand imperials. The gymnastic societies drilled their members in the use of arms without any attempt at concealment, and large numbers of armed men gathered at Aidos, in the north of the Balkan Mountains, for the pretended object of suppressing the Circassian robbers. On May 29th the East Roumelian and Bulgarian leaders of the movement had a secret conference at Slivno, at which it was even proposed to thank Aleko Pasha for his Bulgarian sentiments, to request him to leave Philippopolis, and to call upon Prince Alexander of Bulgaria to take possession of Eastern Roumelia. It was resolved to organize a "Union Committee for Southern Bulgaria," and to prepare a rising of the Bulgarians in Macedonia. At a public meeting held in Philippopolis in August, a Macedonian aid society was organized, ostensibly to collect money to build Bulgarian schools in Macedonia, but in reality to prepare everything for the rising in Macedonia, for which Bulgaria was to furnish the arms and ammunition, and Eastern Rou-

melia the money. Aleko Pasha did nothing to check these movements, and, feeling his impotency in the matter, asked to be relieved from his post. His petition, however, was not granted.

The Legislative and Executive bodies in East Roumelia have been engaged chiefly in maturing measures for the material organization and development of the province. The people have been disturbed considerably by the agitation for union with Bulgaria which was industriously promoted by the gymnastic societies and political emissaries, and by jealousies between Bulgarians and Greeks and Turks, which provoked frequent conflicts and an insurrection of the Turkish population in the Kirdjeli district. Much suffering prevailed during the winter on account of the scarcity of provisions, and attracted the continued sympathy and activity of foreign committees for relief.

An antagonism arose in the Provincial Assembly at the beginning of January against the Governor-General, Aleko Pasha, because he had refused to sanction certain measures which had been voted for reducing the expenditures of the Government. Aleko Pasha threatening to resign, the difficulty was arranged by a compromise. Orders were issued by the Governor-General a few days afterward for the partial demobilization of the militia, the greater part of which had hitherto been on a war footing. The measure was intended to secure economy, and at the same time to consolidate the military organization of the province.

The Provincial Assembly met in extraordinary session March 21st, and was opened by the Governor-General, Aleko Pasha, with a speech, in which he invited the deputies to give careful consideration to the provisions of the budget, to the projected railway line, to the press law, and to the proposal for the establishment of an agricultural bank. The House elected M. Ouechoff President, and M. Stransly and M. Groneff Vice-Presidents. An income-tax law was passed, declaring that every native of the province—excepting the clergy, teachers, soldiers, policemen, paupers, and widows who had lost their husbands during the war—should contribute to the revenue according to a fixed scale. Besides the classes of persons mentioned above, churches, mosques, schools, orphanages, and charitable institutions were also exempted from taxation. Foreigners were required to pay on income accruing from real estate, the annual yield of the same being estimated at six per cent. on the market value of the land. Due provision was made for the assessment of income in each commune, and a double appeal was allowed against an unjust assessment. The tax was made payable in monthly installments of one twelfth, and each commune was permitted to retain three per cent. on the amount collected as its commission. The tax-payers were divided into twelve classes, of which the first class includes

persons whose incomes are less than \$31 per annum, who will pay a tax of \$0.93 each, and the twelfth class includes those who receive more than \$1,215, who will be assessed at the rate of one and a half per cent. The intermediate classes will be assessed at fixed rates. A vote of censure was passed against M. Schmidt, Director-General of the Finances, in consequence of which he resigned his office. M. Strankya, a Bulgarian, was appointed to succeed him. Among the recommendations which the Governor-General made to the Assembly was one for a vote of a loan of \$14,500,000 for the construction of a railway from Bourgas to Philippopolis and Yamboli. The proposition was not acceptable to the Porte, for the reason that the existence of such a line would make it easier for Russian troops to enter the province; and a question was suggested as to the right of the East Roumelians to construct railways without special permission.

A number of the items of the budget as laid before the Assembly were objected to by the Turkish Grand Vizier, on the ground that the Governor-General had included in the revenue statement a sum of 4,000,000 piasters (one piaster=four cents), resulting from the sale of landed property, crops, and effects belonging to Mussulman refugees, and that he had allotted a subsidy of 1,000,000 piasters to the Bulgarian schools, while nothing was granted to the Turkish schools. The Grand Vizier further objected to the sum for the relief of the poor in Eastern Roumelia being fixed without any mention being made of the proportion in which the Mussulman refugees should participate in its distribution; and he opposed the insertion in the budget of a clause respecting the posts and telegraphs of the province, on the ground that those works belonged to the Turkish Empire.

The Provincial Assembly was again opened October 25th, with a speech by the Governor-General, who, after announcing that several bills would shortly be submitted, said that the present peaceful condition of the country was the best pledge of a happy future in store for the province. About thirty projects of law were presented before the 1st of December, some of which had been submitted to preliminary discussion. The most important of these bills related to four classes of subjects, viz.: 1. Improvement of the law courts and of the municipal and rural police; 2. Land-law reform, including the secularization of ecclesiastical property; 3. Changes in the system of taxation; 4. Public instruction.

The Eastern Roumelian Commission held its first sitting in Constantinople, June 17th, and constituted its bureau, electing four secretaries of Turkish, Russian, English, and French nationalities. Petitions were presented to the commission from Greeks asking that the nationalities of the border towns be respected as far as practicable in determining boundaries. At the end of July the commission had adopt-

ed financial provisions determining that the revenue from all the provincial taxes should be paid into the branch offices of the Imperial Ottoman Bank. It further decided that all the costs of local administration—including the expenditure for the gendarmerie and police—should be a first charge upon the revenue, after deducting which, the revenue, exclusive of the indirect taxes on salt, tobacco, silk, fisheries, and spirits, and the customs duties, should be divided into two parts, of which 15 per cent. should be devoted to public works and education in the province, and the remaining 85 per cent. should be sent to Constantinople. The General Assemblies of the vilayets were given control over the budgets. By the middle of August the commission had virtually completed the project of reform for those parts of European Turkey which are not included in the principality of Bulgaria or East Roumelia, and had still to consider the means of applying the reforms.

A disturbance took place between Bulgarians and Greeks at Philippopolis on the 6th of January, when the Bulgarian militia forcibly seized the church of St. Petka, belonging to the Greek community, on the ground that it had formerly been wrested from the Bulgarians by the Greeks. The Governor-General took possession of the keys, but the church was on the next day returned to the Greeks, pending the investigation of the question of title. A party of Greeks, rejoicing over the restoration of the church, and some Bulgarians became engaged, in the afternoon, in a slight riot, which was promptly quelled.

An insurrection of Mussulmans broke out in the latter part of February in the district of Kirdjeli, where the insurgent bands gained a strength of three thousand men. The Governor-General consulted with Reouf Pasha, Governor of Adrianople, concerning measures to put down the rising, and two battalions of infantry, a squadron of cavalry, and a detachment of local militia were sent against the insurgents. Four Mussulman villages were burned by order of a Russian officer of the militia, and a number of Mussulman families were compelled to emigrate from the province in consequence of the rudenesses to which they were subjected. The proceedings of General Strecker, the commander of the militia, were not satisfactory to the Governor-General, and he addressed a report concerning them to the Turkish Government. A commission, consisting of four Bulgarians, Colonel Borthwick, the commandant of the gendarmerie, and three Turks, was dispatched into the disturbed district early in April, to investigate the complaints of the Mussulmans and examine into the losses which they had sustained. The report of the commission was presented in June, and, in consequence of the conclusions embodied in it, three officers of the Bulgarian militia, two of whom were Russians, were dismissed from the service of the province, and a num-

ber of other persons who were implicated in offenses were remanded to the local tribunals for trial.

ECUADOR (REPÚBLICA DEL ECUADOR). For comparative statements of area and population, and for territorial division, reference may be made to the "Annual Cyclopædia" for 1873 and 1878.

The President of the Republic is General Ignacio de Veintemilla, inaugurated in December, 1876.* The first Designado was Señor L. Salvador; and the second Designado, Señor J. Novoa. The offices of these Designados correspond respectively to those of first and second Vice-Presidents, and were created by the Convention of Ambato in 1878.

The Cabinet was composed of the following Ministers: Interior and Foreign Affairs, General C. Bernaza; Finance, Doctor Martin Icaza; and War and Marine, Colonel C. F. Boloña.

The Governor of Guayaquil was General J. Sanchez Rubio.

The armed land-force of the country is returned at 1,200 rank and file, and the navy consists of three small steamers.

In the absence of official reports, little is known of the real condition of the national finances. The revenue in 1876 amounted to 2,317,000 pesos,† and the expenditure was set down at 3,360,000 pesos; thus leaving a deficit of 1,043,000 pesos!

The average yield of the custom-house of Guayaquil—the chief port of entry—in the years 1870 to 1876 was about 1,450,000 pesos, or considerably over one half of the entire revenue of the republic for the last year of the septennial period mentioned. The receipts at that port in 1879 may be estimated at about 1,800,000 pesos, assuming 25 per cent. as the average rate of duty on imports of all classes.

The national debt of Ecuador was reported, on January 1, 1877, at 22,938,000 pesos, of which 10,150,000 represented the home debt, the remainder being the proceeds of a loan contracted for in England in 1855. Interesting particulars concerning this debt have been recorded in our volumes for 1874 and 1875.

The exports (exclusive of precious metals) and imports through the port of Guayaquil in 1879 were of the approximate values of 7,500,000 and 8,684,330 pesos respectively. Chief among the articles exported were cacao, 31,534,137 pounds, of the value of 6,937,510 pesos; Peruvian bark, of the value of 691,891 pesos; ivory-nuts (*tagua*), 573,675 pesos; India-rubber, 145,344 pesos; *jipijapa* (or the so-called Panama) hats, coffee, skins, etc. The precious metals shipped were of the value of 693,598 pesos.

The year 1879 was one of unusual prosperity for the province of Guayas, of which Guayaquil is the capital. The cacao-crop was par-

ticularly abundant, having reached 51,965,819 lbs., against 10,330,900 lbs. for the year previous. The crop of 1879 was of the value of 7,000,000 pesos. Large shipments of Ivory-nuts were also made, of the aggregate value of some 1,000,000 pesos. The province named produces also large quantities of woods, sugarcane, rubber, and hides. Straw hats are extensively exported. Fruits constitute an important article of commerce with Peru, while many other articles of the production of the country bring up the value of the miscellaneous exports of Guayaquil to over 1,000,000 pesos. Taking into consideration the exports of hats, cacao, India-rubber, tobacco, etc., etc., from Manta, Bahia, and Esmeraldas, products of the province of Guayas alone, the value of the exports to the different markets of the world was over 10,000,000 pesos—a splendid reward certainly for the labors of a district containing only 180,000 inhabitants. In addition to this, Peruvian bark, almost the sole product shipped from the interior, increased the value of exports from the port of Guayaquil alone by at least 1,500,000 pesos.

The import trade of Guayaquil increased considerably during the year 1879 by the war between the three more southerly republics of the continent, in which that port has been used as a sort of intermediary between Peru and Chili, more particularly during the brief period in which the commercial interdiction between those two republics continued. This trade was formerly done directly, and since the late decree of President Piérola has returned to its accustomed channels.

The shipping movements at the port of Guayaquil for 1879 were as follows: Entered, 226 vessels (of which 115 were steamers), of an aggregate tonnage of 215,831; cleared, 221 vessels (including 115 steamers), with a total of 216,056 tons. The Yaguachi Railway is reported as being completed.

The following decree was issued by the Municipal Council of Guayaquil under date, November 18, 1879:

ARTICLE I. Craft loaded with any class of merchandise which may arrive at the port of Guayaquil will pay duty in accordance with the following tariff: Small canoes, twenty-five cents; covered canoes, fifty cents; large canoes, two pesos; boats, fifty cents; launches, two pesos; rafts, one peso; small rafts, fifty cents; small sloops, one peso; sloops, two pesos; launches discharging cargo from ships or steamers (each voyage), two pesos; small river-steamers (each voyage), two pesos; medium river-steamers, two pesos; large river-steamers, four pesos. Sailing-vessels or steamers not exceeding one hundred tons register, three cents per ton; from one to five hundred tons, two cents per ton; of larger tonnage, one and one half cent per ton.

ART. II. Craft which are loaded only with provisions for general consumption, or goods from the province of Guayaquil, are excepted from the foregoing duty.

ART. III. The present order will come in force from the 1st day of January, 1880.

It would be particularly gratifying to record the progress of the country in political and

* Declared Dictator for an unlimited period in 1878. (See "Annual Cyclopædia" for that year, p. 260.)

† The Ecuadorian peso is at present equivalent to about 77 cents of United States money.

educational matters, as well as in its commerce. For several years Ecuador has been under military rule, and has passed through various revolutions, with successive changes of rulers, each more despotic than his predecessor. The popular vote has rarely been consulted, and the country "is as much tyrannized over as is Turkey or Russia, although it has nominally a President who assumes to be a constitutional chief magistrate." The principal activity displayed by the military ruler of Ecuador appears to have been in improving as much as possible his own personal interests and those of his friends, while the only reward of merit, when opposed to his principles, has been either imprisonment or exile.

"Although the Treasury," writes a journalist, "is said to be in a flourishing condition—something after the style of the Costa Rica Treasury, which is always overflowing, according to official accounts—yet colleges and schools are closing up because the teachers are unpaid. The college of San Vicente and the Schools of Law and Medicine are in a condition of complete misery, and sustained only by the voluntary efforts of the professors, many of whom are poor men. The School of Medicine, in which there are thirteen classes, subsists on the pitiable sum of 120 pesos; one professor, whose duties are divided between lectures and the hospital, receiving but 12 pesos per month. The Government, it is said, is a debtor to the college in a large amount, which if paid would place it in a condition to maintain its service efficiently, and to the immense advantage of the community." A Guayaquil newspaper published, under date of January 24, 1880, a severe arraignment of the Government on this account: "And as the Government appears to be composed of Veintemilla and his tools, who are more interested in becoming rich and great themselves than in dividing the blessings of Providence with the people, the evils complained of are likely to continue until the hand of destiny scatters to the winds the contemptible faction that ruthlessly assails private rights, fosters corrupt influences, muzzles the press, disregards the claims of education, and does its best to make the country a by-word among nations."

EDMUNDS, GEORGE F., an American statesman, was born in Richmond, Vermont, February 1, 1828. His father was a New England farmer, of the strictest Puritanical habits; his mother was of Quaker descent. He received a public-school education and the instruction of a private tutor, and early developed a fondness for study and intellectual effort. Possessing a natural aptitude for law, he pursued his legal studies with unusual assiduity and success. In 1849, at the age of twenty-one, he was admitted to the bar. He studied law in Burlington, but returned to his native town, to begin practice in the office of his future brother-in-law, A. B. Maynard. In 1851 he removed to Burlington, and was soon in the full tide of success at the bar. He was distinguished even as a boy

for maturity of mind, as well as for readiness of wit, and his strong intellectual qualities, joined to a great capacity for the acquisition of legal knowledge, early gave him a foremost place among the lawyers of his State. In August, 1852, he was married to Miss Susan Marsh Lyman, daughter of Hon. Wyllis Lyman, of Burlington, Vermont, a lawyer of considerable repute. At the end of five years of exclusive devotion to his profession, Mr. Edmunds was induced to enter the political arena, but he has never sought political honors. He was a member of the State Legislature of Vermont in 1854-'55, '57, '58, and '59, serving three years as Speaker; was a member of the State Senate, and its presiding officer, *pro tempore*, in 1861-'62. He was appointed to the United States Senate as a Republican, to fill the vacancy caused by the death of Solomon Foot, and took his seat April 5, 1866, and was elected by the Legislature for the remainder of the term ending March 4, 1869. He has been thrice re-elected to the Senate, and his term of service will expire March 4, 1887. He was one of the members of the Electoral Commission of 1877. As a member of the State Legislature he was distinguished for his accurate knowledge of all business that came before it; and it was said of him then, as it is said of him now, that no measure could possibly get passed into the form of law without his scrutiny. As chairman of the Judiciary Committee of the United States Senate, in which position he succeeded Lyman Trumbull, of Illinois, he has had the shaping of many of the most important measures that have ever been passed by the American Congress. In the long contest with President Andrew Johnson, Senator Edmunds was an indefatigable worker, and in all the legislation of reconstruction and the enforcement of the Constitution he has acted an influential part, often adopting a more moderate and conservative course than many of his party associates. The initiation and passage of the Electoral Commission Bill and the Pacific Railroad Funding Act are largely due to his influence and exertions. He is not an eloquent but a very fluent speaker, with much readiness of repartee, and skill in the art of extemporaneous argument. He is master of a strong and incisive English style, and never varies his voice above a certain pitch, but talks with a calm, self-contained, conversational manner which compels attention. He is especially noted for the keen sarcasm and drastic humor with which he meets his opponents in debate, yet the keen contention in which he habitually indulges never goes far enough to cause a break in his personal relations with any other Senator. The most remarkable trait in his character is his freedom from all enmities and personal piques. His distinguishing characteristics as a legislator are his clearness of perception and quickness to detect any flaw or imperfection in a measure before the Senate, and his unswerving hostility to anything like irregularity in its proceedings.

EGYPT, a tributary of Turkey in North-eastern Africa. The ruler of Egypt, who has the title of Khedive, is Mohammed Tefvik, born in 1852, the eldest son of Ismail Pasha, who resigned June 26, 1879. The eldest son of the Khedive is Prince Abbas Bey, born July 14, 1874.

The area of the entire Egyptian territory is estimated at 2,987,000 square kilometres, with 17,400,000 inhabitants. Egypt proper has about 1,021,354 square kilometres, with a population of 5,517,627. The number of foreigners, in 1878, was 68,653, of whom 29,963 were Greeks, 14,524 Italians, 14,310 French, 3,795 English, 2,480 Austrians, 1,003 Spaniards, 879 Germans, 752 Persians, 358 Russians, 139 Americans, 127 Belgians, 119 Netherlands, and 204 others.

The movement of population is shown by the following table:

YEAR.	Births.	Deaths.	Surplus of births.
1876.....	186,637	132,088	54,679
1877.....	173,529	138,688	34,861
1846-1877..	4,685,983	3,631,605	1,054,383

The total value of Egyptian commerce was estimated, in 1855, at 275,000,000 of Egyptian piasters (one piaster = four cents); in 1870, at 1,028,000,000; in 1875, at 1,333,000,000; in 1877, at 1,275,000,000; in 1879, at 1,344,000,000.

The value of the principal articles of import and export in 1879 (in piasters) was as follows:

ARTICLES.	Imports.	Exports.
Grain.....	147,600,000
Beans.....	76,231,000
Cotton-seed.....	131,686,000
Sugar.....	16,585,000	67,569,000
Liquors.....	15,982,000
Articles of food.....	13,360,000
Coal.....	56,718,000
Iron.....	5,112,000
Hides.....	11,028,000
Ostrich-feathers.....	10,014,000
Spinning material.....	516,637,000
Wood and ivory.....	11,329,000	774,000
Yarns.....	11,371,000
Woven goods.....	165,556,000
Shoes and boots.....	8,757,000
Rugs.....	4,172,000
Drugs.....	23,456,000
Fats, oils, etc.....	23,170,000	22,245,000

The aggregate length of the railroads was, at the end of the year 1879, 1,494 kilometres. The number of post-offices was 83, the number of letters mailed 3,900,000; the aggregate length of the telegraph lines was 8,569 kilometres.

The Suez Canal extends from Port Said to Suez. Its total length is one hundred and sixty kilometres, or ninety-seven miles. Its width varies from fifty-eight to one hundred metres, and its depth is eight metres. The total cost for building and opening the canal, inclusive of repairs, etc., amounted at the close of 1878 to 479,175,683 francs. The buildings and property of the company were estimated in 1874 at 21,795,545 francs.

The state of the capital account was as follows at the close of 1879:

	Francs.
400,000 shares, of 500 francs each.....	200,000,000
833,833 obligations, of 500 francs each, bearing interest at 5 per cent.....	166,666,500
200,000 "bons trentenaires," issued at 100 francs each, bearing interest at 8 per cent, and redeemable at 125 francs each.....	25,000,000
Less 80,000 still unissued.....	10,000,000
	15,000,000
400,000 "bons de coupons," or bonds of 85 francs each, bearing 5 per cent. interest, issued for the consolidation of unpaid coupons on shares.....	84,000,000

The year 1872 was the first to show a surplus, which amounted to 2,071,279 francs. In 1879 the total receipts amounted to 30,949,148 francs, and the expenditures to 28,059,800 francs. The dividend paid to the shareholders, after placing five per cent. to the sinking fund, according to the statutes, amounted to four francs eighty-seven centimes in 1879.

The movement of shipping in the canal was as follows from 1874 to 1879:

YEAR.	Vessels.	Tonnage.
1874.....	1,264	2,428,672
1875.....	1,494	2,940,708
1876.....	1,457	3,072,107
1877.....	1,668	3,418,949
1878.....	1,598	3,291,535
1879.....	1,477	3,236,922

In 1879 the number of vessels belonging to each nationality, and their tonnage, were as follows:

NATIONALITY.	Vessels.	Tonnage.
British.....	1,144	2,508,524
French.....	93	262,013
Dutch.....	61	159,025
Italian.....	51	84,162
Austrian.....	40	71,400
Spanish.....	25	64,468
German.....	16	21,548
Turkish.....	17	18,781
Norwegian and Swedish.....	6	9,185
Russian.....	7	8,780
Danish.....	5	7,730
Portuguese.....	6	7,166
Others.....	6	9,185
Total.....	1,477	3,236,922

The number of travelers passing through the canal in 1879 was 82,144.

At a meeting of the Council of Ministers, with the English and French Comptrollers-General, held in June, the Khedive said: "I am asked to institute a Constitution, and to open a Parliament. This I am ready to do, but when I feel that I do not possess the elements for a Parliament—that the people do not know their country, that there are pashas who seek nothing but their own interests—I can not leave the welfare of my country in their hands. I hope, however, that, when the population is instructed, the necessary elements will be found, and then, at that time, believe me, I will grant a Constitution." The Council of Ministers thanked his Highness for his kind intentions, and the Ministers promised to coöperate with him in every way in

order to finish the reforms in the interior of the country.

Riaz Pasha, the Premier, spoke at a dinner given him at Cairo in reference to the work that had been accomplished in reform as a good beginning, but declared that more remained to be done before the object sought could be attained than it was in the power of the present generation of officers to perform. He said: "We have before us a task which will tax the energies, and which needs the hearty coöperation of all that is best and most honest among us. Our force lies in our union. We have to build up an organization which shall be strong because based on principles of justice. We have to introduce institutions which shall resist, so far as may be, the shocks and vicissitudes of time. By this means only can we assure the future; but the work, to be of use, must rest, not on hasty and partial reform, but on real and solid foundations."

In the budget for 1880, published in January, the receipts were estimated at £8,561,622. The expenses were estimated: for administration, pensions, civil list, etc., £3,491,544; tributes, £681,486; reserve fund, £150,000; leaving a balance available for the public debt of £4,238,592. The Comptrollers proposed to apply this balance contingently upon the approval of the Council of Ministers, in round numbers, as follows: to the unified loan, including the conversion of the short loans, £2,500,000; to the privileged loan, £834,000; to the Suez Canal, £200,000; to the Daira Khassa, £35,000; to interest on the floating debt, £200,000; balance, £419,592, available for the creditors.

The report of the *caisse* of the public debt stated that the capital of the unified public debt amounted on the 31st of December, 1879, to £56,085,000, that of the railway preference stock to £16,880,000, and that of the stocks of 1864, 1865, and 1867 to £300,000, £316,000, and £653,000 respectively.

The report of the English and French Comptrollers-General, containing their definitive scheme for the settlement of the financial situation of the country, was presented to the Khedive in January. It proposed to fix the interest on the unified debt at four per cent.: in case the revenue from the provinces set apart for the service of the debt should be insufficient to pay four per cent, the deficiency should be made up out of the general revenue; if, on the other hand, the taxes assigned should yield more than four per cent., the surplus should be paid to the holders of the unified debt up to a maximum of five per cent., and any further surplus above that amount should be applied to half-yearly purchases of stock in the open market. It provided also that any surplus of general revenue, if a surplus should accrue, should be applied, one half to the administration, the other half to the service of the debt. The Comptrollers considered this

to be a fair arrangement, and believed that the higher rate of interest would be resumed before long, but entertained no hope of ever being able to pay the sums owing on account of former coupons or the suspended half-yearly purchases of stock in the open market. Other provisions of the report were: that the unified stock held by the Paris syndicate should be exchanged for a special stock redeemable in a certain number of years; that the Moukabalah tax should be abolished, and in compensation for the rapid amortization of the short loans levied upon it, those loans should be exchanged at the price of eighty per cent. against bonds of the unified debt at their current market value; that the rate of interest on the railway preference stock should remain undisturbed; and that the tribute to the Porte should be a first charge upon the revenue. The Comptrollers expressed confidence in the sincerity and rectitude of the Khedive, and averred that they had reason to believe that, if the present state of progress continued, affairs would before long return to their normal condition. Past experience forbade an optimist view of the future, but never before had the hope of a final arrangement of the financial situation of Egypt been so well founded. That these anticipations might be realized, a distinct line of demarkation must be drawn at December 31, 1879, and all prior debts must be settled by liquidation, the terms of which would be embodied in a law, whose conditions shall be binding on all concerned, so that the Egyptian Government can never be sued for claims accrued before 1880. Such a law would be submitted to the European powers, and pending their decision would be applied to those accepting it. The Khedive accepted the report in a letter in which he thanked the Comptrollers for preparing it, and declared that complete harmony existed between himself and his Ministers, who accepted the report with the same degree of responsibility as himself. The Khedive had already signed decrees abolishing the Moukabalah tax as well as certain other taxes amounting to about six hundred thousand Egyptian pounds, which had been declared by the committee of inquiry to be of a vexatious and unproductive character. Some of the holders of the unified debt protested against the proposal in the report of the Comptrollers-General with regard to the non-payment of the arrears of the half-yearly coupons of that debt, and were answered that as the report contained only a provisional scheme drawn up for the purpose of affording the creditors an opportunity of making the Egyptian Government acquainted with their views before a definitive settlement was effected, the discussion of the subject by the *caisse* of the public debt must be deferred until the decree of liquidation had been submitted to it, when it would state what sacrifices it considered necessary, without, however, interfering with the personal action of the creditors, should

they disapprove the proposed arrangement. A contract was concluded with the Imperial Ottoman Bank, providing for gradual yearly advances on general revenue not specially set apart with the exclusive object of insuring the future punctual payment of the tribute to the Porte, and generally facilitating the administrative part of the budget. An arrangement amicably settling the claims of the Paris Syndicate was concluded in February. An International Committee of Liquidation was appointed with the concurrence of the great powers, and the assent of the Khedive given in March, for the purpose of effecting by mutual concessions a final settlement of the Egyptian financial situation binding on all parties. The committee was organized to consist of representatives of the English, French, Italian, Austrian, German, and Egyptian Governments, with Sir Rivers Wilson, English, as President. As defined by a decree of the Khedive, its duty was, after examining the whole financial situation of Egypt, and hearing the observations of the parties interested, to draft a law of liquidation between Egypt and its creditors, and also between the Daira Sanieh and the Daira Khassa and their creditors. The conditions of the issue of the domain loan were excluded from its deliberations. The committee was directed to work upon the basis furnished by the report of the committee of inquiry, and to sit for three months after the presentation of its own report in order to watch, in concert with the English and French Comptrollers-General, the execution of the decisions arrived at. The law of liquidation would be binding on all concerned. The sittings of the committee would be attended by representatives of the international tribunals. The five Governments represented in the committee having declared their acceptance of the law of liquidation, would collectively request the adhesion of the other powers represented on the international tribunals. The commission completed its labors on the 16th of July, and the law which it had prepared for the liquidation of the Egyptian debt was immediately signed by the Khedive and officially promulgated. It consists of ninety-nine articles, and is divided into five sections concerning respectively the consolidated debt, the Daira Sanieh, the non-consolidated or floating debt, and the general provisions. The interest on the unified debt was fixed at four per cent., to be paid from the revenues specially set apart for the service of the unified debt—namely, the customs revenue and the revenue from the provinces of Menoulieh, Garbieh, Behera, and Siout—and the coupon of the unified debt was guaranteed by the Egyptian Government on the general resources of the country. Any surplus from the revenue set apart for the service of the unified debt was directed to be applied to open-market purchases. The Daira Sanieh was declared to be a state domain under the Egyptian Government and the English

and French Comptrollers-General, the latter officers having their powers extended; and was continued as a five per cent. stock, with a Government guarantee of four per cent.; and provision was made for the payment of the old claims of the Daira Sanieh against the Egyptian Government and of the next coupon. An indemnity was allowed to the creditors of the Moukabalah tax. The floating debt was allotted thirty to forty per cent. in cash, the remainder in new privileged bonds, and the short loans were directed to be converted into unified stock, about two millions nominal. The privileges of the railway preference loan were maintained as under the Goschen-Joubert decree of the 18th of November, 1876. A new issue of £5,744,000 was authorized, to be in all respects identical with the existing preference stock, the interest of which should date from the 15th of April, 1880. The preference stock was secured on the revenues of the railways and telegraphs, and was made also a first charge on the revenues specially set apart for the service of the unified debt, and the revenue of the harbor of Alexandria. The commission had also before it the case of the claim of Halim Pasha, whose pension had been reduced by a decree of the Khedive from £60,000 to £15,000 a year. The Pasha's application for a restoration of his full pension was rejected, the decree of the Khedive was confirmed, and the pension was definitely fixed at £15,000. Halim Pasha was, however, admitted as a creditor of the floating debt in the amount of £150,000.

The adhesion of the United States and of Russia was given to the decision of the commission when it was made known.

The annual report of the directors of the Daira Sanieh, published in August, stated that in virtue of the law of liquidation that domain entered upon a new phase. The European system of public accounts would be introduced in order to facilitate the task of the directors in protecting the interests of the Daira bondholders. The Daira Sanieh was now for the first time free from debt; and its revenue undoubtedly admitted of a considerable increase, which was principally dependent upon the carrying out of administrative reforms. The abolition of the Moukabalah tax, however, involved an increase of the taxation payable by the Daira to the amount of £93,000 Egyptian, so that for the future the same revenue would be required to give a return of five per cent. which formerly yielded six per cent.

The amount encashed for the public debt up to the end of September was £1,320,000 for the unified debt, and £273,000 for the privileged debt. According to the statement of the *caisse* made at that time, the revenues specially set apart for the service of the unified debt would be required to complete the coupon of the preference loan falling due on the 15th of October; but after the payment of the coupon of the unified loan on the 1st of Novem-

ber, fully £150,000 would be available for open-market purchases for the redemption of the debt.

The publication of the budget on the 29th of December showed a surplus of £111,000.

The Khedive, in February, on the proposal of the Council of Ministers, issued a decree fixing dates for the payment of the land-tax, to correspond with the ripening of the crops in the different provinces. At the same time, the Minister of Finance ordered the governors of the provinces to acquaint the tax-payers with the exact amount of the yearly taxation. The British consul-general in July sent home reports which had been made by his subordinates concerning the condition of the country and the effect of the administrative changes, which were of a highly favorable character. The agricultural population, released from many odious and vexatious oppressions, appeared more contented, and were working more industriously than ever before. The people were voluntarily offering their taxes, to the astonishment of the tax-collectors. Land was rising rapidly in the market, and in some districts owners were asking one hundred per cent. more than they had asked twelve months before. The chief remaining subject of complaint was the forced labor, a certain amount of which was still exacted for the public works, and which bore hard on the poor, who were not able to commute.

The sovereignty of Egypt was proclaimed, in March, along the coast of the Red Sea to Cape Guardafui. Ali Riaz Pasha was appointed Governor of the Red Sea coast. After notice had been given to the powers of the annexation, the Italian Government occupied the Bay of Assab as a naval station. To prevent any lapse of its own authority, the Egyptian Government addressed a note to the Italian Government, expressing its willingness to allow the Rubattino Steam Navigation Company to establish a naval station at the bay on condition of its applying for authorization and submitting to the laws of the country.

Notwithstanding an announcement was made from Khartoom, on the 3d of January, that the slave-trade in the Soodan had entirely ceased, the traffic still continued to such an extent as to excite the remark of Europeans and attract the attention of the Government. It appeared, however, that although the trade had not been wholly broken up, a check had been given to the great slave-owners in the region over which Colonel Gordon had ruled; and the new Government professed to entertain an earnest intention to put an end to the traffic within the four years allowed for that purpose by the Anglo-Egyptian Convention, for which object full powers were given to Riaz Pasha, the Premier, to deal with the evil. During three weeks in April five convoys of slaves arrived from Kordofan, Sennaar, and Darfoor. On the 20th of April, a caravan composed of five hundred and ninety-eight

camels and more than nine hundred slaves openly entered Siout. No notice appears to have been taken of the arrival by the officers whose duty it was to look after the matter, but Mr. Roth, a Swiss and a teacher in the American Mission School, took upon himself to report the fact to the authorities at Cairo. Two officers were sent up by the Government, with a company of infantry, to investigate the affair and bring the guilty parties to punishment. They arrested thirty-six of the dealers, but most of the slaves had already been disposed of. The Council of Ministers on its own initiative, with the assent of the Khedive, dismissed the governor of the province and ordered him, his lieutenant, and the head of the special department for the abolition of the slave trade to be tried by court-martial for having failed to seize the caravan. A special European slave commission was appointed to prevent the repetition of the traffic and insure the execution of the slave convention; the Count della Sala, an ex-officer of the Austrian army, was appointed Governor-General at Siout, with whom the Governors of Upper Egypt were ordered to cooperate, and a force of six hundred troops was furnished to support the commission. At the beginning of August a modification in the Anglo-Egyptian Convention, to make it more stringent, was agreed to by the Minister, and a circular was issued, declaring that persons buying slaves should be subject to the same punishment as those selling them. Dr. G. Schweinfurth, the African traveler, published a communication in June, calling attention to a defect in the convention, in that it recognized "the impossibility of sending back slaves to their homes. This is not impossible," he said; "to liberate slaves after the Egyptian manner means to confiscate smuggled goods and distribute them among friends." Colonel Gordon took a similar view when he wrote from the Red Sea, September 29th, concerning the commission at Siout: "Now, as Siout is three hundred miles from Cairo, and the districts where the slave-hunters are at work are three thousand miles from Cairo, any captures made at Siout mean simply the handing over of slaves from individuals to the Egyptian authorities; it can have no effect on the capture of slaves; and in my opinion, when once sent away from their homes, it would be better for the slaves to remain with their original masters than that they should be taken possession of by the Egyptian authorities"; and he accused the Egyptian Government of bad faith, saying that the provisions of the slave convention and the decree of 1877 had never been made known to the people, but to satisfy Europe they had been put in the European papers. The evidence that the trade was continued accumulated. The Secretary of the British and Foreign Antislavery Society caused to be published, in August, a communication showing that an increase in the slave-trade in the

Soodan and the Red Sea had followed Colonel Gordon's departure, that the trade was carried on in the most open way, and that every steamer that left Souakim had slaves on board. One dealer, known to the correspondent, went backward and forward regularly, and he was only one of many. A report from the Deputy-Governor of the Soodan to the chief of staff was published in the "Official Journal" of October 18th, denying that the traffic in slaves had increased since the departure of Colonel Gordon, and averring that the work of repression was still actively carried on by the same European officers who were appointed to the command of the distant provinces by Gordon Pasha himself. This was immediately met by the publication of a letter from an Austrian officer who had just passed through the Soodan to the Victoria Nyanza to Dr. Schweinfurth, containing accounts of the open manner in which the slave-trade was carried on in Khartoum and on the Upper Nile, to which Dr. Schweinfurth added the comment, "Since the ever-to-be-deplored departure of Gordon Pasha, every post from the Soodan is but another Job's messenger for the cause of humanity." In answer to the letters of Gordon Pasha and the criticisms of a part of the English press respecting the continuance of the slave-trade, the Government caused to be published in the official "Moniteur" the details of the measures which had been adopted for the suppression of the traffic since the resignation of Gordon Pasha. During November, Dr. Schweinfurth published another letter from Cairo, which described the trade as still increasing, and said that all the efforts which had been put forth for the last ten years for its suppression, the convention with Great Britain, and the fighting that had taken place, remained fruitless. Saleh Bey, the Governor of Falosha, it is said, continued to levy the tax of two dollars a head; slaves were disembarked at Kassa and Kalakla with a view to avoid Khartoum; at Metemmeh gangs of slaves were to be met who were being taken up the Nile country to Berber; and a wholesale importation of little negro children took place every week into Jeddah in spite of the English and French consulate. In December the Khedive received an acknowledgment from the British Government of his efforts to abolish slavery.

The relations between Egypt and Abyssinia bore an aspect at the beginning of the year promising peace; but the accounts of the disposition and movements of the Abyssinian King were conflicting. Colonel Gordon, who had visited King John as an envoy from the Khedive, returned to Egypt in December, 1879, dispelling by his return some apprehensions that had begun to be felt lest he should be detained, and bearing a letter from the King respecting the terms on which he would make peace with the Khedive. He described King John as a sour, ill-looking man of about forty-

seven years of age, and of a fanatical disposition, himself hating and hated by all who came in contact with him. The country was surrounded by discontented tribes and rulers: to the east, was King Menelik of Shoa, sullenly opposing King John, but afraid to show open hostility; in the south, Rasalall was in almost open rebellion; and in other quarters, six or more other chiefs were in actual revolt. Placed in this position, Abyssinia could not attack Egypt, and could not in any case do it material harm. The troops of King John might, it was true, plunder the frontier tribes, but the latter were naturally warlike, and would certainly make counter-incursions and pillage the land of their aggressors. Indeed, if the Khedive would only supply the malcontent tribes with arms, the second son of King Theodore would soon be placed on his father's throne. The majority of Abyssinians believed that King John would fall in the course of two or three years by his own dullness and folly. If England and France were to send envoys to him, they would be treated with the same insolence as he had been subjected to. The King now regretted the exorbitant demands he had made upon the Egyptian Government, and had written explanatory letters to the Governments of England and France, casting the blame for the present crisis upon Gordon Pasha.

A belief was expressed among some of the Egyptian officers that King John had wished to entice the Egyptian Government into undertaking offensive operations, but had desisted on finding that his endeavors were not successful. The chief Rasalola was recalled, and this was regarded as a sign of more peaceful intentions toward Egypt, for that chief had favored an aggressive policy. The King was afterward troubled by a revolt of several of his chiefs, which ended in the defeat, with capture as prisoners, by the royal forces, of two bodies of insurgents, followers of Rasalola. Toward the end of March, the Egyptian Government informed the Porte that it might possibly be forced to undertake another expedition against Abyssinia. Evidence of the desire of King John for peace continued, however, to come in. Colonel Gordon gave to the public a letter from one of his former officers of the date of the 18th of January, relating that he had asked the King, "If the Christian nations of Europe should ask you to suspend for a time all idea of making war upon Egypt until they have been paid the sums due to them by Egypt, what should you do?" and that his Majesty had replied, "I should probably be obliged in that case to wait, because I do not wish to vex the monarchs of Europe, who are Christians like myself." "After this answer," said the writer of the letter, "I think we may look for peace between Abyssinia and Egypt for at least ten or twelve years to come." Naib Mahomed, who had been the bearer of a letter from the Queen of Great Britain to King John, without, however, pos-

sessing any authority to enter into negotiations, returned to Cairo in July, and represented that King John had given him a favorable reception, and informed him that he was desirous of maintaining friendly relations with Egypt. Early in October the Government was dispatching sixteen hundred troops to relieve the garrisons on the Abyssinian frontier. The official journal, a few days later than this, contradicted rumors of a fresh outbreak of hostilities on the frontier, and said that the relations between the two countries were not of a hostile character. The Egyptian Government, it is said, had made every effort, especially since the accession of Tefvik Pasha to the throne, to remove all causes which might lead to a conflict.

The first meeting of the Egyptian Judicial Reform Commission was held December 6th, under the presidency of Riaz Pasha. Thirty delegates of the powers who are represented in the international tribunals were present. The committee resolved that the *status quo* should be maintained until the 1st of February ensuing, unless the work of the committee should be concluded at an earlier date.

ELECTRIC LIGHT, VEGETATION UNDER THE. The success of Dr. Siemens in producing healthy vegetable growth under the electric light, contradicts effectually the conclusion of Sachs, that the action of light in promoting plant-growth is owing to properties favorable to chemical changes which are peculiar to solar light. The chemistry of plant-life is less understood than the chemical processes in animal physiology. The hæmoglobin of the blood enters as an active agent in oxidation: when extracted from the associated albuminoid matter in a pure crystalline state, it is capable of combining with oxygen and again liberating the oxygen, precisely as it does in the living body. The analogous process in vegetation is as dependent upon chlorophyl; but the part played by chlorophyl is more mysterious. Extracted from green leaves with alcohol or ether, and shown to be chemically identical with the coloring matter of the plant-cells by its giving the same complex spectrum, the chlorophyl exhibits no deoxidizing power detached from the vegetable protoplasm.

From the fact that the rays of light which are absorbed by chlorophyl are not those which are active in exciting cell-formation, since light which has passed through a solution of chlorophyl has been found just as efficient in producing vegetable growth, and from indications that the absorbed rays have the contrary effect of causing an excessive oxidation and a disruption of protoplasm, Pringsheim supposes, in the absence of any proof of an active agency of the green substance in decomposing carbonic acid, that this simply acts as a screen to protect the cells from the too vigorous action of the rays which promote oxidation, and that it is the living protoplasm which under the influence of the transmitted rays per-

forms the functions of liberating O from CO₂, and uniting the elements of the starch-cells.

Siemens propagated quick-growing plants, such as cress and mustard. For the purposes of comparison they were separated into lots, one of which was exposed to electric light alone, one to daylight alone, one to daylight and to electric light in the night-time, and one kept in darkness. He experimented in the open air, and afterward in a heated greenhouse, with a lamp constructed for continuous currents with two carbon electrodes, equal to 1,400 candles. The light was demonstrated to be equal or nearly equal to daylight in exciting chlorophyll-formation and deoxidation of carbon dioxide, and in promoting all manifestations of healthy vegetable life. Where the normal exposure to daylight was supplemented by electric lighting at night, the plants thrived much more luxuriantly than under the influence of sunlight alone. The electric lamp was observed to excite the phenomena of heliotropism, the erection of leaves after they had drooped for repose at night, the opening of flower-buds, and all the effects of sunshine. In a palm-house the lamp was placed in a position corresponding to that of the sun at mid-day, and lighted for eleven hours each night for a week. The plants under the double illumination assumed a more vigorous appearance, the leaves took on a darker and fresher hue, and the coloring of the flowers appeared to be more brilliant than usual. The electric light seemed to be more efficacious in bringing out flowers than sunlight. The effects of the light were most striking upon the plants which were nearest.

Dr. Siemens drew from his experiments the following conclusions: Electric light is effective in causing the formation of chlorophyll in leaves and in exciting vegetable growth; an electric lamp of 1,400 candles' brightness, placed at the distance of six and a half feet from growing plants, is equal in its effects to average daylight; the carbonic acid and nitrogenous compounds generated in the electric arc are not sufficient in quantity to injure plants in an inclosed room; plants under the influence of electric light appear to be able to sustain a degree of heat which would otherwise wither them; plants exposed to sunlight during the day and to electric light during the night, show an increased vigor and rapidity of growth, proving that a period of rest during the twenty-four hours is not required in vegetable life. The latter deduction is confirmed by prolonged observations made by Dr. Schübler, of Christiania, upon the effects on vegetation of the uninterrupted sunlight of the Arctic summer. He found that plants from lower latitudes acclimatized in Norway develop a larger and more rapid growth, that they bear heavier seeds, and that the pigments of their flowers and leaves acquire deeper and richer hues. The aromatic properties of plants and fruits also are augmented to a remarkable degree: a much larger percentage of essential oils can be

obtained from plants grown in northern latitudes, the flavor of vegetables like onions, and celery is much more pungent, and the aroma and flavor of berries, plums, and other fruits, much more pronounced. The formation of sugar is dependent upon heat, and therefore the fruits of this climate are very deficient in sweetness. Flowers when transplanted from more southerly climates attain an unusual size and take on stronger colors, white flowers acquiring a pink color, blue ones a deeper tint, and all receiving a tinge of red. No plant except the mimosa was observed to contract its leaves during the two months or longer that the sun remained above the horizon.

ELECTRIC LIGHTING. This method of lighting seems now to have passed the purely experimental stage, and to have become established upon a secure commercial basis. For the illumination of open areas and large interiors, such as factories, railroad depots, theatres, hotels, etc., the arc light is satisfactorily displacing gas, both here and abroad. In Paris and London the Jablochhoff candle has been more largely used than any other lamp; but in this country the lamps of Brush, Maxim, Fuller, and other American inventors are employed. These lamps have all been described, and need no further consideration; but in the first an important improvement has been introduced, which allows a number of them to be operated upon one circuit, without any one being affected by variations in any other. This consists in a construction of the feed-regulating helices, so that the current has two paths through the lamp, one by way of the arc and one by way of a resistance-coil. Each of the bobbins of the controlling magnet is wound with two coils in opposite directions, the primary one being of thick and the secondary of thin wire. The connections are such that the currents in the two coils are in opposite directions, but these latter are so related that when the arc is of normal length the attractive influence of the primary overcomes the opposing influence of the secondary coil. The current flowing through the high resistance secondary coil is ordinarily not more than one per cent. of the total current through the lamp; but when, by the lengthening of the arc, the resistance is increased, a greater part of the current goes through it, with the effect of weakening the primary coil. The cores of the bobbins then move downward until the arc is of normal length. When this becomes too short the resistance is diminished, and a larger part of the current then flows through the primary coil, which draws up its core and raises the carbon. By this construction the resistance of the lamp is rendered constant, however much that of the arc may vary, which is the sole condition necessary to the successful operation of a number of lamps on one circuit. Whenever a lamp, from the entire consumption of the carbons, or from any other cause, is rendered unfit to furnish light, it is cut from the circuit by

a simple magnetic switch. In the same case with the regulating bobbins an electro-magnet is placed, which is wound with two coils, both in the same direction, the inner one being of low and the outer of high resistance. The armature of this magnet is carried on the end of a lever, and when it is drawn up in contact with the pole the current has a path from one terminal of the lamp, through the primary coil of this magnet, through two contact points then together, and through a resistance-spring out to the other terminal. The secondary coil is connected with the corresponding ones of the regulating bobbins. Should the arc then fail from any cause, a greater part of the current circulates through the secondary coils, the cut-out magnet is magnetized and draws up its armature, allowing the main current to flow through the primary coil of this magnet and out to line. Each of the remaining lamps becomes proportionately brighter, but, by means of a simple instrument at the distributing center, resistance-coils are automatically inserted in the circuit, restoring their normal brilliancy. By these simple contrivances Mr. Brush is enabled to operate any desired number of lamps from one machine with the same ease as one, a necessary condition of any extended introduction of this light for industrial use. The light-machines are built in different sizes, the standard operating sixteen lights of two thousand candle-power each, and absorbing fourteen horse-power. The largest yet built maintains forty lights of the same candle-power, and uses thirty-six horse-power. Some five thousand of these lamps are now in use in this country, and extensive preparations have lately been made to introduce them in London. The carbons used in the lamps are twelve inches long and seven sixteenths of an inch in diameter, one pair burning eight hours. The lamps are also made with two sets of carbons, the current being switched to the second when the first pair are consumed. The method of doing this is simply an extension of the feeding-device employed with the single carbons. The tilting washer by which the carbon-holder is gripped and raised, is placed higher on one carbon than the other. When the core of the helix is drawn upward by the influence of the current in starting the light, the carbon with the higher washer is moved too great a distance to form the arc, so that it is established between the other two. This relation is maintained until the first pair of carbons are burned out, when the current passes through the second pair.

The incandescent light has made steady progress, and now appears to be in a fair way of going into use at an early date. Mr. Edison has finished his experimental work, and is ready to enter upon the general introduction of his system. The lamp in its present form differs from that described in the "Annual" of 1879, only in the employment of a strip of carbonized bamboo instead of

paper. Extended trial showed that the paper strips varied greatly in density, and hence became unequally heated when the current was passed through them, with the result of soon becoming disintegrated. The bamboo is much more homogeneous, and has therefore been adopted. For general use, it is intended to make the lamps of two sizes, the carbon strip in one being five inches in length and in the other three. Eight lights of sixteen candles each of the former, or sixteen lights of eight candles each of the latter, can be maintained, Mr. Edison states, with an expenditure of one actual, or one and a quarter indicated, horse-power. As in the best gas-engines twenty-five feet of gas an hour will give an actual horse-power, and as this amount of gas will only supply five lights of sixteen candles each, there appears to be a gain in the ratio of eight to five, in first converting the energy of the gas into electricity and this into light, over burning the gas direct as an illuminant. Electricity has, however, on this basis, a somewhat greater advantage than is shown by the figures, in that the lamps will give the full sixteen-candle light as long as they last, while gas-burners gradually deteriorate, with a consequent lessening of the light. The life of the carbon strip varies greatly with the different samples. Some will last but from thirty to forty hours, while others have remained intact as many as twelve hundred, the average of a large number of trials being three hundred.

An incandescent lamp, quite similar to that of Mr. Edison, shown in Fig. 1, and a regulating apparatus, have been brought out quite recently by Mr. H. S. Maxim, the inventor of the arc lamp which bears his name. The carbon strip, made from cardboard or wood, is bent in the form of the letter M, or a Maltese cross, instead of a simple loop. The globe contains a rarefied atmosphere of gasoline, the object of which is to build up the thinner parts of the carbon by the deposition upon them of the free carbon of the dissociated vapor. This action takes place within a few hours after the lamps are started burning, so that the result is an incandescent strip in an atmosphere of hydrogen. The inventor states that the carbon is rendered very dense and homogeneous by this process, and its durability considerably increased. The sealing is done by inclosing the wires in a semi-elastic cement, instead of fusing them into the glass. The regulator, which is designed to automatically vary the current in accordance with the number of lamps in circuit, is of quite

FIG. 1.

simple construction, and has been found to be fairly satisfactory in use. It operates by increasing and decreasing the intensity of the field magnets of the machines furnishing the current, through the medium of an electromagnet placed in the lamp-circuit. When any considerable number of lamps are operated, the current is furnished by a number of generators, whose magnetic fields are maintained by a separate machine, and, in order to vary the current furnished the lamps, it is only necessary to increase or decrease the current supplied by the latter. This is done by shifting the commutator-brushes to and from the neutral points, the current varying with each change in their position. The mechanism by which this result is accomplished is shown in Fig. 2. The train of gearing in the lower portion of the apparatus consists of two ratchet-wheels, on the shaft of each of which is a spur-wheel, meshing into an intermediate one. This latter is mounted upon a shaft which moves the commutator-brushes of the machine, through the medium of the bevel-gearing to the right. Between the ratchet-wheels there is a reciprocating pawl, operated by the machine. In its normal position this pawl moves freely between

FIG. 2.

the ratchet-wheels; but when the current increases, from the turning out of any of the lamps in the circuit, the electro-magnet shown above the gearing becomes strengthened, and draws down its armature. By means of the connecting-rod from the lever carrying the armature to the reciprocating pawl, this latter is depressed, and then engages with the lower ratchet-wheel, which is moved one tooth with each vibration of the pawl. The spur-wheel on its shaft turns the intermediate one, causing the brushes on the machine to be shifted toward the neutral points, lessening the current. When the strength of the lamp-circuit diminishes, the armature of the electro-magnet is drawn away by the spring on the farther end of the lever; and the pawl then engages with the upper ratchet-wheel, which shifts the commutator-brushes in the reverse direction, increasing the current furnished the field of the generators.

The lamp known as the Sawyer-Man lamp, illustrated in the "Annual" of 1878, has been further improved by Mr. Sawyer, and is now pronounced by him to be perfected. The change in the new lamp consists in substituting for the small piece of carbon a thin pencil, some eight inches long, which is slowly fed upward as it wastes away. The waste is stated by Mr. Sawyer to be from one hundredth to one fiftieth of an inch per hour, giving the carbon a life of from four hundred to eight hundred hours. When entirely consumed it can be replaced at a small expense. By means of a switch, operating so that the current is gradually admitted to the lamp, the light can be varied, as with a gas-flame. Four lamps, each giving 27.4 candles, the inventor states, can be maintained per horse-power. Mr. Sawyer has also designed a lamp-regulator (shown in Fig. 3), which acts by inserting a greater or less number of re-

sistances in the circuit as the number of lamps in use varies. He states that it works satisfactorily, but is of the opinion that such devices are not of sufficient value to have a place in a system of general lighting. Resistance-coils are placed in the base and connected with the studs F, so that the current which enters at the base of the insulated contact plate E, and traverses the arms H and G, will pass through a greater or less number of them as the arms G and H rise and fall. This movement of the arms is effected by the cylinder A, which moves tightly in the cylinder B. Water is admitted by the tube D, and flows out by the pipe O. A tightly fitting piston, C, has two valves, N and M, which are closed by the lever L, operated by the electro-magnet K. When the core is not magnetized, the valve N is opened, and water enters above the piston

FIG. 3.

and raises the cylinder A. When the core is magnetized, the armature is attracted, and opens the valve M, allowing the water to flow out and the cylinder A to fall.

With the exception of the Maxim, which has been introduced in some places of business in New York City, none of the incandescent lamps have yet gone into use; but, as they have reached a commercial form, the next few years will probably witness their somewhat extended introduction.

ELIOT, GEORGE, the *nom de plume* of the English novelist Marian Evans, who died on December 23, 1880. As she was herself curiously reticent on all biographical details concerning herself, the actual facts of her early life are but little known. It is certain that the published sketches abound in inaccuracies. It is even disputed whether her original name was Mary Anne or Marian, and the exact date and place of her birth have never been authoritatively made known. She was not, as has often been stated, the daughter of a poor clergyman, nor is it true that she was adopted in early life by another clergyman of greater wealth, who gave her a first-class education. She was born about 1820. Her father, Robert Evans, was a land agent and surveyor, who lived in the neighborhood of Nuneaton, near Coventry, and served for many years as agent for the estates of more than one old Warwickshire family. He is still remembered as a man of rare worth and character by many neighbors in the midlands. The father of George Eliot is the prototype of more than one character in the writings of his daughter. Of these, Caleb Garth, in "Middlemarch," will be recognized as the chief example; but the same note of character—the craftsman's keen delight in perfect work—is struck in "Adam Bede," and the little poem of "Stradivarius." George Eliot's early years were spent in the country of Shakespeare. It is not very clear when she left her father's home, nor where her education was acquired, but she seems to have come to London almost as a girl, and to have devoted herself to serious literature. She became associated with many of the writers in the "Westminster Review," with John Stuart Mill, Mr. Herbert Spencer, George Henry Lewes, Mr. John Chapman, and others, and was herself a frequent contributor to that "Review." Her first serious work was a translation of the celebrated Strauss's "Life of Jesus," published in 1846, when she was only about twenty-six years of age. In 1853 Miss Evans published a translation of Feuerbach's "Essence of Christianity," the intervening period being that of her greatest activity as contributor to the "Westminster Review." The *nom de plume*, George Eliot, she assumed for the first time in her contributions to "Blackwood's Magazine." The manuscript of her first imaginative work, "Scenes of Clerical Life," was sent anonymously to "Blackwood's Magazine" in 1857, by George Henry Lewes, and eagerly accepted by the editor, who discerned in it the promise of rare and preëminent genius. Her next work, "Adam Bede," which was published in 1859, is probably still the best known and most widely ap-

preciated of all her works, and impressed the world at large with the conviction that a new novelist of the first rank had appeared. "Adam Bede" made the name of George Eliot a household word throughout England and the United States, where it was at once republished, and, like others of her late books, it was quickly translated into French and German, and subsequently into Italian, Spanish, Dutch, Russian, and other languages. Although George Eliot was anxious to conceal her name and her sex, the secret soon leaked out, and before "The Mill on the Floss," the second great novel of the series which has immortalized her name, was published in 1860, it was well known, in literary circles at least, that George Eliot was none other than Marian Evans, the contributor to the "Westminster Review." To her intimate friends she was already known as Mrs. Lewes, for by this time was established that close association and literary friendship with the gifted George Henry Lewes, which only terminated with the death of Lewes in 1878. As Mr. Lewes had been unable to obtain a legal divorce from his first, erring wife, the quasi-marital union between the philosopher and the authoress could not be legalized by either church or state, but it was sanctioned by the approval of a large circle of personal friends. In 1861 she published "Silas Marner," the shortest but, as many think, the most perfect of all George Eliot's novels. "Romola," a masterly study of Florentine life in the days of Savonarola, originally written for the "Cornhill," followed in 1863; "Felix Holt, the Radical," in which she returned to the description of English life, in 1866; and "Middlemarch," the most popular of all her works, in 1871. Meanwhile she had given to the world a poem, "The Spanish Gypsy" (1868); and another was issued in 1874, entitled "The Legend of Jubal." After another long interval of silence she published her last novel, "Daniel Deronda," in 1876; the profound and instructive character of this work was generally acknowledged, but as a novel it was thought to have committed the unpardonable sin of failing to entertain. Her last work, published in 1879, "The Life and Opinions of Theophrastus Such," disappointed the public. After eighteen months of virtual widowhood, she was married, May 6, 1880, at St. George's, Hanover Square, London, to Mr. John Walter Cross, of Weybridge, Surrey, a London banker, formerly resident in New York. Mr. Cross was many years younger than his bride, and had long been an intimate friend both of herself and of Mr. Lewes. The attainments of George Eliot were almost universal. To the chief classical and modern tongues she added an acquaintance with Russian and modern Greek. She knew all the physical sciences, all arts and philosophies, and was deeply versed in the history of thought on the most vital topics. In her literary avocation she was extremely laborious, often injuring her health by intense application. She composed

with rapidity, but corrected with great care. She was modest and unassuming in social life, never spoke of herself, nor used any of the ordinary arts of popularity, and had comparatively few intimate friends. Like many other authors, she oddly preferred her poems to her novels. The later works of George Eliot were extraordinarily successful in a pecuniary sense; while she received only \$1,500 for "Scenes of Clerical Life," "Middelmarch" gained her the enormous sum of \$40,000, and "Daniel Deronda" nearly as much.

ENGINEERING. The renewed impetus which abundant crops and restored prosperity have given to railroad extension in the United States has called this branch of engineering connected with railroad-building into unusual activity. The progress of the art in some of the most important departments is little noticed except by the practically interested. There have been 7,150 miles of new railroad constructed in the United States during the year 1880. This is the largest construction of any one year except 1872, which exceeded it by 190 miles. Of the total length built in 1880, 79.6 per cent., or 5,698 miles, was west of the Mississippi River. The total length of railroad in the United States amounts to 93,637 miles. The increase in the railroad mileage, taking the extension of the year 1880 as a basis of calculation, is $8\frac{1}{2}$ per cent. per annum, while the increase in population in the United States is only about $2\frac{1}{2}$ per cent. annually. In the construction of iron railroad-bridges American engineers stand foremost in the world, as might be expected when it is known that the American network of railroads is nearly as extensive as the combined railroad systems of all Europe. There are 900 miles of bridge-structures in the United States, of which 300 miles are of iron or stone. The details of two of the most recently completed railroad-bridges, which are typical iron long-span truss structures, illustrating the most improved practice of American bridge-builders, are given below. O. Chanute, a Western engineer, has collected the statistics of some of those fields of engineering whose achievements are too familiar to be esteemed at their true value. There are, according to his computations, 3,257 miles of canal in the United States. He also states that 569 towns and cities of the United States and Canada are supplied with water-works, which have 13,000 miles of water-pipes, 10,000 miles of these being of cast-iron; and improvements have been wrought in the methods of water-supply within a quarter of a century which reduce the cost 50 per cent. The gas companies of the country have increased in number from 50 in 1850 to about 900, representing a capital of as much as \$200,000,000. The success of the Suez Canal and the project of the interoceanic canal through the Isthmus of Panama have directed attention to the Isthmus of Cape Cod, through which a tide-level canal

is being cut which promises to benefit coast navigation to an extent incommensurately greater than the cost in labor and capital outlay. This labor is undertaken by private capitalists; but from Government initiative still greater works of a similar character are called for in many quarters. The latest matured project of this kind is for a ship-canal with locks across the Florida Peninsula. More urgent improvements are being carried out on a liberal scale, notably the blasting away of reefs to make a new entrance for deep-draught vessels to New York Harbor from Long Island Sound, the commencement of which has been fully described in the "Annual Cyclopædia" for 1876. Very valuable service is being done in the regulation of the changeable currents of the rivers of the West, in the study of which admirable skill has been shown, and original methods evolved. Engineers are more and more convinced that no scheme for river improvements is efficient unless it embraces the entire course of the river; and that, if the regimen of the river throughout its entire length is not taken as a whole into consideration, any local improvements, whether diking or the rectification or deepening of channel-beds, may do more harm than good. (The much-needed improvements of the Sacramento River, just commenced, with the plans proposed for their execution, are described in CALIFORNIA.) In Great Britain several important harbor improvements have been completed in 1880, chief of which are the great Victoria Dock extension in London, and the enlargement of the Harlepool Docks, by which a completely landlocked harbor is secured for a port whose situation is favorable for a commercial development in other directions besides in the timber-trade, which is now its main business. The extension of ocean telegraphy proceeds at an augmenting rate. Only fifteen years after the two great commercial nations of kindred race which face each other across the single ocean of the land hemisphere were enabled to send instantaneous signals over the first Atlantic cable, each and every land nearly of all the six continents, which has aught to contribute or receive in the world's market, or takes any active share in the busy interchange of economic services, is joined by these vital nerves of commerce, whose iron threads wend over the hills and valleys of the ocean's bottom. The first American cable is wisely intended to link the United States to the sister republics of the same continent, with which intercourse and trade have been slighter and less frequent than with the antipodes, while other industrial nations have known how to turn their peculiar and invaluable organic and mineral products to a profitable account.

The bridge across the Missouri River at Plattsmouth, built to connect the Iowa and Nebraska divisions of the Burlington and Missouri Railroad, lately consolidated with the

Chicago, Burlington and Quincy, replaces the ferry by which passengers and freight have heretofore been transferred. The selection of the location for the bridge was a difficult problem, on account of the varying channel of the river at this point, affected by the irregular volume of the Platte, which flows into it about a mile above the town. Opposite the town the river-bed is a mile wide, though the narrow channel-bed alone is occupied by the river at low water. The channel is constantly shifting from one side of the river-bed to the other opposite the town, but some distance below the river flows through a narrow passage between a dike and a high bluff. The width here is only 800 feet; but below the river widens, and the variations in the position of the channel above throw the channel now against one bank and now against the other. It was necessary, therefore, to place the bridge as near as the configuration of the banks would allow to the narrow passage in which there is the least variation in the position of the channel. The shifting nature of the current also necessitated the adoption of a high-bridge instead of a drawbridge plan. At the point selected the width of the river, except in the flood season, is about 800 feet. The bridge crosses this in two spans, 50 feet in clear height above high water. On the east side are three deck-spans of 200 feet each, crossing the sand-bar, which is submerged in the spring floods; beyond which is an iron viaduct, 1,440 feet long. On the west side an iron viaduct, 120 feet long, reaches from the extremity of the high bridge to the western approach, which is a cutting, 80 feet deep at the deepest point, leading in a curve to Plattsmouth. The bridge is 3,000 feet long from abutment to abutment. The main bridge-structure measures 804 feet between the centers of the outside piers. The foundations of the three piers of the main structure are carried down to bed-rock, 30 to 50 feet below extreme low water. The first pier on the flat also has its foundation laid on the solid rock, and the second one rests on piles. The work on the bridge was commenced in July, 1879. The pier on the west shore was sunk by blasting through a mass of boulders 28 feet deep. The two other river-piers, and the one on the sand-flat resting on piles, were sunk by the plenum pneumatic process. The caissons were of a new pattern, designed and furnished by William Sooy Smith. The entire space above the roof was filled as they were sunk by Portland cement concrete, the foundation being thus built downward; but the walls of the caisson were inclined inward, so that little of the weight rested on the roof of the working chamber, and the caisson was sunk by continuous pressure, instead of intermittently blowing off the compressed air, as is usual. The concrete foundation extends from the solid rock, which is horizontally stratified limestone, nearly up

to the low-water mark. The piles under the pier on the east side of the river-bed have a penetration of 28 feet, the masonry commencing three feet below low water. All the rest of the masonry has concrete foundations. The stone used is the finest kind of magnesian limestone, and it is laid in Portland-cement mortar. The sides of the three main piers, from the foundation up to seven feet above high water, have an incline from the perpendicular of one in twenty-four. At the top their thickness is eight feet, their length 33 feet. Both ends are circular arcs, meeting and forming an edge, the radius of the arcs being about three fourths of the thickness of the pier. The arch with circular sides of these dimensions is expected to meet best the conditions of the Missouri River, which carries down great quantities of drift-wood. The extreme variation in the level of the river at this point is 17 feet. The superstructure of the iron viaducts and of the deck-spans over the sand-bar is of iron; but in the channel-spans steel was largely employed. The bridge was designed throughout to bear a running load of 2,000 pounds per linear foot, and to resist a wind-pressure of 30 pounds per square foot when a train is crossing, equivalent to 50 pounds per square foot when empty. The iron viaduct, of riveted-plate girders resting on wrought-iron posts, has forty-eight spans on the east and four on the west side, each of 30 feet, is constructed entirely of wrought-iron, except the cast-iron bed-plates. The three deck-spans, 30 feet deep and 16 feet apart between the centers, are of the single-system Pratt truss, with inclined end-posts, and eight panels of 25 feet in each truss. The wrought-iron trusses, secured with steel pins, rest on cast-iron pedestals anchored in the masonry. The superstructure of the main bridge was made by the Keystone Bridge Company. The two channel-spans are just 402 feet each between the centers of the piers. The trusses are 50 feet deep, and placed 22 feet apart from center to center. The plan is the double-system Pratt truss with inclined end-posts. Each span has sixteen panels of 25 feet each. The top chord, the tension-members, end-posts, the jaw-nuts on the bottom chord, and all of the smaller parts are of steel, except the rest of the nuts, which are of iron. The main ties and the bars of the bottom chord were rolled by the Klonan process, the motion of the rollers being reversed while the steel is between them. The intermediate posts are formed of two channels laced at the sides, and are pinned in the center to the diagonal bars, as well as to the top and bottom chords, the pins in the center being also connected with transverse struts between opposite posts, braced by diagonal rods extending to the top lateral struts. The open-hearth steel used in the structure, specified to contain not over 0.35 per cent. of carbon, was tested by making $\frac{3}{8}$ -inch bars bend 180 degrees around their own diam-

eters, elongate 12 per cent. of their length, and sustain a pulling strain of 80,000 pounds. The tests disclosed the same superior strength in bars of small section as compared with larger ones which is observable in wrought-iron bars. The chief engineer was George S. Morrison. The floor of the bridge, which is uniform throughout, is constructed with iron guards of angle-iron, within oak guard-timbers. These angle-bars with the broad side flat will, it is expected, carry a derailed car or train for any distance.

A railroad-bridge over the Ohio River at Beaver, Pennsylvania, consists of six spans over the river and an iron viaduct across the flats on the north side of the river, 1,000 feet long. The first span on the south side is a plate deck-girder, 30 feet long; the second span over the channel is 446 feet, crossed by a double-intersection Pratt through truss; the next truss, 260 feet long, is of the same pattern; the third, 180 feet long, is a Pratt deck-truss, as are also the fifth and sixth, 230 feet each. The bridge is for a single track. The bridge proper has a length of 1,376 feet, and the iron viaduct of 1,080 feet, divided into thirty-six spans of 30 feet each. The piers for the channel-span were built up from the solid rock, in coffer-dams. They are 90 feet high from the low-water mark, and are 12 feet thick, and 30 feet long under the coping, sloping outward one in 24 to the foundation courses. The next pier, at the north end of the 260-foot span, has the same height. The next two piers, supporting the first 230-foot truss, are 60 feet high above low water, and eight wide by 24 feet long at the top. The channel-span is formed by two trusses, 18 feet apart and 42 feet high. The end-posts are inclined, and the intermediate posts, which are double, each half being formed of an eight-inch beam with plates riveted on the flanges, are stiffened by a longitudinal strut, formed of two channel-bars, fastened to them at their centers, and running the whole length of the bridge. The trusses are divided into 21 panels of 21 feet two inches each. The channel-span was erected in the river upon a temporary bridge of three spans, 135 feet each, of Howe trusses, resting on timber piers, 55 feet high, and these upon columns of rough masonry, ten feet high above low water. Under these temporary spans the river-traffic was conducted without interruption. The shorter span of double-intersection trusses was raised upon a wooden trestle-work. The viaduct rests upon iron trestles, each formed by two legs inclined one in eight, and braced by four panels of cross-struts and diagonals. The height of the viaduct is 60 feet from the ground. Each leg of the iron columns is anchored in a masonry foundation. The longitudinal bracing is a line of struts composed of two channel-bars, fastened to each leg at its center, and strengthened by diagonals. Every third span was left unbraced to allow of expansion.

The Tay Bridge disaster led to a long Parliamentary investigation. This resulted in the adoption of plans for an entirely new bridge by the side of the old one, which is still standing unimpaired, except the thirteen long spans over the main current. This number was adopted by Sir Thomas Bouch, in place of fourteen spans of shorter breadth, in order to hasten the completion of the bridge. This broke down in a high gale of wind on the 28th of December, 1879, while a passenger train was passing over, causing a terrible loss of life. (For description of the bridge see *ENGINEERING* in "Annual Cyclopædia" for 1877.) In the report submitted to Parliament the commissioners say: "The conclusion to which we have come is that the bridge was badly designed, badly constructed, and badly maintained, and that its downfall was owing to inherent defects in the structure, which must sooner or later have brought it down." The engineers stated that 20 pounds on the square foot of wind-pressure had been allowed for, although maximum pressures of 40 to 50 pounds have been observed, and the locality of the bridge is subject to storms of extreme violence. French engineers usually allow for 50 or 55 pounds per square foot of lateral wind-pressure, or more. It transpired that the customary allowance for wind-pressure made by English bridge-builders is much less than observed maximum pressures, though invariably greater than the allowance made in the iron piers of the Tay Bridge, and that the only reason why such disasters had not before occurred was that a far greater lateral stability is usually secured than is nominally held in view.

The new Thames Dock in London, which was called while building an extension of the Victoria Docks, but was opened on the 24th of June, under the name of the Royal Albert Dock, is the largest in the world. It was built to provide for the greatly enlarged shipping traffic of London, and to furnish accommodations for the steamships of colossal size which are replacing the smaller vessels for which the existing dock facilities were intended. The improvements were commenced in 1875, with the channel which was begun between the old dock and Gallion's Reach, a work which was only intended originally as a new entrance below two troublesome bends in the river. This plan was abandoned in favor of a new dock, which it was foreseen would have to be constructed before very long, and which would render the expenditure upon the canal in a large measure superfluous. Instead of the depth of 27 feet, as was intended for the canal, the depth of 30 feet was seen to be necessary in the new dock to accommodate such vessels as the Orient. The new dock is connected with the Victoria Dock by a channel 80 feet wide. At its lower end it has another entrance, communicating with the Thames through a large basin, connected with it by a lock, and connected by another with the river. The new dock and the old one run in one straight line,

from which the two entrances slightly deviate. The total distance between the old entrance at Blackwall Point and the new one at Galleon's Reach, below Woolwich, is two and three-quarter miles. The new entrance joins the docks to the river at its widest part. It is protected by two concrete jetties, opening outward, timber leading-jetties ending in curves presenting a wide mouth guiding into the entrance-lock. The entrance-lock to the basin is 800 feet long and 80 feet wide. It has three pairs of wrought-iron gates. The distance from the outer to the inner gate is 550 feet. There is 30 feet of water over the sills at high tide, and any of the ironclads of the British navy, as well as the largest merchant-vessels afloat, can enter the docks. The entrance-basin into which this lock conducts has an area of nine acres. From this a channel, which is 300 feet long by 80 wide, leads into the main dock. This passage has a pair of gates similar to those of the entrance-lock. The main dock has an area of 75 acres, and is one and a quarter miles long. It has a uniform breadth of 490 feet between the copings. On the south side of the new dock are being built two large dry docks, the larger one 510 feet long and 84 feet wide, and the lesser one 420 feet long and 68 feet wide. Their sills are 22 feet below high water. The largest ironclads can be admitted into the first. Beneath the passage connecting the two wet docks the double track of the Great Eastern Railway passes through a tunnel 1,800 feet long, the gradients of which are one in fifty from both sides, the level of the track in the center being $43\frac{1}{2}$ feet below the high-water line. Another double-line railway, as well as a roadway, is carried over the connecting canal by one of the largest swing-bridges yet made. It spans 90 feet, and weighs over 860 tons. The Royal Albert Dock-works are remarkable for the extensive use in them of Portland-cement concrete. The dock-walls of the whole of the main dock and its entrances from the Thames and from the old dock, as well as the two great graving docks, are constructed almost entirely of this material, which was made and deposited on the spot. The aggregate length of the dock-walls and the walls to the passages is about three and a half miles. These walls are about 40 feet high, five feet thick at the top, and 18 or 19 feet thick at the base. They required in their construction about 500,000 cubic yards of concrete, for which some 80,000 yards of Portland cement were used, besides about 20,000,000 brick. Upward of 4,000,000 cubic yards of material were excavated and lifted an average height of seventeen feet, which was accomplished by steam-excavating machinery of the most advanced types. The steam-navvies used were capable of moving 500 cubic yards a day each. The number of steam-engines constantly employed for various purposes was 70, the number of workmen 2,000 to 3,000; 43,000,000 gallons of water a day have at times been pumped out. All the

lock-gates, swing-bridges, cranes, capstans, etc., used in connection with the docks are worked by hydraulic machinery; and an extensive system of pressure-pipes and water-mains, with fire-hydrants attached, surrounds the whole dock. The numerous hydraulic cranes are supplied with water under high pressure from the pressure-mains through jointed pipes made of gun-metal. The total area of these docks, including the entrance-basin to the new dock, which can be employed as a landing dock if desired, is about 175 acres. They belong to the St. Katharine Dock Company. There is a complete and direct connection with the whole system of British railways. The transfer of goods to or from the manufacturing districts or the London warehouses is very perfect and economical. The docks will also be largely employed for the transfer of passengers. The cost of the dock extension would have been much greater if the gravel excavated had not been used in making the concrete. The total cost was about £1,000,000.

The harbor of Holyhead, on the island of that name, adjacent to the Island of Anglesea, at the northwest corner of Wales, is important, as being the regular landing of the Irish steamship traffic, lying directly opposite Dublin. The harbor is formed by the great breakwater which was begun by J. M. Rendel, in accordance with an act of Parliament passed in 1847, and completed after his death, by Sir John Hawkshaw, in 1873, the plans having been changed and the pier extended so as to inclose 400 acres of deep water, in addition to the 267 acres of water-space originally intended. The outer end of the breakwater was constructed with extreme difficulty, owing to the great depth of the water, which was 55 feet at the extremity, and the heavy seas which washed out of place the huge blocks of stone which were employed, and the rubble foundation 250 to 400 feet wide. An extension of this harbor and new landing docks have been dredged out within the shelter of the breakwater for the London and Northwestern Railway Company. The new docks were opened on the 17th of June. The railway company commenced the harbor extension in 1862, adding ten acres to the area of the harbor, and in 1865 they built the quay-wall which forms the west side of the new harbor. The quay on the east side was commenced, as the beginning of the extensive improvements just completed, in 1874. The harbor, which has been excavated for the traffic of the railway and its sixteen steamships employed in the Irish packet service, is 2,000 feet long and 600 wide. The cost has been about £500,000. In connection with this large open dock is the graving dock, with an entrance 70 feet wide, a floor 398 feet long, and a depth of 27 feet.

Important dock and harbor works are being constructed at Milford Haven, South Wales. The docks, which are being constructed after the plans of J. M. Toler, will have an area of

62½ acres. They include a graving dock 710 feet long and 96 feet wide, in obtaining the foundations for which some of the deepest excavation ever accomplished under tidal water has been done. In the construction of the sill, which is 34 feet below high water in ordinary spring tides, a large iron caisson was used in excavating for the foundation. The sill or entrance is in the form of a groove, the object being to enable the dock to be used as a wet dock for very large vessels when desired. The sill-stones are blocks of granite placed directly on the solid rock, which was excavated to the average depth of eight feet. The gate to the entrance is a floating caisson, the largest ever made of its kind. A large caisson-chamber for receiving the caisson when opening the dry dock, with heavy walls of limestone and concrete, is 100 feet long, 45½ deep, and 15½ wide. This chamber was excavated in the rock to the depth of 12 feet. Some of the deep foundations were obtained by sinking a kind of cofferdam formed by a huge monolith of concrete. This was built up on the surface of the ground to be excavated, and the inclosed earth dug out, the weight of the mass causing it to sink, the sides being built up above the water-level in the beginning or progressively while it was sinking. The largest of these monoliths, used in digging for the foundation of a breakwater at the lock-entrance to the graving dock, is 36 feet by 24 feet, with side-walls averaging six feet in thickness. This had to be sunk 57 feet below the surface of the ground before reaching the solid rock. This mode of tidal excavation has not before been tried in England. It promises to be a valuable method for sinking the foundations of piers, breakwaters, or lighthouses. A channel, 100 yards wide, giving 34 feet of water at high spring tide, has been cut from the graving dock to deep water in the haven. The dry dock has an entrance at both ends, communicating with the wet dock and with the haven, allowing it to be used as a tidal basin or as a lock. A small graving dock, 300 feet long, and capable of accommodating ships of 20 feet draught, is within the area of the wet dock. In this new graving dock the Great Eastern steamship was recently docked for repairs. Of the 62 acres of dock area in the haven, one half will soon be opened for use, affording 5,000 feet of wharfage, with quays of an average depth of 200 feet. When the whole of the wet docks are completed the wharfage-room will be about 7,000 lineal feet, with 26 feet of water in the basin. The entrance-lock will be 500 feet long and 70 wide, with 34 feet of water on the sills at spring tide. A low breakwater will protect the entrances to the tidal lock of the basin and to the graving dock. Close to the docks is a deep-water iron pier, with three lines of railroad-track leading to the coal-fields. There are several hydraulic cranes and a powerful hydraulic elevator attached to the pier, which are capable of discharging 1,000 tons of coal in twenty-four

hours. The pier can also be used for landing passengers, as it is approachable at all states of the tide. This pier is of a novel design. It is nearly 1,000 feet long and 40 feet wide, and is built of solid wrought-iron bars, or screw-piles.

Extensive dock accommodations have been added at Hartlepool, which is the only harbor of refuge along an extensive stretch of dangerous coast, and has now been made one of the most accessible and commodious ports on the eastern coast of England. The docks have been extended by successive additions since the first one was commenced in East Hartlepool in 1840, until they now embrace an area of 176½ acres. The east harbor is connected with the harbor of West Hartlepool, which has too shallow an entrance for large craft, by a deep channel. A large flat which was covered at high tide has been excavated to form the new dock. A tidal basin connects this with the deep-water channel, letting into East Hartlepool Harbor, which is open to the sea. The tidal lock or basin, which is 450 feet long and 26 to 27 feet deep, is provided with a double set of gates, the outer pair of which are constructed of wrought-iron, with air-tight compartments large enough to enable them to float on water. They are operated by hydraulic machinery. The bridges for railroads over the entrance passage are of remarkably easy action; though containing 500 tons of wrought-iron and 200 tons of cast-iron each, they revolve upon a system of wheels of pure steel as though they were of the lightest construction.

The boring of the St. Gothard Tunnel has been completed, the latter part of the work having proceeded with increased rapidity. The Belgian system of tunneling by top-headings, adopted by the late engineer, Louis Favre, and the use of compressed-air drills of the latest types, compressed-air locomotives, and improved methods of ventilation, have enabled the work to be done at quicker rates than would have been possible if the engineers had not so readily availed themselves of new inventions. (See *ENGINEERING*, in "Annual Cyclopædia" for 1879.) Before the two sections of the tunnel met, the temperature had become almost insupportable in the headings. Two serious hindrances were encountered in the latter portion of the work: a large influx of water occurred at one point, and at another the tunnel passed through a mass of disintegrated feldspar with alumina and gypsum, which swelled very rapidly upon contact with air, and was pressed out by the weight of the superincumbent rocks with a force sufficient to crush every kind of arched lining which could at first be devised. Granite arches capable of withstanding the enormous pressure were finally made, though the heavy lining of five feet thickness was sometimes broken down, and had to be reinforced with side-walls, also of granite, about 6½ feet thick. The two headings met on the 30th of April; the calculations

as to grade and direction proved surprisingly accurate, and the deviation was almost infinitesimal. It is proposed to connect the tunnel with Andermatt by a sloping tunnel 700 metres in length. Andermatt lies almost exactly midway between Goeschenen and Airolo. This slight extension of the scheme would, it is thought, not only prove profitable by increasing the receipts, but would make the ventilation of the main bore as good as could be desired, and also prove extremely useful in case the tunnel should cave in and become temporarily impassable on either side.

The Mont Cenis route passed through the same soft stratum of decomposed feldspar and gypsum which proved so serious an obstacle in boring the St. Gothard Tunnel, crossing it in an open cutting in the Replat section, near Modane. The sides of this excavation have been continually crumbling, and the cutting has only been kept clear at great expense and by the exercise of constant vigilance. The cutting is consequently being replaced by a tunnel 1,583 metres in length, which enters the mountain about 1,000 metres from the mouth of the great Fréjus Tunnel, and joins the latter about 600 metres from its terminus. The Colladon machinery and perforators, worked by compressed air, have been used in boring this tunnel.

A new tunnel, which is being made through the Arlberg, is intended to connect the Swiss and Austrian railroad systems without crossing German territory, and requiring to use a link belonging to the German system, as at present. This tunnel, which is intended for a double line, will be six and one half miles in length. The railroad line will follow the right bank of the Inn, passing Innsbruck, Landeck, and Bludenz. A shaft is to be sunk from the height of 1,540 feet near the middle of the tunnel, to accelerate the boring, and to secure the ventilation of the tunnel.

A ship-canal across Cape Cod is a project which has been brought forward from time to time ever since the first settlement of the American colonies. During the War of the Revolution a military commission examined the ground and reported in favor of such a cutting. In the next war its need was strongly felt, and in the succeeding period the route was surveyed, first by order of the Commonwealth authorities, from 1818 to 1824, and then by command of the Federal Government. The latter survey was carefully made by Major Perrault, an engineer of the army, in 1825, who reported the results to Congress the following year. In 1828 the Board of International Improvement adopted a route and plans, and the Government was about to execute the project; but it was abandoned, together with other public works, upon the advent of a new Administration, with a different policy regarding internal improvements. In 1860 the Massachusetts government revived the scheme, and obtained a favorable report upon it from the Coast Survey. After lying

dormant for twenty years more, the project has been taken up as a commercial enterprise, and the canal is being made by private means. An association of Boston and New York capitalists obtained an unexpired charter granted for this object, purchased a strip across the isthmus 1,000 feet in width, and arranged with contractors to commence the cutting immediately, and complete the canal in two years. The engineer is George H. Titcomb, with whom P. Elbert Nostrand is associated as assistant engineer.

The canal is to pierce the interior neck of Cape Cod at its narrowest part, connecting Buzzard's Bay, the deep indentation in the southern coast of New England, which gives to Cape Cod its peninsular form, to the arm of Cape Cod Bay, called Barnstable Bay, which hollows the other shore directly opposite the extremity of Buzzard's Bay. The route of the canal is marked out by nature. Two shallow watercourses, the Monument and Scusset Rivers, coincide with a line straight across the isthmus at its narrowest point for seven eighths of the way across. The summit of the ridge which divides them is only 35 feet above the average low-water level of the bays on each side. This narrow ridge crosses the route, which follows northeast and southwest bearings, five miles from the Buzzard's Bay entrance. The length of the canal will be a little less than eight miles. The material to be removed is very easy of excavation, consisting principally of gravel. The canal is to have the depth at mean tide-level of 25 feet, a surface width at mean tide of 225 feet, and at bottom of 66 feet. Its width at bottom is six feet less and its depth one foot less than the Suez Canal. The New Amsterdam Canal is 21 feet broader at bottom, and two feet shallower; the Caledonia Canal is not within 16 feet as broad nor within five feet as deep. The capital stock of the joint-stock company which is digging this canal is \$8,000,000, of which \$1,500,000 was paid in at the commencement. The actual distance saved to coasting-vessels by the Cape Cod Canal will be 90 miles; the saving in time at least eight hours. The advantages of this route will prove much greater and the saving more, owing to the storms and fogs encountered in rounding Cape Cod. The canal will afford a safe and protected passage between New York and Boston; and the Sound steamers, which now transfer their passengers at Stonington and Fall River, will be able to sail, just as smoothly, all the way to Boston Harbor. The navigation around this most dangerous point along the Atlantic coast is of immense magnitude. This coasting traffic, it is estimated, employs 40,000 vessels annually, carrying cargoes of \$600,000,000 aggregate value. The saving in insurance, time, wages, etc., which the canal will effect at the start is calculated to amount to \$1,500,000 a year. The tonnage which is expected to pass through it the first year is 4,000,000 tons. The canal will facilitate commercial intercourse not

only with New York and the Sound ports, but will render the coasting-trade speedier and safer between New England and all the rest of the seaboard. The final survey of the route was made in July, and work was commenced the middle of September, 1880. The northeast end of the canal is about one third of a mile north of Sandwich. Here two parallel jetties will be carried out into deep water, forming a prolongation of the canal-banks. An interior basin of ten acres' area, made by excavating a salt marsh within the line of the shore, will serve as a harbor. It connects with the canal and the channel between the jetties at their point of meeting. Breakwaters will be so constructed that vessels can run up into the basin from Cape Cod Bay in all weathers. At the head of Buzzard's Bay and at the mouth of Monument River is an excellent natural landlocked harbor. The engineer employed by the same company in 1878, Clemens Herschel, estimated the cost of the canal at \$2,500,000, allowing only 15 to 20 cents per cubic foot for excavation, which estimate was only one quarter of that first made by the present engineers. The former schemes for a canal over this route all contemplated a greater or less number of locks. The bolder plan of an expeditious, free channel cut below the level of the tide was first adopted by the company which has now taken this work in hand, and is the result of the vogue for ocean-level canals brought about by the great achievement of Lesseps and his still greater new enterprise. A serious drawback to a tide-level canal across Cape Cod may be encountered in the strong tidal current, which Herschel calculates will run through at the rate of four knots an hour. Navigation against such a current must be attended by expense and delay. Whether it would also injure the banks and bed of the canal, or entail expensive works for their preservation, can not be clearly calculated beforehand. In the second and third weeks of September several hundred Italian laborers were set at work clearing the ground and commencing the excavation at Sagamore Hill. The Cape Cod Ship-Canal Company was incorporated in the year 1870, and would perhaps have completed the undertaking some years ago had it not been for the financial panic of 1873 and its effects. They were compelled by statute to expend \$100,000 on the canal and collect \$400,000 into their treasury before the 1st of November, 1880, or to forfeit their charter. A second company was chartered April 24, 1880, who should succeed to the privileges of the old one in default of their fulfilling these conditions.

The route of the ship-canal which it is proposed to dig across the peninsula of Florida has been surveyed under the direction of General Q. A. Gillmore. If constructed, this canal will effect a saving in distance between Atlantic and Gulf ports of about five hundred miles, besides the escape from the perils of the passage through the Florida Straits. The route recommended starts from the St. Mary's River

on the east, and descends to the Gulf of Mexico through San Pedro Bay. Its length from the bar opposite the mouth of the St. Mary's to deep water in the Gulf is 169 miles. From the bar to the mouth of the river the distance is $5\frac{1}{4}$ miles. There are 34 miles of ship navigation in the St. Mary's to Camp Pinckney, the eastern terminus of the canal proper. The length of canal to be excavated from here to Ellaville is 122 miles, and from this point to deep water in the Gulf $7\frac{1}{2}$ miles. The summit-level is 105 feet above tide-water. The plan is to ascend the St. Mary's River to the summit-level by means of seven locks of 15-foot lift each. The summit-level commences with Okefinokee Swamp, $11\frac{1}{2}$ miles above Camp Pinckney, and is 62 miles in length. It runs 22 miles through the swamp, and 14 miles beyond the point where it emerges it meets the Suwanee River, which is to serve as the feeder of the canal. The waters are to be raised to the level of the canal, and diverted into it by means of a dam, which will produce an artificial lake near Blount's Ferry. From this lake to the end of the summit-level the distance is 18 miles. It descends on the Gulf side by two locks of 10 feet lift, then five of 15, and one of 10-foot lift. The line crosses the Allapaha and Withlacoochee Rivers, and is carried through the center of San Pedro Bay. A channel must be dug, and protected with jetties, for $7\frac{1}{2}$ miles to deep water. The drainage area tributary to the summit-level is 1,200 square miles, in which the average annual rainfall is about four feet six inches. The cost of the canal, according to the plans proposed, would be about \$50,000,000. These plans contemplate a canal 25 feet in minimum depth, 80 feet wide at the bottom, and 108 feet wide at the water-level. The locks are to be 25 feet deep on the sills, and to have a width at the gates of 65 feet, and a length of 500 feet in the chambers. They have the same dimensions as those of the projected Panama Canal, and differ from them only in the lifts. They are to be dual locks, a reserve lock being placed by the side of each working lock so that traffic may not be arrested while it is being repaired. To enable ships to pass each other the canal is to be widened to 155 feet at bottom and 255 feet at the water-surface, for 1,000 feet above and below each pair of locks; and other basins for the same purpose are to be placed at intervals of six miles along the line. To earn current expenses and 5 per cent. interest on the cost of construction, estimated at \$50,000,000, 10,714,300 tons must pass through annually if the canal-toll is fixed at 28 cents per ton, and a traffic of 1,750,000 tons would have to pass through in order to enable the current expenses and cost of maintenance to be met. The actual tonnage which passed through Florida Straits in 1879 was about 2,600,000; but this traffic will probably be much larger in future as a result of the improvements at the mouth of the Mississippi. It has been computed that the

saving upon present rates of freight and insurance between the Gulf States and Atlantic and foreign ports, which would be effected by a Florida ship-canal, would be at least 25 per cent. The drainage area available for the water-supply amounts to 1,200 square miles. The average annual rainfall is 54 inches at St. Mary's, and somewhat greater in the interior. It would afford some 1,200 cubic feet of water per second available for feeding the canal, sufficient for the supply of the canal if it can be all utilized. About one fourth of this, the actual supply, or one sixteenth of the total precipitation, must be stored away in reservoirs during the wet season for use in the dry season. The reservoir could only be economically constructed by embanking the margins of Okefinokee Swamp, and thus forming two vast shallow ponds, one on each side of the canal.

New lines for canals have been surveyed in Germany to connect all the principal navigable rivers. The canalization of the Main is proposed, between Frankfort and Mayence, a canal connecting the Rhine with the Weser and Elbe, one from Ems to the Jahde, one from the Elster to the Saale, two others connecting the Spree with the Elbe and with the Oder, one connecting the Oder with the Danube, and canals between Berlin and the cities of Rostock and Stettin. Another project is the Baltic and North Sea Ship-Canal, planned by Dahlstrom, to go from the Bay of Kiel to Brunsbüttel in the estuary of the Elbe. It is to have a minimum depth of 20½ feet, a width at the surface of 160 and at the bottom of 64 feet. A peculiar system of reservoirs and locks has been designed to increase the depth at will to 25 or 26 feet, so as to float the heaviest ironclads in the German navy. It is estimated that this canal can be completed in six years, at a cost of about \$18,750,000.

The constant shifting of the channels of the Western rivers, owing to the erosion of the light prairie soil of their banks, causes the double evils which have long been felt: that of uncertain and insecure navigation, and that of the instability and frequent destruction of riparian property, evils which increase with the growth of population and prosperity in the Mississippi Valley. The rapidity and extent of the displacement of river-beds increases in geometrical progression with the swiftness of the current. The erosion of the banks and the deposit of the material washed out causes the deflection of the current, and the gradual formation of great bends. The river returns, after a circuit, sometimes of many miles, to its old bed at a point not far below the spot where it deviated. The narrow neck of land between is eaten away by the impact of the current on the lower bank at the first bend, and bars are formed in the loop until a cut-off is formed; and then the sudden increase of slope disturbs the regimen of the river for many miles above and below; the banks below are washed away, new hollows excavated and bars deposited, the formation of

new loops hastened, and the same transformations of the channel and alterations in the velocity of the current reproduced farther down. The report of Captain Hanbury, of the Engineer Corps of the Army, on the condition of the Missouri River near Omaha, describes simple and inexpensive devices, by the skillful application of which the mutable regimen of these rivers can be controlled, their channels rectified and conserved, the navigable way kept clear, and the farmsteads and urban sites along their banks rendered secure. This is accomplished by arresting the sediment carried down by the river, and causing the deposits to take place where they will preserve or improve the channel, and either increase or lessen the slope of the bed, according to the requirements. The most effective contrivance for filling up a channel-bed when it is desired to deflect the channel into a new course, is a floating-brush dike, technically known where it is used as the "weed." It is made by nailing or wiring scraggy brush to saplings 20 or 30 feet long, and four to eight inches in diameter. The brush is sometimes made fast to a length of rope instead of to saplings. These weeds are anchored from 10 to 20 feet apart in the stream where the bed is to be filled up. The anchor is of sufficient weight to withstand the force of the current. To the down-stream end is attached a buoy to prevent the weed from being driven to the bottom by the pressure of the current. The action of these floating dikes is to retard the current and gradually check it, causing a portion of the solid matter which is rolling along the bottom, or held in suspension, to be arrested and precipitated. The sedimentation caused by these dikes is remarkably rapid, a single season often sufficing to build up the area over which they are stretched to the ordinary high-water level. Another device for the same purpose is the willow curtain. This is made of willows an inch or more in diameter, fastened parallel to each other, six or eight inches apart, with wires. The curtains are anchored athwart the current by rows of weights attached to the bottom edge, and are held up against the current, in a perpendicular or inclined position, by floats fastened to their upper edge. A screen made entirely of wire has been used in the same way as the willow curtain, with very satisfactory results. The wire is woven like a seine, and entangles rootlets and vegetable filaments, which accumulate and form a mat dense enough to check the velocity of the current. These curtains perform the same service as the brush-dikes. The protection of banks exposed to the impact of currents is another important task in this branch of hydraulic engineering. The bank is graded to a slope of two in three, or a less grade. This is inexpensively performed by hydraulic force-pumps. Watted mats of brush or willow are then spread down the bank from the flood-limit, and along the incline of the river-bed,

far enough out to prevent the bottom from being scoured out below the screen. The total width of the revetting is usually about 100 feet. The portion which is carried out into the river is sometimes anchored with pieces of rock; but usually it is held in place by the action of the current, and is soon imbedded under a deposit of sediment. The varieties of revetment which have given the best satisfaction are the brush-blanket, in which the brush is bound together to form a mat with wire; the woven brush revetment; and the willow screen, in which the willows are bound close together with wire, instead of at a distance apart, as in the willow curtain. Where the bank is protected with revetting, instead of being worn away by the current, a deposit of sediment forms on the screen which drives the current farther and farther out. The cost of these protective screens is \$2.25 to \$2.50 a foot, measured along the bank. The brush-dikes cost \$1 a running foot.

The removal of Flood Rock in Hell Gate, the entrance to New York Harbor from Long Island Sound, will widen the channel from 600 feet, its present width, to 1,200 feet. About three acres had been undermined and were ready to be blasted in August, and between five and six acres remained to be excavated. The clearing away of this obstruction will enable the largest ships to enter the East River, giving from 26 to 32 feet of water at low tide through this channel. The velocity of the tide will probably be increased by the destruction of this reef. There were over two miles of galleries, four or five feet broad and seven feet high, excavated at the beginning of December, and 783,000 feet of rock taken out, more than the whole excavations at Hallet's Reef. The entire reef is to be blown up with a single blast, in which over 200,000 pounds of the highest explosives will be used. There are ten tunnels, already 600 feet long, running parallel with the current. The tunneling progresses at the rate of 500 feet a month. The excavations are approached through a shaft, sunk from the crown of the rock, and 60 feet deep. The top of the reef is below the high-water line, and to sink the shaft a cofferdam had to be used. With the excavated material an island was built up on the surface of the rock, upon which stand a blacksmith's and repairing shop, a boiler-house, etc. The final explosion will probably take place about the middle of the year 1883.

The removal of Diamond Reef in New York Harbor, situated midway between the Battery and Governor's Island, a serious obstruction to navigation, which received its name from the wreck of the ship *Diamond* upon it, was completed on the 9th of July. The excavation of this large and dangerous rock was accomplished by means of the drilling scow invented by General Newton for submarine mining. (See *HELL GATE IMPROVEMENTS* in "Annual Cyclopædia" for 1876.) Diamond Reef was

entirely submerged, and was about four acres in extent. The surface-blasting system for submerged rocks proposed by Maillefert was tried upon this reef; and before him other contractors had attempted to clear it away, but abandoned the undertaking. These attempts were made under the authority of the city government, which entertained the plan also of building up the reef into a visible island. The average depth of the holes drilled by the rods of the drilling scow was 10 or 12 feet below the surface of the rock. As many as 21 holes, charged with 1,140 pounds of nitro-glycerine, were sometimes fired in a single blast. A part of the material of the reef consisted of deposits of glacial clay, pebbles, and boulders. General Roy Stone, the superintendent of the work under General Newton, employed an hydraulic jet for removing this lighter matter, and the deposits of silt and harbor rubbish which overlaid it and the surface of the rocky portions of the reef. Where the rock was not homogeneous, but was mixed with the clay and loose pebbles, boring with the scow was impracticable, and some device like this method of hydraulic mining was necessary. Powerful streams of water with a pressure of 150 pounds per square inch were projected upon the surface, when consisting of soft material or mixed hard-pan and detrital matter, which penetrated the mass at the rate of a foot a minute, producing a hollow three to five feet in diameter, in which boulders of 20 pounds' weight would be suspended by the force of the stream. The cost of removing the reef by these methods amounted to only \$309,400.

Appropriations have been voted by Congress to survey a route for connecting the Hudson and East Rivers above Manhattan Island by a navigable channel. The projected canal is to be 18 feet in depth, allowing the tide to pass freely from one river to the other, and from 350 to 400 feet wide. The survey has been conducted by General John Newton. The beds of Harlem River and Spuyten Duyvil Creek will be utilized. The canal is to start on the east side at the mouth of Harlem River, which it follows as far as Dyckman's Meadows, where it turns westward to join Spuyten Duyvil Creek, a cutting having to be made through a ledge of rocks and through dry ground for some distance beyond. The route then follows the creek to its mouth, considerable rocky excavation having to be made in its bed. Such a passage would save vessels going to New England with freight taken on in the North River, the distance around the Battery, about 24 miles, and would relieve the crowded rivers to the extent of this traffic. The cost of the improvement is estimated at \$2,000,000.

The French Paris-New York Telegraph Company, which has lately laid a cable across the Atlantic, is the fourth transatlantic cable line which has been established. The three others are in operation, but have all been brought

under the control of the Anglo-American Company, the pioneer association, which in spite of doubts and disasters first linked the continents of both hemispheres with two cables in 1865 and 1866. The initial capital of that company was \$3,400,000. The large profits acquired by the Anglo-American Company, during the first two years, when it possessed the monopoly of cable communication and fixed the tariff at its own discretion, first at \$20 a word, then at \$5, and afterward at \$2.50, induced French capitalists under the lead of Baron Erlanger to start a rival line. In 1869 the French Atlantic Cable was laid between Brest and the French island of St. Pierre, adjacent to Newfoundland, and thence to Duxbury, near Boston. The competition was not severe enough, though one line would have been sufficient for the business, to prevent the new company from obtaining good revenue. The situation of the French cable was particularly favorable for the distribution of messages. Competition ended in a combination; both companies pooled their earnings, establishing a uniform tariff, on the condition of the French company's having 36 per cent. of the joint gross receipts. To obtain a complete control over the traffic, the English company afterward bought out the French company, paying by agreement 1,044 francs for every share of 500 francs. A new rival sprang up immediately in the Direct United States Cable. The single cable of this company was carried from Ireland to Torbay in Nova Scotia. This new company, which immediately acquired 30 per cent. of the business, was also merged in the Anglo-American, leasing its line to that company for twenty-five years. The new French cable, recently completed, entered the field as the sole rival of the original company. Its published aim was to establish a complete double-cable line between the continents, and to efficiently compete with the British cable combination. The leading promoter of the second French cable was M. Pouyer-Quertier. One of the cables was to connect France with the United States directly without touching foreign territory, the other to unite England with her American colonies. The total length of both lines is a little over 6,000 geographical miles. The first cable, from Brest to Louisburg, on the Island of St. Pierre, 2,430 miles long, has been laid; and the continuation from St. Pierre to Rye Beach, in New Hampshire, 880 miles. Of the British cable, only the section which was to connect it with the Continental land lines, running from Penzance, on the Scilly Isles, to Brest, 151 miles, was put down. The total length of cable laid by the French company is, therefore, 3,461 miles. The cable which was to connect the Scilly Isles with St. Pierre would have a length of 2,285 miles, and the extension to Torbay of 270 miles. From the latter terminus lines would have to be constructed to connect the cable with the Canadian land system. This cable was to have a double termi-

nation on the European side, a cable 30 miles long from Penzance to Land's End, connecting it with the British lines, and the one already laid joining it to the Continental land system at Brest. The company was already provided with a repairing-ship before the cable was laid. The communication has been interrupted twice, once by a break in the main cable, which occurred May 22d near the Island of St. Pierre, which was repaired the same month, and a second time by a break in the section between St. Pierre and Cape Cod, which occurred November 21st.

A cable connecting England and Norway has been laid between Newbiggin and Grøderig, near Arendal, Norway, a distance of 424 miles, and thence to Marstrand, Sweden, a distance of 99 miles. The core is 120 pounds of copper and 200 of gutta-percha per mile. It is sheathed with 12 wires, for a part of the distance No. 6, and for a part No. 8. Both sections have heavy doubled shore-ends.

The third cable of the triplicate line between Marseilles and Algiers has been laid. It has a length of 525 miles, and is of the same type as the new Australian cable, described below.

A cable, 525 miles in length, has been made by the India Rubber Telegraph Works in England, for the Mexican Telegraph Company of the United States, to be laid in the Gulf of Mexico between Vera Cruz and one of the coast islands in Texas, near the mouth of the Rio Grande. It has a core with 107 pounds of copper and 166 of gutta-percha per mile. The main portion is sheathed with 12 No. 6, and the shore-ends with 14 No. 1 galvanized iron wires. The whole cable is thoroughly protected by compounds and tapes. The line is to run from Brazos Santiago to Tampico, and thence to Vera Cruz, 505 miles in all. By arrangement with the Mexican Government it will transmit all the foreign messages of the Mexican lines. This cable will reduce the distance between the United States and Brazil, or the west coast of South America, by over 6,000 miles, and the cost in proportion, as all messages must now be sent by way of Lisbon and the Madeira Islands.

The duplicate Australian submarine cable consists of four sections: Penang and Malacca, 275 miles; Malacca and Singapore, 116 miles; Singapore to Banjoewangie, 920 miles; Banjoewangie to Port Darwin, 1,131 miles. The cable was all laid but the last section in 1879. The core of this cable is 107 pounds of copper and 140 pounds of gutta-percha per mile. The deep-sea portion has eleven No. 13 homogeneous wires covered with two layers of protecting tapes. In the intermediate and shore-end portions the core is protected from insects by being wound round with brass tape. The cable was all down on January 28th.

A cable between Hong-Kong and Manila, which was put down in April, has a similar core to the above in the deep-sea section, cov-

ered with nine homogeneous iron wires alternating with as many manila strands, each wire being separately taped, and the whole cable sheathed in two of the patent compound tapes; the other portions are of four kinds, differing in the size and in the number of wires used in the sheathing, according to the depth. They all have their cores protected with the patent covering to keep out insects, and are wrapped in outside tapes. The ends of the different cables are connected with insulated wires laid in pipes filled with water. At Banjoewangie there is a length of 11 miles of these pipes, and at Hong-Kong the pipes are carried over a hill 444 feet high. Some insulator for the core which will stand dry heat better than gutta-percha is greatly desiderated. The most promising substitute is the ozokerit core invented by Henley. The length of the cable is 529 nautical miles, the length of the deep-sea section 327 miles.

These cables were laid by the Telegraph Construction Company, of England, which has also laid for the Anglo-American Company an Atlantic cable, 2,073 miles in length, between Valentia, Ireland, and Heart's Content, Newfoundland, utilizing for 170 miles from Heart's Content, and 94 miles from Valentia, the shore-ends and a portion of the intermediate section of the 1866 cable. The new cable has a core with 300 pounds of copper and 300 pounds of gutta-percha per mile. The deep-sea portion has ten No. 13 homogeneous wires, each one covered with Clifford's compound, a new protective, and separately taped, alternating with hemp yarn, the whole being incased in tape. About 190 miles of the cable made for the Breast-St. Pierre line were used in the deep-sea portion; this has 400 pounds each of copper and gutta-percha per nautical mile in its core. At the shore-ends the cable was made with steel wire for short distances, so that it may be grappled and raised without breaking in case it may have to be taken up for repairs. The cable was laid in the month of August, by the steamships Scotia and Seine. This cable is the restoration of that laid in 1866, of which the two shore-ends were utilized. It is called the cable of 1880. The 1866 cable was broken January 13, 1877, and finally abandoned July 27, 1878. Its renewal has cost about \$1,100,000. The 1865 cable was broken March 11, 1873, and abandoned finally February 1, 1878. The third cable laid by this company, in 1873, was broken April 2, 1879, but is still in operation, as well as that laid in 1874, in which no break has occurred. The Anglo-American Company has, consequently, three cables of its own in operation between Ireland and Newfoundland, with extensions to Sydney, 300 miles.

The Erlanger cable, which was purchased by the Anglo-American Company from the first French company, was broken in May, 1870, the year after it was first laid, and has been broken and repaired several times since. The

last time it was repaired was in August, 1879, the break having occurred on the 22d of the preceding February. It was worked until December, 1880, when it broke again. The company then declared their intention of abandoning the cable, as it was too rotten to warrant any further attempts to keep it in order. The cable of the Direct United States Company, which was laid in 1874, has twice broken, once near the Torbay end of the main cable, January 4, 1879, and once in the section between Torbay and Rye Beach, in February of the same year. The cable was repaired, and is supposed to be in good condition. The working of the Muirhead system of duplex telegraphy in the Direct United States line has fully doubled the capacity of the cable. Brown and Allen's relay enables this line to send messages direct from Torbay to New York without transmitting at Rye Beach.

There are six cables, between 15,000 and 16,000 miles in aggregate length, now working between Europe and America. Their total cost has been about \$55,000,000. The three cables of the Anglo-American Company have an aggregate length of about 6,450 miles; the old French cable is 3,329 miles long; the Direct United States cable from Ireland to Torbay and Rye Beach is 2,360 miles long; and the new French cables have a total length of 3,461 miles. A project has been mooted of a double cable line, to be built with American capital, and used in connection with the United States lines, remaining under the control of one of the American telegraph companies. The projected cable was to extend from Cape Cod to Cape Breton.

The danger of overhead telegraph-wires in cities, and the occasional stoppages of electric communication by breakage of the wires caused by storms or incrustations of ice, have impressed both the public and the directories of the companies with the necessity of soon adopting some method of underground insulation, especially in inhabited places. In England gutta-percha has been used for several years, not with entire success. In Germany there are long lines of subterranean telegraph similar to ocean-cables, and these have been worked satisfactorily for periods long enough to prove them, though the insulation is less perfect than in overhead wires. The Western Union Company has a cable of 60 wires running under the North River, and one of 80 wires under the streets of New York City, the wires being inclosed in iron pipes of 2½ inches aperture. Brooks's underground system has been tried with success in a section across the St. Louis suspension-bridge, and is also employed for telephone-wires. This cable is made by drawing copper wires, wrapped in cotton or jute, through iron pipes filled with liquid paraffine, every particle of moisture being carefully excluded from the materials, and no air suffered to enter.

EUROPE. The area of Europe was estimated in 1880 at 9,710,340 square kilometres,

or 3,749,313 square miles.* With regard to their population, the countries of Europe (inclusive of their European dependencies) held the following relative position in 1880:

1. Russia (inclusive of Finland).....	74,509,000
2. Germany.....	45,500,000
3. Austro-Hungary.....	38,000,000
4. France.....	37,147,000
5. Great Britain (inclusive of Malta, Gibraltar, and Heligoland).....	35,098,000
6. Italy.....	28,210,000
7. Spain.....	16,343,000
8. Belgium.....	5,536,000
9. Roumania.....	5,376,000
10. Turkey (exclusive of Bulgaria, East Roumelia, Bosnia, and Herzegovina).....	4,790,000
11. Portugal (inclusive of Azores).....	4,618,000
12. Sweden.....	4,579,000
13. Netherlands.....	4,087,000
14. Switzerland.....	2,808,000
15. Denmark (inclusive of Faroe Islands and Iceland).....	2,053,000
16. Bulgaria.....	1,965,000
17. Norway.....	1,879,000
18. Servia.....	1,652,000
19. Greece.....	1,650,000
20. Bosnia and Herzegovina.....	1,326,000
21. East Roumelia.....	816,000
22. Montenegro.....	800,000
23. Luxembourg.....	205,000
24. Andorra.....	18,000
25. Lichtenstein.....	9,000
26. San Marino.....	8,000
27. Monaco.....	7,000
Total.....	818,484,000

The Eastern question kept Europe throughout the year in a state of excitement, though not to the same degree as in 1879. (See EASTERN QUESTION.) Of the two provisions of the Treaty of Berlin which had not been carried out in 1879—the cession of territory to Montenegro and Greece—only the one relating to Montenegro was disposed of toward the close of the year 1880; the other, the Greco-Turkish difficulty, being carried over into the new year. The Porte, with the consent of the great powers, concluded a special treaty with Montenegro, according to which Turkey kept the territory which the Berlin Treaty had given to Montenegro, and in exchange promised to cede to Montenegro the town of Dulcigno and some neighboring villages. In the execution of this new treaty the Turkish Government was so dilatory, that the European powers, by sending their fleets into Turkish waters, made a joint demonstration against Turkey. In October the representations of the German, Austrian, and French ambassadors at last prevailed upon the Turkish Government to order the evacuation, which was effected in November, after the resistance of the Albanians to it had been overcome. (See MONTENEGRO.) For settling the dispute between Greece and Turkey, the great powers arranged another conference of plenipotentiaries at Berlin, on June 16th. The conference agreed upon a new frontier between Greece and Turkey, which the Turkish Government refused to accept, and which Greece declared itself determined to conquer if necessary by force of arms. (See EASTERN QUESTION and

GREECE.) At the close of the year no real progress toward the permanent settlement of the question had been made. In the mean while the condition of Turkey continues as hopeless as before, and a further disintegration of the empire becomes more and more probable. (See TURKEY.)

In England, public attention was engrossed by the change of government and the threatening attitude of the Irish Land League. The general elections which began at the close of March, led to a crushing defeat of the Conservative party, and to the formation of a new Liberal Government under the leadership of Gladstone. It was to be expected that England's influence in the great international questions, especially in the Eastern question, would be weakened by this change, and so the new Government, at the close of the year 1880, could not point to a single success in its foreign relations. In home questions the successful progress of the Irish Land League was a cause of still greater embarrassment. All parties in the United Kingdom agree in the opinion that in Ireland the leaders of the Land League possess a much greater influence than the English Government. No one expects that the result of the trial, which the Government in the last days of the year instituted against the leaders of the League, can in any way determine the further development of the Irish question, which bids fair to occupy a very prominent position in the history of the year 1881. (See GREAT BRITAIN and IRELAND.) The war in Afghanistan inflicted again some severe losses upon the British army, and at the close of the year no definite agreement between the English and Afghan governments had been arrived at. (See AFGHANISTAN.) In South Africa, the English Government had to face two new wars, the rising of the Basutos, who refused to deliver up their arms, and the attempt of the Boers of Transvaal to restore their republic. (See CAPE COLONY.)

In Russia the Nihilists again scared the Government by a new plot against the Emperor's life, which was followed by the appointment of an executive commission, with General Loris-Melikoff at the head. The commission was clothed with very extensive powers for the purpose of rooting out Nihilism. The effect of the terrorism which prevailed in Russia in consequence of the bold operations of the Nihilists made itself felt at the gloomy celebration of the twenty-fifth anniversary of the Emperor's accession to the throne. In the course of the year Melikoff succeeded, however, in checking the demonstrations of the Nihilists, and in allaying, to some extent, the growing discontent of large classes of the Russian people. The negotiations with China on the retrocession of Kulja were not yet concluded at the close of 1880, and the war against the Tekke-Turkoman was to recommence. (See RUSSIA.)

In Italy, the resignation of the Ministry of Cairoli led to the dissolution of the Chambers,

* See "Annual Cyclopædia" for 1879, article EUROPE, for a table of the European countries, arranged in order of their areas.

and a new general election, at which the Ministry again obtained a small majority. The Ministry successfully repressed the impetuosity of the party of Italia Irredenta, which clamors for the annexation of the Italian districts of Austria to Italy, and thereby endangers the continuance of friendly relations between the two countries. Republican sentiments are gaining strength, and are well represented in the Italian Parliament. (See ITALY.)

In France, the republican form of government is making from year to year greater progress. The supplementary election of members of the Chamber of Deputies, as well as the election of general councils, resulted in a signal victory for the Republican party. A violent conflict between the Government and the Catholic party arose, when the former, on March 29th, issued a decree, which enjoined upon all religious communities the duty to apply for a recognition by the state, and to submit to the Government their rules for approbation. The members of all the communities which failed to comply with the demand of the Government were sent out of the country. When the Prime Minister Freycinet hesitated to carry through this policy, he had to give way to Jules Ferry, who announced to the National Assembly, when it reassembled in November, that a complete compliance with the law of the country had been enforced. The relations of France with all foreign countries were of a peaceable character, and some warlike utterances which Gambetta ventured to make in a speech at Cherbourg were promptly disowned. (See FRANCE.)

In Germany, the new protective policy of Bismarck was fully carried through, without, however, producing the favorable result which the Government expected from it. The rate of taxation is higher than before, because the Government demanded and obtained from the Reichstag an increase of the military budget for the next seven years. The exceptional laws aiming at the repression of the Social Democracy were allowed to remain in force until 1884. In April, Bismarck again tendered his resignation, because, in the discussion of a new stamp-tax by the Bundesrath, Prussia, Bavaria, and Saxony had been outvoted by the smaller states under the leadership of Württemberg. The resignation was, however, revoked, as the Bundesrath complied with the wishes of Bismarck, who remained at his post, although the Reichstag rejected a number of the measures proposed by him. The Government of Prussia showed itself willing to make some concessions to the demands of Rome, but a full reconciliation was not obtained; and at the completion of the Cologne Cathedral the Catholic party kept aloof from the celebration in so demonstrative a manner that the Conservative party of the Prussian Diet cut the alliance which had hitherto existed between the two parties. (See GERMANY and PRUSSIA.)

In Austria, the Cabinet of Count Taaffe drifted more and more into the ranks of the

Federalistic party. The representatives of liberal ideas resigned in the course of the year, and the new members were either mere functionaries, without any political convictions, or members of the Federalistic party. An important concession made to the Czechs in regard to the official use of their language, widened the breach between the Ministry and the bulk of the German population of Austria, and called forth on the part of the latter several enthusiastic manifestations of attachment to the German nationality. In the foreign relations of the empire there was no notable change, and the meeting of the Emperors of Austria and Germany at Ischl was regarded as a confirmation of the German-Austrian alliance, which both parties appeared equally desirous to keep intact. (See AUSTRIA.)

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of the Evangelical Association, as they are given in the "Christian Family Almanac" for 1881:

CONFERENCES.	Itinerant preachers.	Local preachers.	Members.
East Pennsylvania.....	83	70	14,864
Central Pennsylvania.....	76	66	11,618

Total.....	898	595	112,197

Whole number of churches, 1,477, having a probable value of \$3,115,299; number of parsonages, 435, having a probable value of \$426,816; number of Sunday-schools, 1,976, with 131,257 scholars; number of baptisms, 1,466 of adults, and 7,494 of children; amount of conference contributions, \$5,098; of contributions for missions, \$64,911; of Sunday-school and tract contributions, \$2,106.

The annual meeting of the *Missionary Society and Board* was held at Cleveland, Ohio, October 8th. The total receipts for missions had been, for the year, \$72,561, of which \$13,605 had been contributed to the principal treasury for home and European missions, \$3,020 for the heathen missions (in Japan), and \$55,849 had been received by the conference treasuries. The expenditures had been \$80,860, exceeding the receipts by \$8,298. The subject of establishing a harbor mission in New York City was considered and referred to the bishops. The proposed organization of a Woman's Missionary Society was approved.

F

FAVRE, JULES CLAUDE GABRIEL, a French statesman, born in Lyons, where his father was a tradesman, March 21, 1809; died January 19, 1880, at Versailles. M. Favre is known in the political history of France as a life-long adherent of republican principles. At the outbreak of the Revolution of 1830, he was a law-student at Paris. He took a very active part in the revolution, and wrote articles in the Paris newspapers in favor of a republic. He first joined the Lyons bar, and in 1841 fought with the National Guards against the rioters. In 1835, defending some political prisoners before the House of Peers, he began by saying, "I am a republican," and, though ill, spoke for four hours. After the Revolution of 1848, he became secretary to Ledru-Rollin, and was credited with the authorship of the celebrated instructions to the provincial commissioners. He resigned this post on being elected deputy, was for a short time Under-Secretary for Foreign Affairs, supported the prosecution of Louis Blanc, and voted on some other questions with the Right. He condemned the expedition to Rome, and Louis Napoleon's presidential acts, and, on Ledru-Rollin's flight, became the virtual leader of the Mountain. After the *coup d'état* he kept for six years aloof from any active participation in political life, confining himself till 1858 to the exercise of his profession. In that year his defense of Orsini secured his election for Paris, and he became the leader of the Republicans who were the nucleus of the gradually increasing parliamentary opposition to the Empire. In 1863, being also elected for Lyons, he decided for that city, to secure that seat for the Republicans. His speeches on Mexico, Italy, and Germany made a great sensation; nevertheless, he was defeated at Lyons in 1869 by the more radical Raspail, and in Paris defeated Rochefort by only a small majority. After the overthrow of Napoleon's dynasty, he became Vice-President of the Provisional Government of National Defense and Minister of Foreign Affairs. He had to carry on the negotiations with Bismarck concerning the conclusion of a treaty of peace, and his remarkable failure as a diplomatist is now a matter of history. From the position taken in his diplomatic circular, that he would pay any amount of indemnity, but not give up an inch of French territory, he had to recede in a very conspicuous manner when he consented, in the treaty of peace, to the annexation of Alsace and Lorraine to Germany. Previously, in concluding the armistice, he had not only been beguiled into excluding Bourbaki, but he had forgotten to notify the exclusion to the Bordeaux Government. A still more disastrous blunder was his insisting, despite Prince Bismarck's warnings, on the Paris National Guard retaining their arms, without which the Commune

could scarcely have occurred. He was elected by six departments to the Assembly, and remained Minister of Foreign Affairs till conservative pressure obliged M. Thiers to substitute M. de Rémusat. In 1867 he was elected a member of the French Academy, as successor of M. Victor Cousin. On this occasion, as well as in several speeches made in the National Assembly, he strongly declared his belief in God and Christianity, and he was looked upon as a devoted member of the Catholic Church. An action for defamation, which, though resulting in a condemnation, had laid bare remote domestic irregularities, confirmed him in his desire to withdraw from political life. A widower since 1870, he married in 1874 a Protestant governess, and finally became a regular attendant at Protestant worship. His two principal works were "Rome et la République française" (Paris, 1871), and "Le Gouvernement du 4 Septembre" (2 vols., 1871-'72), both of which have been translated into English.

FINANCES OF THE UNITED STATES. The monetary transactions of the Government have been marked during the year by a large increase in the receipts, especially from duties on imported goods, while the expenditures, except for pensions, have increased but little, as will be seen by the following statement:

NET ORDINARY RECEIPTS.	YEAR ENDING JUNE 30.	
	1879.	1880.
Duties on imports.....	\$137,250,047 70	\$186,522,064 60

Total.....	\$266,947,883 53	\$267,642,957 73

The receipts from duties on imports have been derived chiefly from importations of sugar, and of woolen and silk goods, as will be seen by the following exhibit:

ARTICLES YIELDING NOT LESS THAN \$1,000,000 OF REVENUE.	RECEIPTS FOR YEAR ENDING JUNE 30.	
	1879.	1880.
Breadstuffs, and other farina- ceous food not otherwise specified.....	\$2,299,949 08	\$2,558,676 90

Wool, and manufactures of.....	18,505,840 36	29,238,370 08

The internal revenue receipts, largely increased over those of the previous year, are derived principally from spirits, tobacco, fermented liquors, adhesive stamps, banks and bankers, as will be seen by the following table:

PRINCIPAL ARTICLES.	RECEIPTS FOR YEAR ENDING JUNE 30.	
	1879.	1880.
Spirits.....	\$52,570,284 69	\$61,185,508 79
Tobacco.....	40,183,002 65	38,870,140 03
Fermented liquors.....	10,729,320 08	12,529,802 84
Banks and bankers.....	3,198,883 59	8,350,985 23
Adhesive stamps.....	6,706,384 06	7,668,394 22

It will be noticed that the net expenditures were less than the net receipts in the amount of \$65,883,653.20, and this surplus represents the actual reduction of the debt, taking into account the cash in the Treasury.

This surplus, together with \$8,084,434.21, drawn from the cash balance of the Treasury, was applied mainly to the purchase and retirement of interest-bearing obligations of the United States, which will reduce the future annual interest charge \$4,139,797.50. The Secretary of the Treasury, in his annual report to Congress, estimates that the receipts for the current fiscal year ending June 30, 1881, will amount to \$350,000,000, and the total expenditures to \$260,000,000, leaving an estimated surplus of \$90,000,000.

The receipts to December 31, 1880, one half of the fiscal year, have amounted to \$179,383,584.30, and the payments during the same period to \$139,618,839.87, leaving a surplus for the half-year of \$39,764,744.43. This indicates that the surplus of \$90,000,000, estimated for the year, will be obtained, should the relative increase of the receipts as compared with last year be maintained.

The expenditures as stated, however, do not

include any amounts to be applied to the purchase of the debt for the sinking fund as required by law. Section 5 of the act of February 25, 1862, provides as follows:

SECTION 5. *And be it further enacted*, That all duties on imported goods shall be paid in coin, or in notes payable on demand heretofore authorized to be issued and by law receivable in payment of public dues, and the coin so paid shall be set apart as a special fund, and shall be applied as follows:

1. To the payment in coin of the interest on the bonds and notes of the United States.

2. To the purchase or payment of one per centum of the entire debt of the United States, to be made within each fiscal year after the 1st day of July, 1862, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct.

3. The residue thereof to be paid into the Treasury of the United States.

While the war continued, and the expenditures exceeded the receipts (excluding loans), the second of the above requirements was not carried into effect, as it would have been absurd to purchase outstanding debt for a sinking fund, and at the same time to issue bonds to meet current expenses.

In August, 1865, the debt reached its maximum. Every year since that time there has been a surplus revenue, and a consequent reduction of debt, as follows:

Statement showing the net receipts, net expenditures, and surplus revenues of the Government for each fiscal year from 1866 to 1880, inclusive.

YEAR ENDING JUNE 30.	Net receipts.	Net payments.	Surplus.
1866....	\$558,082,620 06	\$520,509,416 99	\$37,223,203 07
1867....	490,634,010 27	357,542,675 16	138,091,335 11
1868....	405,638,083 82	377,840,254 86	28,297,798 46
1869....	370,943,747 21	322,565,277 80	48,078,469 41
1870....	411,265,477 63	309,653,560 75	101,601,916 88
1871....	333,323,944 89	292,171,188 25	91,146,756 64
1872....	374,106,567 56	277,517,962 67	96,588,904 89
1873....	338,738,204 67	290,345,245 33	48,392,959 84
1874....	289,478,755 47	257,133,873 17	2,344,882 80
1875....	288,000,051 10	274,623,362 84	13,376,688 26
1876....	287,482,039 16	258,450,797 33	29,022,241 83
1877....	269,000,586 62	238,660,008 98	30,340,577 69
1878....	237,768,573 70	236,964,326 80	20,799,551 90
1879....	273,827,134 46	266,947,583 53	6,879,300 98
1880....	333,526,610 98	267,642,957 78	65,883,653 20
Total.	\$5,326,752,062 10	\$4,578,683,552 19	\$748,068,209 91

The surplus arising from 1866 to 1869 was partly held in the Treasury, increasing the cash balance from \$88,218,055.13 to \$149,502,471.60; the remainder was applied to the purchase of various kinds of securities mainly issued during the war of the rebellion, some of which after purchase were held intact, the interest accruing thereon being reinvested in the purchase of the debt, as required by the sinking-fund act. By this means, the principal of the debt was reduced from \$2,844,649,626.56 to \$2,588,452,213.94.

The bonds purchased still appeared on the books and in the reports of the Treasury as outstanding, though in fact owned by the Government.

To obviate this confusion, Congress, in section 6 of the act of July 14, 1870, directed that bonds purchased under the sinking-fund act should be canceled and destroyed. It also directed that, in addition to the bonds purchased, an amount equal to the interest on previous purchases should be annually applied to the payment of the debt.

A vague idea exists as to the effect of these sinking-fund laws—that they provide in some mysterious way a method by which, without expense, the debt is to be extinguished. This is a delusion: there is no “new way to pay old debts.” Taxation to such an extent that the revenues shall exceed the expenditures is the only way in which the debt can ever be paid. These laws are a pledge that the Government will impose such taxes that its revenues after paying current expenses shall be sufficient to purchase each year one per cent. of the entire debt, and a certain additional amount equal to the interest which would have accrued on all the bonds purchased had they remained outstanding.

A statement setting forth the requirements of the sinking fund, from May, 1863, to June, 30, 1880, as interpreted by the Treasury, and showing the purchases made to meet such requirements, is published with the annual report of the Secretary of the Treasury. From the statement in the last report, it seems that the purchases within the period mentioned were \$49,817,128.78 less than the amount required by law. Had the purchases been kept up as the sinking-fund law appears to direct, the current expenses of the Government could not have been met. From the same report it appears that for the year ending June 30, 1881, the law requires the purchase during the present year of \$39,801,884.48, which, added to the preëxisting deficit above stated, makes \$89,619,013.26 of purchases to be made during the present year to balance the sinking-fund account. As the surplus revenues for the year are estimated at \$90,000,000, this will probably be done. No calculation is set forth in the statement as to the amount required by law to be purchased for the sinking fund during the years 1862 to 1868, nor of the redemptions made, though they were of large amounts; and the statements for subsequent years show that in no year have the apparent terms of the acts been complied with.

The following is the Department's estimate of the requirements of the sinking fund for the next ten years:

1882.....	\$48,386,645 00
1883.....	45,122,110 80
1884.....	46,926,995 24
1885.....	48,804,075 04
1886.....	50,756,238 04
1887.....	52,786,487 56
1888.....	54,897,947 07
1889.....	57,093,864 95
1890.....	59,377,619 55
1891.....	61,752,724 33

Total.....\$520,904,707 58

This official statement may become important

as fixing the maximum limit to which, under existing law, surplus revenues may be appropriated hereafter to the extinguishment of the bonded debt. Should this interpretation be accepted, the debt can be purchased only to the amount of the sinking fund as stated above, and any additional surplus revenues must be held in the Treasury until further legislation. On the other hand, if the sinking fund is to be maintained to the amount stated, Congress must provide revenues by taxation sufficient to meet purchases to that amount.

The amount applied to the sinking fund must not, however, be accepted as the amount of the reduction of the debt. The amount of surplus revenue, for any period, represents the reduction of the debt for that period, whether it is applied to the purchase of outstanding liabilities, or remains in the Treasury as unappropriated assets, for such assets must be considered in any statement of the debt.

On the 1st of November, 1880, \$13,414,000 of six per cent. bonds of the act of February 8, 1861, remained outstanding, which, by the terms of their issue, were to become payable on the 31st of the following month. In view of this fact further purchases of all classes of bonds were discontinued until November 4th, when the Secretary offered to purchase any of those maturing, at the rate of 102 $\frac{1}{2}$, including accrued interest; and, although this rate was advanced on the 1st of December to 102 $\frac{3}{4}$, not many were offered.

During the calendar year ending December 31, 1880, the Government, without material reduction of the cash in the Treasury, purchased mainly upon bids received at the sub-Treasury in New York, or redeemed at par, outstanding bonds as follows:

TITLE OF LOAN.	Amount of principal.	Amount of premium.
Loan of February, 1861.....	\$12,223,000 00	\$125,439 53
Oregon war debt.....	110,750 00	4,737 04
Loan of July and August, 1861.....	88,185,450 00	1,570,751 66
Loan of 1863 (1881s).....	14,422,800 00	598,320 51
Funded loan of 1881.....	38,759,300 00	982,375 79
Consols of 1907.....	1,500,000 00	125,558 26
Total.....	\$105,231,300 00	\$3,407,191 69

The Secretary of the Treasury in his last annual report calls the attention of Congress to the advantages which would arise from refunding at lower rates the bonds which become redeemable in 1881, as follows:

TITLE OF LOAN.	Rate per cent.	Redeemable.	Amount.
Loan July and August, 1861.....	6	June 30, 1881.	\$145,786,500
Loan of 1863 (1881s)....	6	June 30, 1881.	57,757,250
Funded loan of 1881....	5	May 1, 1881.	469,651,053

and he recommends that authority be given for the issue of \$400,000,000 of Treasury notes bearing interest not exceeding 4 per cent., running from one to ten years, the amount maturing in

any one year not to exceed the amount required for the sinking fund for that year; and also \$40,000,000 of bonds of the character of the outstanding 4 per cents, but bearing a rate of interest not exceeding $3\frac{5}{10}\%$ per cent. per annum, redeemable at the pleasure of the United States after fifteen years. Under this plan the Secretary believed the outstanding bonds could be refunded, and the interest of the public debt thereby reduced \$12,000,000 per annum.

The proposition was at first favorably received in Congress, but owing to the continued advance in the market value of outstanding United States bonds, that of the 4 per cents having reached a point at which purchasers could realize only about 3-25 per cent., the belief soon became general that the interest could be reduced to 3 or $3\frac{1}{2}\%$ per cent.

The changes in the character of the public debt during 1880 will be seen by the following comparative table, compiled from the monthly debt statements:

CHARACTER OF DEBT.	AMOUNT DECEMBER 31.	
	1879.	1880.
<i>Interest-bearing debt:</i>		
Bonds at 6 per cent.	\$273,400,550 00	\$202,266,550 00
Bonds at 5 per cent.	508,440,350 00	469,651,050 00
Bonds at $4\frac{1}{2}$ per cent.	250,000,000 00	250,000,000 00
Bonds at 4 per cent.	738,490,550 00	738,420,400 00
Refunding certificates at 4 per cent.	2,855,400 00	927,400 00
Navy pension fund.	14,000,000 00	14,000,000 00
<i>Debt on which interest ceased at maturity.</i>	14,691,925 26	11,484,895 26
<i>Debt bearing no interest:</i>		
Demand and legal-tender notes.	846,742,866 00	846,741,761 00
Certificates of deposit.	10,245,000 00	7,005,000 00
Fractional currency.	18,674,303 78	7,147,580 12
Gold and silver certificates.	21,050,010 00	52,241,010 00
Interest.	24,691,953 75	21,596,379 02
Total.	\$2,219,782,408 79	\$2,121,481,475 40
Less cash in the Treasury.	207,988,908 92	222,209,739 41
Net debt.	\$2,011,798,504 87	\$1,899,181,735 99

The table below is also of interest in connection with the national finances as showing the principal items of assets held by the Treasury on January 1, 1879, the day of resumption of specie payments, and the first day of each year since.

The monetary transactions have been conducted through the Treasurer, nine assistant-

treasurers, one depositary, and one hundred and thirty national-bank depositaries. The gross receipts for the fiscal year amount to \$545,340,713.98, of which \$141,039,558.61 were received through the depositary banks. The deposits of public moneys in these banks are at all times amply secured by deposits of United States bonds with the Treasurer of the United States, and no loss has been suffered by the Government on account of such deposits of money since 1866. The moneys thus received by a depositary bank are paid out upon Treasury drafts, or transferred to the credit of United States disbursing officers, and by them disbursed to public creditors; or, if not needed for disbursement by these methods in the vicinity of the bank, they are without expense to the Government transferred to an assistant-treasurer in a locality where they are needed for such disbursement. At the close of the fiscal year there stood in the depositary banks and sub-Treasury offices to the credit of the United States Treasurer, subject to draft, the sum of \$204,683,836.34, and to the credit of United States disbursing officers \$28,581,290.93.

As agent for the redemption of national-bank notes the Treasurer of the United States redeemed during the year \$61,585,675.68, as against \$157,656,644.96 in 1879.

It is worthy of notice that the amount of gold coin held by the Government, as before stated, is the largest accumulation of such coin in the world. In addition thereto the banks held of coin on October 1st, \$108,000,000, of which about \$100,000,000 was gold. At the same time both gold and silver coin was circulating freely in the hands of the people throughout the entire country; and, thus far, since resumption, all the several kinds of currency have been kept at par with gold coin.

The monetary transactions of the country, other than those of the Government, have been conducted mainly through national banks, State banks, private bankers, and trust companies, supplemented by clearing-houses in several of the large cities. During the year ending November 1, 1880, fifty-seven national banks have been organized, with an aggregate capital of \$6,374,170; three, having a total capital of \$700,000, have failed; and ten, with a total capital of \$1,070,000, have voluntarily discontinued business, leaving in operation 2,095 banks, with a total capital paid in of \$466,365,085.

CHARACTER OF PRINCIPAL ASSETS.	AMOUNT HELD JANUARY 1.		
	1879.	1880.	1881.
Gold coin and gold bullion.	\$185,382,639 42	\$157,790,821 84	\$156,742,095 77
Standard silver dollars.	16,704,829 00	33,168,064 00	48,190,518 00
Fractional silver coin.	9,449,461 25	18,881,629 15	24,769,057 32
Silver bullion.	6,021,804 52	4,492,421 19	6,183,224 05
United States notes.	69,582,502 38	22,660,498 38	15,741,818 06
National-bank notes.	8,469,162 12	8,242,707 58	4,242,828 20
Fractional currency.	157,308 91	65,992 73	54,201 14
Deposits held by national-bank depositaries.	53,205,308 75*	11,732,314 23	12,901,607 22
Nickel and minor coin.	1,393,836 06	1,376,318 35	880,656 87

* Of this amount \$41,996,846.67 was on account of subscriptions to refunding bonds.

The following table exhibits the resources and liabilities of these banks on the first day of October, 1880:

RESOURCES.	
Loans and discounts.....	\$1,087,061,441
Overdrafts.....	8,915,826
Bonds for circulation.....	357,789,850
Bonds for deposits.....	14,827,000
United States bonds on hand.....	25,798,400
Other stocks and bonds.....	48,868,150
Due from reserve agents.....	184,562,779
Due from other national banks.....	68,023,797
Due from other banks and bankers.....	15,881,198
Real estate, furniture, and fixtures.....	48,045,883
Current expenses.....	6,356,182
Premiums.....	3,458,470
Checks and other cash items.....	12,729,002
Exchanges for clearing-house.....	121,095,250
Bills of other national banks.....	18,210,943
Fractional currency.....	367,172
Specie.....	109,346,509
Legal-tender notes.....	56,640,458
United States certificates of deposit.....	7,655,000
Five per cent. redemption fund.....	15,921,741
Due from United States Treasury.....	1,182,125
Total.....	\$2,105,756,626
LIABILITIES.	
Capital stock.....	\$457,553,985
Surplus fund.....	120,518,533
Undivided profits.....	46,139,690
National-bank notes outstanding.....	317,350,036
State-bank notes outstanding.....	271,045
Dividends unpaid.....	3,452,504
Individual deposits.....	873,537,687
United States deposits.....	7,548,539
Deposits of United States disbursing officers.....	8,844,387
Due to national banks.....	192,124,705
Due to other banks and bankers.....	75,735,677
Notes and bills rediscounted.....	8,178,238
Bills payable.....	5,081,605
Total.....	\$2,105,756,626

There are national banks in every State of the Union except Mississippi, and in every organized Territory except Arizona.

The following table shows their geographical division, together with their capital and circulation:

DIVISION.	No. of banks.	Capital.	Circulation.
New England States..	550	\$166,070,420	\$125,174,065
Middle States	651	171,507,665	121,053,704
Southern States	207	40,666,900	29,439,641
Western States.....	642	81,500,100	63,187,042
Pacific States and Territories.....	42	4,620,000	3,258,999
Total.....	2,095	\$466,865,085	\$343,834,107

The following table, compiled by the Comptroller of the Currency from returns made for purposes of taxation, shows the average capital and deposits of the State banks, trust companies, and private bankers, by geographical divisions:

DIVISION.	No. of banks.	Capital.	Deposits.
New England States..	536	\$12,015,518	\$388,969,861
Middle States	1,800	79,510,943	615,618,967
Southern States	495	31,847,370	53,504,493
Western States.....	1,883	45,743,007	169,633,732
Pacific States and Territories.....	239	25,019,987	91,368,073
Total.....	4,456	\$194,186,825	\$1,319,094,576

It will thus be seen that in the United States there were 6,551 monetary institutions, involving an aggregate capital of \$660,501,910, and holding of deposits \$2,203,525,139, an amount considerably greater than the entire public debt.

National banks before declaring dividends are required to set apart a certain percentage of their earnings in order to create a surplus fund with which to meet possible losses. This surplus fund can be loaned or invested like the capital or other moneys held by the banks, and can be paid out in dividends to a limited extent. On September 1, 1880, this fund amounted to \$120,145,649.

During the year ending September 1, 1880, the national banks paid in dividends \$36,411,473, or 8·02 per cent. on their capital. Their earnings, however, amounted in the same period to \$45,186,034. In the first dividend period 226 banks, with a total capital of \$30,407,200, and in the second dividend period 223 banks, with a total capital of \$26,334,150, passed their dividends, showing that about one fifteenth of the entire national-bank capital was unremunerative. The average number of banks passing dividends for the previous five years has been 279, with a capital of \$42,266,244, or about one tenth of the entire capital.

National banks are also required to keep in reserve a certain percentage of their deposits, being 25 per cent. in certain large cities named in the law, and 15 per cent. in all other localities. They must keep of this with the Treasurer of the United States, in lawful money, 5 per cent. of the amount of their circulating notes, to meet the redemption of such notes.

On October 1, 1880, these banks held \$968,000,000 deposits, on which there was a required reserve of \$201,000,000. The reserve actually held, however, amounted to about \$322,000,000, of which \$108,000,000 was in specie (an increase since 1879 of about \$66,000,000), and \$64,000,000 in United States notes (a decrease since 1879 of \$31,000,000). It is to be observed that the banks are doing business upon a specie basis, and that specie is being rapidly substituted for United States notes in the bank reserves, thereby increasing the currency to that extent. At the above date the banks also held with the United States Treasurer, to meet redemptions of their notes, about \$15,900,000 in lawful money.

The amount of circulating notes of the national banks, on January 1, 1880, was \$342,387,236, and on November 1, 1880, \$343,834,107. A national bank can issue of circulating notes only a certain percentage of its capital, viz.: On a capital of less than \$500,000, 90 per cent.; between \$500,000 and \$1,000,000, 80 per cent.; between \$1,000,000 and \$3,000,000, 75 per cent.; and above \$3,000,000, 60 per cent. For the United States bonds deposited to secure circulation, the bank gets 90 per cent. of the amount in circulating notes; and it can at any time withdraw the bonds by placing

with the United States Treasurer lawful money for the redemption of the notes for which the bonds are held as security—not, however, reducing the deposits of bonds below \$50,000.

The restriction in the issue of notes, as above stated, would seem to be needless, as the banks have not called for the maximum by about \$70,000,000 of the circulation to which, under existing laws, they are entitled, though probably in certain individual cases banks have been embarrassed by the restriction, and the country thereby deprived of a temporary increase of circulation when much needed. Experience shows, however, that the volume of circulating national-bank notes is not regulated so much by the necessities of business as by other causes, principally the market rate of interest and the market price of the bonds deposited to secure the notes. The lower either of these, the greater the profit on circulation will be, and the more inducement for banks to expand their issues, and conversely for a higher rate or price. The profits realized by a national bank, on its circulation, may be calculated thus: Take for illustration \$100 of capital to be thus invested, the market rate

of interest being 6 per cent. per annum, with 4 per cent. bonds at a premium of 12 per cent. The interest on the \$100 4 per cent. bond on which the circulation is issued would be \$4. The circulation received would be \$90, from which, however, must be deducted \$12 premium on bond, and \$4.50 for 5 per cent. reserve, leaving of loanable circulation \$73.50, the interest on which at 6 per cent. is \$4.41, making a total interest of \$8.41 on the original investment of \$100. From this, however, should be deducted 1 per cent. on \$90 for tax on the circulation, and nine cents approximate cost of redemption, and there remains \$7.42 or $7\frac{42}{100}$ per cent. net interest realized. Had the \$100 been loaned directly at 6 per cent., there would have been realized \$6, making a net profit by taking out circulation of $1\frac{42}{100}$ per cent. It will be readily seen that with a decreased premium on the bond the profit on circulation would have been correspondingly larger. The following table, prepared by the same method, shows that, with the price of the security bonds remaining constant, an increase in the market value of money lessens the profit of bank circulation:

CIRCULATION ISSUED ON	PROFIT WHEN MARKET VALUE OF MONEY IS						
	5 per cent.	6 per cent.	7 per cent.	8 per cent.	9 per cent.	10 per cent.	11 per cent.
4 per cent. bonds at 12 per cent. premium...	1.69	1.42	1.16	.89	.63	.36	.10
$\frac{3}{4}$ per cent. bonds at par.....	1.79	1.64	1.49	1.35	1.21	1.06	.91
3 per cent. bonds at par.....	1.29	1.14	1.00	.85	.71	.56	.41

This demonstration is well confirmed by the existing distribution of the currency. In the New England States, containing about one twelfth of the population of the country, the market rate of interest as compared with that of other sections of the country is uniformly low, and that section consequently furnishes more than one third of the national-bank circulation of the entire country. In the Western States, where the rate of interest is usually high, capital has more generally sought private banking as more remunerative, there being in those States 1,883 private banks, with a capital of \$45,743,007, against 536, with a capital of only \$12,015,578, in New England; while of national-bank capital the New England States have \$166,070,420, against \$63,137,042 in the Western States. Of national-bank circulation the New England States have \$125,000,000, and the Western States \$63,000,000.

Assuming the market rate of interest to remain unchanged, or to have a tendency to increase, an increase of national-bank circulation would naturally occur only with a fall of the market price of the bonds; and this was well illustrated during the past autumn when the market value of bonds was increasing. At that time the pressure for an increase of paper circulation was so great, that the Government floated \$45,000,000 in silver certificates issued mainly upon deposits of gold—the banks meanwhile diminishing instead of increasing their

circulation, and not heeding the demand for more currency. It is very evident that no elasticity of the currency through free banking has been secured by the present banking laws. On the contrary, as currency becomes scarce and the market rates of interest advance, the tendency of the banks will be to withdraw, rather than to increase, their circulation, and the needed currency must be supplied from other sources, if supplied at all.

Whatever defects in this system of national banks may exist, it is generally conceded that no better system of banking has ever yet been devised. Many of the bank charters will soon expire, however, and the question of their renewal must be met.

The rapid reduction of the public debt, if continued at present rate, will in less than twenty years retire all the interest-bearing bonds of the United States, and the question of supplying a sound paper currency to the country in place of the present bank issues will soon be of serious importance.

The foreign trade for the calendar year 1880 has been greater than ever before in the history of the country, the exports of domestic produce alone being larger than the entire exports of any year previous to 1870.

The following tables show the rapid growth and colossal amounts of this trade. Whether these figures are to be kept up to their present proportions may admit of doubt; but while we

are being paid such enormous amounts for our products, the wisest financial legislation is demanded to properly guard the industries by which the country is being so rapidly enriched:

Statement showing the imports of merchandise into the United States, by months, for the three calendar years 1878, 1879, and 1880.

Fourth ".....	6,588,955	46,677,363	45,764,540

Statement showing the value of the total trade (merchandise and specie combined) of the United States for the three fiscal years ended June 30, 1878, 1879, and 1880.

FISCAL YEARS.	1877-'78.	1878-'79.	1879-'80.
Imports.....	\$466,872,846	\$468,078,775	\$760,959,056
Exports.....	728,605,891	735,436,882	582,781,577
Export excess.....	\$261,738,045	\$269,363,107	\$91,792,521
Total trade.....	1,195,478,737	1,201,515,657	1,613,770,633

The increase in the business of the country is also indicated by the following statement showing the value of the imports and exports of the United States carried in American vessels and foreign vessels from 1856 to 1880:

FISCAL YEARS.	IMPORTS.		EXPORTS.	
	In American vessels.	In foreign vessels.	In American vessels.	In foreign vessels.
1856.....	\$249,972,512	\$64,667,430	\$292,295,762	\$94,669,146
1857.....	259,116,170	101,778,971	251,214,857	111,745,825
1858.....	263,700,016	78,913,184	243,491,288	81,158,138
1859.....	216,123,423	122,644,702	249,617,953	107,171,509
1860.....	223,164,855	134,001,399	279,082,902	121,039,394
1861.....	201,544,055	134,106,098	179,372,733	69,372,180
1862.....	82,274,100	113,497,623	135,421,318	104,517,697
1863.....	109,744,580	143,175,860	123,127,891	199,850,691
1864.....	51,212,977	248,359,816	102,840,409	237,442,730
1865.....	74,385,116	174,170,536	98,617,756	262,839,538
1866.....	112,040,895	322,471,763	218,671,466	251,754,928
1867.....	117,200,586	300,622,035	179,188,851	279,399,969
1868.....	122,965,225	248,659,583	175,016,348	301,886,491
1869.....	136,802,024	300,517,231	158,154,748	285,979,781
1870.....	153,287,077	309,140,510	199,732,324	329,756,978
1871.....	163,280,170	363,020,644	190,378,462	392,561,932
1872.....	177,286,302	445,416,738	168,044,799	393,929,579
1873.....	174,739,884	471,806,765	171,566,755	494,915,586
1874.....	176,027,778	405,320,135	174,424,216	538,585,971
1875.....	157,872,726	382,949,568	156,885,066	501,538,949
1876.....	143,389,704	321,139,500	167,686,467	492,215,487
1877.....	151,834,067	329,565,823	164,826,214	530,854,703
1878.....	146,499,282	307,497,565	166,551,624	569,558,564
1879.....	143,590,353	310,499,599	128,425,339	600,769,633
1880.....	164,087,606	579,894,159	115,917,891	730,072,437

From this table it will be seen that the total value of imports for 1880 was \$743,481,765, and of exports \$845,990,328—a total of exports and imports of \$1,589,472,093.

Gratifying as is this large increase of our foreign trade, and its great value for last year, it is worthy of note that, with all our resources and trade, the United Kingdom of Great Britain and Ireland in 1879 had a total foreign trade of more than \$3,000,000,000, the exports of British products alone for that year amounting to more than \$1,000,000,000.

While the trade with foreign nations has been increasing at this remarkable rate, the internal commerce and industries of the country have probably increased in greater proportions, but no statistics pertaining thereto are at present available.

The results of the tenth census, which will soon be published, will present interesting information on this matter.

The following statement shows the number of failures throughout the United States by geographical divisions during the years 1879 and 1880, together with the amount of liabilities as shown by the report of the Mercantile Agency of New York:

DIVISION.	1879.		1880.	
	No.	Amount of Liabilities.	No.	Amount of Liabilities.
New England States.....	970	\$15,577,282	723	\$6,460,117
Middle States.....	2,290	85,534,191	1,472	88,958,292
Southern States.....	1,076	15,876,708	835	8,818,442
Western States.....	1,608	21,207,519	1,171	11,519,419
Pacific States and Territories.....	714	9,933,358	584	5,005,780
Total.....	6,658	\$98,149,053	4,785	\$65,752,000

It will be seen that in the number of failures, as well as in the amount of liabilities, there has been a great falling off during the last year, which indicates a corresponding increase of prosperity.

The following table shows the tonnage of the various nationalities entered at seaports of the United States from foreign countries during the years 1856 and 1880, respectively:

NATIONALITY OF TONNAGE.	YEAR ENDED JUNE 30,		Increase.
	1856.	1880.	
	Tons.	Tons.	Tons.
British.....	935,180	7,903,059	6,967,879
German.....	166,837	1,089,740	922,903
Norwegian and Swedish...	20,622	1,294,720	1,314,098
Italian.....	15,677	612,584	596,907
French.....	23,935	232,347	208,412
Spanish.....	62,513	227,496	164,983
Austrian.....	1,477	206,349	204,872
Belgian.....	200	226,477	226,277
Russian.....	40	104,049	104,009
Dutch.....	16,892	27,151	10,259
Danish.....	5,838	69,350	63,512
Portuguese.....	4,727	24,449	19,722
All other foreign.....	14,819	154,389	139,570
Total foreign.....	1,269,057	12,112,160	10,843,103
Total American.....	3,194,275	3,128,874	*65,901
Aggregate.....	4,463,332	15,240,534	10,777,202

It will be seen that the annual aggregate of our exports has increased during the last twenty-four years from \$641,604,850 to \$1,589,472,093. In 1856 75·2 per cent. of this trade was carried in American vessels; in 1880 only 17 per cent. was thus carried. While the increase in the value of this trade is very gratifying, the decrease, meanwhile, in the amount of American tonnage engaged in the trade is viewed in some quarters with considerable alarm. It will be seen that since 1856 the tonnage of British vessels engaged in the American carrying-trade has increased from 935,180 to 7,903,059 tons. Meanwhile the tonnage of American vessels has decreased 65,901 tons. It will be remembered, however, that in 1856 the carrying-trade was mostly done in wooden vessels; and, owing to the abundance of ship-timber in this country, and the absence of duties upon articles used in ship-building, the United States was able to compete successfully in this branch of industry with any of the nations of Europe. About that time, however, the material for large vessels began to be changed from wood to iron, and the motive power from sail to steam, making the element of labor a far larger percentage of the cost of the vessel, and giving the British ship-builders,

with low wages, a great advantage over American ship-builders, with labor at the high prices which have been general in this country. To this disadvantage were added the destruction of our vessels by rebel privateers during the war, and also the imposition of duties upon iron and other articles entering into the construction of vessels. Through these means the United States have lost foreign carrying-trade worth perhaps \$100,000,000 per annum. But it is worthy of note that although Great Britain has taken the lion's share of this trade, the balance of our trade with that country during the last year was in favor of this country by the large amount of \$247,569,328.

There is, however, much hope that ere long the United States may recover a portion of the carrying-trade. The difference in the cost of ship-building material, and the price of labor as between this country and Europe, is less than formerly; and the fact that our artisans and mechanics have been enabled to cope successfully with those of other nations in the production and sale of many articles, largely through labor-saving inventions, leads us to hope that in a few years a successful competition in ship-building may also be realized.

While there has been a considerable decrease in the aggregate tonnage of the United States, the following table shows that there has been but a slight decrease in sail and steam tonnage, the large decrease since 1873 being principally in that of canal-boat and barge tonnage. The records previous to that date do not show these classes of tonnage separately.

Statement showing the amount of tonnage of the United States on the 30th day of June from 1868 to 1880, inclusive.

YEAR.	Sail.	Steam.	Canal-boat and barge.
	Tons.	Tons.	Tons.
1868...	2,475,067	1,199,415	643,827
1869...	2,399,972	1,103,568	641,100
1870...	2,363,056	1,075,095	808,326
1871...	2,256,156	1,057,637	908,814
1872...	2,325,375	1,111,552	1,000,819
1873...	2,333,501	1,156,448	1,155,782

As a further indication of the great increase of business and monetary transactions, the following table is presented, showing the average daily exchanges in the New York Clearing-House from 1874 to 1880 :

YEAR.	Average daily exchanges.
1874.....	\$68,139,484
1875.....	75,801,568
1876.....	64,738,312
1877.....	68,447,724
1878.....	65,106,974
1879.....	79,977,589
1880.....	121,510,224

Since the resumption of specie payments the office of the United States Assistant Treasurer at New York has been connected with the Clearing-House Association in that city, the rules of the Association being modified for that purpose sufficiently to keep the operations of the Government within the requirements of law. For the year ending November 1, 1880, the transactions between this office and the Association were as follows :

Exchanges received from the Clearing-House...	\$342,622,365
Exchanges delivered to the Clearing-House...	73,193,323
Balances paid to the Clearing-House.....	266,387,853
Balances received from the Clearing-House....	958,319

The largest amount in balance in any one day was \$11,208,025.20, and of this amount \$3,300,000, weighing about fifteen and a half tons, was paid in gold coin.

There has also been, during the year, a large demand for gold coin, especially of the smaller denominations, and the transactions of the mint have been greater than those of any previous year.

The following statement shows the value of coinage, by denominations, at the mints of the United States, for the last three years :

CHARACTER OF COINAGE.	VALUE COINED, YEAR ENDING JUNE 30,		
	1878.	1879.	1880.
Gold :			
Double-eagles.....	\$51,406,340 00	\$37,234,340 00	\$21,515,360 00

Total.....	\$51,120,499 50	\$68,312,502 50	\$34,870,144 00

The large increase in the monetary transactions, as already stated, is an index of the great revival of business in all its diversified forms throughout the United States. During the year labor has been employed at remunerative rates; mills and factories have been run over time to meet the demand for their products; railroads have had an abundance of carrying-trade; and

there seems to be no reason to anticipate any diminution of this prosperity, unprecedented in the history of the country. Of course, a failure in the agricultural products of the country for a few years would greatly disturb exchanges and draw upon the accumulated resources of the people to meet current expenditures; but the country is so large, embracing

so many different climates, and having such diversified products, that a failure of all the crops in any one year is a contingency too remote to be considered. There is, however, in monetary circles some apprehension of a disturbance before long in the currency of the country, the condition of which is not wholly satisfactory.

The gold coins of the United States are issued under the authority of section 3,511 of the Revised Statutes, taken from section 14 of the act of February 12, 1873, which provides as follows:

SECTION 3,511. The gold coins of the United States shall be a one-dollar piece, which, at the standard weight of twenty-five and eight tenths grains, shall be the unit of value; a quarter-eagle, or two-and-a-half-dollar piece; a three-dollar piece; a half-eagle, or five-dollar piece; an eagle, or ten-dollar piece; and a double-eagle, or twenty-dollar piece. And the standard weight of the gold dollar shall be twenty-five and eight tenths grains; of the quarter-eagle, or two-and-a-half-dollar piece, sixty-four and a half grains; of the three-dollar piece, seventy-seven and four tenths grains; of the half-eagle, or five-dollar piece, one hundred and twenty-nine grains; of the eagle, or ten-dollar piece, two hundred and fifty-eight grains; of the double-eagle, or twenty-dollar piece, five hundred and sixteen grains.

SEC. 3,505. Any gold coins of the United States, if reduced in weight by natural abrasion not more than one half of one per centum below the standard weight prescribed by law, after a circulation of twenty years, as shown by the date of coinage, and at a ratable proportion for any period less than twenty years, shall be received at their nominal value by the United States Treasury and its offices, under such regulations as the Secretary of the Treasury may prescribe for the protection of the Government against fraudulent abrasion or other practices.

SEC. 3,512. Any gold coins in the Treasury of the United States, when reduced in weight by natural abrasion more than one half of one per centum below the standard weight prescribed by law, shall be received.

SEC. 3,555. The gold coins of the United States shall be a legal tender in all payments at their nominal value when not below the standard weight and limit of tolerance provided by law for the single piece, and, when reduced in weight below such standard and tolerance, shall be a legal tender at valuation in proportion to their actual weight.

Section 3,525 of the Revised Statutes, taken from section 36 of the same act, provides as follows:

SEC. 3,535. In adjusting the weights of the gold coins, the following deviations shall not be exceeded in any single piece: In the double-eagle and the eagle, one half of a grain; in the half-eagle, the three-dollar piece, the quarter-eagle, and the one-dollar piece, one fourth of a grain. And in weighing a number of pieces together, when delivered by the coiner to the superintendent, and by the superintendent to the depositor, the deviation from the standard weight shall not exceed one hundredth of an ounce in five thousand dollars in double-eagles, eagles, half-eagles, or quarter-eagles, in one thousand three-dollar pieces, and in one thousand one-dollar pieces.

And section 3,519 also provides that any owner of gold bullion may deposit it at any mint, to be formed into coin or bars.

It will be seen that the law fixes the one-dollar gold-piece as the unit of value in the United States, and makes all gold coins of full

weight a legal tender in payment of all debts, public and private. As the gold coins are now coming into more general circulation, it should be noticed that when they are reduced by natural abrasion to a certain extent, as mentioned above, they cease to be a legal tender for their nominal value, and become a legal tender only for their value as bullion. To determine accurately whether such light-weight coins have been abraded below the limit of tolerance requires delicate weighing and an intricate calculation; but in making tender in disputed cases, the precise law on the subject may become of vital importance, and should be well understood.

The law having declared the gold dollar to be the unit of value in our currency, uniformity would require all other denominations of currency to bear to this unit certain natural and fixed relations; but, in the various acts authorizing the other currencies, no attention seems to have been paid to this important provision.

The silver dollar is made to contain 412½ grains, nine tenths of which are to be pure silver; and this coin is also made a legal tender in payment of all debts, public or private, equally with gold coin. As the market value of the silver in this dollar is about one tenth less than the market value of the gold in the gold dollar, the currency system provides two dollars having equal legal power in discharging debt, but bearing in market value a relation to each other of about 100 to 90. But under the law the coinage of the silver dollar is not free to depositors of silver bullion, as is that of gold to the depositors of gold bullion. For the coinage of silver dollars the Government is required to purchase the silver on the best terms obtainable, and to coin not less than \$2,000,000 or more than \$4,000,000 worth each month. By means of these restrictions in the coinage, the silver dollars have thus far been kept in circulation on a par with gold. To November 1st the difference between the market value of the silver bullion, as paid for by the Government, and the nominal value of the coins made therefrom, was \$8,520,871.45, and this amount may well be called fiat money, the material costing nothing, as it had been taken from the bullion purchased, and was necessary to make the silver coinage equal in intrinsic value to the gold coinage. It will thus be seen that the currency of the country is not based upon either a double or a single standard.

The Secretary of the Treasury in his annual report recommends the suspension of the coinage of the silver dollars, and negotiations with foreign powers for the adoption of an international ratio between the gold and silver coins; or, as an alternative, such an increase in the number of grains of silver in the dollar as to make it equal in market value to the gold dollar, its coinage to be left to depend upon the demand for it, as in the case of gold coinage.

The importance of early action in this matter can not be over-estimated. At the present compulsory rate of coinage of the silver dollar, it is only a question of time when the silver dollars will banish the gold coins from circulation, and reduce the whole currency of the country to a silver basis.

Indications already appear that gold is being hoarded by the banks and other parties with a view of taking advantage of this anticipated change in the standard; and it is possibly within the power of a Secretary of the Treasury, with no greater amount than the present reserve of silver, to bring about such a change at any time. Until legislation can be had which shall in some way cure these evils, the country can hardly be said to have a sound currency.

There is also a needless diversity of currencies. In addition to the silver dollar the law authorizes the coinage of half-dollars, quarters, and ten-cent pieces in silver of the same standard, but not of proportionate weight with the silver dollar. A dollar of these coins weighs but 385.8 grains, or nearly $6\frac{1}{2}$ per cent. less than the standard silver dollar. At the present market rates of silver a dollar of these fractional coins is worth about eighty-two cents. They are a legal tender in payment of debts only to the extent of ten dollars, and are redeemable in lawful money at the Treasury of the United States. These coins were intended only as a convenience for making change, but their circulation has become so redundant that the Government has been obliged to treat them as a debt and redeem them; and on January 1, 1881, they had accumulated in the Treasury to the amount of \$24,769,057.32. Owing to their limited legal-tender quality, the Department is unable to pay them out; and, while the Treasury holds and owns them, they are as unavailable for all purposes of currency as if still remaining in ingots or bars.

In addition to these silver coins, there are also afloat to a greater or less extent the so-called trade-dollars issued under authority of the coinage act of 1873, under which any owner of silver bullion was authorized to deposit such bullion at any mint, to be formed into bars, or into dollars of the weight of 420 grains Troy, the expense of the conversion to be paid by the depositor. This trade-dollar was made a legal tender to the amount of five dollars; but this legal-tender quality has since been taken away. As its name indicates, it was intended for trade purposes only, and the Government had no interest in its production. It has none of the attributes of a circulating medium except, perhaps, its form; and it was not intended to circulate as money in this country. At the time of the passage of the act the silver required to make a trade-dollar could not be purchased for less than one dollar and four cents in gold; consequently, there was no object in having the silver coined into dollars of this kind for circulation here, and, for a time, they were exported as intended.

Owing to the depreciation in the price of silver in the fall of 1877, the amount of silver required for the manufacture of one of these coins could be purchased for less than a dollar in paper currency; and speculators, taking advantage of this condition of affairs, stopped the shipment of the coins abroad and turned about three millions of them into the channels of circulation. Their further coinage for any purpose was peremptorily stopped; but, though their circulation is a constant annoyance, the Government seems unable to furnish any further relief. Should authority be given to purchase them for coinage into the standard legal-tender dollar, dollar for dollar, the foreign holders of the \$30,000,000 of this coin would find it greatly to their profit to send them all back to this country for the recoinage proposed, providing, of course, that the standard silver dollar should circulate as it does now at a gold valuation. Should the silver dollar ever circulate upon its own valuation, the trade-dollar, containing more silver, would be worth more than the standard dollar and would of itself disappear, being more valuable for bullion than for circulation.

Besides the silver coins, there are the minor coins made of copper and nickel issued by the Government for lawful money, and redeemable therein. Only the inconsiderable amount necessary for making change remains outstanding.

In addition to the metallic currencies above enumerated, the country has also several kinds of paper currency, the most important of which are the United States notes issued under the act of February 25, 1862, and subsequent acts. They are by law made a legal tender in the payment of all debts, public and private, except duties on imports and interest on the public debt. By act of January 14, 1875, they have been redeemable in coin since January 1, 1879, at the sub-Treasury in New York, but up to November 1, 1880, there were presented for redemption only \$11,963,336. During the same period these notes were received in lieu of coin in payment of duties on imports, to the amount of \$142,323,601, and the notes thus received were paid out in lieu of coin for interest on the public debt and for other purposes.

The Government, however, reserves the right to exact coin in payment of duties, and will doubtless enforce it whenever holders of bonds object to receiving United States notes in payment of interest. The amount of these notes outstanding is fixed by law at \$346,681,016. As they are redeemable in "coin," they can be redeemed either in silver dollars or gold; and their value consequently depends upon which standard is maintained. A change from the gold to a silver standard, the price of silver remaining as at present, would at once reduce the purchasing power of the notes about 10 per cent.

The national banks also furnish a large portion of the circulating medium of the country. Their notes are redeemable in lawful money,

and are receivable at par in all parts of the United States in payment of taxes, excises, public lands, and all other dues to the United States, except for duties on imports; and also for all salaries and other debts and demands owing by the United States to individuals, corporations, and associations within the United States, except interest on the public debt, and in redemption of the national currency.

No limit is fixed to their issue, and, though they are not a legal tender in payment of debts between parties, they circulate as freely as legal-tender notes. At present their purchasing power is the same as that of gold, as they are redeemable in lawful money by the Treasurer of the United States at Washington, D. C., or by the respective banks of issue, and lawful money is now at par with gold. There was outstanding of this circulation on January 1, 1881, \$344,355,203.

There were also in circulation on January 1, 1881, \$6,658,880 of gold certificates, issued under the authority contained in section 5 of the act of March 3, 1863 (reproduced in section 254 of the Revised Statutes), as follows:

The Secretary of the Treasury is authorized to receive deposits of gold coin and bullion with the Treasurer or any assistant-treasurer of the United States, in sums not less than twenty dollars, and to issue certificates therefor, in denominations of not less than twenty dollars each, corresponding with the denominations of the United States notes. The coin and bullion deposited for or representing the certificates of deposit shall be retained in the Treasury for the payment of the same on demand. And certificates representing coin in the Treasury may be issued in payment of interest on the public debt, which certificates, together with those issued for coin and bullion deposited, shall not at any time exceed twenty per centum beyond the amount of coin and bullion in the Treasury; and the certificates for coin and bullion in the Treasury shall be received at par in payment for duties on imports.

In no case has the amount of these certificates ever exceeded the amount of coin in the Treasury, although authority for the issue of an excess is specifically given. It will be noticed that for these certificates the Government receives only gold, and that gold must be held in the Treasury to meet their redemption. They are not a legal tender, except for payment of interest, and are receivable by the Government only in payment for duties on imports. Since the resumption of specie payments, none of these certificates have been issued, though much demand has existed for them as a circulating medium.

There were also in circulation at the same time silver certificates in the amount of \$45,582,130. These certificates are issued under authority of the third section of the act of February 28, 1878, which provides as follows:

That any holder of the coin authorized by this act may deposit the same with the Treasurer or any assistant-treasurer of the United States, in sums not less than ten dollars, and receive therefor certificates of not less than ten dollars each, corresponding with the denominations of the United States notes. The coin deposited for or representing the certificates shall be retained in the Treasury for the payment of the same on

demand. Said certificates shall be receivable for customs, taxes, and all public dues, and, when so received, may be reissued.

These certificates can not be issued in excess of the amount of the standard silver dollars held for their redemption. During the fall of 1880, the demand for an increase of the paper circulation of the country was so great that holders of gold bullion deposited it with the mints for coinage, asking that they might be paid therefor in standard silver dollars, which dollars they immediately converted into certificates. In this way about \$30,000,000 of silver certificates were issued, as before referred to, leaving only about 3,000,000 silver dollars in the Treasury unrepresented by certificates outstanding. For the present they float at par with gold, and will continue to do so as long as the silver dollars into which they are converted float at their present current valuation.

There were also on the 1st of January, 1881, \$7,005,000 of certain certificates of deposit known as clearing-house certificates, issued under authority of the act approved June 8, 1872, reproduced in the Revised Statutes, as follows:

SECTION 5,193. The Secretary of the Treasury may receive United States notes on deposit, without interest, from any national banking associations, in sums of not less than ten thousand dollars, and issue certificates therefor in such form as he may prescribe, in denominations of not less than five thousand dollars, and payable on demand in United States notes at the place where the deposits were made. The notes so deposited shall not be counted as part of the lawful-money reserve of the association; but the certificates issued therefor may be counted as part of its lawful-money reserve, and may be accepted in the settlement of clearing-house balances at the places where the deposits therefor were made.

SEC. 5,194. The power conferred on the Secretary of the Treasury, by the preceding section, shall not be exercised so as to create any expansion or contraction of the currency. And United States notes for which certificates are issued under that section, or other United States notes of like amount, shall be held as special deposits in the Treasury, and used only for the redemption of such certificates.

It will be seen that no increase of circulation arises from the use of these certificates, and their circulation is not of much importance to the country.

In addition to these several forms of currency, there are also in circulation a small amount of old demand-notes, one and two years notes, compound-interest notes, and paper fractional currency, all of which are redeemable at sight on presentation at the Treasury, and the amount of which is continually growing less; also a small amount of State-bank circulation.

Leaving out all kinds of fractional currency, and the old and State-bank notes which are practically out of circulation, it will be seen that we have legal-tender notes, national-bank notes, gold certificates, silver certificates, and clearing-house certificates, all having different properties, but adding to the paper circulation

of the country. Though at present they float at par with gold, any derangement of the existing system of circulation would make each one of these several kinds of paper vary in its value according to the character of the money in which it is redeemable. As most of the actual money now afloat is used in small transactions among people of small means without much technical education, it would seem de-

sirable that some action should be taken to simplify this currency, giving in its place a few simple kinds bearing to each other some natural relation easily understood.

The following statement shows the amount and character of the principal outstanding paper and coin circulation at certain dates named, the amount of coin being estimated by the Director of the Mint:

FORM OF CURRENCY.	January 1, 1879.	January 1, 1880.	November 1, 1880.
Legal-tender United States notes.....	\$346,681,016	\$346,681,016	\$346,681,016
National-bank notes.....	823,791,674	842,877,386	843,894,107
Gold coin.....	273,271,707	826,874,082	875,823,881
Silver coin.....	95,516,712	127,797,094	152,277,544
Total.....	\$1,089,261,109	\$1,143,740,123	\$1,218,116,549

The following table shows the issues of government and bank paper, and metallic reserve:

COUNTRIES.	Government issue.	Bank issue.	Metallic reserve.
United States....	\$353,923,702	\$343,884,107	\$319,459,097
Great Britain.....	202,075,227	167,948,798	9,991,684
Canada.....	12,472,664	20,793,776	60,821,147

Algers.....
Total.....	\$1,020,652,512	\$3,001,069,341	\$1,501,661,581

The metallic reserve, as above stated, includes, in addition to the reserve for circulation, such portion of the required reserve for deposits as may be in specie. The publicly announced policy of the Treasury of the United States, since the resumption of specie payments, January 1, 1879, has been to hold in specie 40 per cent. of the amount of outstanding United States notes, for the purpose of redeeming such notes upon their presentation. The amount of reserve held, however, has usually been in excess of 40 per cent. of the notes, and the Secretary of the Treasury has ample power at any time to increase this reserve to the full amount of the notes outstanding, by the sale of bonds of the description authorized by the Refunding Act of 1870, if necessary. The specie reserve of the Bank of England since 1820 has seldom been 40 per cent. of the demand liabilities of the bank, and at times has been as low as 17 per cent.

Great Britain, with a trade exceeding probably that of any other nation, has a paper currency of but little over \$200,000,000. This currency is mainly issued by the Bank of England, and is a legal tender only so long as that bank shall redeem the notes at par in coin.

The following statement shows the increase of paper circulation in France:

Table showing the specie and paper circulation in France from 1860 to 1878, compiled by the Director of the United States Mint.

YEAR.	Gold circulation.	Silver circulation.	Paper circulation.	Specie (gold and silver) circulation.	Total specie and paper circulation.
	France.	France.	France.	France.	France.
1860.....	5,060,347,000	1,875,409,000	747,200,000	6,935,750,000	7,682,950,900
1861.....	4,991,638,000	1,808,370,000	715,500,000	6,795,068,000	7,510,568,000
1862.....	5,107,349,000	1,702,110,000	781,600,000	6,889,459,000	7,591,059,000
1863.....	5,066,410,000	1,624,880,000	754,900,000	6,691,290,000	7,446,190,000
1864.....	5,141,274,000	1,574,297,000	722,800,000	6,715,571,000	7,437,871,000
1865.....	5,243,596,000	1,695,720,000	836,900,000	6,882,816,000	7,762,016,000
1866.....	5,600,670,000	1,675,266,000	936,900,000	7,385,936,000	8,272,836,000
1867.....	6,021,935,000	1,856,666,000	1,122,600,000	7,878,621,000	9,001,221,000
1868.....	6,187,686,000	1,959,651,000	1,382,500,000	8,147,837,000	9,580,137,000
1869.....	6,415,181,000	2,066,373,000	1,398,600,000	8,481,504,000	9,880,104,000
1870.....	6,500,000,000	2,100,000,000	8,600,000,000
1871.....	6,256,154,000	2,110,140,000	2,325,400,000	8,366,294,000	10,691,694,000
1872.....	6,154,950,000	2,200,902,000	2,656,300,000	8,353,852,000	11,012,152,000
1873.....	6,005,897,000	2,367,490,000	2,807,700,000	8,373,387,000	11,181,087,000
1874.....	6,392,895,000	2,732,329,000	2,644,500,000	9,116,224,000	11,761,024,000
1875.....	6,516,953,000	2,901,494,000	2,438,000,000	9,718,447,000	12,156,447,000
1876.....	7,276,060,000	3,025,414,000	2,562,700,000	10,861,174,000	12,864,174,000
1877.....	7,687,171,000	3,115,574,000	2,468,500,000	10,802,745,000	13,271,045,000
1878.....	7,569,490,000	3,218,158,000	2,207,300,000	11,087,648,000	13,294,948,000

The following table shows the total and per capita specie and paper circulation of several principal countries of the world.

[Estimated from official reports and other authorities. Where no reference is given, the statement is from official papers printed in Reports of the Director of the Mint.]

COUNTRIES.	POPULATION.		Date for which circulation is stated.	Paper.	SPECIE.			Total paper and specie.	PER CAPITA.		
	Year.	Latest census or estimate.			Gold.	Silver, full legal tender.	Silver, limited tender.		Paper.	Specie.	Circulation.

J. K. UPTON, Assistant-Secretary of the Treasury.

FLORIDA. The receipts of the State Treasury from all sources for the year ending December 31, 1880, were as follows:

REVENUE FROM	Amount.
License-tax.....	\$33,237
State tax proper.....	117,296
General sinking fund tax.....	57,425
Special sinking-fund tax.....	23,716
Auction-tax.....	731
Criminal prosecutions and costs.....	533
Railway net returns tax.....	27
Jurors and witnesses refunded.....	7
Commission-tax.....	803
Fees, lunatic asylum fund.....	815
Maintenance lunatics refunded.....	272
Common-school fund, fines.....	3,541

Total for general revenue..... \$272,914

The current expenses of the State for 1880 were \$167,047; for 1879 they were \$215,047. The appropriations fell short of the expense for the two years, \$33,755.

The total disbursements during the year 1880 were as follows:

EXPENDITURES FOR	Amount.
Salaries, judicial department.....	\$33,568
Salaries, executive department.....	19,200
Jurors and witnesses.....	69,990
Revenue collection expenses.....	23,806
Maintenance of lunatics.....	19,467
Printing.....	5,494
Bureau of Immigration.....	2,610
Other expenditures.....	2,543
Interest on bonds of 1871.....	20,913
Interest on bonds of 1873.....	52,554

Total payments..... \$249,645

Of the payments, \$43,540 were for the year 1879, and \$23,059 for previous years.

There was a cash balance in the Treasury at the close of 1879 of \$10,353; and at the close of 1880 a balance remained on hand of the sum of \$29,683. There were warrants and certificates outstanding to the amount of \$31,286, besides about \$42,292 of juror and witness certificates, issued prior to 1877, a great part of which has been paid by counties; and which there is a balance of appropriations to meet, probably sufficient to cover all which may be presented. The estimate of the appropriations to be made for the ordinary expenses of government for the year 1881 is \$233,073, including \$65,000, estimated expenses of the Legislature; the estimate of deficiencies required to be made up for 1880 and previous years is \$33,755.

The funded debt of the State consists of the seven per cent. loan of 1871, \$350,000; six per cents. of 1873, \$925,000; eight per cent. Convention bonds, \$1,500; seven per cent. bonds of 1857, \$4,000, and interest on the same, \$4,760; making a total of \$1,285,260, from which are to be deducted \$50,700 of 1871 bonds and \$100,000 of the bonds of 1873, bought up by the sinking funds; making the bonded debt \$1,134,560, of which \$246,900 is in the school funds, \$35,000 in the seminary funds, and \$121,600 in the agricultural funds; leaving in the hands of the private holders \$681,060. There has been a reduction in the bonded debt of \$50,800 during the administration of Governor Drew. There are besides \$132,000 of the

1857 bonds held by the Indian Trust Fund of the United States Government, with accrued interest, making a debt of \$307,000. The State has a claim against the United States for an amount more than sufficient to cover this debt. This is an old demand based upon the costs incurred in suppressing Indian hostilities.

The retiring State government has made efforts to have this matter brought to a settlement, since the bonds held by the Indian Trust Fund bear seven per cent. interest, which is more than the United States would allow upon the counter-claim if it were granted; and also because the State is at a disadvantage from the fact that moneys due to the State from the United States from sales of public lands or any other sources can be stopped and applied to the State's indebtedness. An attempt was made in 1860 to obtain an adjustment of the State's claim; and a bill was introduced in Congress for the purpose, which was referred to a committee, but never reported upon. Colonel S. I. Wailes, of Washington, was appointed by Governor Drew, in 1879, with the request that he take as an associate Colonel W. K. Beard, of Tallahassee, to represent the State before the proper department; and these agents were commissioned to procure a settlement, their fee to be a contingent one of fifteen per cent. of the total amount collected.

In investigating the records to establish the case, important documents were found to have been displaced during the military occupation of the Capitol.

Having completed the examination as far as it was practicable, Colonel Beard went to Washington in September, 1879, to present, with Colonel Wailes, the claim at the proper department, where he expected to find documents and other evidence bearing upon the claim, and to put the claim in such definite form as to be reported to Congress for the necessary appropriation. On arriving in Washington, Colonel Beard, with Colonel Wailes, went to the Treasury Department, and there they were met with the objection that no State claim could be adjusted or examined without special authority from Congress. On the meeting of Congress these gentlemen prepared, and Senator Jones and Representative Davidson introduced in the Senate and House respectively, a resolution directing the Secretary of the Treasury to examine and adjust the claim of the State of Florida, and to pay her any balance that might be found due after providing for her bonds held by the Indian Trust Fund. The resolution was referred to appropriate committees and amended in committee, by making the reference of the claim to the Secretary of War instead of the Treasury, and requiring that department to examine the claim and report to Congress such amount as might be found due. The resolution, as amended, passed the Senate on the 28th of May, and was on the same day certified to the House, but failed to pass that body at that session. It

was brought up again in the House during the next session. Until this resolution passes, thus giving the agent of the State access to the files and records of the War and Treasury Departments, a definite statement of the claim of the State can not be made. As far as can now be ascertained, the amount of the principal of the State's claim is about \$280,000, of which there are about \$48,000 for which the vouchers and evidence are not complete, but for which additional evidence is expected to be found in the departments at Washington.

The value of the State bonds in the market has greatly improved in the last four years. At the commencement of this period the six per cent. bonds were selling at 80 cents, while at present they are scarce at par; and the seven per cent. bonds, then selling at 94 cents, can hardly be obtained for \$1.06. The late Governor recommends a law permitting the Treasurer to buy in bonds at market prices, instead of being restricted in the purchase of State or national bonds to their face value, as he is by the present law, which virtually excludes the State from the market.

A sliding-scale rate of taxation was recommended by the Governor in private interviews with members of the late Legislature, on the ground that if, as was expected, the assessment was largely increased, the rate could be diminished; but, if it failed to increase, a sufficiently higher rate of taxation could be fixed to raise enough money for the current expenses of the State and to meet the interest charge. The Legislature did not act upon this suggestion, but fixed the rate at seven mills, calculating upon an increase in the valuation, which they expected would run up to \$35,000,000 or \$40,000,000. Instead of this, it reached only \$30,382,209, making it necessary for the Governor and his Cabinet to borrow money on their own responsibility, for the purpose of maintaining the credit and keeping the Treasury on a cash basis, to meet the interest on the debt for January, 1880. A law is recommended, similar to those in operation in Georgia and other States, by which the Governor and Comptroller can fix the rate, after the assessment is made, high enough to yield money to pay interest and the appropriations. The Governor in his message to the last Legislature called for an amended revenue and assessment law by which the evils of undervaluation should be avoided and less opportunity afforded for escaping an equitable assessment. "Under the present system of assessment," he said, "a great deal of property is assessed at a greatly less valuation than the 'usual selling price' the annual crop would sell for in the market, and in some instances at less than half the value of the crop, and scarcely one tenth of what the owner would demand for the property were he to offer it for sale. This is a great injustice to those taxpayers who return their property to the assessors at a legal and just valuation." The new assessment act, which was approved March 7,

1879, has proved entirely ineffectual to establish equalization of assessments and uniformity of taxation. The valuation has not been increased, as was expected, and the less conscientious tax-payers take the same advantage over their more scrupulous fellow-citizens in returning their property to the assessors. This the Governor, in a final message addressed to the new Legislature, ascribes to the fact that no penalty was attached to the practice of making false returns of the value of property sufficient to carry out the intention of the law. In order to remedy this want of uniformity in assessments and this imposition upon the State the present law should be repealed, and in its stead an act passed "requiring the county commissioners of each county to appoint two appraisers, whose duty it shall be to accompany the assessor on his rounds, and with him to fix the valuation of all lands subject to taxation, and whose valuation shall be final, and shall stand for four years. In this way a spirit of improvement of all real estate will be developed, and property will be assessed at something like its cash value, and, though largely increasing the value of taxable property, it will give uniformity of assessment."

Governor Drew's message, summing up the achievements of his administration, explaining the policy which he had pursued, and recommending certain measures to be taken by the Legislature in furtherance of the objects which he had aimed to bring about in his official term, was an innovation upon precedent; it was an elaborate and lucid exposition of State affairs, and was left with the incoming Governor, who delivered it to the Legislature at the opening of the session. The Governor suggested also that the section of the revenue law which places the power of issuing the second warrant for the extension of the time for the collection of taxes in the hands of the county commissioners be changed, and this authority transferred to the Comptroller. According to the existing law, the commissioners may arbitrarily suspend the collection, as was done in one county last year.

Governor Drew recommends that an amendment to the Constitution should be made, exempting manufacturing establishments from taxation for five or ten years after the commencement of operations, in order to incite the influx of capital for manufacturing purposes, and to foster the development of industrial interests, in which he deems Florida is lagging behind other States, though keeping pace with them in many other respects. The present road laws are found to be ineffective, and in most of the counties the roads are badly neglected.

The total tax valuation of the State is \$31,157,846. The State tax assessment for 1880 amounted to \$112,579; the general sinking-fund tax assessment to \$62,406; the special sinking-fund assessment to \$31,217; and the school-fund assessment to \$31,217; making

the total gross assessment \$237,420. The total net tax assessment after deducting insolvencies, etc., was \$208,107; and the license-taxes amounted to \$62,237. The county tax proper amounted to \$128,084; the county school-tax to \$75,537; the special county tax to \$87,852; making the total taxes for county purposes, \$291,474. The amount of auction-tax collected was, as stated in the revenue exhibit, only \$731. In many counties no reports of auction-tax are made at all. The Comptroller suggests that the law be either repealed and the license of auctioneers be made uniform with those of other merchants, or that it be modified so as to be made effective. The tax on sales by land agents is also inoperative, no reports being made at all. The Comptroller considers that the right of assessment of lands held under the homestead laws of the United States ought to be more clearly defined. Assessors have usually been instructed that, when the occupant is entitled to a patent, his land is liable to assessment. Even though the homesteader is taxed as soon as the legal time has elapsed which is necessary to secure a patent, his land is often improved and rendered valuable in the interval, and he remains exempt from taxation, while his neighbors are assessed regularly, and under such circumstances are taxed unequally. A smaller amount of land was sold for taxes and bought in by the State in 1830 than in 1879, and a larger amount was redeemed, indicating that the collection of taxes is more efficient, and that the fraudulent or heedless mistakes in the descriptions of lands on the tax-books, which discourage bidders, have been better guarded against. Many of the collectors and assessors of the taxes for 1876 and previous years had not yet settled up their accounts with the State at the beginning of Governor Drew's term of office, owing to the fact that the appropriations for the payment of commissions for the collection of the revenue had been exhausted, and an accounting at the regular time was thereby prevented. The assessors could not be paid off until the collectors had made a final settlement; and these officers did not press for a settlement, having, as they did in most cases, in their possession funds of the State more than sufficient to balance their claims. In order to close up the accounts of these delinquent officers, warrants were issued in excess of the appropriations during the last and the preceding administrations, which in many cases were paid into the Treasury on account with balances due the State. These warrants run through four years, the largest number having been issued in 1877, and were \$15,709 in excess of the appropriations of those years for the collection of taxes. The Comptroller has been much embarrassed by the presentation of accounts from county officers, who have been denominated such by a decision of the Supreme Court, and therefore payable by the counties. This decision was cited by a letter from the Attor-

ney-General to the Comptroller in reference to these accounts. The last Legislature enacted that coroners, etc., should be paid by the State; but there was no appropriation made to meet such payments. They also enacted that the expenses of justices' trials, in cases of felony, should be paid by the State, but there was no specific appropriation made to pay them, and the appropriation for paying jurors and witnesses has been construed as only applicable to jurors and witnesses of the circuit courts. Under these circumstances the Comptroller has not felt authorized to issue warrants for such expenses.

The sales of public lands have continued to increase. In regard to the entries and sales of State land the retiring Governor, in his parting message addressed to the new Legislature, offered the following suggestions:

The law, as it now stands, requires the payment of the purchase-money in cash, upon the entry of any public land, and many of our citizens and some of the poorer immigrants are unable to do this, and so they settle upon these lands without entry. And there these squatters remain. They make only such improvements as are essentially necessary to health and life; frequently they live on in this way for years, exhausting whatever fertility there may be in the land, and when worn out they move off, leaving only worn-out land and dilapidated improvements, while, in the mean time, the State has received not one cent of tax or remuneration in any way for the use of the land. Then, again, it checks and kills the spirit of improvement among the class of people settling on these lands. If asked why they do not build more comfortable houses, plant fruit-trees and make other improvements, the reply invariably is: "This is State land; I am not able to buy, and I don't know how soon I may be entered out." And on this account many a poor man is prevented from becoming a landholder and a tax-payer. To obviate these difficulties in the way of their becoming tax-payers instead of squatters, and to increase the revenue from the public domain, I think every settler or intending settler upon State land should be allowed to pay for his homestead (say one hundred and sixty acres or less), in three installments—one third of the purchase-money in cash, upon entry, one third in two years, and the other in three years, after date of entry, in the mean time the land to be assessed and taxed as the property of the settler. In this way not only a considerable revenue will be brought into the Treasury from lands which, under the present system, are of little or no benefit to the State, but a door will be thrown open for the encouragement of settling and improvement among the poorer classes of our citizens and immigrants which will, in the course of years, prove of incalculable benefit to the State of Florida. A home will be placed within easy reach of the poorest, and a feeling of protection and security will be produced among the settlers on public lands that will develop the thrift and economy necessary to secure the means with which to buy the land.

Governor Drew was instrumental in procuring the conveyance to the State of a large quantity of land from the United States Government which was claimed under the acts of Congress relating to swamp and overflowed lands. Learning, upon entering upon the governorship, that a considerable area of swamp and overflowed lands existed in the State, for which the General Government had omitted or had refused to issue patents to the State, he vis-

ited Washington, and, upon convincing himself that the facts were as reported, he entered into an arrangement with Colonel S. I. Wailes, who agreed to examine into the claims of the State and to act as agent on behalf of the State government before the department at Washington. Upon receiving the report of Mr. Wailes, the board of trustees of the Internal Improvement Fund engaged him to obtain an adjustment of the claims, which he did, obtaining the patents and turning them over to the State for 1,761,880.87 acres. The trustees of the Internal Improvement Fund have determined to relinquish all claims to the swamp-lands lying within the former Palatka military reservation, and they and the Governor thus advise the Legislature. This tract has been in part entered by settlers under the homestead laws, who have complied with the requirements of the acts in good faith; other portions of it have been disposed of at private entry in the United States Land-Office, or located with military land-warrants. Regarding the internal improvement policy of the State government, and the public fund for promoting the extension of the facilities of communication, etc., known as the Internal Improvement Fund, Governor Drew says:

The board of trustees of this fund, recognizing the wisdom and soundness of that policy which would tend to encourage and foster such improvements as would promote the interest of the State and its citizens, have ever been willing and ready to countenance and aid any legitimate, *bona fide* scheme looking to this end. During the past two years several propositions and proposals for the internal improvement of the State have been presented to the board, which were not accepted, as it was believed the material interests of the State would not be advanced by them. Several railroads, canals, and other corporations have been incorporated under the general act, and are now pushing forward their work, notably among which are several railroads in the eastern part of the State, which are now nearly completed.

The affirmation by the Supreme Court of Judge Bradley's decree in the "Florida Railroad cases" promises to help greatly to bring about the much-desired disencumberment of the Internal Improvement Fund. This fund is pledged for the payment of interest on guaranteed railroad bonds. These interests have accumulated until they amount to between six and seven hundred thousand dollars. The interest, running since 1860, on some bonds of the Pensacola and Georgia and Tallahassee Railroad, forms an important part of these obligations, amounting to some \$440,000. By the final decision of the United States Supreme Court, this interest becomes a charge upon the property of the Jacksonville, Pensacola and Mobile Railroad. If the fund is relieved to the extent of this amount, the remaining liens upon the extensive area of land belonging to the fund, aggregating nearly 13,000,000 acres, will not exceed \$250,000.

The railroad decision of Justice Bradley, which has been affirmed by the Supreme Court in full bench, settled three points in the involved and much-litigated affairs of the Florida

railroads: that the North Carolina claimants, the Western North Carolina Railroad Company, have no rights as against the Dutch bondholders, who brought the suits, in either the Florida Central or the Jacksonville, Pensacola and Mobile Railroad; that the trustees of the Internal Improvement Fund have a first lien upon portions of the Jacksonville, Pensacola and Mobile Railroad for \$463,175, being the balance of the unpaid purchase-money principal, with interest at eight per cent. from March 20, 1869, amounting altogether to some \$900,000; and that the Dutch bondholders have a second lien on the same property, and a first lien on the Florida Central from Lake City to Jacksonville. The Dutch bondholders, through agents, sold out the roads by virtue of the decree, and bid them in on their own account in September, 1879; but the sale has not been confirmed. In case it should be, they would be bound to pay off the lien of the State within one year from the confirmation of the sale.

The number of convicts in the penitentiary on the 1st of January, 1879, was 163; the number pardoned during the year, eight; escaped, seven; died, eight. The number of convicts on hand on the 1st of January, 1880, was 151; pardoned, six; escaped, six; died, nine. The State convicts were let out for the years 1879 and 1880 to H. A. Wyse, of Live Oak, who contracted to keep and clothe them, provide medical attendance, etc., paying into the Treasury the nominal sum of \$100 per annum. This arrangement effected a net saving to the State of \$4,000 over the expenses of the penitentiary in 1878, and of more than \$21,000 over the expenses of 1876. A few days before the expiration of the contract, bids were received for the labor of the convicts for the next year. They were let out to the East Florida Railway Company, and a contract was entered into for two years, whereby the company agreed to take the convicts on hand, and all who should be convicted during the period of the contract, receiving them at the jail of the county in which they are convicted, paying all costs accruing after conviction, and furnishing their maintenance and all the requisites for their health and comfort, and to pay to the State a hire of \$15 a year for each convict. The act of the last Legislature appropriating a sum for the arrest of criminals and fugitives from justice has not yet proved effective in insuring the capture of fugitives, since several rewards have been offered for the arrest of persons accused of murder, but none of the criminals have been caught and delivered into custody. On extradition papers ten prisoners have been handed over by the constabulary of other States.

The number of patients in the Insane Asylum on the 1st of January, 1879, was 55. During the two years 93 have been admitted, 38 have been discharged, and 14 have died, leaving 96 in the asylum at the close of 1880.

The digest of the Statutes of Florida, made in accordance with the act passed in 1879, the

preparation of which was intrusted to Colonel J. F. McClellan, was completed by him in the early part of the summer of 1880. The task of revising this work was committed to P. W. White, John A. Henderson, and George P. Raney; but, as the members of the commission declared themselves unable, on account of other business, to perform the examination and revision of the digest, they, with the acquiescence of the Governor, placed the work in the hands of Colonel C. C. Yonge, who will have ended the labor of revision early in 1881.

General Gillmore, in his report concerning the deepening of St. John's and Fernandina bars, estimates the cost of excavating St. John's bar to give fifteen feet of water at mean low tide at \$1,306,409, and considers that an additional sum of \$120,000 will be needed for deepening the shoal places in the St. John's River between the bar and Jacksonville. He states, however, that a practicable high-water depth of twelve and one half feet, equivalent to or exceeding the draught of the largest craft which can ordinarily be carried between the bar and Jacksonville at high tide, could be secured on the bar in three years, at a cost of about \$800,000, by carrying a single jetty out to the fifteen-foot curve, or a little beyond. At the mouth of the St. John's and south of that point, northeasterly storms strike the coast nearly at right angles, and have a tendency to heap up drift-material at the mouth of the inlets. This causes the depth on the bar to vary greatly, and these variations would be more excessive in an improved channel than where the flow of the tide takes place over a broad expanse. The temporary filling up of the channel resulting from a storm would last some weeks before the channel is cleared again to its normal depth by scour.

For the Fernandina bar he proposes a single jetty, carried out along the north shoal to the fifteen-foot curve, and a spur-jetty projecting from the north end of Amelia Island. By these works, which could be completed in three or four years, at a cost of \$1,000,000, a low-water depth of sixteen or seventeen feet on the bar can probably be secured, and an excellent harbor of refuge as well as a good entrance-channel be established.

The River and Harbor Bill, passed by Congress, contained the following appropriations for Florida: Improving harbor at Cedar Keys, \$15,000; improving harbor at Pensacola, \$40,000; improving Apalachicola River, \$2,000; improving Apalachicola Bay, \$10,000; improving Choctawhatchee River, \$7,000; improving inside passage between Fernandina and St. John's, \$7,000; improving Escambia River, \$8,000; improving Suwanee River, \$5,000; improving Tampa Bay, \$10,000; improving Volusia bar, \$5,000; improving St. John's bar, \$125,000. The bill also directs the Secretary of War to cause examinations, or surveys, or both, and estimates of cost of improvements proper, to be made at Finnholloway River,

Aucilla and Wacissa, Chipola River, Holmes Creek and East Bay, and Blackwater River.

The Republican State Convention met at Gainesville, May 12th. Ex-Senator Simon Bolivar Conover received the nomination for Governor, and W. M. Ledwith that for Lieutenant-Governor.

A resolution was adopted instructing the delegates to Chicago to vote as a unit for Grant for President, as long as his name was before the Convention, and to vote for Thomas Settle, of Florida, for Vice-President.

The Conservative - Democratic Convention met at Gainesville, June 10th. William D. Bloxham was nominated for Governor, the principal opposing candidate being Governor Drew; L. W. Bethel, at the time Secretary of State, received the nomination for Lieutenant-Governor. Robert H. M. Davidson and Jesse J. Finley were the candidates for delegates to Congress. The delegates to the Cincinnati National Convention were not instructed as to their course, save to vote for the continuance of the two-thirds rule. The following platform was adopted:

Resolved, That the Conservative-Democratic party of Florida congratulate the people of the State on the favorable auspices under which they have assembled. For more than three years they have been blessed with a government which has faithfully fulfilled all the promises made to them in 1876. The onerous tax under which the people suffered has given place to a moderate rate of assessment, absolutely necessary to an economical administration of government; the laws have been rigidly and energetically enforced; equal protection has been extended to all persons within the limits of the State, without regard to race or color; and this beneficent, prudent, and economical management has insured to the welfare and prosperity of the entire people.

Resolved, That we appeal to the sober judgment of every honest and unbiased citizen of Florida, of whatever political affinities, in the contrast presented by the past three years of Democratic rule with the previous eight years of Republican rule. We appeal with confidence to every man in our midst who values the blessings of a just, faithful, and prudent government, to sustain us in this campaign, and with us, by the complete and overwhelming success of our candidates, to put an end for ever to the dangers which menace from a restoration of the Republicans to power.

Resolved, That the preservation of good order, honest expenditure of public funds, reduction of taxation, and the continued progress of material prosperity, present issues paramount to all mere questions of party; therefore, discarding the dead issues and party dissensions of the past, we appeal to the intelligent and honest voters of all parties and races to join hands with us in support of self-preservation.

Resolved, That the greatly increased influx of intelligent and industrious citizens under the present State administration is a source of great gratification. To the thousands already here, and the thousands soon to follow, we extend a cordial welcome regardless of party, and pledge the State administration, if continued under Conservative control, to renewed efforts to increase the tide of immigration.

Resolved, That the Conservative-Democratic party of Florida reaffirm their acceptance of the legitimate issues of the war. To all men in our midst, white and black, we pledge the fullest possible protection in the exercise of their civil and political rights; recognizing fully and sustaining that fundamental law of the State which gives to any citizen the right to vote as he

pleases, and to utter and publish his sentiments undisturbed by menace of violence and threats of disfranchisement, and so recognizing and sustaining this right, we denounce and arraign the Republican party for its systematic appeals to mob violence over the colored people of this State, and for the systematic terrorism over them which has been a regular appliance of its political machinery. We pledge ourselves to protect every citizen in the exercise of his rights against all lawlessness, to the fullest possible extent.

Resolved, That the Conservative-Democratic party of Florida condemn and denounce in unqualified language the frauds in elections which have been so frequent of late years. We arraign the Republican leaders, and charge them with being the authors and instigators of these crimes against the purity of the ballot-box; but whether perpetrated by Republicans, or men calling themselves Democrats, we condemn these acts as dangerous to our political institutions and subversive of our system of government.

Resolved, That we favor a liberal public-school system, exempt from all sectarian influences.

Resolved, That we favor the disencumberment of the Internal Improvement Fund of the State at the earliest practicable moment, and the appropriation of the public lands, as far as may be necessary, to the construction of a railroad through south Florida, and the completion of the road from the Appalachicola River to Pensacola in west Florida.

Resolved, That we deem it of the utmost importance to the commerce of the whole country that a ship-canal be constructed across the peninsula of Florida, and we request our Senators and Representatives in the Congress of the United States to use such means as will most effectually accomplish the construction of that very important public enterprise.

Before the election a spirited controversy took place between the rival parties upon the import of the clauses of the State Constitution and the laws upon the statute-books, which deprive persons who have been convicted of crimes of the right of suffrage. In the Constitution of 1868 one section declares that no person convicted of felony shall be qualified to vote unless restored to civil rights; and another section requires the Legislature to pass laws excluding from public office and from the right of suffrage all persons convicted of bribery, perjury, larceny, or of infamous crime, as well as any person convicted of betting upon the result of elections, or of being party to a duel, which provision was duly carried out in an election act defining the classes of persons who are not entitled to vote. The clause in the statute relating to the disqualification of criminals defined this class of non-voters as follows: "Persons hereafter convicted of felony, bribery, perjury, larceny, or other infamous crime." The Republicans contended that the law did not include petit larceny or any grade of larceny below a felony, and that conviction by a justice's court did not take away the right of suffrage. The Attorney-General, George P. Raney, in answer to a question put to him by Governor Drew, expressed the opinion that no person is entitled to vote who has been convicted of the crime of larceny since the date of the approval of the general election law, August 6, 1868, unless subsequently pardoned or restored to civil rights, whether the larceny be a felony or a misdemeanor. The reasons for this interpretation he stated at length, at the

request of the Governor, in an opinion delivered on the 2d of October. The clause of the Constitution disqualifying persons convicted of felony needed no act of legislation to give it the force of a law. The subsequent section of the same article, empowering and commanding the Legislature to pass an election law, depriving persons who should be tried and convicted of certain specified crimes of the elective franchise, must have contemplated other crimes than felonies. Neither the Constitution nor the statute limits the disqualifying power to any particular grade of larceny. The statute follows closely the wording of the Constitution in declaring the disqualifications for the franchise, using the same words, or terms of exactly equivalent meaning, excepting that, instead of saying "persons convicted of bribery, perjury, larceny, or of infamous crime" shall be disqualified, it has "bribery, perjury, larceny, or other infamous crime." This phrase is capable of two different constructions: it either infers that larceny of all grades is to be rated among infamous crimes; or it might be construed to signify that the degree of larceny which disfranchises is only that which amounts to an infamous crime. If this less obvious construction is put upon it, the question arises as to what constitutes an infamous crime. Legal authorities define a crime to be infamous which subjects a person to infamous punishment or incapacitates him from being a witness, and a person to be infamous who may be challenged for a *juror propter delictum*. According to the statute-law of Florida, the offenses which exclude a person from giving evidence in court are murder, perjury, piracy, forgery, larceny, robbery, arson, etc. This declaration is contained in an enactment which was passed in the year 1845, and which remains still in force. It is a general statute, and includes all grades of larceny, whether felonies or misdemeanors. In the Bill of Rights is a provision that no one shall be tried for a capital or otherwise infamous crime unless on an indictment by the grand jury, excepting in cases of impeachment, in cases of the militia, or in cases of petit larceny, thus indicating that the framers of the Constitution regarded petit larceny as an infamous crime.

The conclusion, then, is, even if the Legislature meant that no conviction of larceny should prevent a person from voting, unless the larceny was an infamous crime, that all larcenies are infamous crimes, and therefore the conviction, by any competent court, of a person of any larceny, prevents the person convicted from voting, unless he shall have been pardoned or restored to civil rights. "A conviction of a person of larceny by a justice of the peace's court, acting within its jurisdiction under the provisions of the act to regulate criminal proceedings before justices of the peace, approved March 2, 1877, is as effectual to produce the disability as a conviction by a circuit court acting within its jurisdiction."

A considerable excitement was aroused by the publication, by the Democratic National Committee, of copies of telegrams signed by the chairman of the Republican National Committee, one of which, dated at New York, October 12th, and addressed to the collector at Key West, contained the words "City of Dallas took 150, City of Texas 100, Colorado 100 for Key West," which were presumed by the Democrats to signify that fraudulent negro voters were being imported into the State, but which were explained by the Republicans to be a warning against men suspected of being Democratic repeaters.

In counting the vote, "tissue-ballots" and ballots in small form, known as "little-jokers," were discovered to have found their way into the boxes in several precincts, though not in numbers sufficient to have changed the issue. In some instances the inspectors defeated the fraud by the device of tightly compressing and slightly twisting with their fingers every ballot before dropping it in the box; so that the multiple ballots were found inclosed in the larger one which concealed them when the vote was canvassed, in which cases no vote was counted. A number of Democratic ballots were found enwrapped in Republican ones, and both were cast out in the canvass; these were supposed to have been deposited by negro voters who had promised and intended to vote for the Democratic ticket, but were closely watched by their own people, of whom the vast majority are intolerant partisans, who resent with anger any defection from the Republican party among the people of their own race, and were therefore afraid to vote as they desired, but secretly inclosed the Democratic voting slips within Republican tickets. Great complaints were made on the part of the Democrats of the terrorism and petty persecutions to which colored citizens were subjected by their own race for abandoning the Republican party. After the election a large number of arrests were made by United States marshals for illegal voting. At Madison a number of prisoners, in charge of a deputy-marshal, were forcibly released while entering a railroad train, apparently against their own will, by a band of masked and armed men. The arrested parties protested against the interference, and took the next train for Jacksonville, and there delivered themselves up to the United States authorities, publishing a statement in the newspapers denouncing the act of their self-constituted protectors as hurtful to the State at large, and unkind to themselves.

In the election for Governor, Bloxham received 28,378 votes, and Conover 23,297, giving Bloxham a majority of 5,081. In the first Congressional district Davidson was elected Representative by 14,971 votes, against 11,082 cast for Witherspoon; in the second, Finley received 13,105 votes, and was elected, Bisbee polling 11,953. At the same election the ballot was taken on the question of calling a con-

vention for the revision of the Constitution, in accordance with the terms of a joint resolution by the Legislature, approved March 4, 1879. The vote of the people on the Constitutional Convention was adverse, 14,713 votes being cast in favor of holding one, and 23,281 against.

The total population of the State of Florida, according to the schedules returned to the census-office by the enumerators, is 266,566. Of this number 134,951 are males, 131,615 females, 256,871 native, and 9,695 foreign born; 141,219 white and 125,317 colored. This shows a white preponderance over colored of 16,032. The increase over the population of 1870 is 78,818, or about 42 per cent. The population of the city of St. Augustine is given in the preliminary returns as 20,350, against 11,750 in 1870.

FOG AND CLOUDS, GENESIS OF. A theory of the formation of clouds and mists has been propounded by John Aitken, a Scotch physicist, who offers strong experimental evidence to support it. He considers the condensation of watery vapor into the minute drops which make up clouds and fogs to be due to the presence of dust-motes in the atmosphere, and that without dust there would be no mists or clouds, and probably no rain. That particles of water-vapor do not combine to form a cloud-particle unless they find a nucleus of solid matter upon which to condense was proved by experiments. Steam was admitted into two receivers, one filled with common air, and the other with air from which all dusty impurities had been removed by filtering through cotton-wool. In the first the well-known cloudy form of condensation took place, while in the other there was no condensation and no mist, the air becoming supersaturated and remaining perfectly transparent. Vapor in pure air consequently does not condense, but the air becomes supersaturated; and, if there were no floating dust in the atmosphere, condensation could only take place on the surface of solid bodies on the earth. Every object would then become a condenser which would be constantly covered with the water deposited by the supersaturated air. When there is much dust in the atmosphere but a small quantity of water condenses on each, and they float easily in the air; but when the air is very free from dust each particle receives a greater quantity of moisture, and becomes heavier and more quickly acted upon by gravitation. The dusty state of the atmosphere is revealed by the mist formed by the breath in frosty weather, and by the cloudy appearance of steam when escaping into the air. The particles necessary for the accumulation of vapor may be finer than those visible in a sunbeam, as air in which the visible motes had been destroyed by burning was still found to be capable of giving a mist. The blue color of the sky is supposed to be due to these excessively fine particles. The sources of this cloud-generating dust are probably many. Anything capable

of breaking up matter very minutely can contribute a share. The spray from the ocean is probably an important source. Meteoric matter, it is likely, furnishes a considerable proportion. The process of combustion produces copious quantities of very finely divided matter. If there is an excessive quantity of these particles in the air, they remain floating with a film of water condensed upon each of them, giving rise to the dense but light form of condensation called fog. This explains the prevalence of fogs in large cities and in factory districts. The experiments made by Aitken showed that simply heating a substance, for example glass, iron, or brass, gives rise to a cloud of dust of this nature. By collecting the air in which bodies had thus been heated into a receiver, he obtained a very dense mist by the injection of steam. A particle of iron weighing only $\frac{1}{100}$ grain when heated in pure air gave off enough dust to cause a distinct mistiness. An experiment was tried with combustible gas and air, both thoroughly filtered. Their combustion in the receiver gave rise to an atmosphere in which an exceedingly thick mist was formed by the admission of steam. When purified air and ordinary air were compressed successively by an air-pump with a little water to produce saturation, upon removing the pressure a foggy appearance was presented by the common air, but no change was visible in the filtered air. When air containing a small quantity of dust was placed in the receivers the cloud-particles were heavy and fell to the bottom like fine rain; but when there was much dust a permanent white mist formed. Experiments with different substances with the view of finding out their capacity for emitting dust showed common salt when burned in a fire, or in the flame of a spirit-lamp, to be one of the most active fog-generators. The air of the laboratory in which gas was burning gave a much denser fog than the air outside, and no difference could be detected in the density of the fog produced by burning gas with a bright or a smoky flame. The products of a perfect combustion and of a smoky combustion of fuel in a fire were also compared, without any difference in their fog-producing qualities being noticeable, while both were much more active than other air. Sulphur when burned gave rise to the most dense fog given by any substance, it being impossible to see through a thickness of five centimetres of the atmosphere thus produced. The vapors of other substances, such as sulphuric acid, alcohol, benzole, and paraffine, acted in the same manner as watery vapor, condensing in a dust-laden atmosphere but remaining perfectly clear in filtered air. The fogs of London and other large cities would not be averted by more perfect combustion of fuel, but would only be rendered whiter and purer. The quantity of sulphur burned in the coal in London is estimated to amount to 200 tons a day in winter. This would account for the density of the London

fogs. The sulphur may serve a good purpose as a disinfectant and deodorizer, as the air during a fog is perfectly stagnant, and is probably full of the germs of disease, which would more frequently cause infection were it not for the antiseptic action of the sulphur, and also of the smoke-particles with which the fogs of London and such cities are filled, and which make them so much more disagreeable. Smoke descends during a fog because the particles of soot are good radiators which soon cool, and then form nuclei on which the water-vapor condenses more readily than on the other dust-particles, by which they become heavier and fall. This is the reason why the phenomenon of falling smoke, caused by a saturated condition of the atmosphere, often indicates the approach of rain. Experiments with rain-drops have been made by Professor Lister, who found that they produced great numbers of living organisms in sensitive solutions. It is therefore probable that the germs of disease and putrefaction form a part of the fog-generating dust.

FOOTE, HENRY S., was born in Fauquier County, Virginia, in September, 1800. Having graduated at Washington College, Lexington, he removed first to Tusculum, Alabama, where he practiced law and edited a Democratic newspaper, and then to Jackson, Mississippi. He was elected to the United States Senate in 1847. In 1848 he was chairman of the Committee of Foreign Relations. In 1850 he advocated the compromise measures. In 1851 he became the Union candidate for Governor of Mississippi. General J. A. Quitman was his opponent, but a short time before the election his defeat became evident, so that he withdrew, and Jefferson Davis was substituted for General Quitman. Foote was elected. At the close of his governorship he moved to California. In 1858 he returned and resided at Vicksburg. He was a member of the Knoxville Convention, strongly opposed to disunion, yet he took the Southern side at the outbreak of the war. He was a member of the Confederate Congress, and was a thorn in the side of his compatriots. Finally, he left Richmond and went to Washington. Mr. Foote was irascible in temperament. He had a personal encounter on the floor of the United States Senate-Chamber with Thomas H. Benton, when they were both Senators. He was involved in several duels, one with Winston, of Alabama, another with Sargent S. Prentiss, and a third with Claiborne, of Mississippi. He was a firm believer in the "code of honor," but a wretched shot, so that his various affairs were bloodless. Mr. Foote filled the post of Superintendent of the United States Mint in New Orleans in later years. His health induced him to return to his home in the neighborhood of Nashville, Tennessee, where he died May 20th, in the eightieth year of his age.

FORSTER, WILLIAM EDWARD, the Chief Secretary for Ireland in the new English Cabinet of

Mr. Gladstone, was born at Bradpole, Dorsetshire, July 11, 1818. His father, William Forster, was a minister of the Society of Friends, who made extensive travels in the cause of religion and philanthropy all over Europe and the United States; his mother, Anna Buxton, was the eldest daughter of Sir Thomas Fowell Buxton. He was brought up to business, and was a worsted-manufacturer at Bradford, in Yorkshire, some years before the death of his father, who resided latterly at Norwich, and died during an antislavery mission to Tennessee, in 1853. In December, 1846, during the Irish famine, he accompanied his father to that country, to administer relief from a fund raised by their religious society. In 1850, having quitted the formal connection with the Society of Friends, he married Jane Martha, eldest daughter of Dr. Arnold, of Rugby. In 1859 he was a candidate, but without success, for the representation of Leeds in the House of Commons. In February, 1861, he was elected for Bradford, which constituency he still represents. His first speech was a very short one upon the American civil war, but that subject frequently drew from him questions and suggestions addressed to the English Government in favor of a just neutrality, and especially of prohibiting the equipment of privateers for the Southern Confederacy in British ports. In 1862 he came forward as the Parliamentary champion of a thoroughly efficient and widely extended system of national education. From November, 1865, to July, 1866, he was Under-Secretary of State for the Colonies in Lord Russell's Administration. On the accession of Mr. Gladstone to power, in 1868, he received the appointment of Vice-President of the Committee of Council on Education, in which position he rendered his party signal service by conducting the Elementary Education Act through the House of Commons. In 1871 he introduced the bill to establish vote by ballot at Parliamentary elections. The bill was thrown out by the Lords, but in the session of 1872 it became law. He was also made Fourth Charity Commissioner. When Mr. Gladstone resigned the Liberal leadership, Mr. Forster was named by a section of the party as his successor, but declined to attempt the task, on the ground that he did not expect to obtain that general support without which the arduous duties of the position ought not to be undertaken.

FOSTER, LAFAYETTE SABINE, LL. D., ex-Senator, was born at Franklin, Connecticut, November 22d, 1806. His father was Captain Daniel Foster, who fought bravely at Saratoga in 1777. His grandmother was Hannah Standish, a descendant of the Puritan soldier Miles Standish. Mr. Foster graduated with the highest honor at Brown University in 1830, and embraced the profession of the law, studying under Calvin Goddard. For a year he taught school at Centreville, Maryland. In 1833 he settled at Hampton, Connecticut. In 1835 he

removed to Norwich. In 1839 he was elected to the State Legislature, and was reelected in 1845, '48, and '54. During the last three years he was Speaker of the Assembly. He was Mayor of Norwich during 1851 and 1852. He was defeated for the gubernatorial office in two elections. In 1854 he was elected to the United States Senate by the Whigs. In 1856 he joined the newly-formed Republican party. In 1860 he was again sent to the Senate. He was on various important committees, on the Public Domains, the Finances, etc. In 1865 he was chosen President of the Senate, *pro tempore*. After the assassination of Lincoln and the elevation of Andrew Johnson to the Presidency, April 14, 1867, Mr. Foster became, according to the Constitution, acting Vice-President of the United States. His senatorial term of office expired March, 1867, and, not having been reelected, he was replaced by Mr. Wade in the second office of the Government. In 1869 he was chosen Professor of Law at Yale College. Defeated in 1874 as candidate for Congress, he resumed his practice. He died in Norwich, Connecticut, September 19th, in the seventy-fourth year of his age.

FRANCE, a republic in Europe. President, François Paul Jules Grévy, elected January 30, 1879. The French Cabinet was at the close of 1880 composed as follows: M. Jules Ferry, President of the Council and Minister of Public Instruction and Fine Arts; M. Barthélemy St.-Hilaire, Minister of Foreign Affairs; M. Constans, Minister of the Interior and of Worship; M. Cazot, Minister of Justice; M. Magnin, Minister of Finance; General Farre, Minister of War; Vice-Admiral Cloué, Minister of Marine; M. Sadi Carnot, Minister of Public Works; M. Tirard, Minister of Commerce; M. Cochery, Minister of Posts and Telegraphs.

The President of the Republic is elected by the Senate and Chamber of Deputies, united in National Assembly. The term of his office is seven years, and he is eligible for reelection. The Senate is composed of 800 members, of whom 75 hold their seats for life, the vacancies being filled by the votes of the Senators. The remaining 225 seats are divided by lot into three classes of 75 each, one class going out at successive periods of three years.

The Chamber of Deputies is elected by universal suffrage under the *scrutin d'arrondissement* adopted by the National Assembly, November 11, 1875. The law orders every arrondissement to elect one deputy, and, if its population is in excess of 100,000, an additional deputy for each 100,000, or portion thereof.

The area of France, according to the latest official calculations, is 204,092 square miles, or 528,572 square kilometres. The population, according to the census of 1876, was 36,905,788. The movement of population from 1869 to 1878 was as follows:

YEARS.	Births. Exclusive of still-born children.	Deaths.	Surplus of births (B.) or deaths (D.).
1869.....	948,526	864,820	B. 84,206
1870.....	944,115	1,046,909	D. 108,394
1871.....	826,121	1,271,010	D. 444,815
1872.....	966,000	798,064	B. 172,936
1873.....	946,364	844,588	B. 101,776
1874.....	954,652	781,709	B. 172,943
1875.....	950,975	845,062	B. 105,913
1876.....	966,682	834,074	B. 132,608
1877.....	944,576	801,956	B. 142,620
1878.....	937,210	889,086	B. 98,175

The relation of marriages to the total population from 1871 to 1877 was as follows:

YEARS.	Total population.	Marriages.	Number of marriages to the 100 inhabitants.
1871.....	36,544,067	262,476	0.72
1872.....	36,102,921	352,754	0.98
1873.....	36,260,928	321,238	0.89
1874.....	36,389,481	308,113	0.83
1875.....	36,542,910	300,427	0.82
1876.....	36,905,788	291,336	0.79
1877.....	36,977,098	275,094	0.75

The receipts and expenditures in the general budget for 1880 were estimated as follows (value expressed in francs):

REVENUE.	
Direct taxes.....	377,421,500
Special taxes assimilated to direct taxes.....	29,787,700
Stamps and registration duties.....	643,666,700
Produce of forests.....	88,102,600
Duties.....	311,499,000
Indirect taxes.....	1,050,853,000
Posts.....	108,763,000
Produce of telegraphs.....	21,177,000
Three per cent. income-tax from personal property.....	34,274,000
Produce of universities.....	4,620,365
Produce of prisoners' work.....	9,165,180
Revenue of Algeria.....	27,937,700
Tax upon civil pensions.....	19,438,000
Miscellaneous receipts.....	52,011,055
Total.....	2,749,716,800
EXPENDITURE:	
Public debt and dotations.....	1,197,725,498
Ministry of Justice.....	34,448,942
“ of Foreign Affairs.....	14,036,800
“ of the Interior and Worship.....	188,986,218
“ of Finance.....	20,143,020
“ of Posts and Telegraphs.....	1,440,560
“ of War.....	575,129,017
“ of the Navy and Colonies.....	104,990,358
“ of Public Instruction and Fine Arts.....	58,490,254
“ of Agriculture and Commerce.....	36,505,826
“ of Public Works.....	164,025,659
Cost of collecting the revenue.....	275,910,972
Drawbacks and reimbursements.....	19,620,438
Total.....	2,792,293,679

The interest on the public debt, according to the budget of 1880, was as follows:

Consolidated debt.....	745,957,546
Capital that may be called in.....	319,320,338
Debite viagère.....	132,447,619
Total.....	1,197,725,498

On January 1, 1873, the new army law of July 27, 1872, went into operation. Its first article enacts universal liability to military service. Every Frenchman capable of bearing arms must serve for twenty years, namely, five

years in the standing army, four years in the reserve of the standing army, five years in the territorial army (Landwehr), and six years in the reserve of the territorial army (Landsturm). By a law of July 24, 1873, on the reorganization of the army, France is divided into eighteen districts, each of which is occupied by an army corps. One army corps is also organized in Algeria. Each of the eighteen army corps consists of two divisions of infantry, one brigade of cavalry, one brigade of artillery, one battalion of engineers, one squadron of the train, a general staff and the subordinate staffs. By a law of March 16, 1880, the former general staff, which was a closed corps consisting of 513 officers, has been dissolved, and has been replaced by a new staff which is accessible to all officers who, after completing the course of studies in the *École militaire de Guerre*, have obtained the *brevet d'état major* on the ground of their final examination. In this examination, all captains may take part even if they have not visited the *École*. Moreover, officers of the staff may receive the *brevet* under special conditions fixed upon by the Minister of War. The Minister of War selects among the brevetted officers those who are to enter into the service of the general staff. In time of peace they remain in this service for four years, after which they return to their former position. They can not be recalled to the general staff until two years later. While serving in the general staff, their names remain on the lists of their own branch of the army, but they are kept there “*hors cadre*.” The brevetted officers who are not called into the service of the general staff form a reserve. The new general staff consists of 300 officers and 150 archivists. Outside of this *cadre* a land-surveying commission has been established in connection with the war depot, consisting of twelve officers. The French army, on a peace footing, was in 1880 composed as follows:

ARMS.	Men.	Horses.
Infantry (156 regiments, 641 battalions, 2,575 companies).....	281,601	2,649
Cavalry.....	65,617	59,028
Artillery.....	66,831	32,690
Engineers.....	10,960	738
Train.....	9,392	7,680
Staff.....	38,849	8,684
Gendarmes.....	27,014	13,667
Total.....	502,764	120,126

According to an estimate of the “*Journal des Sciences Militaires*” for January, 1879, the strength of the French army on a war footing would be as follows:

Infantry:	
817 battalions of the active army.....	817,500
449 battalions of the territorial army.....	449,000
Total infantry.....	1,266,500
Cavalry:	
392 squadrons of the active army.....	58,800
79 squadrons of the territorial army.....	11,850
Total cavalry.....	70,650

Artillery :

312 field batteries of the active army. }	124,000
57 mounted batteries " " }	56,000
83 field batteries of the territorial army.....	180,000
407 batteries with 2,442 cannon.....	26,000
Engineers :	19,000
Active army.....	45,000
Territorial army.....	5,000
Total engineers.....	
Pontonniers, active army.....	

This gives a total of 1,031,300 men for the active army, and 535,850 for the territorial army; in all, 1,567,150 men. For the train, the administration, and the sanitary troops, there would still be necessary 155,000 men for the active and 58,150 for the territorial army; which would give the following result: Active army, 1,186,300; Territorial army, 594,000; total, 1,780,300. Notwithstanding the loss of Alsace-Lorraine, resulting in a decrease of pop-

ulation of more than a million and a half, the expenditure for the army has largely increased since the war with Germany. The rise is mainly due to the increase in the numbers of the army under the new organization.

The navy on January 1, 1879, comprised 258 vessels. Of these 66 were ironclads, 156 steamers (44 cruisers, 29 transport-vessels, 40 dispatch-boats, 36 gunboats, 7 torpedo-boats), and 36 sailing-vessels.

The foreign trade of France is officially divided into "commerce général," which comprises the entire imports and exports, including goods in transit, and "commerce spécial," which embraces the imports consumed and the exports produced within the country. The following table exhibits the movements of French commerce from 1859 to 1879 (value expressed in francs):

YEARS.	GENERAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1879.....	5,008,900,000	4,111,700,000	4,594,800,000	3,168,100,000	889,200,000	424,500,000
1878.....	4,570,000,000	4,371,000,000	4,461,000,000	3,869,800,000	546,000,000	189,600,000
1877.....	4,908,800,000	4,547,500,000	3,663,800,000	3,436,300,000	653,100,000	141,200,000
1876.....	4,461,800,000	4,807,000,000	3,988,400,000	3,575,600,000	804,000,000	234,000,000
1875.....	4,422,500,000	4,702,100,000	3,586,600,000	3,872,600,000	228,000,000	219,000,000
1874.....	4,576,400,000	4,822,300,000	3,507,700,000	3,701,100,000	952,000,000	150,000,000
1873.....	4,107,000,000	4,061,300,000	3,554,800,000	3,787,300,000	565,000,000	492,000,000
1869-1873.....	8,513,800,000	3,988,800,000	3,342,500,000	3,259,700,000	462,000,000	371,000,000
1859-1868.....	2,846,600,000	3,088,200,000	2,358,700,000	2,961,800,000	799,000,000	451,000,000
1859-1868.....			2,121,100,000	2,271,000,000	607,000,000	513,000,000

The countries chiefly interested in the trade with France during the year 1878 are exhibited in the following table (value expressed in francs):

COUNTRIES.	Imports.	Exports.
Great Britain.....	580,300,000	915,400,000
Belgium.....	411,000,000	409,700,000
Italy.....	348,500,000	169,700,000
Germany.....	418,500,000	843,700,000
Switzerland.....	110,400,000	229,400,000
Spain.....	148,900,000	137,600,000
Russia.....	549,600,000	80,000,000
Turkey.....	127,300,000	57,200,000
United States.....	487,500,000	207,400,000
British India.....	136,700,000	8,200,000
China.....	93,400,000	2,800,000
French colonies.....	220,700,000	181,400,000

The principal articles of import and export in 1879 were as follows (in francs):

CLASSES.	Imports.	Exports.
Articles of food.....	1,966,970,000	800,775,000
Raw materials.....	1,689,753,000	478,944,000
Manufactured goods.....	483,488,000	1,578,820,000
Other merchandise.....	499,619,000	304,551,000
Total merchandise.....	4,594,887,000	3,168,090,000
Coins and precious metals....	889,170,000	424,543,000
Total.....	4,934,007,000	3,587,633,000

The railroads of France are either main lines, which serve the general interest, or local lines. The former partly belong to the state Government, and partly to private companies. The latter will be assumed by the Government at the expiration of their charters. The number

of kilometres in operation on January 1, 1880, was as follows:

Main lines.....	22,761
Local lines.....	2,158
Total.....	24,919

The number of kilometres in the course of construction, on the same date, was 5,153, of which 2,178 were built by companies, and 2,975 by the Government.

The statistics of telegraphs are as follows:

Length of lines in 1879, kilometres....	59,500
Length of wires in 1879.....	471,500
Stations in 1879.....	4,965
Total dispatches in 1878.....	14,414,457
Revenue.....	21,172,230 francs.
Expenditure.....	20,890,400 "

An official inquiry into the production and consumption of sugar was instituted by the Government with a view of modifying the high duties upon sugar. The following table gives the particulars of the production and consumption in kilogrammes during the last ten years:

YEARS.	Production.	Consumption.
1869-'70.....	290,000,000	279,000,000
1870-'71.....	283,000,000	294,000,000
1871-'72.....	285,000,000	284,000,000
1872-'73.....	408,000,000	185,000,000
1873-'74.....	396,000,000	252,000,000
1874-'75.....	450,000,000	231,000,000
1875-'76.....	462,000,000	284,000,000
1876-'77.....	243,000,000	285,000,000
1877-'78.....	398,000,000	259,000,000
1878-'79.....	420,000,000	266,000,000

The consumption has by no means kept pace with the increase of production—a fact which

is partly to be accounted for by the heavy and constantly increasing duties. These were in 1860-'61, per 100 kilogrammes, 33f.; 1862-'63, 45f.; 1864-'70, 47f.; 1871-'72, 61f.; 1873, 70f. 50c.; 1874-'78, 73f. 32c. Great Britain, on the other hand, with her constantly diminishing duties, which disappeared finally in 1874, has a consumption which increased from 450,000,000 kilogrammes in 1860 to 918,000,000 in 1878.

On December 31, 1877, there were 538 authorized savings-banks with 777 branches. The number of books out on December 31, 1877, was 2,863,283, and there was due to depositors 862,834,155 francs. According to a report of the Minister of Commerce on the savings-banks in France the number of depositors in 1870, before the war, was 2,130,000; in 1872, 2,016,000; in 1875, 2,642,000; in 1877, 2,863,000; and in 1878, over 3,000,000. The deposits in this interval rose correspondingly from 711,000,000f. in 1870 to 1,010,000,000f. in 1878. From 1851 to 1870 (eighteen years) the whole progress made was 1,500,000 in the case of the number of depositors, and 553,000,000f. as regards the deposits.

The French colonies and dependencies had, according to the latest official reports, the following areas in square kilometres (1 square kilometre = 0.386 square mile) and popula-

From a comparison of the above table with that given in the "Annual Cyclopaedia" for 1879, it will appear that Tahiti, in Oceania, no longer belongs to the dependencies of France, but to its colonies. It was on June 29, 1880, formally annexed to France. (See article AUSTRALIA, in the present volume.)

Special attention is given by the French Government to the extension of its rule and influence in Central Africa. The Minister of Public Works, in 1880, sent out a mission to study the line of the proposed trans-Saharan Railway, and the plan of a railway connecting the colony of Senegal with the Niger is under consideration at the Ministry of the Marine. In 1879 the French built the fort of Baoulabé, and thus brought their frontier considerably nearer the Niger. In 1880 they began to build a fort at Kita, which will advance their frontier 250 kilometres and bring them within 250 kilometres of the river. At the beginning of the year a mission, under the guidance of Captain Gallieni, was sent out to secure the friendship of the tribes through whose territory the railway is to pass. The expedition left St. Louis on January 30th, and arrived at Kita on April 27th, without accident. Captain Gallieni obtained all the concessions necessary for the construction of a fort, and made treaties of friendship with the neighboring chiefs. The caravan was then formed, and the mission proceeded eastward until May 11th, when they were attacked by the Bambaras and lost half their number. The rest escaped, and succeeded in passing the Niger on May 15th.

On September 16th the "Journal Officiel" published two decrees touching the question of bringing Central Africa into communication with the civilized world. There are in Central Africa two vast and fertile regions which are placed in a state of complete isolation by their distance from the sea and the difficulty of communications. One of these regions in the southern hemisphere will, perhaps, be some day connected with the Mediterranean by the Nile, with the Indian Ocean by a railway, and with the Atlantic by the Congo. The other region, in the northern hemisphere, may be connected with the Mediterranean by the proposed Sahara Railway, and with the Atlantic by several proposed lines of railway, one of which would pass through the French colony of Senegal, and put it into communication with the upper basin of the Niger, which is inhabited by independent tribes. This railway from the Atlantic to the upper basin of the Niger was proved to be possible by the explorations of Lieutenant Mage. The decrees mentioned above were intended to organize expeditions for studying the details of the line, first of all between the upper basin of the Senegal River and the upper basin of the Niger.

The first change in the Ministry of M. de Freycinet took place on May 16th, when the Minister of the Interior, M. Lepère, resigned. The reason for this resignation was found in a

reluctance of the Minister to carry through the decrees against the religious communities with that degree of energy which his colleagues and the majority of the Republican party demanded. He was succeeded by M. Constans, the under-secretary in the Department of the Interior. On September 23d the Premier, M. de Freycinet himself, with Admiral Jauréguiberry, Minister of the Navy, and M. Varroy, Minister of Public Works, resigned, and were succeeded by M. Jules Ferry, heretofore Minister of Public Instruction, who was appointed Premier; M. Barthélemy St.-Hilaire, who in place of M. de Freycinet became Minister of Foreign Affairs; Vice-Admiral Cloué, as Minister of the Navy; and M. Sidi Carnot, as Minister of Public Works. The new Ministers are all in favor of a more radical policy against the religious orders, and against the influence of the Church upon the national system of education, than their predecessors, and all are among the intimate friends and supporters of M. Gambetta. The new Prime Minister, M. Jules Ferry, declared at once, in a circular to the diplomatic agents of France, that there would be no change in the foreign policy of France. (For biographical notes on M. Jules Ferry, see "Annual Cyclopædia" for 1879, p. 387, and, for a biographical sketch of M. Barthélemy St.-Hilaire, "Annual Cyclopædia" for 1875, p. 316.)

M. Jean Antoine Ernest Constans, the new Minister of the Interior and of Public Worship, was born in 1833, and was formerly Professor of Roman Law in Toulouse. M. Sidi Carnot is a member of the well-known family which has given to France a number of distinguished advocates of republican sentiments. He was heretofore under-secretary in the same Ministry of which he has now become the chief. Vice-Admiral Cloué has heretofore not taken an active part in political life, and was, at the time of his appointment, President of the Hydrographic Committee.

The National Assembly resumed its sittings on January 13th. Both in the Senate and the Chamber of Deputies the oldest member present acted as temporary president. In the Senate the presidency devolved upon M. Gaulthier de Rumilly, who was eighty-seven years of age, and in the Chamber of Deputies upon M. Desseaux, who was ninety-one years of age. Both belong to the Republican party, and expressed a wish that the coming session might contribute to the strengthening of the republic. The Chamber of Deputies reelected on January 13th, M. Gambetta, and the Senate, on January 14th, M. Martel as president. In the Chamber of Deputies, of the 533 members, only 308 deposited voting papers, the Right, as usual, abstaining, and of these 308, 49 resorted to blank papers, or inserted names at random, so that M. Gambetta, though reelected, received only 259 votes, or slightly less than half the House, whereas a year ago he received 314. The Left comprises about 380 members, so that about 70 Republicans held aloof, while 50 vir-

tually voted against him. The Extreme Left, with the aid of the Bonapartists, elected M. Madier de Montjau, a questor, to the exclusion of M. Gailly, of the Left Center, and they also gained one of the secretaryships at the expense of the Left Center. M. Martel received 168 out of 208 votes. On January 16th the statement of the new Ministry respecting their intended policy was read in the Senate and Chamber of Deputies. The Ministers say that the recent change in the Cabinet indicates no change in the prudent and measured policy which is best suited both at home and abroad to the condition of the country, but merely signifies that France may henceforth advance with decision in the path of necessary reforms and successive improvements. The Ministry propose to ask the Senate to go on with the Public Instruction Bills which have already been adopted by the Chamber; to proceed with the reorganization of the magistracy, and the reform of the *personnel* of the administration; to adopt the bill of their predecessors respecting the right of meeting; and to prepare a bill on the subject of the press. Nothing was said about an amnesty. The Easter vacation of the Chambers began on March 21st, and lasted until April 20th.

On May 25th M. Léon Say was elected President of the Senate, in place of M. Martel, who resigned on account of ill health. He presided for the first time on June 14th. His inaugural address, which reviewed the constitution and growth of republican principles in France, was received with applause.

On November 9th, at the first meeting of the Senate and the Chamber after the recess, M. Jules Ferry, the President of the new Cabinet which had been formed in September, read the declaration of the Government, in the course of which he stated that the Cabinet did not intend to apply the decrees to the congregations of women. Among the first laws which the House would have to consider, M. Ferry mentioned those relative to education, the reform of the magistrature, and the laws on the press and the right of public meeting. The declaration of the Government was received with applause from the Left, and laughter from the Right, when M. Ferry pronounced the name of liberty.

The discussion of the Ferry Bill on the Supreme Educational Council, which had been introduced on March 15, 1879, and had created so great an excitement in that year,* was begun in the Senate on January 23d. On the next day the Duke de Broglie spoke against the bill, which would exclude the religious element from the Superior Council, and would be a first step in the path of revolutionary fanaticism. On January 26th M. Jules Ferry defended the measure, and read a secret memorandum drawn up by the framers of the bill of 1860, and which had been submitted to the

* See "Annual Cyclopædia" for 1879, p. 390.

Pope, showing that the scheme was intended to swamp the university by a number of members not belonging to it, in order to increase the influence of the clergy in education. Several members of the Right objected to the reading of this document; and, after it had been read, a Senator asked who were its authors, to which M. Jules Ferry said, "I have no doubt M. de Falloux and Monsignore Dupanloup." On January 27th a powerful speech was made against the bill by M. Laboulaye, who said that he was opposed to constant state interference in matters of education, and that the present measure did not suppress liberty, but virtually strangled it. He thought that by such bills the Republicans were paving the way for a dictatorship. M. Jules Ferry spoke again in favor of his bill on January 30th. He said that the bishops were excluded from the proposed Council because they had all joined the Ultramontane party. Mr. Jules Simon opposed the bill, and contended that the principle of free instruction should be fairly represented in the Council. An amendment, moved by M. Delsol, in favor of giving the bishops and others seats in the Council, was rejected by 147 to 122 votes. On February 14th the Senate, by 162 votes to 126, gave a second and final reading to the bill. On February 19th the bill was returned to the Chamber of Deputies, which on February 21st agreed to the senatorial amendments. On February 28th the bill was promulgated in the official journal.

The discussion of the second of the two educational bills of M. Jules Ferry, concerning the liberty of education, was begun in the Senate on February 23d. M. Chesnelong spoke against the bill from the Catholic point of view, maintaining that there is only one genuine kind of education, which is imparted by the Church, and most effectually by the religious orders. M. Pelletan, a member of the Left, made a vehement attack upon the Jesuits, and argued that the question at issue was not one of legality but of freedom. M. Dufournel, in speaking against the bill, was threatened with a call to order for a reference to M. Ferry's civil marriage, but he disclaimed any offensive intention. M. Jules Simon spoke against the bill, and maintained that clause seven, which excludes members of religious bodies not recognized by the state from the right of teaching in the schools, infringed the freedom of education. The general debate was then closed, and the discussion of the clauses began. On February 28th, M. Eymard Duvernay, of the Republican Left, proposed a counter-project. He objected to higher education in any but state schools, but proposed a similar system to the German *privatdozenten*. He also demanded that Article VII should be struck out of the bill. The scheme was, after some discussion, withdrawn. On March 1st, Article I, which suppresses the mixed juries, with whom the conferring of degrees formerly rested, and restores that right to the state, was adopted after

the amendment of M. Brun maintaining the old system had been rejected by 172 votes to 103. The Chamber then passed Articles II and III, the latter of which abolishes the fees paid by students on entering state colleges, and concluded by approving Articles IV, V, and VI. According to Article IV, the law recognizes two classes of schools of superior education: 1. Schools or groups of schools which are founded or supported by communities or the state, and which are called universities, faculties, or public schools; 2. Schools which are founded or supported by individuals or by societies, and which are not allowed to bear any other name than that of free schools. Article V provides that the titles of professor, doctor, licentiate, and baccalaureus, can only be bestowed upon those who have acquired them by passing the prescribed examination before the state faculties. According to Article VI, the opening of special courses of instruction is exclusively regulated by the law of July 12, 1875. The most controverted article was Article VII, which has already been referred to. M. Bertauld, on March 5th, spoke strongly in favor of the measure, contending that the Jesuits had no legal right of existence, and ought to be excluded from the rights and privileges of French citizens. M. de Gavardie, after shaking his fist at M. Bertauld, and being called to order, continued to speak in very violent terms, and the President for some time was unable to restore order. M. Jules Ferry subsequently spoke in support of the measure, which he maintained was based on principles of public policy. He said that the Jesuits were in permanent conspiracy against the state, and that their position in France had always been illegal. He condemned the education given by the Jesuits, and gave quotations from several books, the teaching of which he regarded as dangerous and hostile to the established institutions of the country.

M. Jules Simon followed on the other side. He said that from the outset he had intended to oppose Article VII of the bill, but now it had become a question of defending the principle of liberty. The time had come for the country to know whether freedom was to continue to prevail in France or not. The law proposed by the Government was both useless and impolitic, and he reminded the House of the answer given by Henry IV to the university professors who complained of the success of the Jesuits—namely, "Make your schools better than theirs, and the pupils will come back to you." M. Simon concluded by saying it was by means of liberty that the Catholic Church must be combated. The Minister-President, M. de Freycinet, defended clause seven against M. Jules Simon, and maintained that it in no way violated liberty. A deep impression was made by the aged Dufaure, who is at the same time one of the honored champions of a republican form of government and a devoted member of the Catholic Church. He declared that

the measure was an arm raised against religion, and had been brought forward without any serious reason. Following the leadership of Simon and Dufaure, a number of members of the Left Center and the Left voted with the Right against clause seven, which accordingly was rejected on March 9th by 148 against 129 votes. Great excitement followed the announcement of this vote. In the principal towns of France, meetings were held and petitions signed in favor of expelling the Jesuits in accordance with the existing law, which the present Government, like its predecessors, had ignored up to the present time. The reading on the second bill began on March 15th. M. Pelletan moved that clause seven should be restored, and the motion was rejected by 149 to 132. M. de Freycinet stated, with regard to M. Dufaure's suggestion of a compromise, that, despite the desire of the Cabinet for conciliation, and their deference for the illustrious orator who addressed to them that appeal, they could not submit a fresh clause, the clause itself being in their eyes a compromise. The clause being rejected, it only remained for them to enforce the laws. The bill, as amended, was agreed to by 187 to 103. On March 16th, the bill again came before the Chamber of Deputies, and was declared urgent. The Prime Minister, M. de Freycinet, again declared that the Government intended to apply, on its responsibility, the existing laws, and asked the Chamber for a declaration of confidence. An order of the day in this sense was then put and carried by a majority of 338 against 147. The bill, as modified by the Senate, was afterward adopted by 276 against 88. On March 30th, the "Journal Officiel" published the decrees of the Government respecting the religious congregations. The first article dissolves the Jesuits' Association, and orders the closing of the schools and novitiates within three months. On April 26th, M. Baragnon, a member of the Right, moved that urgency should be accorded to his proposal that all diplomas granted by the Minister of Public Instruction should be placed upon an equal footing in all examinations for prizes. This was granted, by 153 votes to 104. M. Baragnon's motion was directed against a recent circular of the Minister of Justice, which determined that, for the examinations for the posts of auditors of the Council of State, only those candidates could compete who had obtained their diploma from the state faculties.

Nearly all the archbishops and bishops of France issued a protest against the resuscitation of the laws against the Jesuits; and the Pope, in an address made to a company of French pilgrims, declared himself in the same sense. In the Chamber of Deputies, M. Lamy, who is both a supporter of the Government and a zealous Catholic, brought forward an interpellation questioning the validity of the laws cited by the Government in support of the decrees against the Jesuits. M. Cazot, the Minister of Justice, replied that the laws under which the

Government had acted were good and binding, and the Ministry would enforce them according to their right and duty. After a long discussion, the order of the day pure and simple was voted by 362 to 137. Prince Napoleon issued a manifesto, in which he took the ground that the recent decrees do not amount to persecution, and that they are but a return to constitutional law. The Bourbons recognize that theocracy must give way to the state. The Prince declares it to be time that the fiction of a conservative union should be ended, as there is nothing in common between the Legitimists and the Bonapartists. He concludes by saying that the most fatal policy of the Bonapartists would be to adopt a retrograde policy.

After the reassembling of the Chambers in November, the Senate adopted M. Camille Sée's bill for the creation of high schools for girls, under the surveillance and responsibility of the state. Like the educational bills of M. Jules Ferry, this bill intends to weaken the influence of the Church upon national education, and to increase that of the state. The bill had previously been adopted in the Chamber of Deputies by a large majority.

Another measure directed against the influence of the Church was the proposed repeal of the army chaplains law of 1871. The Minister of War, General Farre, was much applauded by the Left when he stated that he should have himself proposed the repeal had nobody else done so, and that a chaplain's presence with a regiment was undesirable from a military point of view, for, whatever influence he acquired would be at the expense of the officers. The repeal was adopted by 342 to 111.

No less than three Public Meeting Bills engaged the attention of the Chamber of Deputies soon after it met in January—one introduced by the Government, a second by the committee, and the third by M. Louis Blanc—this last proposing the repeal, pure and simple, of all laws fettering the right of meeting and forming associations, whereas the others insist on notice being given to the authorities and on police regulations. On January 26th the Chamber rejected M. Louis Blanc's motion by 322 votes against 162. On January 27th M. Lepère, the Minister of the Interior, spoke in favor of the bill proposed by the Government. He maintained the necessity of the object of a public meeting being declared beforehand by its promoters. Despite the Minister's argument, the Chamber adopted the fourth clause of the bill, as proposed by the committee, by 310 votes against 167. A long discussion ensued upon clause seven, which aims at preventing political meetings. It was on January 29th adopted by 266 votes to 199. The other clauses having been agreed to, the bill was read a first time, when the subject came up again for discussion in May. M. Cazot, the Minister of Justice, moved as a compromise that the Commissary of Police should have the right to at-

tend meetings and to issue warnings to those present, without, however, being entitled to dissolve such meetings. This was agreed to, and the whole bill was then adopted.

As the Government, in the statement of its principles, which was submitted to the Chamber of Deputies on January 16th, said nothing about an amnesty, M. Louis Blanc, on January 22d, introduced in the Chamber of Deputies a bill for a general amnesty. The report of the committee on the proposal, which was read on February 5th by M. Perier, advocated its rejection, pure and simple. In the name of the Government, M. de Freycinet declared on February 12th that the Government considered it their duty to refuse the request for a plenary amnesty. The country was not in favor of the measure, and would not be until it ceased to be an instrument of political agitation. M. de Freycinet, therefore, urged the partisans of an amnesty to unite with the Government in establishing calmness throughout the country, and in giving effect to the reforms required. The Government would then, perhaps, be strong enough to propose an amnesty. After a debate the Chamber rejected M. Louis Blanc's proposal by 313 to 115. On June 19th the Government after long and careful deliberation thought the moment opportune for presenting to the Chambers a bill for granting a plenary amnesty to all persons who have been convicted of political offenses. The bill ran as follows: "An amnesty is accorded to all who have been condemned for crimes and offenses connected with the insurrection of 1870 and 1871, as well as to all who have been condemned for political crimes and offenses, or for press crimes and offenses committed down to June 19, 1880." Only two days later, the committee reported in favor of the acceptance of the Government's bill without modification. M. Gambetta left the President's chair, and when the moment came he rose from his seat and delivered an oration, which carried the House in favor of the bill. The amnesty was voted by 333 against 140, out of 473 voters. This was the first time that M. Gambetta appeared in the tribune of the Palais-Bourbon since September 4, 1870.

In the Senate, M. Jules Simon, on July 3d, made a brilliant speech against the Government bill, and the Senate, by 143 votes against 138, adopted a limited amnesty proposed by M. Bozérian which excepts assassins and incendiaries. The committee appointed by the Chamber to report upon the Senate's amendment to the Amnesty Bill, after hearing the views of the Ministers and of delegates from the different groups of the Left, adopted M. Labiche's amendment, proposing to grant an amnesty to whomsoever the Government shall pardon within the next three months. The committee, however, appended a proviso that all those who previous to the Commune had undergone sentences for common-law crimes shall continue to be deprived of their political rights.

The committee subsequently held a second sitting, when its former decision was, after a long discussion, partially reversed, and it was resolved to adopt M. Labiche's amendment in its original form, but limiting the period assigned for the granting of pardons by the Government to the interval between the present date and July 14th, instead of fixing it at three months. Finally, the Senate and the Chamber agreed upon the following wording:

All the individuals condemned for having taken part in the insurrectional events of 1870 and 1871, and in the posterior insurrectional movements, who have been or shall have been, before July 14, 1880, the object of a decree of pardon, with the exception of individuals condemned by judgment to the penalty of death or to penal servitude for life for the crime of arson or assassination, shall be considered as amnestied. This exception shall not be applicable to the above-mentioned condemned persons who shall have been up to the date of July 9th the object of a commutation of their sentence, etc.

On July 11th the "Journal Officiel" contained two decrees, dated July 6th and July 10th, rendering the amnesty practically plenary, and granting pardons and commutations of sentence to all the Communists who at that time were still in exile or in New Caledonia. The number excluded from the amnesty was seventeen. These seventeen were pardoned, and none of them were political personages.

The views of France are greatly divided on the subject of free trade and protection. The south, on the whole, favors free trade, the north protection. On January 31st the debate on the Customs Tariff Bill began in the Chamber of Deputies. M. Tirard, the Minister of Commerce, referred to the customs tariff established in 1860, and said that that tariff had not borne all the fruit which was anticipated from it, because it was not previously made the subject of an exhaustive discussion in the legislative body; but, at the same time, the reform then instituted had led to a considerable growth of trade. He replied to various objections that had been made to the Anglo-French commercial treaty, and asserted that France sent twice as much of her products to England as she received thence. He asked the Chamber to adhere to the present tariff as the basis of negotiations entered into with foreign countries for the renewal of the treaties of commerce. On February 15th, M. Allain Targe traced an intimate connection between the question of customs duties and that of transport. The speaker objected to the system of *octroi* duties at the entrance of cities, saying that it is no use abolishing customs duties if these are to be maintained.

One of the most important speeches was that by M. Rouher, on February 21st and 23d. He defended the empire against the charge of having concluded the treaties of commerce of 1860 by surprise, criticised successively the tariffs proposed by the committee, which he declared to be too high, and expressed his belief that the dangers of foreign competition

had been exaggerated. He called attention to the increase of the national wealth of France and England since the conclusion of the treaties of commerce, and remarked upon the solidity of the French economical *régime*, which had maintained the credit of the country during the crisis of 1870, and had enabled it to pay an enormous war indemnity. He concluded by saying, "We have had many sufferings, but, if other countries have grown in breadth, we may grow in stature." The speech was much applauded. In the course of the discussion the protectionists made many efforts to impose higher duties than those recommended by the committee, but they were generally unsuccessful.

The administration of Algeria was the subject of a warm debate in the Chamber of Deputies on April 21st. M. Godelle, one of the leaders of the Bonapartist party, who represents one of the *arrondissements* of Paris, brought forward an interpellation respecting the allegations contained in a letter written by M. Journault, the Secretary-General of Algeria, who had resigned his appointment in consequence of a disagreement between him and M. Albert Grévy, the Governor. M. Godelle charged M. Grévy with ruling in a most despotic manner, and moved for a parliamentary inquiry on the subject. M. Janvier de la Motte, another Bonapartist, followed, and accused the Governor-General of corruption with respect to a railway contract. M. Albert Grévy, who, being a Senator, attended to make his defense by virtue of a special decree by the President, having replied, M. Godelle rejoined by pressing for a parliamentary investigation on the ground that "suspicion still rested on the brother of the President of the Republic." This provoked great uproar, and on the motion of M. Gambetta, who said that the President had been insulted, the Chamber passed a vote for M. Godelle's temporary exclusion. Censure was also passed on two Bonapartists, M. Cunéo d'Ornano and M. Baudry d'Asson, for their comments on M. Gambetta's severity. The Right then threatened to leave in a body, whereupon M. Gambetta declared that such a demonstration would bring on them a like punishment, and the threat was not carried out. A resolution proposed by M. Spuller, expressing satisfaction with the Governor's explanations, was supported by 367 deputies. The Right voted against it, and a few radicals did not vote at all.

On July 14th France celebrated, for the first time, the annual festival which the Government has introduced in commemoration of the removal of the Bastille (July 14, 1789). The Chambers had appropriated half a million francs for the festival. The participation of the masses of the people in Paris and the large provincial cities was general and enthusiastic. President Grévy distributed flags to 436 deputations of the army, which was followed by a grand parade of 25,000 troops, with 96 pieces of artillery and 5,000 horses. The Government took occasion to

distribute a few crosses of the Legion of Honor. Among those promoted was M. Ernest Renan, who was now made an officer of the Legion of Honor, after having waited twenty years.

The relations between France and England were throughout close and cordial. M. Léon Say's appointment as ambassador at the English court was generally thought to promise an arrangement for the renewal of the commercial treaty which had been provisionally continued pending the French general tariff legislations. Mr. Gladstone was willing to make an effort to compass this object, and his supplementary budget included a provision for the reduction of the wine duties demanded by the French. M. Léon Say, however, soon abandoned the London embassy, preferring the presidency of the Senate. He was succeeded as ambassador by M. Challemeil-Lacour. The negotiations with respect to the treaty did not progress rapidly in France, and finally were postponed till 1881. The new ambassador in London is an ardent republican and an intimate friend of Gambetta. He is a pupil of the *Ecole Normale*. The first position he occupied was the chair of French Literature at Zurich. Then he returned to France, and became a journalist. In 1868 he joined Gambetta, Brisson, and Allain-Targé in forming the "*Revue Politique*." In 1870 he entered political life and was elected Senator in 1876. He joined Gambetta again in founding the "*République Française*," in which he was one of the principal writers until he was appointed minister plenipotentiary at Berne. The alliance of Austria and Germany tended to bring France and Russia together, and this mutual approach alleviated the bitterness felt when the French Government refused the extradition of Hartmann, the Russian nihilist, who was arrested in February by the French police on suspicion of having been concerned in the attempt of December 2d to blow up the train by which the Emperor of Russia was traveling. The new Minister of Foreign Affairs, M. Barthélemy St. Hilaire, is outspoken in favor of preserving friendly relations with all the European powers. In April he wrote, as Vice-President of the Senate, a letter to the editor of a paper in Berlin, in which he expressed his recognition of Prince Bismarck's policy as one "decidedly useful for the preservation of European peace." M. de Freycinet, while Prime Minister, ordered the foreign envoys of France henceforth to style themselves, not ambassadors or ministers of France, but of the French Republic.

In consequence of the Amnesty Bill adopted by the Chambers, the exiles returned to France. Rochefort and his family arrived in Paris on July 12th, and were escorted from the station by a crowd of 50,000 persons singing the "*Marseillaise*," and crying "*Vive Rochefort!*" "*Vive la république!*" Rochefort, soon after his return, established a new radical organ, "*l'Intransigeant*." In Octo-

ber, Félix Pyat, the director of "La Commune," was condemned to two years' imprisonment and 1,000 francs' fine, for having written in his paper a rhetorical panegyric of regi-

cide, and originated the idea of a public subscription of five centimes to buy a pistol of honor for Berezowski, who shot at the Emperor of Russia while he was at Paris in 1867.

G

GARFIELD, JAMES ABRAM, President-elect of the United States, was born in Cuyahoga County, Ohio, November 19, 1831. His paternal ancestors came from England and settled at Watertown, Massachusetts, in 1635. His father, Abram Garfield, was born in New York; his mother, Eliza Ballou, in New Hampshire.

In 1830 they moved to Ohio, and settled in the Orange Woods, then a dense forest, broken only by occasional clearings of settlers. Here, in 1833, Abram Garfield died, leaving a family of four children, of whom James was the youngest, dependent upon the exertions of a widowed mother. His boyhood was spent in laboring on the farm and wood-chopping during the summer, to assist in the support of the family, and in attending the pioneer district school about three months each winter. When fourteen years of age he learned the carpenter's trade. His seventeenth summer was passed as a driver and helmsman on the Ohio Canal.

His early ambition was to become a sailor, but a three months' attack of fever and ague, contracted on the canal, changed the current of his life into literary channels.

In March, 1849, he entered Geauga Seminary at Chester, Ohio, and at the close of the fall term was competent to teach a district school. He rented a room with two other young men and boarded himself. Except seventeen dollars, which was all the aid his mother could render him, he paid his own expenses, working at his trade in Chester, mornings, evenings, Saturdays, and the summer vacation. After the first term he received no pecuniary assistance during his entire school and collegiate course. From 1851, three years of his life were passed in the Eclectic Institute at Hiram, performing at first the double duties of student and janitor, afterward of student and teacher. His earnings, which by the closest economy he had saved at Hiram, did not cover his expenses at Williams College, and he left college with a debt of five hundred dollars, which he afterward faithfully discharged. Before leaving college he identified himself with the Republican party. On his return to Ohio he accepted the professorship of Ancient Languages and Literature in Hiram College. The next year, at the age of twenty-six, he was made its president, which office he held till he entered the army in 1861. During this term he made frequent public addresses, both from the platform and pulpit, but it never was his purpose to enter the ministry. In the religious body of which he is a member, called "Disciples of

Christ," but generally known as "Campbellites," any member is privileged to preach.

In 1858 he married Miss Lucretia Rudolph, a teacher, whose thorough culture in the classics, modern languages, and literature, has enabled her to keep even pace with her husband in his literary career.

In 1859 he was elected to the Ohio Senate. His well-known characteristics as a legislator, his effectiveness as a debater, and his thoroughness as a committee-man, were manifested in his career in the State Senate in 1860 and 1861. He studied law while President of Hiram College, and was admitted to the bar by the Supreme Court at Columbus during his second winter in the Ohio Senate. In 1866 he was admitted to practice in the Supreme Court of the United States.

General Garfield's military services cover a period of two years and three months. After the first battle of Bull Run, Governor Denison offered him a lieutenant-colonel's commission. He was mustered into the service August 16, 1861, and reported to General Hill at Camp Chase for instruction in camp duty and discipline. He was soon after detailed to recruit the Forty-second Regiment of Ohio Volunteers, and was commissioned its colonel September 5th. In December, 1861, he was ordered with his regiment to eastern Kentucky and placed in command of the Eighteenth Ohio Brigade, where he conducted a winter's campaign against the Confederate forces under General Humphrey Marshall. In recognition of his services President Lincoln promoted him to the rank of brigadier-general of volunteers, dating his commission from January 10, 1862. His regiment, the Forty-second Ohio, was never again under his command. He was ordered to report to General Buell, who was hastening to effect a junction with General Grant at Pittsburg Landing, and was assigned to the command of the Twentieth Brigade, which reached Shiloh on the afternoon of the second day of the battle, April 7, 1862. The next day he moved with General Sherman to the front, and shared in a sharp engagement with the rear-guard of the retreating army. He participated in the subsequent operations around Corinth, Decatur, and Huntsville, Alabama. November 25th he was detailed as a member of the general court-martial for the trial of General Fitz John Porter. An official order, dated January 14, 1863, sent him to the Army of the Cumberland, then under the command of General Rosecrans; he was made his chief of staff, and participated in

all the engagements of that army in Middle and Southern Tennessee. With the battle of Chickamauga General Garfield's military career closed. His ability and bravery were recognized by the War Department in an order promoting him to the rank of major-general of volunteers "for gallant and meritorious services at the battle of Chickamauga."

He resigned his commission in the army on taking his seat in the Thirty-eighth Congress, December 5, 1863, having been elected, while absent in the field the year before, a Representative from the Nineteenth Congressional District of Ohio. He was reelected to the Thirty-ninth, Fortieth, Forty-first, Forty-second, Forty-third, Forty-fourth, Forty-fifth, and Forty-sixth Congresses. He served on the Committee of Military Affairs during his first term, a committee which ranked all others in importance at that time. He opposed the giving of bounties to any but veteran soldiers who might reenlist, and was one of the two who voted against the Bounty Bill passed January 6, 1864. He made one of his strongest and most effective speeches in favor of granting to Mr. Lincoln the power which he asked for drafting men to fill up the ranks, and it was largely due to the influence of this speech that a resolution to that effect was carried through the House. In the Thirty-ninth Congress he was assigned to the Committee of Ways and Means, and at once entered upon those financial studies that have made him an authority on American finance. He was chairman of the Military Committee in the Fortieth Congress, and of Banking and Currency in the Forty-first. On the 15th of May, 1868, he made a speech on "The Currency," which has been termed a sound money manual and a cyclopædia of financial facts. It procured for him the distinction of being elected an honorary member of the Cobden Club of London. His financial record in the House is that of an opponent of inflation and repudiation, an advocate of the payment of the national debt, and return to specie payments. Besides his regular committee-work he has done much extra service upon special committees, making at one time a thorough examination of the affairs of the Bureau of Engraving and Printing of the Treasury Department; at another, presiding at the sittings of a special committee to inquire into the causes of the gold panic in 1870. While chairman of the Committee on Appropriations, during the Forty-second and Forty-third Congresses, he carried on the work of reform, begun by Mr. Dawes, in the method of making appropriations. Prior to the act approved July 12, 1870, there had been two kinds of appropriations—annual and permanent. Nearly one half of the expenses of the Government had been provided for by these permanent appropriations, Congress having no direct control over them. Unexpended balances of appropriations had been accumulating in the bureaus from the beginning of the Government. If any part of the money appropri-

ated for a specific purpose remained unexpended at the end of the fiscal year, this balance stood on the books of the Treasury to the credit of the bureau, and could be used at any time for the purpose named. When these balances were covered into the Treasury in 1872, they amounted to \$174,000,000. That law, made still more stringent by the act of June 24, 1874, requires that any surplus of appropriations remaining at the end of each fiscal year, except so much as shall be needed to execute contracts already made, shall go into the general fund of the Treasury.

A sudden reaction in politics gave the control of the House of Representatives of the Forty-fourth Congress to the Democrats, December, 1875. In the three succeeding Congresses, the Republicans being in the minority, General Garfield was assigned a place on the Committee of Ways and Means. After Mr. Blaine's transfer to the Senate in June, 1876, he became and continued to remain, till the end of his Congressional career, the acknowledged leader of the Republicans in the House.

His speech in June, 1876, in reply to Mr. Hill, of Georgia, on the General Amnesty Bill, and his reply to the Hon. L. Q. C. Lamar, of Mississippi, August 4th, added greatly to his reputation as one of the ablest and most forcible speakers in the halls of Congress. He was one of the Republican statesmen invited by President Grant to go to Louisiana to witness the counting of the vote for Presidential electors by the State Returning Board, November, 1876. While the Electoral Bill was pending in the House, he made a speech in opposition to its passage, holding that neither Congress nor the Commission could go behind the action of a State; yet, after the Commission was created, he was unanimously designated by the Republicans of the House, and was elected a member of the Electoral Commission. In the Forty-fifth Congress his most effective speeches were made on questions relating to finance, trade, and industry. His speeches during the extra session and the first regular session of the Forty-sixth Congress embrace these titles: "Revolution in Congress"; "Close of Debate on First Army Bill"; "Legislative Appropriation Bill"; "Second Army Appropriation Bill"; "Judicial Appropriation Bill"; "Nullification"; "Defense of Union Soldiers of Seceded States"; "Resumption and the Currency"; "The New Silver Bill"; "The Mississippi River an Object of National Care"; "The Revived Doctrine of State Sovereignty"; "Ancient and Modern Panics"; "Obedience to the Law the Foremost Duty of Congress"; "Pulp and Paper"; and "How News and Public Opinion are manufactured." At all times a forcible and elegant speaker, he is especially noted for making the most felicitous and appropriate speeches on commemorative and ceremonial occasions.

The year 1880 witnessed General Garfield's preferment to two of the highest official positions in the gift of the American people. In

January he was elected by the Ohio Legislature Senator for the term beginning March 4, 1881, to succeed Allen G. Thurman. On the 8th of June, in the Chicago Convention, he was nominated, and on the 4th of November was elected to the Presidency of the United States. He resigned his seat in Congress November 8, 1880.

The life of James A. Garfield is the fullest exemplification of the possibilities of American citizenship on record. He began life in the Ohio forest, poor as the poorest, and by his own exertions, abilities, and character, he has made his way upward to the highest place. His road has led him by the log-house district school, chopping fallow, tow-path, academy, and college, to the Ohio Senate, the Army, the House of Representatives, a senatorial election, and to the Chief Magistracy of the nation.

GEOGRAPHICAL PROGRESS AND DISCOVERY. The most attractive fields for investigation are still the polar regions and equatorial Africa. The very completely equipped Arctic steam cruiser Jeannette, which sailed to the Arctic Sea in the summer of 1879, under Captain De Long, and which was spoken off Franz Joseph Land late in the season, has not been heard from, and doubts are felt as to the safety of the expedition, as they may have been tempted to enter one of the temporary fiords which form in the ice-pack, and closed in and carried off by the pack, which drifts steadily to the northeastward. The *Corwin*, which was ordered by the United States Government to search for her, returned without tidings; but in the exploration of the Alaskan coast this expedition accomplished very satisfactory results. Lieutenant Schwatka has gone over the region where the Franklin Expedition met its fate, and so thoroughly, that the search for the records of the *Erebus* and *Terror* will probably not be again resumed. In Africa, the dangerous region between the Sahara and the Congo is every year the grave of some hardy explorer. The Italian Expedition under Chiarini and Cecchi was stopped on its way to Shoa by one of the barbarous Mohammedan potentates, and the former died in duance. Rohlfs endeavored to penetrate to the Soodan from the Mediterranean coast across the desert, but was obliged to put back on account of the ferocity of the inhabitants. The withdrawal of the Egyptian garrisons in Soodan and the remission of Gessi Pasha's vigorous and successful efforts for the suppression of the slave trade, are discouraging for the exploration of the Soodan and the region of the Welle, as well as for the development of legitimate trade and the spread of civilization in this part of the continent. The misfortunes of the Belgian expedition have not yet ceased. Captain Carter, who was engaged to introduce the Indian elephant for the Belgian Society into African transportation, and his associate Cadenhead, have both been assassinated by the natives. In Asia the Russians

have reached and already passed the boundaries of Thibet and China in their explorations. The British Indian officers and their invaluable coadjutors, or rather pioneers, the *pundits*, have penetrated into Thibet from the south, and are every year including large tracts of new country in their very thorough reconnaissances.

HYDROGRAPHY.—The United States Coast Survey has extended its operations lately to the Gulf of Mexico and the Caribbean Sea, and commenced a new investigation of the Gulf Stream. Commander John H. Bartlett, on the steamer *Blake*, has discovered a remarkable depression in the Caribbean, the eastern end of which is opposite Santiago de Cuba. It extends in a westerly direction from between Cuba and Jamaica to the Bay of Honduras. Its length is about seven hundred miles, and its average width eighty miles. This submarine valley, which is estimated to have a total area of 85,000 square miles, shows nowhere a depth of less than 2,000 fathoms, except over the summits of submerged mountains in two or three places. The greatest depth sounded was 3,428 fathoms. It was first struck at its eastern end, where, only twenty-five miles off the coast of Cuba, the line suddenly sank to 3,000 fathoms. From the temperatures obtained, Commander Bartlett was led to the conclusion that the Gulf Stream enters the Gulf of Mexico through the Caribbean, and that it derives its temperature, which is higher than that of the equatorial current, by passing over shoals in the Caribbean, making perhaps the entire circuit of that sea. The equatorial current, striking against South America, is deflected north, and when it reaches the island of Tobago all that can flow between this island and the mainland and south of Granada does so. This current is said to be felt along the Spanish Main. The greater part of the equatorial current, however, is deflected north between Barbadoes and the Grenadines, finding its way to the westward whenever it meets a passage. It would naturally be driven toward the Spanish Main by the trade-winds. The temperature down to 400 fathoms was found to be suddenly increased as Guadalupe was passed. The difference was so great that the most probable explanation seems to be, assuming the equatorial current to be the source of the Gulf Stream, that the current remains for some time in the Caribbean, traveling around the borders of the sea, and being warmed by passing over shoals and banks. The current said to flow along the Spanish Main would be deflected by the Isthmus and keep on flowing inside or to the eastward of the banks connecting Jamaica with the mainland, and so on south of St. Domingo, part passing north through the Mono Passage, and the remainder south of Porto Rico to the Annegada Passage to join the current flowing north of Porto Rico and St. Domingo, which is helped through the Windward Passage by northeast trade-winds.

Another expedition for hydrographic explo-

ration conducted by the United States Coast and Geodetic Survey in the Arctic seas which wash the coasts of Alaska, has resulted in the discovery of evidences that the Kuro-Siwo, or Pacific Gulf Stream, does not pass through Behring Strait, or even enter Behring Sea. This conclusion, reached by W. H. Dall, may have been too hastily formed, since it is opposed by the counter-evidence of climatic conditions observed in the polar seas by former explorers, which indicate that a warm current does pass through the strait, and contradicts the theoretical conclusions of hydrographers based upon the laws of physics, which seem to show in advance that the recurvature of the current occurs mainly south of the Aleutes Isles, but partly in Behring Sea, and that a portion of the waters must force their way into the Arctic basin through Behring Strait. The expedition reached Plover Bay on the 15th of August, in the schooner Yukon.

On the 20th of August they touched Cape Lisborne, where daisies, forget-me-nots, monk's-hood, and other flowers covered the shore. Proceeding nearly to Point Barrow, they observed on the land everywhere a profuse vegetation. Under the soil of the beach, about two feet below the surface, is a stratum of solid ice of unknown thickness, which extends all along the shore of the Arctic Sea. They observed in Kotzebue Sound, at Elephant Point, cliffs which seemed to be composed of ice with a layer of earth on top, a formation which was observed by Kotzebue and other explorers. The formation does not move, and has nothing of the character of a glacier. It rises to the height of several hundred feet above the sea in places, and must be very ancient, as it contains bones of the mammoth, the fossil horse, and the fossil buffalo. The temperature of the sea varied from 48° to 36° Fahr., and was considerably higher on the American than on the Asiatic side of Behring Strait. The temperature at the surface and at the bottom was uniform, proving that there exists no lower drift carrying cold water out of the Arctic through Behring Strait. The northerly current through the strait depends chiefly on the tide. Its temperature is higher than the water south of St. Lawrence Islands, which is due to the warming of the shallow waters of Norton Sound and the Yukon and vicinity.

ASIA.—Two expeditions started out in 1879, with the object of penetrating Tibet from the north, and both were compelled to desist from their original purpose after a vigorous and courageous attempt. The expedition of Count Szechenyi skirted the eastern border of the Thibetan plateau, traveling fifteen months through the inhospitable deserts of Mongolia and the fruitful mountain-vales of the Thibetan frontier, discovering in the bounding range of the plateau summits 25,000 feet in height, and emerging at last in Burmah at the end of February, 1880. The other expedition was undertaken by the accomplished and tireless Russian ex-

plorer, Prejevalsky, who, since he first sighted the mountain-wall of Thibet fronting the desert of Gobi near Lob Nor, has made Lhasa his goal. Prejevalsky left Zaisan in April, 1879, and ascending the Urungu and Bulgan Rivers, arrived at Hami at the end of May. The party were treated with much respect by the Chinese authorities, who gave them a guard of an officer and seven soldiers. The march across the Mushun section of the Gobi Desert was terrible. The temperature rose every day to 38° Centigrade, the sand was heated to 68°, and the air was without a trace of moisture. It took two weeks to make two hundred and thirty miles. The only oases were patches of thinly growing grass fifty miles or more apart. At length they reached the oasis of Suchow, a beautiful spot, next to Kulja the most fruitful district in Central Asia. The Altyn Tag of Lob Nor joins here with the Nan Shan range of Koko Nor. There are no forests in these mountains, and the flora and fauna are very meager. Here commenced difficulties about guides, which it required all of Prejevalsky's experience and resources to successfully overcome. After looking a whole month for guides, there came along some Mongol hunters from Syrtyn Nor, which lies in the southwest, who guided him to Koorlyk, on the way to Koko Nor, from where with much difficulty he reached Dozoon Zassak at the foot of the Burkhan-Buda range, 1,370 miles from Zaisan, and on the highway from China to Thibet. The whole country traversed was a desert with occasional oases, almost destitute of animal life and flowering plants. Only once, in the Thian Shan Mountains, were forests met with. He obtained a guide who agreed to conduct him on the road to Lhasa; but he led him astray to the upper waters of the Blue River. He dismissed the false guide, and found his way to the road alone, crossing the Blue River and a high plateau, along which runs the Taila, a snowy range 16,800 feet high, which was crossed in the middle of October. They were attacked by nomad robbers, and repulsed them with their firearms. On the southern declivity of the Taila they were met by Thibetan soldiery who forbade them to advance. A messenger was dispatched to Lhasa, who brought back a written communication stating that the entrance to Thibet was prohibited to Russians. The expedition was not one hundred and seventy-five miles from Lhasa. The return over lofty mountains, 14,000 to 16,000 feet high, in the depth of winter, was exceedingly trying. They proceeded to Sining in the province of Kansu, to the east of Koko Nor. Prejevalsky next sought permission to explore the sources of the Yellow River, and obtained it from the Chinese authorities with much trouble. He struck the Hoangho at Gomi, fifty miles south of his camp, at Tonkir. The river here makes a sharp bend from northeast to east. The valley of Gomi, inhabited by Tangut agriculturists, is the last cultivated district on the

river, which is 420 to 490 feet wide here, and has a very swift current. Its elevation is 8,000 feet above the sea-level. Above here the river runs through many deep ravines, most difficult to pass. The natives, called the Sifau, which is Chinese for Western barbarians, were unfriendly. The travelers traversed some large forests with a rich fauna. The blue pheasant was encountered at the altitude of 9,500 feet. The medicinal rhubarb is indigenous here, and the roots sometimes weigh twenty-six pounds. The Churmysh is a tributary which flows into the Yellow River, eighty-seven miles above Gomi. An enormous mountain-chain barred the passage above, the Burkhan-Buda, which is entirely destitute of vegetation. The chasms through which the river finds its passage became more and more arduous. Finding no passage over the mountains, and not even being able to cross the Churmysh, which is 300 to 350 feet wide, they returned to Gomi. He obtained leave to cross to the right bank of the Yellow River and explored in Houidé. After examining the rich flora of the mountains, he proceeded northward to Cheibsen, and afterward explored the country about Koko Nor. He came out at Ugri, passing over the Ala Shan and the middle Gobi, reaching there in October, 1880, having traveled altogether 4,800 miles.

AFRICA.—There is a renewed interest manifested at present in the regions drained by the Niger, and in the exploration of the upper Niger, otherwise called the Joliba, and its sources, and more particularly of the Benue branch of the Niger. The French people and their Government, and to some extent the Germans, as well as the ubiquitous English traders, are devoting much attention to the commercial exploitation of this productive region and of the still more important basin drained by Lake Tchad, of which the Niger-Benue is the key; and a growing trade, already large, is carried on at the mouth of the Niger. In 1822 Major Laing saw the place where the upper Niger, or Joliba, rises from the summit of a sugar-loaf peak twenty-five miles distant. The spot in the side of a lofty mountain, which was pointed out to him as the head of the river, appeared to have an altitude of about 1,600 feet above the sea. The Scotch explorer was not able to visit the fountain-head of the Niger on account of the superstitious fears of the inhabitants lest he should throw a spell over the spring and pollute the pure crystal waters of the river with sorceries. The river at its head bears the name of the Tembi. This stream, which by its length and its volume deserves to be considered the principal source of the Niger, has been lately visited by MM. Zweifel and Moustier, two commercial agents of a house in Marseilles. Rising near the highest peak of the Loma range, in about 11° north latitude, not far from the source of the Senegal, but on the opposite slope, the Niger flows first northward, crossing the kingdom of

Segou and passing near the city of Timbuctoo, turns to the eastward, and then takes a southeasterly course to the confluence with the Benue. This beautiful river is navigable throughout its course, except at the rapids of Boussa, which could be easily passed by a lateral canal. These rapids are situated a short distance above the confluence.

Zweifel and Moustier started from Port Loko, on the northern branch of the Rokelle, or Sierra Leone River, on July 11, 1879. They intended to proceed direct to Mount Loma, but found it necessary to go by way of Falaba. A party of Koranko warriors from Mount Loma arrived while they were there for the purpose of striking a peace with the King of Falaba, and the travelers were allowed to accompany these emissaries upon their return. They crossed several affluents of the Niger, and at last came to the Tembi, the principal head-stream, but were prevented from following it down to the Joliba by a war which was going on below. The Tembi rises in the neighborhood of the village Kulakoya, on the borders of Koranko, Kissi, and Kono. This is the main branch of the Joliba, and is reverently regarded by the natives as the source of the great river. They could only follow it up to the point where it issues from the granite wall of the mountain, being forbidden to enter by a man who seems to officiate as the guardian high priest of the fountain, and who lives on a small island formed by the stream a few miles farther down. The travelers left Port Loko July 11, 1879, and reached Falaba on the 16th of August. The forests which Reade encountered on this route ten years ago have given place to rice and grain fields. On the route from Falaba they first crossed three branches of the Joliba, the Tentaraba, the Tamicone, and the Falico, before reaching the Tembi. They passed the source of the Seli River, which is the upper course of the Rokelle. The natives opposed their progress when near the goal of their journey in every possible manner. The Kurankos above were intelligent and hospitable, but those of Kissi and Kono are a wild, degraded race, who have no intercourse with the neighboring peoples, except to trade for the powder they want. The Tembi is a mere brooklet at Kulakoya. The source is in 8° 45' north latitude and 10° 25' west longitude.

J. H. Ashcroft, in a small steamer built for the purpose of extending the work of the Church Missionary Society, which has a station at Lokoja, opposite the confluence of the Benue and the Niger, has ascended the Benue one hundred and forty-five miles beyond the point attained by Blaikie in 1854. The steamer Henry Venn is one hundred and twenty feet long, has fifteen feet of beam, and a capacity of sixty tons, with a draught of three and a half feet. Eduard Robert Flegel, a German trader who has long resided on the coast, accompanied the expedition and sketched a map of the route, and took barometrical observa-

tions which indicate that the entire fall of the river between Djen and Ribago, the highest point reached, was not over six hundred and twenty-four feet, and that the descent from the *embouchure* of the Mayo Kebbi to the confluence of the Benue with the Niger does not exceed fifteen inches a mile. The discovery of the Benue by Barth in 1851, who crossed it at the mouth of the Faro, led to the fitting out of an expedition under Dr. Blaikie in 1854. He ascended the river in the steamer *Pleiade* as far as Djen. Beyond that point the river had never been explored until the travelers on the Henry Venn ascended beyond the town of Ribago to 9° 20' north latitude and 18° 36' east longitude. The town of Djen, which lies in 11° 25' east longitude, numbers about 2,000 inhabitants. It is governed by a head-chief and an under-chief. Fan-palms grow thickly at the foot of the mountains, and groves of them here stud the plain around the village. The village consists of six groups of houses, from seventy-five to one hundred in each, which are shaded by fine trees and surrounded by fences of plaited grass. Huts surrounded by cultivated patches form a semicircle around the place. Well-shaped water-jugs covered with painted ornaments are made by the women. The men wear a clout of calico or a strip of skin about the loins, and are armed with spears and daggers, carrying these in a sheath strapped to their forearm. They are frequently seen with whips having two or three lashes of the skin of the *aju* (*Manatus Vogelii*). Their ornaments are iron, or more rarely ivory, hairpins and armlets, leopard-claws, tips of antelope-horns, pockets containing texts from the Koran, or little bags of musk, suspended from their necks by leathern cords. The women go naked, wearing for ornament a braid of colored straw around their arm or their waist. They do not follow the barbaric practices of defacing their persons for the purposes of ornament, except to bore holes in their ears for the insertion of bright objects. The expedition, composed of Ashcroft, Kirk, another agent of the mission, and Flegel, sailed from Lokoja on July 8, 1879, and reached Djen August 20th. The unexplored countries beyond this place are among the most populous in this part of Africa. The voyage led through the territories of the Bassamas and Bulas, tribes still able to repel the Fulahs, who are gradually absorbing the whole of the Benue Valley, and then into lands occupied by the eastern branch of the Fulah invaders or under their dominion. They first passed through the kingdom of the Bassamas. They are a warlike race, strong and healthy. The plain here and in the Bula kingdom above was much of it under water. The floods spread to the very foot of some of the mountains, which, as elsewhere in equatorial Africa, raise their round, solitary forms directly from the plain, the process of erosion, that has been going on probably longer here than anywhere else on the globe, having eaten

away all but these remnants of the central masses. The Bassamas are a great deal upon the water. The river was thick with their canoes, which are made to hold three or four men, who manage them standing, as is the manner of all the tribes on the Benue. Their paddles are made by binding with thongs a spoon-shaped blade two to three feet long and seven or eight inches broad to an elastic staff about six feet in length. The paddles and the boats are covered with branded and carved ornaments. The men wear a breech-clout of skin or stuff, and have an elaborate and peculiar fashion of arranging their hair. The women wear an apron five or six inches square. The large village of Habe was seen from the river lying at the foot of the mountains. The chief town of the country, which is called Bassama, is said to be a very large place. The son of the king came to exchange courtesies with the travelers. He affected the Mohammedan costume partly, but the horsemen who accompanied him wore the national head-dress, weapons, etc. They carry a curious short sword with a broad end, hung at their hip in a scabbard adorned with leathern openwork or tassels, on which were often suspended finger-rings of copper or iron, and invariably a pair of tweezers used for extracting thorns. The Bassamas brought lion and leopard skins and ivory to sell the next day, but upon the refusal of the missionary agents to trade these because it was Sunday, and because they did not pay a visit to the king, the savages became hostile and threatening in their manner. Sailing farther, the explorers passed large villages and fields of luxuriant grain. Umburu and Numun, on opposite banks of the river, contained, the first some five hundred, and the latter from three hundred and fifty to four hundred huts. Messengers from the King of Demsa, a large town in the south, brought presents, though it is not customary for African chiefs to take the initiative in giving presents. Their town is said to be a large place south of Numun. The messengers, dressed in scarlet clothes, remained on shore, as they are forbidden by the law of their land to cross the river. They were admirable horsemen and rode fine horses. Entering the territory of the Bula people between Numun and Umburu, the margins of the river were more marshy, and still more thickly populated. The people were exceedingly shy as they ascended the river, but on their return they were saucy and importunate. Wherever there was a dry spot and a grove of trees they planted their villages, and every fertile space was cultivated. Within a dozen miles five towns with five hundred to six hundred huts each were passed. The river swarmed with their canoes. This Bula people and their Bassama neighbors seem to be the last original occupants of these regions who have not yet passed under the yoke of the Fulahs. The Bulas are a fine-looking, robust, warlike people, possessing an abundance of horses, sheep, and cattle. They are always on the

alert for enemies, and go fully armed with spears and shields, or with bows and poisoned arrows. They live even more upon the water than the Bassamas. Farther on they entered the kingdom of Yola, a magnificent country inhabited by Fulahs. The banks were beautifully wooded, resembling an English park. The population was numerous, but their dwellings were surrounded by gardens or stood in the midst of green corn-fields, and were not crowded together like those of the tribes below. The people showed more of the negro type than the Fulahs of Sierra Leone, but they possessed the surest mark of a developed race—a wide remove between the sexes in form and height. In dress and behavior also there was a marked difference between the sexes. Other evidences of a stage of culture beyond the common condition of Africans were the ample drapery of their light-colored garments and the skillful arrangements of their commodious houses. As might be expected, they are a peaceful people of pastoral habits. The travelers did not visit the town of Yola, as the king failed to make them return-gifts. These Adamawa Fulahs show much taste in making clay mugs and pipes. Passing through a mountain-region between the Bagele and Alantica Mountains, where the current was exceedingly swift, they reached the confluence of the Faro. They could only observe that the Faro is a shallow stream. The Benue above the confluence is not more than one fourth as broad as below, but is much deeper, winding tranquilly through a thickly wooded country, its level banks rising only a couple of feet above the water. The natives say that the water never overflows these banks, even when the plains below the mountains are entirely flooded, but that in the dry season the bed at Gurua is quite bare, except in the pools. After passing the rapids they came upon Batta villages. These people are tolerably well clad in blue calico, and go unarmed. Their canoes are shaped from a single piece of wood, not sewed together or fastened with iron staples, as in the lower river. Some of the places were independent, and others subject to Yola. On September 4th they anchored at Gurua, and explored above as far as Ribago, the first Bornu settlement. At Gurua they were informed that the Mayo Kebbi enters the Benue from the north at a distance of four days' march, and that the Benue, which is but a small stream above the confluence, rises in the mountains ten days' march toward the southwest. This tributary seems to carry the principal supply of water into the Benue. The Mayo Kebbi comes from the direction of the Tubori marshes, and it seems probable that an annual overflow from the Shary into the Benue takes place, since the second rise in the Benue which occurs in September corresponds in time with the period of highest level in Lake Tchad. The Mayo Kebbi flows through an alluvial plain from a marshy district containing a sheet of water which according to Barth feeds the west-

ern branch of the Shary. Barth prophesied that within half a century there would be a navigable communication established between the Niger and Lake Tchad. An annual navigable passage seems easy to establish, if one does not already exist; and if the Welle is identical with the Shary, the Benue-Niger must be one of the principal portals of inner Africa. That the Welle is the upper course of the Shary, and not an affluent of the Congo as Stanley conjectured, can hardly be doubted when the extent of Lake Tchad is taken into consideration, and the evaporation in the lake and the river, not to speak of the absorption of water by the sands of the desert, which must be very great.

There is another physical reason on which the identity of the Welle and the Shary is based, besides the vast probable drainage needed to feed Lake Tchad. The rise of the Shary in March proves that its head-waters are situated near the equator, as it is only within a narrow equatorial belt that there occurs any considerable rainfall as soon as the latter part of February. The accounts of the people encountered on the Welle of men dressed in white and bowing toward the sun on the river far away to the westward are, therefore, not the strongest evidence that the Shary is the continuation of this river. An adventurous Greek traveler, Dr. Potagos, brings a report of an enormous river which he saw in this region called the Bere, which is unquestionably the same as Schweinfurth's Welle and the Babura of the brothers Poncet. He followed it west as far as 23° east longitude, proving that it can not be identical with Stanley's Aruwimi, which enters the Lualaba in 23° 40' east longitude, and 0° 55' north latitude. Schweinfurth at the capital of Munsu, the Monbuttu king, was informed that the course of the Welle was due west from that place, which lies in 3° 35' north latitude. Potagos reports that for about one hundred and fifty miles west of Munsu's capital it keeps on that parallel, but that on this side of Bakangoi, which village was visited by Miani in 1872, it turns southward, and then westward again in about 3° north latitude and 25° 40' east longitude, near the village of Ingami, from which point its direction is westerly as far as he followed it. Potagos passed several northern affluents of the Welle, or Bere, the most important of which were the Bomo, the Beti, the Ura, and the Tzigo.

Soleillet, who departed from St. Louis, the capital of French Senegal, in 1878, with the intention of reaching Algeria by way of Timbuctoo, was not allowed by the Sultan to visit that pagan metropolis, and, for want of means, was unable to pursue his journey beyond Segou, the capital of the Bambara kingdom. He ascended the Senegal River to the factory of Podor, and journeyed overland thence to Bakrel, Medine, and Konniakary, which latter place is situated on an affluent which enters the Senegal on its right. From here he struck across the mountains and passed through the

forests of Kaarta, gaining the Niger at Gamina, about 2,500 kilometres from its mouth. From this place he journeyed to Segou in a boat, and there turned about and retraced his course to St. Louis. This traveler reports, as products of the country explored, rice, millet, indigo, tobacco, and cotton. The *Karité Bannia Parkii*, the tree which yields the vegetable butter of Africa, abounds in the forests. The inhabitants crush the fruit and boil it to obtain the fat. This has been employed in Europe in the manufacture of soaps and candles. Coffee grows wild in the Fouta Diallon Mountains. The caoutchouc-tree (*Ficus elastica*) is also found. Iron is an abundant mineral, and gold is also present. Soleillet started out a second time to reach Timbuctoo, in connection with the exploration of the route for a Saharan railway.

Dr. Oscar Lenz has succeeded in reaching Timbuctoo from Morocco, being the first traveler who ever penetrated to that place from the north. He was kept from proceeding for a long time by the Moorish authorities, who gave him a guard across the Atlas to Terodant, but declined to protect him farther, or to authorize his advance, on the ground that the Sultan exercised but a slight authority over the fierce and fanatical Shloh tribes in the southern part of his dominions. After attempting in vain to join a caravan of merchants, being prevented by the fanatical prejudice of the people, he intrusted his safety in the hands of some Howara-Kabyle robbers, who conducted him without harm through the territory of their people. He did not feel perfectly secure until he entered Iler, in the territory of Sidi Hedjam. The country was everywhere well cultivated and thickly populated. From Iler he passed over a plateau and through a river valley, to the foot of a range of mountains 4,000 feet in average height, with summits rising to 5,000 feet, which stretches from southwest to northeast. This he crossed, and followed the valley, which expands into a broad plain covered with palm forests, amid which lies the town of Temenet. The people here, as well as at Iler, are chiefly of Berber race. A few miles farther south, the mountains open and disclose the Sahara. He passed through other towns and arrived at Fum el Hassan, the residence of Sheik Ali of the Maribda-Kabyles. The sheik received the traveler hospitably.

Four several routes are marked out for examination with reference to the projected Sahara railway: 1. Through the province of Constantine, into the desert by way of Wargla; 2. From Algiers, by way of El Agbuat and El Golea; 3. By way of Oran, Wad Sossana, and Wad Messaura; 4. By way of Tiaret, El Maia, and El Golea. Colonel G. Flatters explored the Wargla route, leaving that place March 5th, at the head of a strong party. He marched, by way of Ain El Taiba, El Beyyodh, Timassanin, and the Igharghar Valley, as far as the lake El Menkhugh Tedjudelt in the Wady

Tedjudelt. On his return he came upon the ancient caravan route from Wargla to the Soodan, at In Lalen, and followed this through Tin Essedj to El Beyyodh. Here the expedition divided into two parties, the one returning to Wargla by the road already traveled, the other proceeding eastward and taking down the course of the Igharghar, passing through Ain El Mokganza. The expedition examined a part of the El Erg. It established the practicability of a railroad with a firm bed from Wargla as far as In Lalen. Flatters intended, on his next expedition, to examine the Ahaggar country, visiting Sebcha Amadghor, where the celebrated fairs once took place, in which the wares of Europe and Barbary were exchanged for the products of the Soodan. A well-known engineer, Choisy, conducted an expedition for the more thorough exploration of the two routes to El Golea from Biskra and El Agbuat. Another engineer, Pouyanne, conducted a reconnoitering expedition from Oran to Wad Sossana, on the Morocco frontier, which met with extraordinary obstacles, yet gathered valuable data concerning the country visited.

The exploits of Major Serpa Pinto, of the Portuguese Central African Expedition, who crossed the continent diagonally, from Loanda to the Transvaal, through the basin of the Zambesi, were published to the world upon his return in the beginning of 1879 (see "Annual Cyclopædia" for 1879). His associates, Brito Capello and Robert Ivens, separated from him when they reached the edge of the great central African plateau at Bihé, and struck out to the north, through a region as little known as that explored by Serpa Pinto. Between the marshy, malarial coast-region of Loanda and Benguela and the great plateau, whose elevation is 1,500 metres, lies a strip of hilly and wooded country, of an average elevation of 900 metres, which, on account of its soil, a very rich humus, and of the regularity of the rainfall, is the most fruitful region on this part of the continent, producing a superabundance of manioc, millet, yams, and sweet-potatoes, coffee, tobacco, and different legumina, and bamboos, sycamores, Adansonia, and baobabs of prodigious growth. The central plateau is less productive, by reason of its thinner soil, and, on account of its altitude, is less rich in species. Coffee, the baobab, and other tropical plants do not grow, but leguminous plants thrive well. The climate is temperate and quite healthy. During the dry season a refreshing southeast breeze blows every morning early. The mean temperature during this season is 77° Fahr., with wide variations. The rainy season lasts from September to March. The heavy rains of October and November relax in December and January, and then reappear with the same violence in February and March. Bihé, once the slave metropolis, has so diminished in importance that the explorers would have had difficulty in finding men enough to carry their stores and apparatus, even if the

neighboring chiefs had not done all they could to hinder their departure, as they did. They finally set out with a small number of porters, taking only articles of absolute necessity, toward the end of May, for the Coanza River, whose head is a small lake. Just below its source it is sixty metres broad and three deep. To the eastward extends the broad dominion of the Ganguellas, tall, muscular people, who exchange iron and other minerals which abound in their country for calico, glass beads, and rum, at Bihé. In the absence of this beverage they prepare a mead by fermenting honey in water. The Loando, one of the chief affluents of the Coanza, was reached June 24th, after a troublesome march through an inundated country. It rises in the Quico table-land, and flows in a north-northwesterly direction into the Coanza above Quibinda. Its average width is sixty or seventy metres. This river divides the Luimbe, Quimbanda, and Ganguella countries on the south from the territories of the Songos and Quicos. It flows through an exceedingly fruitful region, and supports with its fish a numerous population. The travelers visited the mountains in which the Coango, Chikapa, and Cassai rise. They were hospitably aided in their researches into the hydrography of this region by N'dumba Attembo, the large-minded Soba of Quico. The mountain-plain in which the three rivers have their sources close together, and which forms the parting between the Congo and Zambesi basins, has an absolute elevation of 1,700 metres. The Coango, after receiving a number of affluents, descends by many rapids and waterfalls, some of these sixty metres high, into the Cassange plains. The Cassai, in its upper course an insignificant stream, flows eastward, and then northward into the Catende country. The source of the Chikapa lies northeast of the head-waters of the Coango, and empties into the Cassai in 8° south latitude. The Quicos are a tribe of hunters whose wanderings extend as far as Imbarri, the residence of the Arab chief Tipo-Tipo. The other dwellers in the Cassai Valley are successively the Macocos, Matabas, Cauris, Peindes, and Malacas, to the northward, and on the east the Sambos, Calundas, and Moluas, Cawandas, Casselanges, and Zuala Mavums, the two latter tribes cannibals. The Quicos and the allied Sambos and Bangelas are a branch of the Central African family.

The travelers separated to more thoroughly examine the Coango basin, Capello going east, while Ivens followed the west bank of the Coango through the dominion of Muene Coje or Mozul. Having only sixty or seventy carriers between them, they were compelled to abandon their provisions and a large portion of their equipments. The march along the river-side to determine the exact course was attended with great difficulties. The way led now through a narrow chasm with precarious footing, now through a dense thicket of bamboos and thorny grasses; sometimes they were turned aside by

a sharp abyss, and sometimes they had to find a crooked path over a flooded district. The food-supplies had to be brought from places twenty or thirty miles away from the route. The obstructions and extortions of the chiefs through whose country they passed were a serious annoyance. Particularly insolent and exacting was the drunkard N'dumba Chiquilla, into whose power Capello fell. Ivens, on the other hand, obtained much assistance from a female chief, named Moa Chandalla Dicuata, who placed at his service a company of female carriers. The Coango is a rapid river, sixty or seventy metres broad, with steep banks. The variation of the water-level is 2-6 metres. The vegetation along its banks is very abundant and luxuriant. Before coming to the Luale, the first large tributary of the Coango from the left, above which the country is very much broken, Ivens found himself deserted by the greater part of his carriers, and the Soba Muene-Lhinica exacted a portion of his effects as toll before permitting him to engage carriers and pass over his territory. He reached the confluence of the Coango and Luale near the end of August, traveling a northeasterly course, through the country of the old chief Chanfana, and then northward along the river-banks. At the end of a long gorge, called the Tala-Mogongo, is the cataract of Caparanga, where the river, with a breadth of thirty-five or forty metres, plunges over an abyss fifty metres high. From an eminence the traveler could see the sinuous course of the river for sixty miles, through the plain in which is the village of Cassange in the Bangela country. This plain is 450 metres below the level of the country through which the river has been passing. On the way through the Quimbo and Manungo territories to Cassange, Ivens heard that Capello was unable to advance for lack of carriers. He pushed through to Cassange, along the swampy margin of the Coango, crossing many tributaries, and visiting the lake Quibonda, which furnishes salt for the inhabitants of these regions. When there, he raised a force of carriers and dispatched them to his comrade. While waiting for the latter, he attempted, though the wet season had set in, to explore the country northeast of Cassange, but was obliged by attacks of marsh-fever and neuralgia to return. After a month's illness he recovered sufficiently to conduct scientific researches, but did not venture on extended excursions. Toward the end of October Capello arrived. He also collected a store of valuable geographical data.

Notwithstanding the rains, which had transformed the plain of Cassange into a vast morass, the explorers started eastward to reach the Coango again. The Soba Banza-e-Lunda opposed with arms their passage in this direction, and they were obliged to take a northwesterly route, striking the river about twenty-five miles farther down. In 9° 20' south latitude, they discovered the N'zamba cataract, and a little below that of Joaza. Stopped by

a paludal morass formed by the floods of the Coango, which submerged the savanna on the left of the river as far as the eye could see, and admonished by the signs of approaching sickness, they returned to Cassange, to seek another route to the north along the Tala-Mogongo mountains, through the territory of Tembo Aluma or that of Munene. They crossed the valley of the Lui, which was likewise inundated, by a westerly route, and then turned northward, and reached the Coango at the village of Tembo Aluma near the last cataract, the Sucoia-Muquita. They were forced to turn back again. From Malange they made another attempt to advance to the north. The eastern slope of the Tala-Mogongo drains into the Hamba, one of the most important of the Coango's tributaries. Through the districts of Pacassa Aquiboadá, Dongo, and Danje, they came to the domain of the chief Mafachilla, in the Hungo country, who received them hospitably at first, but afterward drove them to flight by threatening to rob them of all they had. They were unable to advance farther to the north than the point where the lake Aquilonda or Chilande is located on the newer maps. No such lake exists in this region. In its place is an extensive marshy plain, studded with several lakes, large and small. In this journey the explorers discovered a large number of rivers flowing into the Coango which were before unknown. The most important of these are the Hamba and its affluent, the Cuilla, and the Cugho with its affluent, the Caoali. The country farther north is entirely uninhabited, destitute of water during the hot season, and covered with an impervious forest, which they several times vainly essayed to penetrate. They then crossed to the Atlantic watershed, making for Duque de Braganza in a south-southwesterly direction, determining on the way the water-parting between the Coango and the Coanza systems, and discovering the sources of the Sussa and the Caoali-Luemba. Their route passed through an exceedingly fertile region, with as salubrious a climate as any in Western Africa. The margins of the rivers are covered with an exuberant vegetation. Much of the land is covered with large and profitable plantations of sugar-cane, tobacco, cotton, manioc, rice, etc. The country is also exceedingly rich in game. In Duque de Braganza they lost a part of their note-books and journals, through a fire kindled to destroy an army of ants. They then made their way to Ambaca and the interesting mountain-mass of Pungo Adongo, from which they took another excursion to Malange, for the astronomical location of Quibanda, where the Coanza makes a great S-curve. Returning to Pungo Adongo, they descended to Dondo and took the steamer for Saint Paul de Loanda, where they arrived October 5, 1879. In the six hundred days which their expedition consumed, the Portuguese explorers traveled over 2,620 miles of mostly unexplored territory. Among the more important places whose geo-

graphical position and elevation were determined were the crossing of the Coanza in $10^{\circ} 52' 30''$ south latitude, $17^{\circ} 38'$ east longitude, where the elevation is 1,258.4 metres; the village of N'dumba Attembo, $11^{\circ} 20' 51''$ south latitude, $18^{\circ} 50'$ east longitude, elevation 1,326.4 metres; Cassange, $9^{\circ} 35' 6''$ south latitude, $17^{\circ} 57' 37''$ east longitude, elevation 990 metres; pass of the Tala-Mogongo, $9^{\circ} 14'$ south latitude, $17^{\circ} 8' 30''$ east longitude, elevation 720 metres; Malange, $9^{\circ} 30' 30''$ south latitude, $16^{\circ} 25' 30''$ east longitude, elevation 1080.2 metres.

The reawakened zest which is displayed in recent African exploration is due as much to the munificent initiative of King Leopold of Belgium in founding the International Association for the Exploration of Africa, which was started in 1876, as to any other cause. The many national and other expeditions which have entered the dark continent from every side, and which have kept cartographers busy in filling out and rectifying the maps, and the interest in geographical studies manifested by missionaries, and even by traders, in the interior of Africa, date from the establishment of the International Association. Yet the efforts of that society, though admirably planned, intrusted in competent hands, and supported by abundant means, have met with nothing but disaster. Captain Crespel, the leader, and Dr. Maes, the naturalist, of the first expedition died in Zanzibar in 1878; and Cambier and Marno, who, after the successful experiment of the missionary Price, attempted to transport their goods as far as Mpwapwa in ox-carts, were obliged to return. In June, the reorganized expedition, composed of Cambier, Wautier, and Dr. Dutrieux, started out. On the Mwomero the porters deserted and robbed them of the best part of their baggage. Cambier pushed forward, while the others remained to look after the transport of the remaining effects. To escape Mirambo, who had been playing a treacherous part, having been accessory to the murder of the missionary Penrose, Cambier changed his destination to Karema, instead of Ujiji. Wautier died, and Dutrieux returned sick to Europe. Continued difficulties and delays prevented Cambier from reaching Lake Tanganyika before August, 1879; and when he had brought up all his baggage, September 15th, he set to work to build the first station of the Association at Karema. Owing to the untrustworthiness of the porters, Cambier had been over a year in reaching Karema from Bagamayo. Oxen and asses had both failed, and as some different method of transportation from the worthless porter-system was demanded, King Leopold determined to employ trained Indian elephants, a means of transportation which had been recommended by Dr. Petermann for the Loango expedition, and which had already been successfully tried by Colonel Gordon on the Nile, between Lado and Dufilé. It was proved by his experiment that they can feed and keep in good condition on the indige-

nous plants, and that they do not require Hindoo *mahouts* to manage them. Leopold had the Englishman Carter bring four elephants with thirteen *mahouts* to Zanzibar, where they landed safely in May, 1879. While the elephants, which carried a load of five hundred kilos, were making their way through difficult jungles and morasses to Mpwapwa, in company with a train of ninety porters and a guard of soldiers, Captain Popelin, Lieutenant Dutalis, and Dr. Van den Heuvel set out from Zanzibar to join the caravan. Dutalis sickened and returned, and, from the first caravan, Rankin, Carter's lieutenant, and several of the *mahouts* turned back. On September 3d they all set out from Mpwapwa. The caravan reached Karema, having made the quickest journey between the coast and the lake ever accomplished; but on the way three of the elephants had died. Whether any one of the deaths was owing to climatic causes or to the hardships of the route is not known. In order to avoid the possible objections to the use of Indian elephants, a station was established at Simba for the purpose of training African elephants for the service. As it takes many years for an elephant to grow large enough to bear a burden, the experiment will be a long one. King Leopold bears the expenses, and has ordered trained elephants from India to serve as decoys. The elephants were not poisoned by the *tsetse*-fly, and, although they winced at first, they soon became indifferent to its bite. At Tabora, Popelin purchased land for a station, and Dr. Van den Heuvel remained to erect the buildings. The loss of so many of their emissaries impelled the Association to fit out a third expedition, composed of the Belgians Burdo and Roger, and the Englishman Cadenhead, the latter to assist Carter in the direction of the elephants. They left Zanzibar in January, 1880. Burdo succeeded in bringing several asses safely to Mpwapwa, although this animal was supposed from former experiments to be too tender to bear the fatigues and unable to survive the *tsetse*-bite. In April they reached the station at Tabora. Cadenhead went forward to join Carter. Burdo and Roger, leaving Tabora in May, were deserted by their carriers, and waited for relief from Karema. Carter and Cadenhead, on their march from Tanganyika to the coast, were set upon and killed by bands of Simba and Mirambo. Another expedition was sent out by the Association in June, under Captain Ramaecker, who is accompanied by Lieutenants Belen and Becker, Demesne, a photographer, and three mechanics who are to put together and navigate a steamboat which the expedition takes with it.

The expedition organized by the British Geographical Society, which started from Zanzibar in May, 1879, under the direction of Keith Johnston, with Joseph Thomson as companion, and one hundred and fifty picked carriers, lost its leader, who succumbed to the malarial climate at the very start. Thomson continued

the work of the expedition and accomplished more than was expected of it. Lake Nyassa was reached by an unexplored route through the lands of the treacherous Wakhutu and the hostile Mahenge, and over deserts and lofty mountains. After a brief rest the explorer crossed an elevated plateau of rolling land from the north end of Nyassa to the south shore of Tanganyika. With a few attendants, Thomson visited the Lukuga, to determine the question whether it was an outlet or not. He explored this river in its downward course for several miles. After narrowly escaping death at the hands of the savage Warua, he rejoined the body of his followers, and sailing down the lake returned to Zanzibar by the caravan route, having occupied about a year in the expedition. The Lukuga flows out of the lake in a general west-northwest course as far as Mekeleto, and there turns to the westward, entering the Congo at its great westerly bend. Mr. Thomson is a trained geologist, and gave especial attention to the geological features of the regions which he visited. The low country of the east coast of Africa is formed of two, or perhaps three, raised beaches, which have been lifted above the sea-level in recent times. The soil is red sand and clays overlying coral rock. The sand is derived, by erosion, from the coast-ranges of mountains, which are composed of hornblende and ferruginous rocks. In the sands of the coast-region is found the valuable gum-copal. The tree which yields it is now almost extinct. Behind the coast country, of recent formation, is a strip of carboniferous formation, extending from Mozambique to the equator. This belt, extending along the foot of the mountains, is of variable width, rising here and there into hills and small ranges, and has a horizontal stratification. There are dark-red sandstones, interbedded with lava, limestones, and shale, and, on the Rovuma, coal-beds. The coast-ranges of mountains are formed of schists, gneiss, and the highly metamorphosed rocks. The granitic formation, which extends through the great interior plateau of Africa, commences on the other side of this coast-range, which extends from Abyssinia to the Cape of Good Hope, and rises in this region to the height of 7,000 feet. The plateau between these and the mountains of the lake-region has an elevation of from 4,000 to 6,000 feet. This tract is marked by undulating hills and valleys and level stretches, where the Kafir-like Wabena, Warori, Wahehi, Wagogo, and Masai tribes hunt and herd their cattle. These races are constantly quarreling and warring among themselves. A higher plateau, 7,000 to 9,000 feet high, consisting of clay slates in horizontal beds, commences with what appears to be a great fault, revealed by intrusive rocks. In the upper plateau are smooth, round mountains formed by denudation. In the vicinity of Lake Nyassa the marks of gigantic disturbances, and even of recent volcanic action, are apparent. At ten miles' distance from the

lake was observed an ancient volcano; five miles farther commenced a series of volcanic rocks, porphyry, tufa, and agglomerates, forming mountains several thousand feet high, which skirt the northern end of the lake. At the northwest corner of the lake, in the plain through which the river Jumbaka passes, were seen a number of perfectly formed recent cones rising to the height of 300 feet. Between Nyassa and Tanganyika are first mountains 8,000 feet in height, then a level country, 4,000 to 6,000 feet in elevation, of clay slates and schists, with intrusive masses of granite. Near Lake Tanganyika are red and variegated sandstones, considerably disturbed. On the opposite side of the lake, near the southern end, is a sudden wall, which lowers the level from 5,000 to less than 3,000 feet. This is probably the continuation of the fault noticed above. Feldspar is the predominating rock from this point northward, huge masses of feldspathic rock forming mountains on the east and west sides of the lake. Beyond the Chansa range of metamorphic rocks with a feldspathic foundation, the sandstones are again found in the Uguha country. They spread over a wide area, extending down the Lukuga and the Congo Valley as far as Lake Moero. They probably mark the bed of an immense inland lake. When rounding the south end of Tanganyika, Thomson took occasion to explore the disputed lake Hikwa, or Likwa, as he calls it, from Kapufi, latitude 8° south, longitude 32° 25' east. This lake is sixty to seventy miles long, and fifteen to twenty wide. It lies two days east of Makapuli, in a deep depression in the Lambalamfipi Mountains. A large river, called the Mkafa, which rises in Kawendi, and drains Mpimbwe and most of Khonongo and Fipa, empties into it. Thomson is sure that it has no outlet. The debated question of the Lukuga outlet of Lake Tanganyika seems to have been finally settled by the exploration of Mr. Hore, an English missionary at Ujiji. This mysterious stream, which Cameron saw flowing out of Lake Tanganyika, with a distinct current in the direction of the Congo, but which presented itself to Stanley's view as a shallow water-course, half marsh, extending but a short distance from the lake, carrying an insignificant volume of water brought down by small creeks, with a feeble current, into the lake, was found by Hore to be a swift river proceeding out of the lake. The stream as it issued from the lake had a depth of from three to five fathoms. It narrowed soon, and the current became dangerously rapid. At the point where Stanley ceased his explorations, the stream-bed becoming smaller and overgrown with reeds, the current was too swift for the canoe. Half a mile farther the rapids end, and the river widens. Ascending an eminence, Hore saw the river flowing far away into Urna. It is a frequent phenomenon in Africa for the rivers to become choked with vegetation. After accumulating for a number of years in such thick

masses as to sometimes stop the current, the aquatic plants will decay, and at the next rise of the water will be carried down, leaving a clear channel. When Cameron visited the Lukuga, there was a bed of aquatic plants covering the river, but a current flowing between and underneath them; when Stanley saw it they had probably settled to the bottom, and as the lake was presumably at its lowest stage, there may have been little or no outflow. This mass must have since decayed, and been swept out in succeeding rainy seasons, forming a channel for the swift-flowing river seen by Hore. The growth of water-plants for twenty months unchecked, in the White Nile, formed an obstruction to navigation which it has recently taken the Austrian Marno five months of unremitting toil to remove, so as to reopen the river to navigation and trade. Thomson, the commissioner of the Royal Geographical Society, was carried across the lake by Hore upon his vessel. Thomson, on his homeward journey, came to the Lukuga, and endeavored to follow it down to the Lualaba. He succeeded in descending considerably beyond the point where Hore was obliged to leave the river, but was unable to accomplish his purpose, by reason of the hostile actions of the natives.

AMERICA.—One of the most interesting facts in physical geography which has been established by the geographical exploration of the Territories, conducted by Clarence King, is that the operations of nature which caused the great prehistoric sea, called by geologists Lake Bonnevill, to dwindle down to the dimensions of Great Salt Lake, are now reversed, and that the filling up process has commenced. Great Salt Lake now loses by evaporation less water than flows into it, and has risen eleven feet since 1866. The natural basin of Pyramid Lake is now full, its level having risen nine feet; and Winnemucca Lake is being filled up from the overflow, having risen twenty-two feet, and doubled in area, within the same few years. The upheaval which has been detected on the shores of Hudson Bay extends far up into the region of the lakes of British America and the Mackenzie River basin. Abbé Petitot, a Canadian missionary, who has traversed the vast and little explored territory between Great Slave Lake and the Arctic Sea in every direction, found that several of the lakes and chains of lakes were drying up. The deep granite basin of one of the lakes he found completely bare, and in it he saw a yawning chasm shaped like a funnel, through which the waters had been drawn into some subterranean channel. The Indians believe that there are several of these underground rivers in this region. The Mackenzie River district is not adapted to colonization, in the belief of Abbé Petitot and other travelers who have visited it; but its upper waters, the Liard, Peace, Elk, and Athabasca Rivers drain a fertile region, in which coal is found and petroleum in abundance.

Reports have long been circulated in Cen-

tral America, and repeated doubtfully by travelers, of the existence of descendants of various warlike tribes who had escaped the Spanish conquerors by fleeing to certain rich valleys encircled by mountains and accessible only through narrow and difficult passes, which they have jealously guarded against the approach of strangers to this day. This forbidden land is, according to rumor, of considerable extent—it is said five hundred miles square—and lies between Tabasco, Guatemala, Peten, and Yucatan. Here the remnants of the Chinamaces, the Laucaerones, the Itzaks, and other tribes, still maintaining the league of their forefathers, and allowing no white person to penetrate their stronghold, if the stories of the inhabitants of the neighboring regions are to be accepted, have kept their blood from mixture, and still preserve the customs and mode of living prevailing at the time of the conquest, retain the ancient religious observances, and speak the pure Maya language. Dr. Le Plongeon, who has spent several years in examining the ruins of Central America, has satisfied himself, from information received from the people of the adjacent districts, that these accounts are substantially true. The mountain-region possessed by them is called the *Tierra de la Guerra*. The members of these aboriginal communities are reported to have been more disposed to intercourse of late than formerly, descending sometimes to barter tobacco, cacao, and the products of their handiwork, for commercial articles, and occasionally hiring out for a season as farm-laborers, though not yet suffering strangers to enter their country. Le Plongeon expresses the hope that these people may retain the knowledge of the Mexican hieroglyphics, and that the key of these writings will be disclosed as soon as they can be induced to relax the rigorous exclusiveness which must have served to rescue from oblivion, if not the graphic symbols of the ancient Mexicans, many other interesting relics of their lost civilization. On the borders of this interesting region the British colonial secretary in Honduras has discovered the existence of three ruined cities, and a building containing many mural paintings, which are in the possession of the Santa Cruz Indians. The expedition under Désiré Charnay, equipped by the French Government, and supported at the expense of Pierre Lorillard, of New York, and which is patronized furthermore by the United States Government, is commissioned to systematically and thoroughly explore the ruins of Central America and Mexico, and to take photographs and casts of every relic of the ancient civilization which can be found. Doubtless there are more antiquities yet to be discovered in Oaxaca, Tehuantepec, Guatemala, and Yucatan than have yet been brought to light. Mount Alban, Mitla, Uxmal, Palenque, and the rest of the largest and best known of the ruined cities, have yet to receive a systematic examination, and scores of sites are known to exist which have never been

viewed by a competent archæologist. It is more reasonable to expect that the materials collected by Charnay and his assistants will find some Champollion to unriddle the cryptography, than that the symbols should be yet understood by the retrograde, savage descendants of the Mayas in their mountain eyrie. The Lorillard expedition will endeavor to wring from these shy mountaineers whatever knowledge they possess, and will be protected in their excursions in these wild parts by a body of one hundred regular soldiers.

ARCTIC EXPLORATION.—The American Franklin search party under Lieutenant Schwatka returned in the bark *George and Mary*, on September 22d, from a two years' hunt for the log-books and other relics of the Franklin Expedition. During the first ten years after the loss of the *Erebus* and *Terror*, several finely equipped expeditions were sent out to discover the fate of Sir John Franklin and his companions; but not a trace was seen until in 1859 Captain McClintock found clothes and other articles belonging to the lost crews on King William Land, and explored the country for records; but it was May, and everything was covered with snow and ice. In Captain O. F. Hall's two expeditions, 1860–1862, and 1864–1869, many relics were obtained from the Esquimaux, and the spot was discovered where the band of survivors from the *Erebus* and *Terror* made their last camp on their fatal attempt to return to civilization after wintering three years in the regions of perpetual ice. He was only able to examine the southeast extremity of the island. A skeleton was brought away which was identified as that of Lieutenant Le Vesconte of the *Erebus*. The natives informed him that books and documents had been found. In 1872 an American whaling-master, Captain Potter, who lay frozen up twenty-four months in Repulse Bay, brought to New York spoons, forks, and knives, engraved with the arms and initials of Sir John Franklin, Captain Crozier, and Fitzjames, which he had obtained from Netchilik Esquimaux, who related that a large number of white men had visited their country, which is distant a long way from Repulse Bay; that they had perished one after another of starvation many years before; and that the last one surviving had laid away papers and books in a cairn. In 1877 another ice-bound whaler, F. Barry, who had been one of the companions of Potter, brought back a silver spoon with Franklin's crest upon it, and repeated the tale of buried documents, presumed to be the ship's logs and notes of scientific observations. Messrs. Robinson and Brown, owners of this whaling-vessel, determined to fit out an expedition to land at Repulse Bay, provisioned for eighteen months, for a thorough search with the help of the Esquimaux over the whole ground on which the tragic scenes of the Franklin catastrophe had taken place. The schooner *Eothen*, commanded by Barry and fitted out for a whaling-cruise, bore the search party to the scene

of its labors. Lieutenant F. Schwatka, of the United States Army, was the leader of the expedition. Schwatka chose to land at Camp Daly, north of Chesterfield Inlet, and opposite Depot Island on Hudson Bay, finding Esquimaux here, rather than run the risk of not finding them at Repulse Bay. The party consisted of three white men besides the leader—Colonel W. H. Gilder, Harry Klutschak, and Frank Melms, and the Esquimaux, Joseph Ebberbing, called Esquimaux Joe, for long years the faithful companion of Captain Hall, who acted as interpreter. Lieutenant Schwatka, convinced of the impossibility of conveying the usual stores in the sledge-journey of thousands of miles which was before them, determined to adopt the sensible but novel method in Arctic exploration of becoming inured to the life of the Esquimaux, of acquiring their habits, and learning the arts by which they are enabled to wring their scanty means of subsistence from the chary hand of Nature. Such an existence would be impossible to the natives of kindlier climes without the discipline of a period of habituation and acclimatization. The winter passed at Camp Daly was turned to account in acquiring experience in sledging and in becoming hardened and accustomed to the Esquimaux life and ways. Information was studiously sought as to the best route to King William Land, and scientific observations were taken. Astronomical determinations showed that the west shore of Hudson Bay in this region is set down on the maps nearly two degrees too far to the west. The Esquimaux among whom they found themselves denied all knowledge of relics or buried documents. On April 1st Schwatka and his comrades set out on their way to King William Land, accompanied by thirteen Inuit and Netchillik men, women, and children. In three sledges, drawn by forty-two dogs, were wares for barter and provisions for three months, to be preserved for the case of necessity. They were to depend entirely on the chase for their daily food; and with their long-range rifles they killed an abundance of reindeer, whose flesh they were often obliged to eat raw. Every evening *iglus*, or snow-huts, were thrown up, in which they comfortably passed the nights. They guided their course directly for their destination over a route before untrodden by whites or by Esquimaux, seeking a path where possible in the frozen streams, thus taking advantage of the Connery and Lorrillard Rivers, leaving the latter to cross the Hazard Hills, beyond which they traversed an undulating country, sometimes unhitching the dogs and gliding down the northern slopes by the force of gravitation. On April 21st they found that they were in latitude $65^{\circ} 45'$, having crossed the bed of the Wager River without knowing it. Schwatka thinks that this estuary dries out in late summer after the melted snows have flowed down, leaving only a chain of isolated lakes. The route to the north-westward from this point, through a hilly coun-

try, became difficult, the land being nearly stripped of snow; until, May 9th, they descended a range of hills into a stream flowing northward, which they named Hayes River, and followed it 110 to 120 miles to its mouth in Cockburn Bay. On this river, May 15th, the travelers fell in with Esquimaux, a remnant of the Ukjuliks, who had been expelled from the western shores of Adelaide Peninsula and King William Land, and nearly exterminated by the Netchilliks. The chief had seen white men in his youth who had come down Back River in a boat, and had found a ship in the ice off the west coast of Adelaide Peninsula twenty-five or thirty years ago. There was a single corpse on board, and knives, spoons, and utensils were taken out by the Esquimaux by making a hole in the side, in consequence of which the vessel, which must have been the Erebus or the Terror, sank the next summer with the books and other things which were not removed. He had heard of other white men being seen by Esquimaux, and of cairns being opened and despoiled. Taking several of these Esquimaux into their company, they descended the river and crossed land until they reached Elliot Bay, arrived at their goal, entering the region tracked hither and thither by the fated followers of the most hopefully conceived and most disastrous of Arctic expeditions, who marked the path of their blind wanderings with the corpses of their dead. On May 22d a cairn reported to have been made on Montreal Island was sought for unsuccessfully. On Adelaide Peninsula, by Barrow Inlet, they came across a large band of Netchilliks, several of whom recollected the Franklin party. Near their camp was the spot where, probably, the last survivors perished. The Esquimaux had here found skeletons of several people under a boat, and appropriated their effects, giving the books and watches to their children to play with. Meeting an old woman, who had been in the camp of the unfortunate explorers at Washington Bay, Schwatka determined to hasten on to King William Land before the ice broke. On the way he obtained some relics, and heard of another treasure of books and papers having been destroyed by Esquimaux children. The Esquimaux told a grisly tale of finding skeletons with sawed bones, indicating that cannibalism, the last, desperate relief for the maddening pangs of hunger, had been resorted to by some of the sufferers. They crossed Simpson Strait with a large following of natives, attracted by the promise of rewards, but left Esquimaux Joe and all but a single family of Esquimaux at Cape Herschel, June 21st. They were surprised at reaching Erebus Bay two days later. Cape Herschel was afterward found to be eighteen or twenty miles farther west than the position marked on the Admiralty charts. The snow became too soft to bear the sledges, and the ice was covered with water; but in a few days the snow had nearly melted on the land, while a path was found for the sledges

in the ice off shore. The weather was now so warm that when the wind was not blowing their clothes felt too heavy. At the site of the camp occupied by Captain Crozier, after abandoning his ship off Cape Jane Franklin, many articles were found, and in a grave, on the evidence of a medal inscribed with his name, were the remains of Lieutenant Irving, third officer of the *Terror*. On July 3d they reached Cape Felix, the northern extremity of the island, and the limit of the ground to be explored. On their return journey they more thoroughly examined the whole coast, when the snows had entirely disappeared. Graves were found in many places all along the coast, marked by heaps of stones which the gallant band had tenderly and reverently erected over the heads of their fallen companions; and fragments of boats, utensils, clothing, etc., were found, but no document or jotted minute, save a copy of the brief memorial left by Captain Crozier when he set out with the crews of the *Erebus* and *Terror*, 105 souls in all, for Back River, which was found by Lieutenant Hobson, of the *McClintock* expedition, in 1859, and is the only record of the Franklin expedition which has yet been brought to light.

Difficult as had been the march ever since the snow began to melt, it became tenfold more so when the ice broke up, and all the stores and equipments had to be carried on the men's backs, while the dogs had all they could do to drag the empty sledges over the dry land. While the luggage was being thus transported to the camp at Cape Herschel, the explorers continued their researches. Meanwhile the cold season was again coming on: by the last of August the Esquimaux could build *iglus* of ice eight inches thick. No lack of food was felt, as the reindeer gathered at the southern end of the island at the approach of winter, waiting for the strait to freeze over. The ice was not safe for the heavily laden sledges before the 1st of November. While the main party made their way straight to Back River, after giving Starvation Cove, the last camping-place of the lost crews, another thorough examination, Schwatka and Gilder went around by the west shore of Adelaide Peninsula to seek the spot where that vessel sank, which was driven through Victoria Strait. Here, at the mouth of Sherman Inlet, they obtained from Esquimaux, among other relics, a portion of a boat which had landed from the lost ship. They had a hard journey up Sherman Inlet and across McCrary Isthmus to the rendezvous at the rapids of Back River. The heavy sledges were dragged with difficulty through the deep, new-fallen snow; icicles formed by the severe frost impeded them; the overworked dogs were poorly fed, and their strength failed rapidly; all were kept on short rations, as their store of meat was nearly exhausted, and there was no game to be found. Moreover, they had to pick their way in darkness and twilight, as the sun scarcely rose

above the horizon, and it was growing bitter cold, the mean temperature for November being 23° below zero, Fahr., the lowest reading 49° below. The journey took weeks longer than they expected; but when they came to the rapids, on December 5th, the main body had not arrived. On the 10th they came, and all started for Hudson Bay. This was the worst march of all, a constant struggle for life. The provision of fish which they took from Back River, salmon and a species of herring, soon ran out; and reindeer were so scarce that hunters were often absent several days before getting a shot at one. Farther south, where they were more plentiful, the travelers had to defend themselves from the wolves, and several times the hunters barely escaped being devoured. The reindeer-flesh was now too lean to afford good nourishment, and had to be eaten, moreover, not only raw, but when frozen so stiff that it had to be sawed into small bits and thawed in the mouth; and of lard and tallow they had only enough to light their *iglus*. More than half of their dogs died on the route. Snow-storms often kept them in camp several days. The cold was the most prolonged and severe ever suffered by a polar exploring party. The thermometric readings were so extraordinary that their accuracy has been called in question. The average temperature of the month of December was -50° F., and the minimum reading -69° ; the mean for January was -53° ; the minimum, observed January 3d, -71° ; the mean temperature in February was -45° ; the lowest -69° . The thermometer stood below -60° under the zero-point for twenty-seven several days, and for sixteen days it was below -68° . The natives said that the winter was an unusually severe one. Instances of lower temperature than Schwatka's minimum of -71° F. have been observed by other travelers. Nares read -74° F. on March 4, 1876, at Floeberg Beach, and Dr. Kane, Captain Parry, and several Russian explorers have experienced equally severe cold. In Siberia the thermometer has been known to fall to -76° F. In this very region Back's thermometer registered -70° in 1835, and Hall recorded $-65\frac{1}{2}^{\circ}$. After they reached Depot Island their privations were not ended. The Esquimaux there could furnish a small quantity of seal and walrus meat, but the supplies promised had not been left for them. They were reduced to chewing walrus-skins for nourishment before the weather allowed of good hunting. They were called for by Captain Baker, who had wintered there, at the end of his next summer's sealing-voyage.

The unexamined sledge-journey of Schwatka and his companions, lasting from April 1, 1879, to March 4, 1880, covered 3,250 miles. Important corrections were made by them in the map of the country traversed. Instead of flowing northeastward, the course of Back River is nearly due north for as far as they followed it up, about ninety miles. The coast-lines of King

William Land and Adelaide Peninsula are corrected and completed, and long stretches of new territory were traveled. The fate of the Franklin Expedition can only be read by the one rescued document and the graves of its members. Weakened by scurvy and lumbered with boats and stores, their march southward, commenced April 26, 1848, was slow and painful. Sickness carried them off rapidly, and hunger added its ravages. They were succored for a time and then abandoned by Esquimaux at Washington Bay. A detachment, probably led by Irving, seems to have thought of returning to the ships, either to bring provisions, or to take their chances for safety on board. A larger division continued the march to the south. A part of the enfeebled band seem to have tried to cross Simpson Strait in a boat, and to have been cast ashore again near Pfeffer River. They had reached the south shore too late to cross on the ice; but the following winter the handful who survived crossed the strait to lie down and die at Starvation Cove. Perhaps the diseased and famine-stricken crews had been fallen upon and numbers of them massacred by Esquimaux who coveted their weapons or feared the destruction of their game.

The Arctic cruise of Captain Hooper in the United States revenue-cutter Corwin had for its objects the discovery of the fate of missing whaling-vessels, and of tidings of the exploring steamer Jeannette; a visit to St. Lawrence Island at the entrance of Behring Strait, where many of the natives have perished of starvation; and the suppression of the traffic in whiskey and firearms with the Indians of Alaska. The Corwin sailed from San Francisco, May 22d, and returned to that port, October 12th. Five different attempts to reach high latitudes east of Wrangel Land were made by the Corwin. She came within twenty-five miles of Wrangel Land, September 11th, and within three miles of Herald Island, August 3d. No news of the Jeannette or of the whalers was obtained. The first push for the north was made before the summer had well begun, after visiting the Island of St. Lawrence. Several hundred Indians had starved to death, owing to an unusually severe season, and improvidence induced by their newly acquired habit of drinking rum. They were stopped in about latitude 69° by packed ice, July 2d. Herald Island was surrounded by ice supposed to be at least two years old. This is said to rarely break up between this island and Wrangel Land. When Wrangel Land was sighted, the highest hills, which seem to be more distant, were entirely covered with snow, other lower ones were partially covered, and others still lower were bare. Three peaks were observed which were about 3,000 feet apparently in height, the central peak conical and the others round-topped. North of these was a range of rounded hills, the summits of which appeared to be about 2,000 feet high. At a point farther north the land seemed to end. Captain Hooper doubts

whether Wrangel Land is ever free from ice. He considers it an island, possibly one of a chain passing through the polar regions to Greenland. The Corwin coasted the northern shore of Alaska as far as Point Barrow, the northernmost extremity of United States territory. The Indians who came down to St. Michaels with fur-traders, some of whom are located 2,000 miles from the coast, are described as superior in *physique* to the coast Indians. They are tall, erect, and muscular, with piercing black eyes, courageous, and not as yet addicted to drink. They attack the fierce black bears with knives, deeming it cowardly to shoot them. The canoes, or *kyacks*, used by the Indians of the coast, are remarkably fleet and handsome. The nomadic inhabitants of Point Hope have larger boats, called *oomiaks*, in which they travel. They are made of walrus-hide or seal-skin, drawn over a wooden frame, which is fastened with thongs with slip joints to allow of its giving in a seaway. They are flat-bottomed, about thirty feet long, six wide, and two and a half deep. The men use paddles and the women oars. The dogs follow along the beach, and are sometimes harnessed to the boat in a head wind. The Esquimaux of Alaska are very different in appearance from those of Labrador, being a remarkably tall and muscular people. This is due, in the opinion of Captain Hooper, to intermarriage with the athletic Indians of the interior. They have low, narrow foreheads, high cheek-bones, and large mouths with very thick lips. Their coarse black hair is cropped short on the top of the head. The men wear in holes bored in the lower lip on each side of the mouth pieces of polished stone, glass, or ivory, round, square, or oblong in shape, three quarters of an inch to two inches in diameter and one eighth to one half inch thick. The women do most of the work. Their infants are carried under their seal-skin tunics on their backs. The parents care for their children tenderly. Their marriages are not prolific. When a wife is barren the husband often brings a second one into the house. They are a good-natured people, always laughing. They call themselves Inuits. The seal is their main support. The flesh and fat of this animal is their chief food; its skin is the material of their clothing, their tents, and their boats; they also light and warm themselves in winter with its oil, and make fish and bird nets of thongs cut from its hide. They catch salmon and other fish in seines and gill-nets, and hunt the white whale, driving it into shoal water in their swift canoes, where it is speedily dispatched with flint spears. They also hunt the bowhead whale. They throw into the whale spears about six feet long with heads of flint or ivory tipped with iron. To these are fastened by thongs inflated seal-skin bags which prevent the whale from escaping by diving. They stalk the seal with the rifle in the spring and fall, and show great skill and patience in hunting the wary animal. They

eat whale and seal meat raw, and sometimes quite putrid. They use no seasoning, and can not bear the taste of salt. All of them smoke—men, women, and children. They make their own pipes, the stems of two pieces of wood wound with sinews of whalebone, the small bowls of different metals combined, very skillfully worked. Their superstitious belief in shamanism is so strong that the medicine-men deceive them with the most transparent tricks. They believe also in witchcraft. Blood-revenge is practiced, but murders are rare. The avenger may wait many years before striking the blow, which he usually delivers secretly and without exposing himself to danger. Aside from this custom they have no laws or punishments. When not in drink they are very kind-hearted, and in the opinion of Captain Hooper could be easily civilized.

Whales are found everywhere in this ocean, entering as soon as the ice breaks up and remaining until the sea closes again. They are said by the natives to be most numerous after the departure of the whaling fleet. They are most frequently found in the vicinity of the ice, and the whalers watch for them in the wake of the ice-pack. The season is reported to have been remarkably successful, though the season before very few whales were killed in these waters; their average size this year was 20 per cent. greater than usual. The whale called the bowhead, a variety of *Balena mysticeta*, is the only common kind. The finback and California gray whales are rare, as is also the grampus. The *Beluga catadon*, or white whale, frequents the mouths of rivers, and particularly Kotzebue Sound. The walrus enters the Arctic Ocean in the spring from Behring Sea, and returns when the ice closes the ocean. They collect in large numbers on the floes, not venturing on the main pack for fear of the polar bear. Seals are found in all parts of the Arctic Ocean. The common hair-seal, the *Phoca vitulina*, and the large hair-seal, probably identical with the *Phoca Greenlandica*, are abundant; the leopard-seal is equally well distributed, but not common. Examples of an unknown variety, small and dark-colored, with a slender body and pointed head, were observed from the Corwin. The Seal Islands abound more than ever before with seals, and the beaches are swarming with their young. The party killed several polar bears ranging from 900 to 2,000 pounds in weight. Reindeer are usually most numerous between Point Belcher and Point Barrow, but are very migratory. Moose, though very common inland, do not visit the coast. The ibex is plentiful in the hills, but can seldom be killed. Muskrats and squirrels are very abundant. Among the birds which swarm on the islands and along shore the commonest were white gulls, and gulls with black-tipped wings, crested auks, lesser auks, two varieties of puffins, eider-ducks, murr, white owls, robber-birds, tern, and ravens, the latter being found all along the coast. Pigeon guillemots, spring-

tail ducks, old squaws, two varieties of snipe, plover, sparrows, and a small bird called the bowhead bird by the whalers, were also met with, and many smaller birds. The only valuable fish is the salmon, which is smaller than the salmon of lower latitudes, but is of excellent flavor.

No icebergs, such as are found in the Atlantic near Greenland, are found in the Arctic Ocean. The highest ice observed did not rise more than fifty feet above the water. The main pack averages ten to fifteen feet in height, with hummocks twenty or thirty feet high. Ice does not form in the water in a thicker sheet than eighteen feet. The deepest formation in a single winter is nine and a half feet. The pack-ice formed by many sheets crushed together and piled upon each other, is one hundred to two hundred feet in thickness. Drift-ice skirts the pack in summer, sometimes floating fifteen or twenty miles away when the wind blows off the pack. Large rifts open at times in the pack, which may be followed many miles; but it is dangerous to enter these leads, or even to approach the pack, as long tongues of ice suddenly shoot out from the pack, and unless very alert and watchful the navigators may be locked in the ice. Since 1871 fifty-four whaling-vessels have been lost in this part of the Arctic Ocean, thirty-three of which have been caught in the ice-pack. The pack has a slow but constant drift toward the northeast. Arctic ice is of four colors: snow-ice newly formed is white and opaque; ice formed in muddy and shallow waters is brownish gray, opaque, and often covered with sand and earth; ice containing salt is greenish; and clear ice which contains none is blue. Above the ice the air is colored yellow with reflected light. This appearance, called the ice-blink, can be seen thirty or forty miles, and before the ice itself is in sight. Drift-ice can be distinguished at a distance from the solid pack by dark lines over the openings. The breaking up of the ice commences in the region of Behring Strait in May or June. By the first of September new ice begins to form, though the general closing does not occur until after the beginning of October. The perennial mass, called the barrier, varies a little in position from year to year, but generally may be looked for near Icy Cape during September. It extends westerly as far as Herald Shoal, where it takes a northwesterly direction to the vicinity of Herald Island. Here, in August and September, a lane of open water is generally found extending to the northward. This space is at first filled with broken ice. In the Corwin's second attempt to reach the island they steamed up this lane over fifty miles, with the pack in sight from the mast-head on both sides. The last twenty miles they were compelled to force a way through drift-ice. The icy barrier extends several degrees farther south between Point Barrow and Wrangel Land than in any other part of the Arctic regions.

A tentative excursion into high latitudes in the European Polar Sea by the route of the Austrian Expedition, which was strongly favored by Dr. Petermann, was made by Leigh Smith in a little steamer specially built for Arctic cruising. He sailed in his small cutter, the *Eire*, from Peterhead, Scotland, on June 19th, and after spending several days on Jan Mayen, seal-hunting, ran over to the east coast of Greenland, which he sighted for one hundred miles north of Cape Bismarck, the farthest point of the German Expedition, and then steered eastward, and finding King Karl Land, like Greenland, inaccessible on account of ice, turned to Franz Joseph Land, which came in sight August 14th. He reached the coast in latitude $80^{\circ} 5'$, longitude $45^{\circ} 50'$ east, found a safe harbor between two islands in latitude $80^{\circ} 5' 25''$, longitude $48^{\circ} 50'$ east, and explored the islands and the fiords of the coast, which run up into the land in northerly and northwesterly directions. Many large and small islands were encountered, all covered with glaciers and snow-fields except on their southern exposures, which were bluff headlands covered with vegetation. Several Arctic flowers were collected. He followed the coast in these excursions eighty or one hundred miles farther westward than the Austrian expedition had gone. His farthest point was $80^{\circ} 20'$ north latitude, 40° east longitude. He saw the coast stretching to the northwest for about forty miles farther, but was barred from following it by the ice. He visited on the east Cape Tegethoff and Wilkzek Island, but his advance to the east and northeast was blocked by solid ice-masses stretching across between Hall, Salm, and Lamont Islands. He sighted King Karl Land, which was closed with ice in this direction also, on his return by way of Hammerfest, reaching this port September 27th. Both in his outward and return voyage he found Barents Sea free of ice.

The Dutch schooner *William Barents*, commanded by Captain Van Broekhuysen, in cruising around the coast of Nova Zembla ran upon a reef and was disabled. Thermometric and magnetic observations were made, soundings taken, zoölogical specimens collected, and the location and condition of the ice profitably studied; a barrier of ice stretched from Ice Cape across Kara Sea, which seemed to be filled with ice by the east wind, while to the north of Nova Zembla there was none to be seen.

GEORGIA. The enterprising and commercial spirit which has sprung up in Georgia since the war has enabled its thrifty citizens to develop the great natural advantages of their State so rapidly and extensively as to give it a more decided preëminence than it asserted in the days of slavery, and to earn it the name of the Empire State of the South. Governor Colquitt, in his biennial message, gives the following cheerful description of its present material and social condition: "There is everywhere, in the broad limits of the Commonwealth, progress,

order, thrift, and contentment. All industries have thrived. All classes rejoice in an improved condition, and in the hopefulness of a bright future. Our resources have been multiplied and developed. The different sections of the State have grown in wealth and population. Our credit maintains its exalted standard; our public debt is diminishing; crime is steadily on the decrease. It is a matter of congratulation to all true patriots to observe the rapid progress of the State in moral and material development."

The first session of the General Assembly opened November 3d, and closed December 2d. James S. Boynton was elected President of the Senate, and A. O. Bacon Speaker of the House. The election of a United States Senator, and of Judges of the Supreme and Superior Courts, and Solicitors-General, was the first business which occupied their attention. There was not time to mature many general laws; but much laborious committee-work was accomplished, and a mass of legislation was got under way to be attended to in the next session. The Legislature expected to receive the census returns in time to redistrict the State, but were disappointed. For this and other reasons it was thought necessary to hold an extra session to commence on the second Wednesday in July, 1881. A penal act was passed regarding the buying or selling of votes. An amendment was passed making an order of foreclosure not necessary for the postponement of a sale of mortgaged personal property. An act conferring additional powers on tax-collectors, making them *ex-officio* sheriffs in certain cases, etc., was repealed. An act was passed authorizing the Governor to furnish arms and accoutrements to colleges organized as branches of the State University. The question of appointing a joint committee to inquire into the constitutionality of repealing the convict-lease system was postponed to the July session. Some important railroad bills were passed. One of these was to charter the Atlanta and Alabama Railroad, the incorporators being A. Anstell, S. M. Inman, and other prominent Georgian capitalists. The road is to be built from Atlanta to some point on the Alabama line, in the direction of the coal-fields. The capital stock is to be \$2,000,000, with the privilege of raising it to \$5,000,000. The Rome and Chattanooga Railroad was incorporated, with the privilege of raising a capital of not more than \$1,500,000. This road, if completed, will be an important connecting link in the Southern network. The only other charter granted was for the Buena Vista Railroad, with a capital stock of \$500,000. This road will develop a tract of country which stands in much need of means of transportation.

Only one bill passed by the Legislature was vetoed by the Governor. This was the charter for a bank in Savannah, in which the stockholders were made liable only for the amount of the unpaid stock, which the Governor deemed

contrary to public policy, as they could contract unlimited liabilities for deposits.

In 1874 an act was passed by the Legislature taxing the property of all the railroads in the State as other property of the citizens is taxable. Many of these corporations claimed that they were entitled by their charters to a prescribed limited rate of taxation, and that it was a violation of the contract made with the State to impose a higher rate. The rate prescribed in their charters was generally one half of one per cent. upon their net income. The object of the act was to test the right of the State to tax the railroads beyond the limits prescribed, and a method was defined by that act, by which the railroads could avail themselves of all the privileges conferred by their charters. Suits were instituted against most of the railroad companies during the term of Governor Smith; and while taxes were collected against those roads which had no chartered exemptions, yet in most of the leading lines of this State the decisions of both the State courts and the Supreme Court of the United States were adverse to the right of the State to recover any taxes beyond its chartered rate. The *feri facias* issued were generally for taxes due for the years 1874 and 1875. The Legislature, by reenacting the act of 1874, in an amended form, continued to impose the tax, and made it the duty of the Executive to enforce it, if possible, under the law. The Attorney-General suggested that, if new suits were instituted against the railroads, a decision might be obtained from the courts, either declaring these exemptions unconstitutional, or else materially modifying them. General Toombs, who had been employed in the suits arising under the *feri facias* for the years 1874 and 1875, was employed to aid the Attorney-General in reopening this litigation. The Comptroller-General, whose duty it was under the law to issue the *feri facias*, declined to issue the writ without an Executive order requiring him to do so. This order was accordingly given by the Governor, and the *feri facias* issued. The result of that reopened litigation was to obtain a decision from the court declaring the tax constitutional; so that from this source, apparently closed, there has been collected for the State the sum of \$216,683.27. These collections embrace taxes from the railroads for the years 1874 and 1875, as well as subsequent years, with interest from the time when due. A principle has been established which will result in bringing a large amount of revenue into the State Treasury annually from this source. The Attorney-General recommends some legislation in connection with the tax on certain roads, and that, in order to secure a proper return of the taxable property of railroads, the duty of determining what taxes the roads should pay should be devolved by the Legislature on the Railroad Commission instead of the Comptroller-General.

A very important suit has been instituted,

which involves the constitutionality of the act creating the Railroad Commission. A bill was filed by M. K. Jessup, surviving trustee of the bondholders, for the old Atlantic and Gulf Railroad, in the United States court, to restrain the Commissioners from executing the act to regulate tariffs, which bill Judge Bradley dismissed. A second bill was filed by one of the stockholders of the Savannah, Florida and Western Railroad Company, which succeeded the old Atlantic and Gulf Railroad Company, and a preliminary injunction was granted pending the decision.

In conformity with a resolution of the General Assembly, *feri facias* were issued against John W. Renfro, Treasurer of the State, and his sureties, for certain moneys received as interest on the public funds. Bills were filed in these cases by the defendants, and injunctions granted, and the cases are pending. The *feri facias* are for the amount of nearly \$26,000. The amount of interest which the principal and his sureties are sued for is over \$20,000. It is contended by the State that the Treasurer illegally appropriated to his own use interest obtained from banks in payment for the use of the State's moneys which were deposited in them, in violation of an act which forbids the Treasurer "to use himself, or to permit to be used, the funds of the State." Six contracts were made with the banking companies by the Treasurer, each of which, and not each act of receiving interest, was construed by the Attorney-General to constitute a violation of the law, to which a penalty of \$500 is attached. The question will, however, be submitted to the courts, it is said, whether or not each separate act of receiving interest is finable, in which case the penalties will amount to \$40,000.

In the case of the State against John Jones, Treasurer, and John T. Grant and C. A. Nutting, sureties, a judgment was obtained for \$96,000, dated May 23, 1879. A motion was made to set aside the judgment. The suit was instituted during the term of Governor Smith, by the Attorney-General, N. J. Hammond; and Governor Smith employed to assist him General R. Toombs, McCay & Trippe, Willis A. Hawkins, and William T. Newman. All of these lawyers advised the acceptance of \$35,000 offered in compromise by Mr. Grant. The tax-books showed his available property to be but little in excess of this sum. Mr. Grant urged, and some of the State's counsel conceded, that he gave the bond to serve a temporary purpose, deemed important for the public service, and thought that the new bond given was legally a substitute for his bond. This constituted a strong equitable reason for accepting the compromise. Governor Colquitt under these circumstances acted upon the recommendation of the counsel for the State, and accepted the \$35,000 as the best thing for the State's interest. This offer was accepted pending the motion to set aside the judgment. The Supreme Court afterward decided in favor of

the State, but the decision, the Governor states, would not have increased the chances of a larger recovery.

At the close of the fiscal year ending September 30, 1878, the first of Governor Colquitt's administration, there was a balance in the Treasury of \$295,789. The receipts of the year ending September 30, 1879, were \$1,847,790, and the disbursements \$1,212,671, leaving a balance at the close of the year of \$930,908. During the fiscal year 1880 the receipts amounted to \$4,589,015, making the total sum in the Treasury \$5,519,924; and the disbursements were \$4,833,683; leaving a cash balance in the Treasury on the 30th of September, 1880, of \$686,240. The issuance of \$100,000 of four per cent. bonds to meet bonds issued in 1856, which was authorized by an act approved December 14, 1878, will not be required if the balance in the Treasury is applied for that purpose. The remaining \$100,000 of \$400,000 of four per cents. can also be redeemed. \$2,298,000 of the year's disbursements were applied to the funding of seven per cent. endorsed bonds of the Macon and Brunswick, the North and South, and the Memphis Branch Railroads in six per cent. State bonds, in pursuance of an act passed in 1877. The Governor issued an order on April 14th directing the Treasurer, J. W. Renfro, to apply \$250,000 surplus in the Treasury, over the requirements to meet appropriations and interest and the maturing debts, to the purchase of outstanding four per cent. or other bonds, not due, at par.

The Macon and Brunswick Railroad, which was seized by the State on July 2, 1873, on account of the non-payment of interest, was sold at auction January 13, 1880. From September 30, 1878, to February 29, 1880, the date on which it was handed over to the purchasers, the earnings were \$638,731, and the expenses \$496,246, making the net earnings for the seventeen months \$142,484. Since the foreclosure the State has discharged old debts resting upon the road to an amount exceeding \$123,000. The act under which the road was sold, approved September 3, 1879, authorized the lease of the road to the highest bidder, with the privilege of purchase for \$1,125,000. An auction was held September 16, 1879; but the bidding was going on at the legal hour of closing, and such confusion prevailed that the highest bidder could not be recognized, while at the same time the true value of the lease had not been offered, the highest yearly rental bid having been \$176,000. The sale was, therefore, postponed to November 18th, on which date it was knocked down to James M. Couper, acting also for Messrs. Hazlehurst, Lane, and Johnston, for the sum of \$194,000 rent. They demanded the immediate sale and transfer of the road; but, not being able to obtain from the Governor a warranty deed, they, after some delay, accepted a deed without an unconditional warranty covenant, and, upon the payment of \$250,000 in State four per cent.

bonds, received the title to the road. One of the conditions of the sale was the extension of the road from Macon to Atlanta within twelve months. The Governor was requested by the Legislature in a resolution to investigate the validity of some coupons of the first-mortgage guaranteed bonds of this road which fell due before 1873. These coupons are not valid claims against the State under the present law, the Governor reports, for the reason which Governor Smith gave when he ordered that the \$540,000 of bonds authorized in 1875 for the payment of back interest on railroad bonds should not be applied to any interest on the bonds of this road which were overdue before the seizure. The grounds on which the previous interest is declared to have been forfeited lie in the terms of the act of 1866 authorizing the endorsement of the bonds, which requires the Governor to take possession of the road when the interest on bonds endorsed by the State is not paid when due, and apply the earnings to the payment of the guaranteed interest. The act only authorized the payment by the State of the defaulted interest for the non-payment of which the road is seized. This construction of the act is demanded by the principles of equity, because, if the notice of default, such as is required before the road can be seized, is not duly given, the State loses the opportunity to protect its own interests.

The valuation of the taxable property of the State, as given in the report of Comptroller-General Wright, is \$13,840,707 greater in 1880 than the tax valuation of 1879. The counties possessing the greatest amount of taxable wealth are Fulton, assessed for \$20,303,525, of which \$11,647,125 is in city and town property; Chatham, \$17,672,222, of which \$9,327,509 is urban property; Richmond, \$15,328,452, of which the town property makes \$7,001,650. The amount of property returned by colored tax-payers was \$5,764,293, an increase of \$581,895 over the returns of 1879. The aggregate amounts of the different species of taxable property in the State are given in the following table:

DESCRIPTION OF PROPERTY.	Value in 1879.	Value in 1880.
Improved land.....	\$8,629,168	\$6,676,558
Wild land.....	1,607,677	1,749,966
City and town property.....	49,607,286	51,280,730
Building associations.....	202,685	88,474
Bank shares.....	4,667,560	4,761,498
Money and solvent debts.....	26,518,005	29,295,439
Merchandise.....	12,012,755	13,989,109
Shipping and tonnage.....	896,003	579,081
Stocks and bonds.....	4,869,364	5,037,894
Cotton-manufactories (not exempt).....	1,640,000	1,966,845
Iron-works (not exempt).....	295,640	267,790
Mining capital.....	97,580	103,390
Household furniture.....	9,156,440	9,543,026
Watches, jewelry, etc.....	1,073,911	1,112,662
Horses, cattle, etc.....	21,017,634	23,075,764
Plantation and mechanical tools.....	2,971,872	3,206,286
Cotton and corn crops.....	546,940	781,977
Other property.....	3,958,069	4,364,681
Defaulters' property.....	630,376	503,016
Total taxable wealth.....	\$225,093,469	\$238,934,126

The census returns make the total population of Georgia 1,538,983, a gain during the decade of 351,014, or 29½ per cent. The population is divided into 761,152 males and 777,831 females; the white population numbers 814,218, the colored 724,765; the native-born 1,523,673, the foreign-born 10,310. In the returns of the colored population are included 93 Indians and half-breeds, one albino, and 17 Chinese. The census of the African race has increased since 1870 from 545,142 to 724,654, or over 33 per cent. The increase of the colored population between 1840 and 1850 was 25 per cent.; between 1850 and 1860 19 per cent. It is suspected that the large increase of 33 per cent. in the last decade is an excessive estimate, as the returns of the census of 1870, which showed an increase of only 5½ per cent. between 1860 and 1870, must have been defective. The same ratios of increase are reported in the other Southern States, and it seems probable that the true rate of increase in the colored population is not greater than that of the whites, or about 28 per cent. in all the States largely peopled by the black race. The population of Atlanta is 32,825, against 21,789 in 1870; of Savannah, 30,747, against 28,235; of Macon, 12,695, against 10,810; of Columbus, 10,132, against 7,401.

The attendance in the State free schools in 1879 was about 224,000, an increase of 14,000 over the attendance of 1878. The total number of children of school age was 433,444. The growth of the free schools since the inauguration of the system in 1871 has been steady and rapid, as shown in the following table giving the attendance in the white and colored schools in each year:

YEAR.	White pupils.	Colored pupils.	Total attendance.
1871.....	42,914	6,664	49,578
1873.....	63,922	19,755	83,677
1874.....	93,167	42,374	135,541
1875.....	105,990	50,333	156,324
1876.....	121,418	57,987	179,405
1877.....	128,296	62,330	190,626
1878.....	137,217	72,655	209,872
1879.....	147,192	79,435	226,627

The average attendance in 1879 was 132,000. The net amount appropriated for the support of the free schools in 1879 was \$155,264; in 1880, \$185,789. The increase in 1880 was due to the receipt of about \$35,000, the yield of the new liquor-tax for a half-year. The poll-tax for the support of schools assessed in the counties is separate from this sum. The poll-tax collected in 1879 amounted to \$160,484. About \$150,000 additional is raised in certain cities and counties under local laws. The estimated revenue available for the public schools in 1880 is \$376,273 from the State, or, with the local levies, \$526,000 altogether. The schools have been maintained with \$300,000 for from a month and a half to three months in the year; but a more liberal support is demanded in view of the growth and increasing popularity of the free schools. The

appropriation from the State in 1879, including the poll-tax, rental of the State road, and other sources of revenue, amounted to \$315,748, being 73 cents per capita of the total school population, \$1.39 per capita of the enrollment, and \$2.39 per head of the average attendance. The State University at Athens was attended in 1879 by 149 students, and in 1880 by 152. Of these, 82 were in the Literary College, 63 in the College of Agriculture and the Mechanical Arts, and seven in the Law School. The available fund in 1880 was \$40,035, including a balance from the preceding year of \$7,276. The amount derived from tuition fees was \$2,227. The expenditures were \$32,138. In the branch college at Dahlonega were instructed 245 males and 80 females—together 325 students; in that at Thomasville 180 students, all males; and in the one at Milledgeville 165 males and 186 females—together 351. In these three colleges and the one at Cuthbert the total number instructed was 1,024; adding the 112 students in the medical department at Augusta, the total number of pupils instructed in the State high-schools was 1,288. The branch colleges which perform so conspicuous a part in the educational work are all of them of very recent establishment. The North Georgia College commissioned 79 teachers at the end of the school year in 1879, and from these in the following autumn 105,000 received instruction. The college at Thomasville, employing four instructors, was first organized in September, 1879. It occupies a school-building which was already standing, and which was presented by the Methodist Church and improved with a sum subscribed by the citizens. The Milledgeville College occupies the old State Capitol. It was organized in January, 1880, and employs ten teachers. The Cuthbert College commenced operations in September, 1879, and has four teachers.

The number of convicts in the penitentiary at the close of the fiscal year 1878 was 1,234. In 1879 and 1880 the number received was 444; discharged, 332; deceased, 80; escaped, 32; pardoned, 42; leaving 1,187 in the penitentiary on October 1, 1880. The number received during the two years was 105 less than during the two years preceding. The death-rate among the convicts has been lessened from 4½, 5½, and 4½ per cent. in the three years preceding 1877 to 3½, 1½, and 2½ per cent. in the three succeeding years. The present convict-lease system was inaugurated under the administration of Governor Smith. Several reforms in the management of the system have been instituted. The leases which were entered into with contractors are for a term of twenty years. The grand juries in the counties where the convict-camps are keep a watch over the manner in which the men are treated and cared for.

The State Lunatic Asylum contained in the year 1879 the average number of 749 patients, the whole number in the asylum during the year having been 951. In 1880 the average

number was 820, and the whole number 1,058. There was a building for colored patients containing 164 new rooms added to the asylum during the year, and an additional building is demanded, as the present accommodations are insufficient. The cost of maintaining the insane was 35-64 cents per capita per diem in 1880, and 32-9 cents in 1879, against 34-35 cents in 1878, and 36-33 cents in 1877. There was a greater number of patients restored to health in 1880 than in any previous year.

In the Deaf and Dumb Institute there were 67 pupils in 1879, and 64 in 1880. The expenses were \$15,641 in 1879, and \$14,616 in 1880. The buildings are too small for the number of pupils, and have no accommodations for the reception of colored deaf-mutes, of whom 15 have applied for admission. The appropriations made by Georgia for the support and instruction of the deaf and dumb are lower than in any other State. In the Academy for the Blind, which has been established twenty-eight years, 66 pupils were in attendance in 1879, the average attendance having been 58. The expenses were \$9,624; the cost per capita \$166.

The first semi-annual report of the Railroad Commissioners was made to the Governor on the 1st of May. The commission is empowered by the act to fix just and reasonable rates for freight and passenger transportation, which shall be published, and must not be avoided by secret rates or rebates. The rates on freight which is carried from or to places beyond the boundaries of the State are not subject to the regulation of the Commissioners, except that they must not exceed the uniform tariffs established by the commission. A standard tariff for freight was adopted, which went into operation on the 1st of May. It is a maximum rate which can not be exceeded by any road, but which was lowered for different roads with the acquiescence of the commission. The maximum rate for passengers was placed at four cents a mile, but license is given to any railroad to charge as much less as it wishes, to special classes of people, or to issue thousand-mile or excursion tickets at reduced rates. In December a further reduction was made in passenger rates, which were fixed for the principal railroad at three cents per mile, while some were permitted to charge four, and a few five cents. The law empowers the commission to revise its action at any time. The commission was organized November 10, 1879, and is composed of ex-Governor J. M. Smith, Major Campbell Wallace, and Colonel Samuel Barnett. Concerning the latitude of their powers the Commissioners in their report remark as follows:

The regulations established by the commission under the law are enforced by ample penalties to the State and damages to individuals—so stringent that the board feels a deep sense of responsibility and anxiety for the just exercise of powers so large and enforced by such penalties. In the report of the Wisconsin Commissioner we observe that his powers are felt to

be inadequate to his duties; he is to make brick without straw; quite the reverse in many particulars in our case. There is no sense of weakness, but rather of anxiety in the use of large powers—positive, not merely negative; which, like thumb-screws, take a powerful hold, so that even litigation to test them is dangerous. For this reason our sense of responsibility has often been oppressive.

The Commissioner of Agriculture remarks a gratifying advance in the agricultural prosperity of the State, improvements in home comforts, on the farms, the general introduction of improved implements and machinery, and improved methods of culture. Steam-power has been largely utilized on the farms, especially in running cotton-gins. An increased demand has been made for improved seeds. Thoroughbred cattle and sheep have been bought. The dairying interest has received a decided impetus. Local agricultural organizations have been instituted in greater numbers, and there seems to be a general and practical interest taken by the farmers in the department of agriculture. The department has issued 148,000 copies of crop reports and circulars, and is publishing a manual on cattle. From the inspection of fertilizers, of which 119,583 tons, chiefly ammoniated superphosphates, of 182 different brands, were inspected in the season of 1879-'80, there have been \$59,791 received in fees, \$10,353 of which were consumed in the cost of inspection. The present statute concerning the analysis and inspection of artificial manures needs revision. The Commissioner proposes that the revenue derived from this source be applied to founding an agricultural college. The Superintendent of Fisheries stocked the Oconee, Ocmulgee, and Chattahoochee Rivers with shad in June, and has distributed German carp in small numbers for the stocking of ponds.

No appropriation was made by the last General Assembly for the payment of the State Geologist, and the field-work was suspended. The Geologist continued to some extent his office labors, however. He reports that the mineral districts are attracting a greater degree of attention than before. During the five years of the survey fifty gold-mills with nearly 500 stamps, representing nearly \$500,000 of capital, attracted from outside, were set in operation. New mining industries which have sprung up during the year are the working of manganese-mines in Bartow County, of brown hematite iron deposits in Dade County, and copper mining in Haralson County. Other mineral interests of recent development are the manufacture of fertilizers from the potash deposits of Houston and Twiggs Counties, the shipping of soapstone from Murray and Fannin Counties, and of asbestos, barite, mica, and rutile from other parts of the State. Iron has been found in 71 counties in the State, granite in 45, and gold in 61, as shown in the collections of specimens made by the geological survey. There are specimens also of valuable limestone from 48 counties, of quartz from 46, of soapstone from

22, of asbestos from 28, of copper-ore from 27, of corundum from 9, of kaolin from 11, of manganese from 15, of marble from 6, of serpentine from 11, and of other minerals of merchantable character. The survey has found 600 streams in the State affording water-power, ranging from 10 to 300 horse-power usually, though some of them are capable of giving as high as 30,000 horse-power.

The yield of gold bullion in the State is stated by Dr. Little, the State Geologist, to amount at present to over \$1,000,000 per annum. There are said to be very rich veins of easily crushed quartz in the Georgia hills, and Dr. Little believes that the gold-mines of the State will prove as productive as those of California at present. In the gold belt in north Georgia only the most primitive machinery has as yet been used, and many easily accessible lodes are left undeveloped for lack of capital. Extraordinary placer deposits have lately been found. The largest nugget but one ever found in the State was met with in the spring in the Nacoochee Valley. It weighed over a pound. Gold dust and nuggets are said to be the common medium of exchange in northern Georgia, every storekeeper having a pair of scales to weigh the gold brought to him for barter. The Chattahoochee and other streams, which are known to contain gold in their beds, have never been worked.

Francis Fontaine was appointed State Commissioner of Land and Immigration under an act approved October 17, 1879. He opened an office in Atlanta and one in New York, and printed circulars and pamphlets containing information on the soil, productions, and climate of the State. Agents have been appointed at the North and in Europe. The Commissioner thinks that the best way to get immigrants for Georgia is to obtain them in Europe and bring them direct by steamship to Savannah. There are now no emoluments attached to his office, and he asks that a salary for himself and a secretary, office-rent, and a fixed sum for printing, etc., be provided.

The area under cotton, reported in the census returns, is 2,579,969 acres, about 18½ per cent. of the total cotton acreage of the country; the crop of 1879-'80 is reported to have been 803,211 bales, less than 14½ per cent. of the total crop of the country. Georgia has the largest acreage of any State devoted to cotton, but its product is exceeded by that of Mississippi, whose acreage is less than that of either Georgia, Alabama, or Texas.

An act was passed by the last Legislature, pursuant to a clause in the new State Constitution, for supplying soldiers who had lost an arm or a leg in the Confederate service with artificial limbs during their lives at the expense of the State. The sum of \$69,870 has been paid out of the Treasury for this purpose to 960 maimed veterans of the Southern army. By means of skillful forgeries a small portion of the fund was fraudulently ob-

tained, but the criminal parties have been arrested, and one of them convicted.

A revision of the law in the State code relating to the electoral vote for President was discovered to be necessary, as it was found after the Presidential election that a discrepancy exists between the code and the United States statute which rendered the electoral vote of Georgia in 1880 legally void. While the law of Congress requires the electoral college in each State to cast its vote on the first Wednesday in December, the Georgia code directs the Governor to summon the electors to meet at the capital on the first Monday in December to cast their vote on the Wednesday following. When, therefore, the first day of the month, as in 1880, or the second, should happen to be a Wednesday, the electoral vote can not be taken on the legal day under the code.

A murder of exceptionally heinous character occurred in Jonesboro, Clayton County, on the 29th of July, in which the victims were a family of negroes and the perpetrators a band of masked white men. The leader of the assassins was identified as a man who had been prosecuted and fined for whipping the negro whose family was murdered. As there were threats made of rescuing the suspected parties who were arrested, the Governor sent a company of militia, going himself to Jonesboro, and had the prisoners taken to Atlanta.

The squads of revenue officers who, in accordance with the vigorous policy adopted by Commissioner Raum for the suppression of illicit distilling, scoured the mountains of north Georgia for that purpose, were frequently assaulted and resisted in the execution of their duty. Special agents were sent out by Commissioner Raum to investigate the state of affairs reported by the officers, and a State Commissioner, Henry L. Carrow, was appointed to participate in the inquiry, who, together with District-Attorney Farrow and Marshal Fitzsimons, accompanied the Government agents. Later a disposition was manifested on the part of those who had been engaged in the unlawful business to abandon the practice, and men against whom warrants were issued voluntarily came and surrendered themselves to the United States officers. The Georgia press and the representatives of the State in Congress indignantly denied the reports of a state of lawlessness in the northern counties, and a concerted resistance to the enforcement of the laws on the part of the citizens.

A revenue *posse* was fired upon by a gang of five illicit distillers near Red Oak, Campbell County, and returned the fire, killing one and wounding another of the "moonshiners"; the fatal encounter occurred on the night of June 23d. The deputies were arrested on a justice's warrant; and, on application to Judge Woods of the United States Circuit Court, he took cognizance of the case and discharged the prisoners after an examination. One of the band who was in advance was arrested in the road,

and the others then hid in the bushes and fired, and upon being dislodged sought another ambush and fired a second volley.

A resolution was agreed to by the State Senate, on one of the last days of the session, by which the Senators and Representatives in Congress are instructed to endeavor to secure an enactment exempting from revenue taxation all distilled spirits made by farmers on their own lands, from grain or other material of their own production, not to exceed 1,000 gallons per annum, to the same extent to which brandy manufactured from apples, peaches, or grapes is exempted, and allowing its manufacture under the provisions and restrictions applying to brandy.

Arrangements are being made for an exhibition of appliances, methods, and products of the culture and the manufacture of cotton, to be held in Atlanta, in the months of September, October, and November, 1881. The scheme was first proposed by Edward Atkinson, who made a speech before the people of Atlanta, in which he criticised the institution of slavery and its social and material consequences very bluntly. The kindly and interested seriousness with which the leading Georgians and the citizens in general received the strictures of a former abolitionist and approved the advice of a practical New England business man was remarked throughout the country. J. W. Ryckman, of Philadelphia, afterward visited Atlanta in behalf of the project, and an association was organized under the name of the International Cotton Exposition Company. The capital stock was limited to \$200,000, and a quarter of that amount was at once subscribed in the State. Senator Joseph E. Brown was chosen President, Samuel M. Inman, Treasurer, and J. W. Ryckman, Secretary. The need of more careful and thorough methods of preparing cotton for the market is felt by manufacturers, and in this planters are naturally interested, as well as in improved methods of culture, which, it is thought, might treble the yield from the same area. The Southerners are very desirous to see the English and American processes of manufacture exhibited, on account of the young industry which has sprung up along their water-courses, engaged in spinning coarse yarns and weaving the heavier fabrics. They think that the climatic conditions of the South are more favorable for cotton manufacture than those of New England, while the saving in freight, and the superior condition of the cotton before it is compressed into tight bales, give them great commercial advantages.

Active efforts are being made by the attorney of the holders of the repudiated bonds of the Brunswick and Albany Railroad to compel the State to acknowledge its warranty, which was disclaimed by an act of the Legislature, passed in 1872, and by a clause in the Constitution of 1877 forbidding the payment of these bonds. The bonds amount to nearly \$3,000,000, and are held principally in Frankfort-on-the-Rhine.

The attorney for the German bondholders is O. A. Lochrane, of Georgia, who has applied to Congress to submit to the people the question of the annulment of the eleventh amendment to the United States Constitution, which forbids legal process against a State in the suit of private parties. Judge Lochrane hopes to rally to the support of such a measure a strong party of the holders of repudiated Southern bonds and their sympathizers, and to bring pressure enough to bear upon Congress, and excite enough popular interest, to secure the repeal of the amendment, the effect of which would be to bring the action of the repudiating States into the United States courts for review, to be tested by the ordinary rules of law and equity. The construction of the Brunswick and Albany road was commenced with Northern capital just before the war. About sixty-five miles had been completed, and some 1,400 tons of iron were lying on the wharves at Brunswick, when the ordinance of secession was passed. In the secession Convention a resolution was adopted granting immunity to public works from confiscation. Nevertheless, the property was seized as belonging to alien enemies. At the close of the war the owners made a claim upon the State for the material destroyed, and a compromise was effected by which they were to complete the road, and the State to pay a subsidy of \$15,000 for every mile constructed. This measure was passed in 1869 by a Democratic Legislature. In October, 1871, the railroad was seized by Governor Bullock and placed in the hands of a receiver, being in a bankrupt condition, the President, J. C. Kimball, having no funds to pay the contractors, to whom about \$1,000,000 were owing. Henry Clews, banker, of New York, was the Treasurer and financial agent of the road, and had the bonds of the road, bearing the warranty of the State, which he proceeded to negotiate in Europe. The seal of the State was attested by the British consul in Savannah, and the bonds were purchased by German investors on the strength of the State's guarantee. Among these bonds were a number predicated upon a section of the road not completed. The refusal of the Treasurer to complete the road, and his failure to pay the contract debts, which were distributed among about eight hundred Georgia citizens, and entailed upon them great hardships, exasperated the people. The Legislature appointed the bond committee, in the winter of 1871, to investigate the validity of the bonds sold by Clews & Co., which reported that the company had not conformed to the charter in many respects, and had consequently lost its legal existence; that the bonds had been issued on sections before they had been completed, and were invalid under the authorizing act; and that there was irregularity in the recording of the deed of trust securing the bonds sufficient to vitiate them. The General Assembly passed the act declaring the endorsement of the State null and void on August 16, 1872. The law author-

izing the investigation was published in American, German, and English newspapers. On the 29th of May, at the instance of the Governor and Attorney-General, the State was allowed by an order of the Court to withdraw from the case which it had commenced against the company. Besides the claims of the contractors, that of the first-mortgage bondholders for \$2,844,986 was entered in the complaint by Henry Clews & Co. Upon the withdrawal of the State, the bondholders, who had not been parties to the original bill, being supposed to be protected by the endorsement of the State, now took charge of the case, pressed their first lien, established their claim, and bought in the road under foreclosure for \$530,000, thus shutting out all the claimants on simple contract debts, except those who had been paid by the court on laborers' liens. This course of the bondholders in electing to assert their claim upon the property of the road instead of relying upon the security of the State, which was properly the mortgagee according to the act, and held the deed of trust of the road, and not the bondholders, is held to bar the bondholders from recourse to the State under the law of estoppels, since they prevented the contractors from recovering their debts from the assets of the road, even if the bonds were valid in form and substance. As the publication of the legislative investigation, the withdrawal of the State from litigation, and the passage of the act of repudiation were sufficient advertisement of the intentions of the State before and while the bonds were being sold, the State is considered released in law and in honor from the claims of the bondholders, which were vitiated by frauds and irregularities originally, of which defects the State had given warning in ample time; while, moreover, on the ground of the invalidity of the bonds and their repudiation by the State, the bondholders had stepped in and assumed the mortgage in the place of the State, to the prejudice of other parties. Judge Lochrane claims for his clients that the bonds issued upon the road as far as now completed, \$2,850,000 bonds on one hundred and ninety miles of road, are perfectly valid and regular, while the bonds last issued on sixty miles of road which was never completed were illegal, and should not be paid; that there was never any just reason for repudiating the former, which were issued in compliance with the law, and with the proceeds of which, obtained on the State's guarantee, railroads, which have added to the wealth of the State, were built.

The Democratic Convention for the nomination of State officers and Presidential electors assembled in Augusta on the 4th of August. An excited canvass had preceded the Convention, an organized and determined minority opposing the nomination of Governor Colquitt for the governorship. On the first ballot Colquitt received 209½ votes, lacking only 24½ of the necessary two-thirds vote. The struggle over the governorship prolonged the sessions

of the Convention for seven days, and on the seventh day, after taking thirty-two ballots, it adjourned without making a nomination for Governor in accordance with the two-thirds rule, in the place of which a majority resolution was adopted recommending Alfred H. Colquitt to the votes of the people. N. C. Barnett was nominated for Secretary of State, and William A. Wright for Comptroller. Clifford Anderson was proposed for Attorney-General after two or three ineffectual ballots for other candidates had been taken, and on the next ballot he received the nomination. The State Treasurer, J. W. Renfro, it was announced, would, in consequence of the failure to nominate a candidate for Governor, go before the people as an independent candidate for Treasurer; upon which D. N. Speer was nominated. The minority division of the party settled upon Thomas M. Norwood as the opposition candidate, although his name had not been before the Convention. The opposition to Governor Colquitt was ostensibly based upon his endorsement of the Northeastern Railroad bonds, to which, he asserted, the honor of the State was pledged, and upon other official acts which were held to have been unwise. This opposition was intensified by his appointment of ex-Governor Brown to the vacant senatorship left empty by the resignation of Senator Gordon. General John B. Gordon unexpectedly sent in his resignation on May 15th. To the request of Governor Colquitt that he would recall his resignation or postpone it until the meeting of the Legislature, he refused to accede, and the Governor was obliged to accept it and appoint another Senator for the interim. General Gordon stated, as the principal reason for his action, that he was too poor to support the hospitalities which he felt bound to dispense as a Senator, and was unable in that position to obtain the means of providing to his satisfaction for his family, as he might in private employments. He subsequently accepted the position of attorney to the Louisville and Nashville Railroad. Joseph E. Brown, who was appointed in his stead, had been the earliest of the secessionists to accept the position in which the State was placed by the defeat of the Southern arms, and in inaugurating the movement, in which many of the leading men of the South soon afterward joined, he placed himself outside the pale of his party in 1868, acting and voting with the reconstructionists. His appointment to the senatorship awakened the resentment of the conservative wing of the Democratic party, of which he had constantly been an energetic opponent, and who regarded him with greater hostility than any of their other assailants. Many of the more moderate conservatives regarded Brown as a deserter of his party, half a radical, and altogether ineligible for the senatorship. Senator Brown and Governor Colquitt made common cause in the gubernatorial contest. The conservative Democracy were joined by other factions in opposing the reelection of Colquitt,

and many harsh accusations were brought during the campaign, among others that the retirement of Senator Gordon was the result of a bargain and sale, by which he was given a remunerative employment, and Brown made Senator in return for his promised support of Colquitt. In the preceding election Colquitt had received over 80,000 majority. In this one his majority, though considerably less than those of his associates on the ticket, reached over 54,000. The Legislature upon assembling elected ex-Governor Brown Senator for the unexpired term of Senator Gordon by a handsome majority.

JOSEPH EMERSON BROWN, the new Senator, was born in Pickens County, South Carolina, April 15, 1821. He commenced active life as a lawyer in Canton, Georgia, in 1845. He was elected State Senator in 1849, and a Circuit Judge in 1855. In 1857 he was nominated for the governorship, B. H. Hill, the candidate of the American party, being his opponent, and was elected. He was reelected in 1859, and again in 1861, remaining Governor during the war. He was strongly opposed to the conscript and enforcement acts of the Confederate government, as being contrary to the Jeffersonian principles of Democracy on which the Confederacy was to be founded. When Georgia was invaded by Sherman's army he raised a defensive force of about 10,000, made up of State officers, youths and aged men, and other classes exempt from conscription, and when Jefferson Davis afterward made a requisition upon him for this corps he refused to send them out of the State. Upon being released from the prison in which he was confined by the Union authorities after the war, he resigned the governorship. In 1866 he visited Washington to ascertain the position of affairs, and on his return expressed his views in the famous letter in which he advised the Southerners to accept the situation and comply with the terms of reconstruction, and thus obtain representation in Congress as speedily as possible. He found himself almost alone in his position, and for the time acted with the Republican party. He took part in the Constitutional Convention of 1868, and was appointed by Governor Bullock Chief Justice of the Supreme Court, which place he resigned in 1870. He was chosen President of the Western and Atlantic Railroad Company, President of the Southern Railway and Steamship Association, President of the Dade Coal Company, President of the Atlanta Board of Education, and has been one of the most active promoters of the *post-bellum* development of the material resources of Georgia. He voted for Greeley in 1872, and has acted with the Democratic party ever since.

The results of the election gave Colquitt 118,349 votes for Governor, and Norwood 64,004, making Colquitt's majority 54,345. Clifford Anderson was elected Attorney-General, William A. Wright Comptroller-General, and

N. C. Barnett Secretary of State, by much larger majorities.

A speech made by ex-Governor Brown before the Assembly, in answer to one by the rival candidate, General Lawton, in advocacy of his election to the United States Senate, was accepted both in the North and the South as defining the position of the progressive branch of the Southern Democratic party. In this controversy, Lawton, whose candidature was favored by General Toombs and the conservative wing of the party, called Brown to account for allying himself with the reconstructionists in 1868. Brown showed that the Democratic party in the next Presidential campaign, and ever since, have gone beyond him by professing devotion to the constitutional amendments and reconstruction, which he had merely accepted as the conditions of defeat. He quoted a private letter written by Robert E. Lee, dated April 3, 1867, in which the late commander of the Southern army counseled the same acquiescence in reconstruction and participation in the constitutional conventions which he advised himself. General Lee's opinion, privately expressed to one of his former subordinates, was as follows:

I think there can be no doubt in the minds of those who reflect that conventions must be held in the Southern States under the Sherman bill; that the people are placed in a position where no choice in the matter is left them, and it is the duty of all who may be entitled to vote to attend the polls and endeavor to elect the best available men to represent them and act for the interests of their States. The division of the people into parties is greatly to be reprehended, and ought to be avoided by the willingness on the part of every one to yield minor points, in order to secure those which are essential to the general welfare. Wisdom dictates that the decision of the Convention should be cheerfully submitted to by the citizens of each State, who should unite in carrying out its decrees in good faith and kind feeling.

His policy, Senator Brown declared, would be to endeavor to obtain the advantages from the General Government for his State which the current theory of the Constitution makes possible—harbor and river improvements, encouragement of agriculture and manufactures, etc.; to cultivate friendly relations with the Republican Administration, and to solicit the appointment of honest and capable colored Georgians to Federal offices where Democrats are not acceptable; and to advocate a national public-school fund to be derived from the sales of public lands, and to be apportioned among the States in proportion to the extent of illiteracy, a plan which he thought the wealthier and better educated commonwealths of the North would not grudge for the improvement of the South, which found itself hampered in its efforts for progress by the mass of ignorant colored citizens, who had been enfranchised as a result of the war. The constitutional amendments and the other results of the war must be accepted finally, and the Democratic party of the South must turn its back upon the Bourbons and reject the disaffected sentiments of

the former slaveholding aristocracy, and look forward to the building up of a prosperous South under the new conditions, seeking national and local advancement hand in hand with the other States, and fostering a general and superior education, such as that of New England, which gives its ideas their present ascendancy. The negroes must be assured absolute civil and political equality, while social equality must be left, as it is elsewhere, to itself.

GERMANY, an empire in Europe, reestablished January 18, 1871. The Emperor, William I, was born March 22, 1797, and was married June 11, 1829, to Augusta, daughter of the Grand Duke Charles Frederick of Saxe-Weimar. The heir-apparent, Frederick William, born October 18, 1831, has the official titles of Crown Prince of the German Empire and Crown Prince of Prussia. He was married January 25, 1858, to Victoria, Princess Royal of Great Britain and Ireland, born November 21, 1840, and has six children, viz.: William, born 1859, married on February 27,

1881, to Augusta Victoria, Princess of Schleswig-Holstein, born 1858; Henry, born 1862; Charlotte, born 1860, married in 1878 to Bernhard, hereditary prince of Saxe-Weimar; Victoria, born 1866; Sophia, born 1870; and Margareta, born 1872. One son, Waldemar, born in 1868, died March 27, 1879. Imperial Chancellor (*Reichskanzler*), Otto, Prince von Bismarck-Schönhausen.

The German Empire consists at present of twenty-six states, of which four are kingdoms, six grand duchies, five duchies, seven principalities, three free cities, and one, Alsace-Lorraine, an imperial province (*Reichsland*). The area of the German Empire in 1880 was 540,477 square kilometres, or 208,687 English square miles. The following table exhibits all the states of the German Empire, the area, the population according to the census of 1875, the number of representatives of every German state in the Federal Council, and the number of deputies who represent each state in the Reichstag:

STATES.		Area in square kilometres.	Population in 1875.	Votes in Federal Council.	Deputies to the Reichstag.
Grand Duchies. Kingdoms.	1. Prussia (including Lauenburg).....	348,245.83	25,742,404	17	236
	2. Bavaria.....	75,863.49	5,022,390	6	48
	3. Saxony.....	14,992.94	2,760,586	4	23
	4. Württemberg.....	19,503.69	1,881,505	4	17
Duchies.	5. Baden.....	15,083.55	1,507,179	3	14
	6. Hesse.....	7,680.92	884,218	3	9
	7. Mecklenburg-Schwerin.....	13,303.75	553,785	2	6
	8. Saxe-Weimar.....	3,593.24	292,968	1	8
Principalities.	9. Oldenburg.....	2,929.50	319,814	1	8
	10. Mecklenburg-Strelitz.....	6,413.99	95,673	1	1
	11. Brunswick.....	3,690.43	327,493	2	3
	12. Saxe-Meiningen.....	2,468.41	194,494	1	2
Free cities.	13. Saxe-Altenburg.....	1,321.51	145,844	1	1
	14. Saxe-Coburg-Gotha.....	1,967.74	182,599	1	2
	15. Anhalt.....	2,347.35	213,565	1	2
	16. Schwarzburg-Rudolstadt.....	942.13	76,676	1	1
	17. Schwarzburg-Sondershausen.....	862.11	67,480	1	1
	18. Waldeck.....	1,121.60	54,743	1	1
	19. Reuss-Greiz (elder line).....	316.99	46,935	1	1
	20. Reuss-Schleitz (younger line).....	829.25	92,375	1	1

Total.....		540,477.48	42,727,360	53	397

The Constitution of the Empire bears date April 16, 1871. By its terms all the states of Germany "form an eternal union for the protection of the realm and the care of the welfare of the German people."

The Statistical Bureau of the empire officially estimated the population of the empire for 1876 at 43,073,087, 1877 at 43,657,387, 1878 at 44,210,948. A new census was taken throughout the empire on December 1, 1880. According to a preliminary statement of the result, published in March, 1881, the population of the empire amounted in 1880 to 45,194,172. The following table exhibits all the cities of the empire which, according to the new census, have more than 100,000 inhabitants, and compares their present population with that of 1875:

CITIES.	POPULATION.	
	1875.	1880.
Berlin.....	966,858	1,118,630
Hamburg.....	348,447	410,176
Breslau.....	239,050	272,390
Munich.....	198,829	228,372
Dresden.....	197,295	220,816
Cologne.....	185,371	144,225
Leipsic.....	127,387	148,760
Königsberg.....	122,696	140,689
Stuttgart.....	107,273	117,021
Hanover.....	106,677	122,675
Frankfort-on-the Main.....	103,186	137,600
Bremen.....	102,532	112,114
Dantzic.....	97,931	108,864
Strasburg.....	94,306	106,000

The following table shows the growth of the population of the German Empire within its present limits since 1816:

YEAR.	Population.	Average annual increase.
1816	24,531,396	
1820	26,291,606	1.48 p. c.
1830	29,518,125	0.98 "
1840	32,755,150	1.16 "
1850	35,895,496	0.57 "
1860	37,745,137	0.83 "
1870	40,816,249	0.58 "
1875	42,727,360	0.92 "

The total number of electors inscribed on the lists at the general election of 1878 was 9,124,311, while the number of actual voters was 5,834,843 at the same election.

The following table gives a full exhibit of the governments of the particular states, including the names and titles of all the sovereign princes, their years of birth and accession to the thrones, and the names of the heirs-apparent :

STATES.	Title.	Name.	When born and when succeeded to the government.	Heir-apparent.
Prussia.....	King.....	William I.....	Born 1797, succ. 1861...	Frederick William, son.
Bavaria.....	King.....	Louis II.....	" 1845, " 1864...	Otto, brother.
Saxony.....	King.....	Albert.....	" 1828, " 1873...	George, brother.
Württemberg.....	King.....	Charles.....	" 1828, " 1864...	William, cousin.
Baden.....	Grand Duke.....	Frederick.....	" 1826, " 1856...	Frederick William, son.
Mecklenburg-Schwerin.....	Grand Duke.....	Frederick Francis II.....	" 1823, " 1842...	Frederick Francis, son.
Hesse.....	Grand Duke.....	Louis IV.....	" 1837, " 1877...	Ernest Louis, son.
Oldenburg.....	Grand Duke.....	Peter.....	" 1827, " 1853...	August, son.
Saxe-Weimar.....	Grand Duke.....	Charles Alexander.....	" 1818, " 1853...	Charles August, son.
Mecklenburg-Strelitz.....	Grand Duke.....	Frederick William.....	" 1819, " 1860...	Adolf Frederick, son.
Brunswick.....	Duke.....	William.....	" 1806, " 1831...	Disputed.
Anhalt.....	Duke.....	Frederick.....	" 1831, " 1871...	Leopold, son.
Saxe-Altenburg.....	Duke.....	Ernest.....	" 1826, " 1853...	Maurice, brother.
Saxe-Coburg-Gotha.....	Duke.....	Ernest II.....	" 1818, " 1844...	Prince Alfred, cousin.
Saxe-Meiningen.....	Duke.....	George.....	" 1826, " 1866...	Bernhard, son.
Lippe-Deimold.....	Prince.....	Waldemar.....	" 1824, " 1875...	Hermann, brother.
Reuss (elder line).....	Prince.....	Henry XXII.....	" 1846, " 1859...	Henry XXIV, son.
Reuss (younger line).....	Prince.....	Henry XIV.....	" 1832, " 1867...	Henry XXVII, son.
Schaumburg-Lippe.....	Prince.....	Adolf.....	" 1817, " 1860...	George, son.
Schwarzburg-Rudolstadt.....	Prince.....	George.....	" 1838, " 1859...	Günther, second cousin.
Schwarzburg-Sondershausen.....	Prince.....	Charles.....	" 1830, " 1880...	Leopold, brother.
Waldeck.....	Prince.....	George.....	" 1831, " 1852...	Frederick, son.
Bremen.....	Burgomaster.....	{ F. L. Grave.....	1879-1883.....	
		{ Dr. O. Gildemeister.....	1877-1881.....	
Hamburg.....	Burgomaster.....	{ Dr. C. Petersen.....	1880.....	
		{ Dr. Kirchenpauer.....	1880.....	
Lübeck.....	Burgomaster.....	{ Dr. H. T. Behn.....	1880.....	
Alsace-Lorraine.....	Stadtholder, appointed by the Emperor.....	Freiherr von Mantouff.....	1879.....	

It will be seen from the above table that the dual line of Brunswick is likely to become extinct by the death of the reigning Duke. The succession is disputed by the Duke of Cumberland (son of the late King of Hanover) and the Emperor of Germany. It is also interesting to notice that the heir-apparent is the son of the reigning sovereign in only thirteen of the twenty-two sovereign houses which belong to the German Empire.

The legislative functions of the empire are vested in the Bundesrath or Federal Council, and the Reichstag or Diet of the Empire. The Bundesrath represents the individual states of Germany, and the Emperor must have its consent to declare war which is not merely defensive. The members of the Bundesrath are appointed by the Governments of the individual states for each session. Both the Bundestag and the Reichstag meet in annual session convoked by the Emperor. The Emperor has the right to prorogue and dissolve the Reichstag, but the prorogation must not exceed sixty days; while in case of dissolution new elections take place within sixty days, and a new session opens within ninety days. The Bundesrath is presided over by the Chancellor of the Empire, and the President of the Reichstag is elected by the deputies.

Emigration from the ports of Bremen and Hamburg since 1832 has been as follows:

YEAR.	FROM		Total.
	Bremen.	Hamburg.	
1879.....	26,654	24,864	51,518
1875-79.....	22,697	26,756	49,253
1870-74.....	56,318	52,361	108,679
1865-69.....	62,093	45,579	107,672

The budget of the German Empire for 1880-'81 estimates the revenue and expenditure at 539,252,640 marks each (1 mark = 23·8 cents). The revenue was derived from the following sources :

	Marks.
1. Customs and excises of consumption.....	307,196,470
2. Stamps on playing-cards.....	1,139,000
3. Stamp-duty on bills of exchange.....	6,276,200
4. Statistical dues.....	900,000
5. Administration of postal affairs and telegraphs.....	16,649,045
6. Administration of railroads.....	10,367,400
7. Administration of the imperial printing-office.....	953,340
8. Imperial Bank and other receipts.....	1,506,000
9. Receipts of various descriptions.....	6,692,487
10. From the imperial funds for invalids.....	32,098,512
11. Surplus of former years.....	16,668,286
12. Interest from invested capitals.....	4,759,635
13. Extraordinary receipts.....	52,975,315
14. Matricular contributions.....	81,670,950
Total.....	539,252,640

The expenditures of the empire were estimated as follows :

EXPENDITURES.	Ordinary.	Extraordinary.
1. Chancellor of the Empire and Imperial Chancery.....	118,870
2. Imperial Diet.....	352,580
3. Foreign Office.....	6,493,890	230,000
4. Imperial Office of the Interior.....	2,629,756	517,979
5. Administration of posts and telegraphs.....	8,459,150
6. Imperial army.....	825,915,066	85,973,814
7. Navy.....	25,598,289	18,659,450
8. Administration of Justice.....	1,676,585	224,000
9. Imperial Treasury.....	43,785,646	8,881,760
10. Railroad Office of the Empire.....	262,260
11. Interest on the debt of the empire.....	9,002,500	128,500
12. Chamber of Accounts.....	460,618	20,000
13. Administration of railroads.....	8,124,411
14. Imperial printing-office.....	20,000
15. General pension funds.....	17,895,197
16. Expenditures arising from the war with France.....	792,766
17. Imperial invalid funds.....	32,098,512
18. Deficit of the financial year 1878-'79.....	5,987,592
Total.....	468,289,719	72,962,921

The public debt of the German Empire consists of three loans, one of 77,731,321 marks (authorized by the law of June 14, 1877), one of 97,484,865 marks (law of June 14, 1878), and one of 68,021,071 marks (law of June 13, 1879). Total debt, 243,237,257 marks = \$57,900,467. There is also a floating debt consisting of Treasury notes issued for short periods only. In accordance with the law of April 20, 1874, the Imperial Government has issued paper money (*Reichsbankenscheine*) to the amount of 120,000,000 marks, which has been distributed among the several states in proportion to their population on December 31, 1871. The same law authorized the issue of paper money to the amount of 54,889,940 marks to facilitate the carrying out of the reform in the coinage. Of this amount, 54,082,140 marks had been issued on April 1, 1880, and 14,637,280 had been withdrawn, leaving the paper money in circulation on that date 159,444,820 marks.

The following table gives the military forces of the empire in time of war (exclusive of the Landsturm) :

I. FIELD ARMY.			
DIVISIONS.	Officers.	Men.	Horses.
Higher staff.....	868	5,170	5,070
Infantry.....	10,328	463,564	20,060

6. Train.....	200	5,000	2,457
7. Particular formations.....	311	943
Total.....	17,220	401,659	79,893

These numbers are distributed among the states as follows:

STATES.	Officers.	Men.	Horses.
Prussia (inclusive of smaller states).....	13,311	311,423	62,757
Bavaria.....	2,133	48,244	8,726
Saxony.....	1,012	24,208	5,055
Württemberg.....	764	17,784	3,355
Total.....	17,220	401,659	79,893

According to a law passed on May 6, 1880, the army on a peace footing, exclusive of officers and volunteers, shall consist of 427,274 men. Since the Franco-German war the fortress system of Germany has been entirely re-modeled, and a number of old fortified places deemed useless have been abolished, and many new ones erected, and others enlarged. The Empire is at present divided into the following nine “fortress-districts” (Festungs-Inspectionen), each including a certain area with fortified places: Königsberg, Dantzic, Posen, Berlin, Mayence, Metz, Cologne, Altona, Munich. In 1880, the Empire had 17 fortified places of the first class, serving as fortified camps, and 26 other fortresses. Works for enlarging six of the fortresses were in hand.

The German navy was composed as follows in 1879:

* Including Ministry of War, offices of commanding generals, etc.

VESSELS.	Number.	Guns.	Tons.	Horse-power.
I. Afloat.				
1. Steamers—ironclads:				
Frigates.....	7	85	80,754	48,100

Total 1879.....	12,978,238			
Total 1878.....	11,682,371	1,897,436	893,325	15,710,999

The German Parliament was opened on February 12th, by Count Stolberg, the Vice-Presi-

dent of the Prussian Ministry, who read the Emperor's speech. It was stated in the speech

from the throne that an increase in the contributions from the various states would be required, as well as a loan, to meet the most urgent items of expenditure. A large portion of the speech was devoted to the increase of the army, which was declared to be without prejudice to the pacific tendency of the policy of the empire. The Reichstag, it was added, would be asked to prolong for a fitting period the new Socialist law, which would expire in March, 1881. At the conclusion of the speech, Herr von Frankenstein, former Vice-President of the Reichstag, called for cheers for the Emperor, in which all the members heartily joined. Next day the Parliament elected its President and Vice-Presidents: Count Arnim-Boitzenburg, belonging to the Imperial German party, was chosen President by 154 out of 244 valid votes; Herr von Bennigsen, National Liberal, receiving 89 votes. Herr von Frankenstein, of the Center, was elected first Vice-President, and Herr Hoelder, National Liberal, second Vice-President. As the latter declined, Herr Ackermann, of the German Conservative party, was elected, receiving 102 out of 202 votes.

The most important bill of the session was the Army Bill. It had been submitted to the Federal Council in January, and its contents had then become known. It demanded a prolongation of the military law of 1874 for seven years more, an increase of the army by eleven new regiments of infantry, one regiment of field-artillery, thirty-two field-batteries, one regiment of foot-artillery, and one battalion of pioneers, and besides the means for the regular convocation of the "Ersatz-Reserves" for several manœuvres. The additional expenditures required by these changes would amount to about 17,000,000 francs annually, and to 27,000,000 more for the first introduction. The general discussion of the bill began on March 1st. The Minister of War positively denied that the proposed increase of the German army had its origin in the expectation of imminent war. Count Moltke spoke in the same sense. He delivered on this occasion one of the longest speeches he had ever made. Having briefly reviewed the causes of recent wars, he showed that Germany must yet bear for a long time the heavy burdens imposed upon it by its geographical position and historical development. Besides, there was the constant augmentation of the hosts of Russia and France, each of which had now a much larger peace force than Germany. He sincerely grieved that stern necessity compelled the imposition of fresh sacrifices on the German nation, but it was only by sacrifices and heavy labor that Germany again became a nation. The credit of a state reposed exclusively upon the security of that state, and how would all the credit relations of Germany be shaken were the continuance of the empire even but doubted! Since the decline of imperial German power, Germany had been the battle-field for all oth-

er powers. Swedes, Frenchmen, and Germans once transformed Germany into a desert for more than half a century. And were not the ruins which later still were heaped upon the Neckar, on the Rhine, and deep within the bosom of the land, permanent monuments of the previous weakness of Germany and of the masterfulness of its neighbors? Who would wish to recall the days when, at the imperious behest of an alien lord, German contingents took the field against Germany? "Let us defend," Count Moltke concluded, "above all things, the safety and honor of the empire, our long yearned for and finally achieved unity. Let us continue to be at peace as long as we may, and even also preserve it abroad as far as lies in our power. In this effort we shall, perhaps, not stand alone, but find allies. Therein lies a menace to no one, but surely a pledge rather of peaceful existence in our part of the world, always presupposing, of course, that we are strong and in arms. For with weak forces, and armies liable to quit on a given warning, this aim can not be reached, and the fate of each nation lies in its own strength."

Herr von Bennigsen, leader of the National Liberals, declared, in the name of his political friends, that they would support the bill in its essential provisions. Professor Treitschke, the distinguished historian, wound up a patriotic speech with the words, "We will threaten no one, but our neighbors must know that if any one should dare to attack us, we are all one, a host valiant in arms, a strong people." Count von Frankenberg, a Conservative, referred to the dangers which threaten Germany from France and Russia, and to the Austro-German agreement which he said was "intensely popular in Germany as a pledge of European peace." Dr. Windthorst, the leader of the Catholic Center, declared his readiness to support all the reforms which were proved to be necessary, but this had not been done with regard to the proposed army reform. Herr Bebel, representing the Social-Democrats, declaimed on the crying evils of the military system. The bill was then, on motion of Herr Bennigsen, referred to a special committee of twenty-one, which adopted clause one, fixing the strength of the army on a peace footing from 1881 to 1888, with the proviso that, instead of one per cent. of the population, the number of men shall be fixed at 427,274. Clause two, increasing the *cadres*, was adopted without alteration; and clause three, requiring the reserve of the first class to come up for drill, was agreed to with some modifications. The second reading of the bill took place on April 9th and 10th, and the third reading on the 15th. The leading men of all the parties took an active part in the debate, which was the most important one of the session. The arguments against the adoption of the bill represented the foreign relations as free from any serious danger, and regarded a bill which demanded a grant for seven years in advance, as a new in-

fringement of parliamentary rights, which even now were more limited in Germany than in other constitutional monarchies; they also called attention to the additional burden which its adoption would impose upon a heavily taxed people. The Progressist party and the Center showed themselves unanimously opposed to the bill, the chief speaker of the former being Herr Richter, and of the latter Freiherr von Schorlemer-Alst. The Conservative parties were a unit in favor of the bill. The declaration of Herr Bennigsen, the leader of the National Liberals, that a majority of his friends would vote for the Government, assured the latter of success. In the name of this party Herr Dernburg and Herr Rickert spoke eloquently for the bill, but among the dissenters were some of the most prominent and influential men of the party, especially Herren von Stauffenberg, Bamberger, and Lasker. Herr Richter moved an amendment to the effect that the number of men with the colors should be fixed annually in the military budget; that the one-year volunteers should be included in that number; and, finally, that the Imperial Chancellor should be called upon to present a bill in the course of next session limiting the term of service of the infantry to two years. The motion was supported by the Progressists, the Center party, and a few National Liberals; but it was ultimately rejected. Herr von Stauffenberg next proposed to restrict the operation of the Army Bill to three years, but this motion was also lost by 180 votes to 104. Paragraphs one and two, fixing the peace strength of the army to March 31, 1888, at 427,270 men, were then adopted by 186 to 96 votes. During the debate Herr von Kamecke, the Minister of War, declared that the bill owed its origin not only to the present political situation, but to reasons of a lasting character. A permanent military budget could alone give the army stability and confidence in itself. Herr Rickert, who spoke at considerable length, ended his address by declaring that the strengthening of the army was of the highest importance to the nation, and must not be made a party question. There existed in Germany no party which wished to weaken the defensive power of the Fatherland, and it was the desire of the whole nation to uphold with a mighty hand the possessions which Germany had acquired, and to maintain peace. A resolution proposed by Herr Bühler, urging the Imperial Chancellor to bring about a congress of states with a view of promoting a general disarmament, was almost unanimously rejected. Herr Bühler had previously had a correspondence on the subject with Prince Bismarck, who wrote: "I regret being too much occupied with urgent and practical concerns to have any time left for the contingencies of a future which I am afraid neither of us will live to see. Only after you have won our neighbors for your plans shall I or any other German Chancellor be in a position to attend to such like suggestions in relation to this coun-

try and its purely and permanently defensive position. But even then I fear nations will find it difficult to supervise each other's military preparations, and to create a board able and willing to exercise and enforce an effectual military control." On April 16th the bill was adopted by 186 to 128 votes.

Next to the Military Bill, the Emperor's speech had specified the bill for the prolongation of the anti-Socialist law of 1878 as one which the Government regarded as important. The committee appointed by the Reichstag to report on the bill decided, by ten votes against three, to prolong its operation until September 30, 1884, instead of 1886, as proposed by the Government. The discussion of the second reading was begun on April 17th. The Socialists had allotted to each member of their fraction the task of moving for the abrogation of successive clauses of the bill. Foreseeing, however, the protracted struggle which would result from this mode of warfare, the Reichstag, on motion of Herr Winnigerode, resolved to combine all the seven motions of the repealers, promising, however, to listen to their specially prepared arguments. Accordingly, Herr Wiener spoke against the unfair application of the Socialist law with regard to the right of public meeting; Herr Fritzsche declaimed on the suppression of coöperative societies; Herr Hasenclever delivered an angry philippic on the vexatious restraints which had been imposed by the police on certain prints alleged by them to have a democratic taint; and Herr Debel indignantly protested against the contradictory way in which electoral meetings had been either forbidden or scattered. On a division the combined amendments of the Socialists were rejected by an overwhelming majority, being only supported by a few Progressists. The Reichstag also rejected two separate amendments of the leader of the Center, Dr. Windthorst—the first to the effect that the Reichsgericht, or Imperial High Court, should be substituted for the Reichsbeschwerde Commission, or Tribunal of Appeal, for such as deemed themselves aggrieved through the operation of the Socialist law; the second aiming at exempting electoral meetings from its scope. In support of the former, Dr. Windthorst pointed to England, where much sounder views on the subject prevailed, full and free discussion being permitted in the confidence that the power of truth would prevail. Hence, too, all expelled leaders of the Socialist movement fled to London, whence he was convinced that the whole agitation here was conducted—an assertion which elicited an emphatic protest from the ranks of the Socialists. The speaker then went on to descant on the evils resulting from the prevention of free discussion, winding up with an allusion to the "Culturkampf," and the efficacy of a free Christian Church in combating the evils which the Government vainly sought to exterminate by dictatorial force. Bebel threatened with the imminence of a terrible

revolution if the people were deprived of all their rights, and debarred from the possibility of executing their plans by legal means. The act was then adopted by 191 against 94 votes, with some slight modifications, particularly one which protects Social-Democrats who are elected to any of the state Legislatures.

A bill introduced by the Prussian Government for granting a subsidy to the German Marine Commercial Company, lately formed on the ruins of the enterprise started by Messrs. Godeffroy, of Hamburg, also called forth on April 21st an animated discussion, as it was regarded as a new attempt of the Imperial Chancellor to inaugurate a colonial policy. The bill empowered the Chancellor to guarantee a maximum sum of 10,000,000 marks to the shareholding company aforesaid, formed in Berlin in January, toward insuring a net annual profit of $4\frac{1}{2}$ per cent. of the invested capital, but under the condition that the amount thus to be granted from the Imperial Treasury toward the payment of the dividends should not exceed three per cent. of the paid-up capital. Deputy Mosle ardently supported the measure, in the interest of German commerce, navigation, industry, science, missionary enterprise, etc., making copious reference to long personal experience of things in the latitude of Samoa. Herr Meyer, also relying on his knowledge of the South Seas, essayed to dissuade the House from countenancing the bill, scorning the apprehension that the English would seek to oust the Germans from the commercial footing they had already effected on the islands. Prince Hohenlohe, lately German ambassador in Paris, assured the Reichstag that the Government laid great stress on the measure, and would honestly regret its rejection. The numerous firms recently founded in Australia testified to the restless spirit of enterprise among the commercial classes of Germany. It was a well-known fact that trade with those South-Sea peoples only thrived on the savage tribes being impressed with the power of the nation with which they had to do. Trustworthy traders who had long lived among them asserted that the South-Sea Islanders had a very fine appreciative sense of the might of those countries having intercourse with them. The rejection of the bill would result in the German settlements in Samoa passing into other hands—settlements over which the German flag waved, and which came into life with a certain well-studied, and he might almost say well-justified, aim. This transition into other hands, the hauling down of the German colors, and the hoisting of the English, the American, or any other flag, would decidedly impress the population with the belief that Germany had suffered a defeat. This view might be erroneous, but they could not dispute that unthinking men would receive this impression. Traders averred that this result would again react on all the South-Sea Islands, and even make itself felt in Japan. The approval of the bill would

materially enhance the prestige of the empire and the commercial flag of Germany. The bill was also supported by Herr Georg von Bunsen, a National Liberal, and Prince von Hohenlohe-Langenburg, belonging to the Protestant branch of that family, of which the Paris ambassador is the Catholic head. One of the most effective speeches in behalf of the bill was made by Reuleaux, Federal Council Commissary, who had but lately returned from officially representing Germany at the Sydney Exhibition, and had ample opportunity while in Australia of gathering material on the subject of the South-Sea trade. Professor Reuleaux essayed to elucidate the commercial relations of Germany with Australia, and argued that vessels could only undertake successful voyages thither when, by the establishment and prosperity of the South-Sea Company, the opportunity of getting return freights was afforded them. Conversely, a firm connection being established with Samoa, German traders would be infinitely better able to compete with English exporters in Australia. On its becoming known out there that the Godeffroy firm was tottering, all English houses expressed themselves more or less loudly to the effect that the time was now come for again snatching from the Germans the trade in Polynesia, but their joy was turned into anger when they heard that the Imperial Government thought of protecting and promoting the commercial interests of its subjects in the South Seas. All parliamentary proceedings on the subject were wired to Sydney and read with great suspense. After further describing the watchful jealousy of English traders in the South Seas, Professor Reuleaux wound up by saying that the bill, if passed, would stretch a net of commercial relations all over the archipelago, and animate their connection with Australia, while enormous difficulties in that respect would drop up if the company were not promoted and direct communication with the islands established. The most powerful speech against the Government bill was made by Dr. Bamberger (Liberal), who compared the present project to the notorious South-Sea Company, founded in London in 1710, and asked the House to reject it, which the House soon thereafter did by 128 votes against 112, the majority including the Center, the Progressists, and some of the National Liberals.

The revised Elbe Navigation Act, concluded between Germany and Austria on March 7th, led to complicated and angry discussions which involved the constitutional rights of the Federal Council and called forth a long speech from Prince Bismarck. The Government of Prussia had made a motion in the Federal Council to separate Altona and the suburb of St. Pauli from the free-port territory of Hamburg, and to include them within the Customs Union. The Government of Hamburg regarded this as a danger to their free-port position, but all the efforts on the part of the Ham-

burg Senate and the deputies of the Hanse cities in the Reichstag to effect a compromise with the Chancellor proved unavailing. On May 6th Prince Bismarck addressed a circular note to all the representatives of Prussia accredited to the federal courts of the empire. Alluding to the conflict of opinion between Hamburg and Prussia which would inevitably result from a formal interpretation of Article XXXIV of the Constitution by a majority in the Federal Council, the Prince points out the detriment which would accrue to certain Prussian subjects from the present formation of the Hamburg free-port district. As Reichskanzler it was incumbent on him to be cognizant of the constitutional rights of the Bundesrath, and to represent all the allied Governments in their exercise thereof, and not only seek to counteract particular efforts on the part of the various states, but also centralizing tendencies of the Federal Council in abridging its constitutional rights in favor of Parliament. The Prussian Government, the Prince then proceeded to say, demanded the separation of Altona and other Prussian territory from the free-port district of Hamburg, its justification being that these parts were not necessary to the fulfillment of the ends of Hamburg as a guaranteed Hanse city, and there being apparent a unanimity on that point in the Bundesrath on the proposition of Altona to propose the new line of frontier which the Federal Council would have to decide upon, and he opined that it would not be difficult to form such a resolution without creating a conflict over the interpretation of the Constitution. The Chancellor then said: "Those Governments which believe that, by the separation of St. Pauli from the free-port territory, a constitutional right is infringed, or even affected, can vote against this line; and the customs frontier, if they form a majority, will then coincide with the territorial boundary between Hamburg and Prussia. But should, in the opinion of Prussia, an erroneous interpretation of the Constitution be alleged in justification of the vote, it will also be necessary for Prussia, on the other hand, to stand up for the proper reading thereof; and in that case I can not advise my most gracious master, in his quality of German Emperor, to waive his undoubted duty of upholding the Constitution." Dr. Lasker wished to procure a declaration from the Reichstag that Article XXXIV of the Constitution did not permit the Federal Council to approve the proposal of Prussia without the consent of the city of Hamburg. The Reichstag would, however, not consent to his desire to bring in his motion on May 8th. On the other hand, the committee of the Reichstag to which the Navigation Act had been referred proposed a resolution that a change of the Customs Union frontier could only by constitutional right be effected by a law passed by Parliament in the usual way, and not by the Federal Council alone. On May 8th Prince Bismarck appeared in the Reichs-

tag after ten months' absence, and made a long speech in support of the Elbe Navigation Act. He said that he had no wish to deprive the free port of Hamburg of any of its rights, but that he considered the arrangement of the customs boundary was exclusively in the hands of the Federal Council, and that the Parliament had nothing whatever to do with it. He complained bitterly of the attempts made to sow dissensions among the German states, said that such attempts endangered German unity, and concluded by asserting that he was tired to death of the opposition he had to meet with at every turn, and that, if the obstacles proved too great, he should beg the Emperor to relieve him of his post, and appoint some one who would be able to satisfy all parties. Dr. Wolfson, member for Hamburg, replied to Prince Bismarck, and defended the proposal of the committee. Herr von Windthorst said that the Center did not oppose the Government from a spirit of opposition, but they supported the empire on the bases of the federative Constitution. At the day sitting on Monday the debate on the second reading of the Elbe Navigation Act was proceeded with, and, after a discussion extending over seven hours, the House rejected, by 125 votes to 123, a motion of Herr von Bennigsen to refer the bill back to the committee, and also threw out, by 138 votes to 110, the declaratory resolution of the committee to the effect that the Elbe frontier line could not be removed to a point lower down the river, except by a special bill. The Reichstag finally agreed to the second reading, and resolved to take the third reading at an evening sitting. On the House reassembling, Herr von Windthorst, the leader of the Center, brought forward a motion in favor of referring the bill back to the committee, which was ultimately agreed to. In June, after the adjournment of the Reichstag, the Federal Council passed the resolutions moved by the Prussian Government for the inclusion of the lower Elbe in the Customs Union by an all but unanimous vote. The representative of the free city of Hamburg was the only dissident.

On May 10th, after a review of the work of the session, made by the President, Count Arnim-Boitzenburg, Count Stolberg, the Vice-Chancellor, read a message from the Emperor closing the session.

A few weeks before, in April, Prince Bismarck had once more tendered his resignation as Imperial Chancellor, in consequence of a vote come to in the Federal Council on the Imperial Stamp Duties Bill. On this occasion Prussia, Bavaria, and Saxony had been outvoted by a combination of the small states under the leadership of Wurtemberg. The Emperor William, in a Cabinet order, while recognizing the difficulties of Prince Bismarck's position, declined to relieve him of his office, and called upon him to prepare proposals for bringing about a constitutional solution of such a conflict of duties as led to the recent resigna-

tion. On May 12th the German Federal Council adopted a resolution declaring receipts for post-office orders and remittances liable to a stamp-duty, thus reversing the previous vote which led to the resignation of Prince Bismarck.

On April 20th an International Fishery Exhibition was opened at Berlin by the Crown Prince of Germany. The ceremony was attended by Prince Frederick Charles, several Ministers of State, and many of the principal functionaries of the empire and members of the Federal Council and the Reichstag. Nearly all the members of the foreign diplomatic body were also present. The Prussian Minister of Agriculture, Dr. Lucius, addressed the Crown Prince on the origin and aims of the Exhibition. The German Fishery Society, called into existence by his Highness, had in 1873 inaugurated a display of native achievements in the piscatorial art; and, encouraged by the success of their endeavors, the committee had now ventured on a bolder flight, and invited the participation of all nations in the scheme. In doing this they had an eye no less to the economical than to the scientific side of the question. He gratefully acknowledged that the Fishery Society had met with the most obliging support, not only in Germany itself but in nearly all the neighboring countries and even in the farthestmost zones of the earth. From the Baltic and the German Ocean, the ice-bound seas of the North, from the coasts of Holland and England, from the Swiss lakes, from the exhaustless riches of the Mediterranean, from the Volga and the Black Sea, from North and South America, from the coasts of the far East, from India, China, Japan, and the Malay Archipelago, the fauna of the waters had been brought in rare and wonderful profusion, with an endless variety of pearls, shells, and corals. Alluding then to the innumerable kinds of instruments and devices for catching, curing, and rearing fish sent for exhibition, the Minister wound up with an eloquent peroration on the profit derivable from such an international competition, and trusted that, among other things, it might result in gradually directing the attention of all classes of the population in Germany to fish-products as the cheapest article of food. Sections of the Exhibition were allotted to Germany, England, America (North and South), Italy, Holland, Russia, Denmark, Norway and Sweden, China, and Japan, and each of these Governments, with the exception of England, gave a government grant in connection with the competition of their fishing industries, sending one or two commissioners to Berlin to look after their interests. An idea of the extent and variety of the Exhibition may be obtained from the enumeration of the various classes, which comprised aquatic animals: fishing gear, craft, tackle, and machinery; pisciculture; appliances for keeping and conveying fish; the preparation and preservation of fish; fishermen's dwellings and costumes; physico-

chemical researches; the history and the literature of fishing. The prizes awarded to the various exhibitors in the Fishery Exhibition at Berlin were distributed on June 17th by the Crown Prince. To the United States, which sent a fine national collection of piscatorial articles, a large share of honor fell, Professor Spencer Baird, of Washington, having also received the first honorary prize offered by the empire.

An exhibition of manufactures, agriculture, forestry, and the fine arts, was opened at Düsseldorf on May 9th. It was the largest ever held in Germany, and the products exhibited were of exclusively German origin. The opening ceremony was conducted by the Crown Prince of Germany. The entire Exhibition was divided into twenty-two groups, including agriculture with forestry, mines, smelting machinery, metallic industry, chemical products, alimentary products, earthenware and glass, timber and wood-work, small wares, textile industries, ready-made clothing, leather and India-rubber goods, paper manufactures, polygraphic trades, scientific instruments, musical instruments, building and engineering, educational books and appliances, and modern art industry, as well as a valuable collection of objects of old art industry, and finally one of the greatest exhibitions of modern paintings ever held in Germany or Austria. The number of exhibitors was altogether about four thousand. The building cost \$200,000, and this sum did not include the eighty annexes, the construction of which was defrayed by the exhibitors themselves. Krupp's annex was among the more striking curiosities of the Exhibition; near it an immense one-hundred-ton gun, with all the late improvements, attracted crowds of visitors.

The relations of Germany to all foreign countries were of a friendly nature. The alliance with Austria did not only remain undisturbed throughout the year, but was greatly strengthened. The meeting of the Emperors of the two countries at Ischl, on August 10th, was generally believed to have been highly satisfactory. Nearly all the political parties of Germany were agreed in regarding a close alliance with Austria as most profitable for the interests of Germany. In the further development of the Eastern question (see EASTERN QUESTION) Germany took a leading part, and the supplementary conference of the great powers, which was to settle the remaining difficulties of Turkey with Montenegro and Greece, again met at Berlin. The German ambassador at Constantinople, Count Hatzfeld, acquired by the successful management of difficult negotiations the reputation of a diplomatist of consummate ability. The commercial treaties with Austria, Switzerland, and Belgium were renewed until June 30, 1881.

The German military manœuvres which took place in August were of the most imposing character. They were visited by Crown Prince Rudolph of Austria, the King and Queen of the Hellenes, the Duke of Cambridge, the Duke and

Duchess of Connaught, the Grand Dukes of Hesse and Mecklenburg-Strelitz, and a number of distinguished foreign officers. The appearance of the troops was a subject of general admiration.

The birth of a son, on October 28th, to the Duke of Cumberland, the claimant to the throne of Hanover, caused great jubilation among the Guelphs. The Duke of Brunswick greatly displeased the Prussian Court by sending a congratulatory telegram to the Guelphs in the city of Hanover who celebrated the event.

The split which had for some time existed in the National-Liberal party with regard to the policy of Prince Bismarck, led in August to the secession of a considerable number of members of the Imperial Parliament and Prussian Diet from the ranks of the party. A declaration to that effect was published at Berlin, on August 30th, signed by twenty eight members of the two Assemblies. The "Secessionists," as they were called, declare in their manifesto their intention to uphold the political liberties already achieved, and to adhere to the principles of freedom of commerce and reform of the imperial system of taxation, rejecting unnecessary burdens and indirect taxes, especially those which press heavily upon the poorer classes. They also insist upon ecclesiastical and religious freedom being guaranteed by independent state legislation, protecting the inalienable rights of the state. Among those who signed the manifesto were Herr von Forckenbeck, formerly President of the Reichstag, Herr von Stauffenberg, formerly first Vice-President of the Reichstag, Dr. Bamberger and Herr Rickert. At the close of the year the "Secessionists" numbered thirty. Their political position is half-way between the National-Liberal and the Progressist parties.

On October 15th Germany celebrated the formal consecration and opening of the Cologne Cathedral. The Emperor and Empress, the Crown Prince and the Crown Princess, the King of Saxony, and several other German sovereigns were present on the occasion, but all the leaders of the Catholic party remained demonstratively absent. A petition of prominent Catholics of the Rhenish provinces and Westphalia, for the recall of the exiled Archbishop of Cologne to his see on the occasion of the cathedral festival, was not granted.

GIFFORD, SANDFORD ROBINSON, N. A., landscape painter, was born in Greenfield, Saratoga County, New York, in 1823. His youth was passed at Hudson, where his mind must have been early imbued with those beautiful combinations of river and sky which he studied later to reproduce. He entered at Brown University in 1842, but during his second year he left college and went to New York to devote himself to art. He studied under John R. Smith, one of the best teachers and water-color painters of that day. His canvases show that he was a disciple of Cole. In 1851 he became an Associate of the National Academy, and in 1854 a member. In 1855 and 1856 he

was abroad, and his careful study of the best models produced a steady growth in his own powers. The war interrupted his work. He was a member of the Seventh Regiment, volunteered with it, and shared its history in camp and field. Some fine sketches of bivouac and battle are reminiscences of this experience. His first exhibition at the Academy of Design was in 1847, "A Lake Scene on the Catskills." His last were, in this year, "Ruins of the Parthenon" and "Sunrise on the Matterhorn"—well worthy of his maturer fame. He sent to the Paris Exposition (1867) "Home in the Wilderness" and "Twilight on Mount Hunter." At the Centennial Exhibition, Philadelphia, he was represented by "Lake Geneva"; "Pallanza"; "Fishing-Boats in the Adriatic"; "Sunrise on the Seashore"; "Tivoli," and a canvas glowing with golden tints, "San Giorgio, Venice," which was also shown at the Paris Exposition of 1878, together with "Mount Renier." In 1868, Mr. Gifford returned to Europe. In 1870 he journeyed through the Rocky Mountains. In the early summer of 1880 he traveled to Lake Superior in search of health, but the benefit was temporary, and after his return to New York he died, in the fifty-eighth year of his age.

GLADSTONE,* WILLIAM EWART, First Lord of the Treasury and Chancellor of the Exchequer in the new Liberal Cabinet formed in 1880, was born December 29, 1809. After graduating at Oxford, where he took a double first class, in 1831, he contested in the following year Newark in the Conservative interest, and sat for that borough until December, 1845. He was only twenty-five years of age when Sir Robert Peel appointed him to a Junior Lordship of the Treasury, and three months later he became Under-Secretary for the Colonies, retaining that post until his ministerial leader went out of office, in April, 1835. On Sir Robert Peel returning to power in 1841, Mr. Gladstone accepted the appointment of Vice-President of the Council and Master of the Mint. In 1843 he exchanged the former office for the presidency of the Board of Trade in succession to the Earl of Ripon. In 1845 he succeeded the late Earl of Derby in the Secretaryship for the Colonies; but shortly after resigned the office and his seat, and remained out of Parliament until the general election of 1847, when he was returned for the University of Oxford. Finding himself opposed to his colleagues on the questions of university reform and the removal of Jewish disabilities, Mr. Gladstone in 1851 separated himself from the body of the Conservative party, and at the general election of that year succeeded in regaining his seat only after a severe contest. In December, 1852, he joined the "Coalition" Ministry of Lord Aberdeen as Chancellor of the

* A sketch of Mr. Gladstone's political and literary life was published in the "Annual Cyclopaedia" for 1871. In the following lines we reproduce the leading events in the political life of the new English Premier, and add an account of his life since 1871.

Exchequer, which position he resigned in 1855, soon after the reconstruction of the Cabinet by Lord Palmerston. In the winter of 1858-59 he was employed on a special mission to the Ionian Islands. In June, 1859, Mr. Gladstone resumed office under Lord Palmerston as Chancellor of the Exchequer, and when Lord Palmerston died he retained the chancellorship under the late Earl Russell and also assumed the leadership of the House of Commons. At the general elections of 1865 Mr. Gladstone was rejected by the University of Oxford, but obtained a seat in South Lancashire. In June, 1866, the Government being defeated in committee on the Reform Bill, Mr. Gladstone and his colleagues resigned. He lost his seat in Lancashire at the general election of 1868, but was returned for Greenwich by a large majority, and, on the resignation of Mr. Disraeli's Ministry, Mr. Gladstone succeeded him as Premier. In 1873 the Government sustained a serious defeat in the rejection of the Irish University Education Bill, and Mr. Gladstone tendered his resignation; but Mr. Disraeli declining to take office, he was commissioned by the Queen to reconstruct the Cabinet. Mr. Gladstone undertook the Chancellorship of the Exchequer, in addition to his office as First Lord of the Treasury, retaining the dual position until the adverse verdict of the constituencies in 1874 caused the resignation of the Ministry. Soon after his retirement from office, Mr. Gladstone formally announced, in a letter to Earl Granville, his resignation of the leadership of the Liberal party, which was transferred to the Marquis of Hartington. He devoted the leisure thus gained to literature, and, by a number of controversial essays and newspaper articles, took an active part in the leading questions of the day. The pamphlets published by him in 1874 and 1875, on the conflict between the States of Europe and the Roman Catholic Church ("The Vatican Decrees in their Bearing on Civil Allegiance"; "Vaticanism, an Answer to Reproofs and Replies," 1875; "Rome and the Newest Fashion in Religion," 1875), were translated into several foreign languages and found a wide circulation. In 1876 he published his famous pamphlet on "Bulgarian Horrors and the Question of the East," which exerted a decisive influence upon public opinion in England. About the same time he published a large work on Homer, entitled "Homeric Synchronism; an Inquiry into the Time and Place of Homer" (London, 1876). At the general election of 1880 he was returned both for the borough of Leeds and for Edinburghshire. The former he resigned in favor of his son Herbert, who was elected in his stead. Mr. Gladstone married, in 1839, Catharine, eldest daughter of Sir Stephen Glynne, Bart., of Hawarden Castle, Flintshire. By the decease of the late Baronet that mansion and estate became the property of Mr. Gladstone's eldest son. Several members of

his family have also come forward in public life. Mr. William Henry Gladstone, the eldest son, was born in 1840, was elected member of Parliament for Chester in 1865, for Whitby in 1868 and 1874, and for East Worcestershire in 1880. He was also a Lord of the Treasury from 1869 to 1874. Mr. Herbert Gladstone, the fourth son, was born in 1854. He is a lecturer on history at Keble College, Oxford, and was in 1880 appointed private secretary of his father. He was also elected in the same year to Parliament for the borough of Leeds. The second son, the Rev. Stephen Edward Gladstone, is Rector of Hawarden, and a daughter of Mr. Gladstone is wife of the Rev. E. C. Wickham, Head Master of Wellington College. Mr. Gladstone's oldest brother, Sir Thomas Gladstone, Baronet, was Lord Lieutenant for Kincardineshire, and member of Parliament for Queensborough, 1830, Portarlington, 1832-1835, Leicester, 1835-1837, and Ipswich, 1842.

GRANVILLE, GRANVILLE GEORGE LEVESON GOWER, second Earl, Secretary of State for Foreign Affairs in the new English Cabinet, was born in London May 15, 1815. He took his degree at Oxford in 1834. He sat in the House of Commons for Morpeth (1836 to 1838), and also for Lichfield (1841 to 1846), previously to succeeding, in 1846, his father, the first Earl Granville, in the peerage. His official life dates from 1840, when he accepted the appointment of Under-Secretary for Foreign Affairs. From 1848 to 1851 he was Vice-President of the Board of Trade, and from 1851 to 1852 Secretary of State for Foreign Affairs. He has held various other official positions, having in turn been Master of the Buckhounds, Paymaster-General of the Forces, Chancellor of the Duchy of Lancaster, and President of the Council, which office he held in the two Cabinets presided over by Lord Palmerston. In 1868 he joined Mr. Gladstone's first Cabinet as Colonial Secretary, relinquishing that position in 1870 to succeed the Earl of Clarendon as Secretary for Foreign Affairs. He was Vice-President of the Royal Commission for the Great Exhibition of 1851, and also chairman of the Commission for the Exhibition of 1862. He attended the coronation of the Emperor Alexander II of Russia, as the representative of England, in 1856. He is Chancellor of the University of London and Lord Warden of the Cinque Ports.

GREAT BRITAIN AND IRELAND, a kingdom of Western Europe. The Queen, Victoria, was born May 24, 1819. She is a daughter of Prince Edward, Duke of Kent, the fourth son of George III; succeeded her uncle, William IV, in 1837; and married in 1840 Prince Albert of Saxe-Coburg-Gotha.

Children of the Queen.—1. Princess Victoria, born November 21, 1840; married in 1858 to the present Crown Prince of Germany. 2. Prince Albert Edward, heir-apparent, born November 9, 1841; married in 1863 to Princess Alexandra, daughter of King Christian IX

of Denmark. Issue, two sons and three daughters; eldest son, Albert Victor, born January 8, 1864. 3. Princess Alice, born April 25, 1843; married in 1862 to Louis IV, Grand Duke of Hesse; died December 14, 1878. 4. Prince Alfred, Duke of Edinburgh, born August 6, 1844; married in 1874 to the Grand Duchess Maria of Russia. He is heir-apparent to the Duke of Saxe-Coburg-Gotha. He has issue one son and three daughters. 5. Princess Helena, born May 25, 1846; married in 1866 to Prince Christian of Schleswig-Holstein-Sonderburg-Augustenburg. 6. Princess Louise, born March 18, 1848; married in 1871 to the Marquis of Lorne. 7. Prince Arthur, Duke of Connaught and Strathearne, born May 1, 1850; married March 13, 1879, to Princess Louise Margarethe, daughter of Prince Frederick Charles of Prussia. 8. Prince Leopold, born April 7, 1853. 9. Princess Beatrice, born April 14, 1857.

The following princes and princesses are cousins of the Queen: 1. Prince Ernest August, Duke of Cumberland, born September 21, 1845, the grandson of King Ernest August of Hanover, fifth son of King George III; married December 21, 1878, to Princess Thyra of Denmark, born September 29, 1853. Offspring of the union are a daughter, Maria Louisa, born October 11, 1879, and a son, born October 28, 1880. 2. Prince George of Cambridge, born March 26, 1819, the son of Duke Adolph of Cambridge, sixth son of King George III, Field-Marshal, commanding in chief the British army. 3. Princess Augusta, sister of the preceding, born July 19, 1822; married June 28, 1843, to Grand Duke Frederick William of Mecklenburg-Strelitz. 4. Princess Mary, sister of the preceding, born November 27, 1833; married June 12, 1866, to Prince Franz von Teck, born August 27, 1837, son of Prince Alexander of Württemberg. Offspring of the union are one daughter and three sons.

The Cabinet was composed as follows at the close of 1880: First Lord of the Treasury and Chancellor of the Exchequer, Right Hon. W. E. Gladstone, M. P. (see GLADSTONE); Lord High Chancellor, Lord Selborne (see SELBORNE); Lord President of the Council, Earl Spencer (see SPENCER); Lord Privy Seal, Duke of Argyll (see ARGYLL); Secretaries of State: 1. Home Department, Right Hon. Sir Vernon Harcourt, Baronet, M. P. (see HARCOURT); 2. Foreign Affairs, Earl Granville (see GRANVILLE); 3. Colonies, Earl of Kimberley (see KIMBERLEY); 4. War, Right Hon. Hugh C. E. Childers, M. P. (see CHILDERS); 5. India, Marquis of Hartington, M. P. (see HARTINGTON);

First Lord of the Admiralty, Earl of Northbrook (see NORTHBROOK); Chancellor of the Duchy of Lancaster, Right Hon. John Bright, M. P. (see BRIGHT); Chief Secretary for Ireland, Right Hon. W. E. Forster, M. P. (see FORSTER); President of the Board of Trade, Right Hon. Joseph Chamberlain, M. P. (see CHAMBERLAIN).

The Parliament which assembled in April, 1880, is the twenty-second Imperial Parliament of the United Kingdom, and the tenth Parliament of the United Kingdom. The House of Lords consists of all peers of Great Britain and of Scotch and Irish representative peers, and of most of the archbishops and bishops of England and Wales. The House of Lords, in 1880, was composed of 4 peers of the royal blood, 2 archbishops, 22 dukes, 19 marquesses, 134 earls, 32 viscounts, 24 bishops, and 262 barons. The Speaker of the House of Lords was Earl Selborne, the Lord High Chancellor. The members of the House of Commons are elected by the counties, boroughs, and universities. Of the latter, Oxford elects 2, Cambridge 2, London 1, Edinburgh 1, Glasgow 1, and Dublin 2. England was represented in 1880 by 493, Scotland by 60, and Ireland by 105 members. The Speaker of the House of Commons was the Right Hon. Henry Bouverie William Brand; second president and chairman of committees, Right Hon. Dr. Lyon Playfair. The number of registered electors in 1880 was 2,501,676 in England, 231,536 in Ireland, and 305,514 in Scotland. The total number of votes recorded at the general election of 1880 was 1,417,924 for the Conservative candidates, and 1,881,951 for Liberal candidates and Home Rulers.

The area and population of the British Empire in 1880 were as follows:

COUNTRIES.	AREA.		Population in 1880.
	In English square miles.	In square kilometres.	
United Kingdom.....	121,608	314,951	34,866,000
India and Ceylon.....	924,043	2,393,177	193,851,000
Colonies and possessions..	6,544,549	17,726,669	11,769,665
Total British Empire..	7,590,200	20,434,797	240,486,665
Tributary states in India..	557,908	1,444,922	49,203,083
Total empire and dependencies.....	8,448,108	21,579,719	289,689,718

The following table gives the area and population of the United Kingdom according to the census of 1871, as well as the estimates of the Registrar-General (who does not include the islands in the British waters, nor the soldiers and sailors abroad) for 1871, 1878, 1879, and 1880:

COUNTRIES.	Square miles.	Population in 1871.	Population in 1878.	Population in 1879.	Population in 1880.
England and Wales.....	58,811	22,712,266	24,854,937	25,165,386	25,480,161
Scotland.....	30,463	8,360,018	8,593,989	8,627,453	8,661,292
Ireland.....	32,581	5,412,377	5,951,060	5,938,324	5,363,590
Islands in the British waters.....	308	144,633	145,000	145,000	145,000
Soldiers and sailors abroad.....	216,080	216,000	216,000	216,000
Total.....	121,608	31,845,879	34,160,386	34,517,113	34,866,000

The following table gives a complete list of the English colonies and possessions:

COUNTRIES.	Square miles.	Population.	Year.	COUNTRIES.	Square miles.	Population.	Year.

The colonies and dependencies of Great Britain embrace about one seventh of the land of the globe, and a fourth of its population.

The movement of population for 1875 to 1879, according to the "Statistical Abstract of the United Kingdom," No. 26, 1864-1878 (London, 1880), was as follows:

YEARS.	Marriages.	Births.	Deaths.	Excess of births.
ENGLAND AND WALES.				
1875.....	201,212	850,607	546,458	304,154
1876.....	201,874	887,963	510,315	377,653
1877.....	194,332	888,200	500,496	387,704
1878.....	189,657	891,418	569,574	331,844
1879.....	181,719	882,866	528,194	354,672
SCOTLAND.				
1875.....	25,921	123,693	81,785	41,908
1876.....	26,568	126,749	74,122	52,627
1877.....	25,790	126,824	73,946	52,878
1878.....	24,333	126,707	76,775	49,932
1879.....	23,462	125,736	73,329	52,407
IRELAND.				
1875.....	24,037	138,320	98,114	40,206
1876.....	26,388	140,469	92,324	48,145
1877.....	24,722	139,659	93,548	46,116
1878.....	25,368	134,370	91,839	42,531
1879.....	23,313	135,408	105,432	29,976

The number of owners of land in Great Britain, exclusive of the metropolis, is as follows:

	No. of owners below an acre.	No. of owners above an acre.	Total No. of owners.
England and Wales, exclusive of London.....	703,289	269,547	972,836
Scotland.....	113,005	19,225	132,230
Total.....	816,294	288,772	1,105,066

The number of emigrants from the United Kingdom in 1879 was as follows:

NATIONALITIES.	To United States.	To British North America.	To Australia and New Zealand.	To other countries.	Total.
English.....	52,402	13,965	26,366	11,542	104,275
Scotch.....	9,846	1,670	6,395	1,292	18,703
Irish.....	30,058	2,317	8,198	723	41,296
Foreign.....	41,651	4,497	1,219	2,083	49,480
Not specified.....	1,103	60	2,246	3,409
1878.....	134,590	22,509	42,178	17,886	217,163

The number of emigrants from the United Kingdom during the years 1853-1879 was as follows:

NATIONALITIES.	To United States.	To British North America.	To Australia and New Zealand.	To other countries.	Total.
English.....	1,941,473	209,059	545,769	122,006	1,918,307
Scotch.....	155,328	75,381	134,977	17,571	413,207
Irish.....	1,632,233	126,402	231,103	14,648	2,004,375
Foreigners.....	654,902	94,282	22,509	80,801	801,994
Not specified.....	163,742	52,556	80,898	55,768	308,264
1853-1879.....	3,652,668	557,930	965,255	240,294	5,446,147
1815-1879.....	5,747,249	1,594,644	1,276,091	291,755	8,909,739

The receipts and expenditures from 1874 to 1880 were as follows :

YEARS.	Receipts.	Expenditures.	Surplus (S.) or Deficit (D.).
1874-75.....	£74,921,573	£74,328,040	S. £593,533
1875-76.....	77,181,693	16,621,773	S. 509,920
1876-77.....	73,565,036	78,125,227	S. 459,509
1877-78.....	79,763,298	82,403,495	D. 2,640,197
1878-79.....	83,115,972	85,407,789	D. 2,291,817
1879-80.....	81,265,655	84,105,754	D. 2,840,699

The revenue for the year ending March 31, 1880, was as follows :

SOURCES.	Gross receipts.	Delivered to the Exchequer.
1. Customs.....	£19,301,555	£19,326,000
2. Excise.....	25,961,280	25,300,000
3. Stamps.....	11,527,940	11,300,000

1879.....	709,430,592	42,778,147	25,770,100	778,078,840
1880.....	710,476,359	36,222,976	27,344,900	774,044,235

In 1775 the total charge for interest and management of the debt was less than 4½ millions sterling, but at the end of the war it had risen to 9½ millions. The twenty years' warfare with France, from 1793 to 1814, added nearly £23,000,000 sterling to the annual charge, which had risen to £32,000,000 in 1817, the year of the consolidation of the English and Irish Exchequer. Since that date, the capital, and the annual charge for its interest and management, has steadily decreased.

The imports and exports of merchandise from 1875 to 1879 were as follows :

The declared value of the imports and exports of precious metals, coined and in bars, in the same period, was as follows:

YEARS.	GOLD.		SILVER		TOTAL.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1879	£13,369,000	£17,579,000	£10,787,000	£11,006,000	£24,156,000	£28,585,000
1878	20,571,000	14,969,000	11,532,000	11,715,000	32,423,000	26,687,000
1877	15,442,000	20,861,000	21,711,000	19,487,000	37,153,000	39,798,000
1876	23,470,000	16,516,000	18,578,000	12,948,000	37,054,000	29,464,000
1875	23,141,000	18,643,000	10,174,000	8,950,000	33,265,000	27,628,000

The value of imports and exports in the years 1879 and 1878 was as follows:

COUNTRIES.	IMPORTS.		EXPORTS.	
	1879.	1878.	1879.	1878.
I. FOREIGN COUNTRIES.				
Russia.....	£15,876,000	£17,804,000	£7,645,000	£6,559,000

Lagos.	51,000	50,000	484,000	577,000	363,000
Mauritius.	730,000	735,000	700,000	2,229,000	3,777,000	564,000
Feejee (1876).	61,000	65,000	137,000	193,000	47,000

* The commerce of Gibraltar, Hong-Kong, and Labuan is with the United Kingdom only.

The commercial navy was as follows in 1879 and 1878 :

PARTICULARS.	SAILING-VESSELS.		STEAMSHIPS.		TOTAL.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
Number of ships registered :						
United Kingdom { 1879	20,538	4,289,000	4,826	2,816,000	25,884	6,555,000
{ 1878	21,058	4,289,000	4,826	2,816,000	25,884	6,555,000
Number of vessels used in 1879 (exclusive of river-steamers) :						
Coasting	10,709	708,000	1,844	240,000	12,058	948,000
Coasting and long-voyage	909	128,000	209	84,000	1,118	213,000
Long-voyage	4,881	8,083,000	2,027	2,007,000	6,858	5,089,000
Total, 1879	16,449	8,919,000	3,580	2,881,000	20,029	6,250,000
Ships registered in British colonies, 1879						

The following table gives the postal statistics for the year ending March 31, 1880 :

ARTICLES.	England and Wales.	Scotland.	Ireland.	Total.
Letters	950,000,000	102,000,000	76,000,000	1,128,000,000
Postal-cards	97,000,000	12,000,000	6,000,000	115,000,000
Newspapers and printed matter	281,000,000	87,000,000	27,000,000	845,000,000
Money orders :				
1. To United Kingdom	£14,400,000	£1,400,000	£1,000,000	£16,900,000
2. To foreign countries and colonies				200,000
3. From foreign countries and colonies				300,000
Amount of money orders :				
1. To United Kingdom	21,838,000,000	2,820,000,000	1,874,000,000	25,032,000,000
2. To foreign countries and colonies				427,000,000
3. From foreign countries and colonies				1,081,000,000

The railroad statistics for 1879 were as follows :

COUNTRIES.	Kilometres in operation.	Capital.	Gross receipts.	Net receipts.
England	20,192	£598,156	£50,488	£25,367
Scotland	4,609	90,695	6,884	3,229
Ireland	8,677	33,153	2,573	1,186
Total, 1879 ..	27,894	£698,545	£60,454	£29,673
“ 1879 ..	28,478	717,004	59,395	29,732

The number of telegraph-offices in 1878 was 5,259, of which 1,401 were private and railway stations. The length of the government lines was 41,334 kilometres, of wires 183,554 kilometres. The number of dispatches sent, exclusive of press and official dispatches, was 23,385,416.

The British army is filled up exclusively by recruiting. The term of service is twelve years, after which a soldier can serve for nine years more. At the end of three years he can also enter the reserve, one year in the regular army being counted as three in the reserve. By the reorganization of 1872, the United Kingdom is divided into sixty-eight military districts. In each district there is one brigade depot of 182 men, two battalions of the regular army, which alternately serve abroad, two battalions of militia, and the volunteers of the district. Besides these there are the following organizations: In Ireland there is a police force under military discipline, consisting of 13,000 men and 4,000 horses; the Channel Islands have a militia of 300 officers and 7,000 men, subsidized by the British Government. India has a police force, under military discipline, of 190,000 men, the officers of which are Europeans; the colonies

all have a militia and a volunteer corps of their own. According to the “Army Estimates” 1880-’81, the army was composed as follows :

TROOPS.	Officers.	Soldiers.	Total.	Animals.*
I. REGULAR ARMY.				
1. Cavalry	819	16,426	17,245	11,718
2. Artillery	1,324	32,907	34,231	12,164
3. Engineers	816	4,885	5,655	322

* Horses, elephants, and steers.

† English officers.

‡ Native officers and soldiers.

The navy consisted of 72 ironclads, inclusive of those in the course of construction, about 360 steamers, and 120 sailing-vessels. Of this number 251 were in commission in August, 1880, 123 being at home, and 128 abroad. The navy is manned by 45,800 seamen, 13,000 marines, and 21,420 men belonging to the Royal Navy reserve.

The session of Parliament was opened February 5th by the Queen in person. Her Majesty said in her speech, which was read by the Lord Chancellor :

My relations with all the powers continue to be friendly. The course of events since the prorogation of Parliament has tended to furnish additional security to the maintenance of European peace, on the principles laid down by the Treaty of Berlin. Much, however, still remains to be done to repair the disorder with which the late war has affected many parts of the Turkish Empire.

A convention for the suppression of the slave-trade has been concluded between my Government and that of his Imperial Majesty the Sultan.

At the close of your last session I expressed my hope that the Treaty of Gundamak had happily terminated the war in Afghanistan. In conformity with its provisions, my envoy, with his retinue, was honorably received and entertained by the Ameer at Cabool. While engaged, however, in the exercise of their duty, he and those connected with the embassy were treacherously attacked by overwhelming numbers, and, after an heroic defense, were almost all massacred. An outrage so intolerable called for condign chastisement, and my troops, which, pursuant to the stipulations of the treaty, either had withdrawn or were withdrawing from the territories governed by the Ameer, were ordered to retrace their steps. The skill exhibited in the rapid march upon Cabool, and in the advances upon the other lines of action, reflects the highest credit upon the officers and men of my British and native forces, whose bravery has shewn with its wonted luster in every collision with the enemy.

The abdication of the Ameer, and the unsettled condition of the country, render the recall of my troops impossible for the present; but the principle on which my Government has hitherto acted remains unchanged; and, while determined to make the frontiers of my Indian Empire strong, I desire to be in friendly relations alike with those who may rule in Afghanistan, and with the people of that country.

My anticipations as to the early establishment of peace in South Africa have been fulfilled. The capture and deposition of the Zooloo king, and the breaking-up of the military organization on which his dynasty was based, have relieved my possessions in that part of the world from a danger which has seriously impeded their advancement and consolidation. In Basutoland a native outbreak of considerable importance has been effectually quelled by my colonial forces; while the Transvaal has been freed from the depredations of a powerful chief, who, having successfully resisted the former Government of the country, had persistently rejected our attempts at conciliation. I have reason to hope that the time is now approaching when an important advance may be made toward the establishment of a union or confederation under which the powers of self-government, already enjoyed by the inhabitants of the Cape Colony, may be extended to my subjects in other parts of South Africa. . . .

The commission which, at the close of the last session, I informed you I had issued to inquire into the causes of agricultural depression throughout the United Kingdom is pursuing its labors. In the mean time, the serious deficiency in the usual crops in some parts of Ireland has rendered necessary special precautions on the part of my Government to guard against the calamities with which those districts were threatened.

With this view, they have called upon the authorities charged with the duties of administering relief to make ample preparations for the distribution of food and fuel, should such a step become necessary; and they have also stimulated the employment of labor by advances on terms more liberal than those prescribed by the existing law.

I feel assured that you will give your sanction to the course which has been adopted where it may have exceeded the power intrusted by Parliament to the Executive Government.

A proposal will be submitted to you for providing the funds required for these exceptional advances on the security of the property administered by the Church Temporalities Commissioners.

I trust you will be able to resume the consideration of the Criminal Code, and of the improvement of the law of bankruptcy.

Bills will be laid before you for enlarging the powers of owners of settled land, for consolidating and amending the lunacy laws, and for simplifying the practice of conveyancing.

The address to the Crown was moved in the House of Lords by Lord Onslow, who defended the policy of the Government in Afghanistan and South Africa, and expressed the hope that the Government would be able to make good its promises of useful legislation to meet the agricultural distress. Lord Rosse seconded the motion, speaking particularly of the distress in Ireland. Lord Granville urged a reform of the land laws, by simplifying the sale and acquisition of land. If Home Rule meant another and distinct Parliament for Ireland, he considered it an utter impossibility, though he had no objection to giving the sister kingdom such an amount of local control over its affairs as would really tend to an amelioration of its condition. The war in South Africa had not only been impolitic, but in the highest degree unjust and unnecessary, a cruel and inhuman contest, a disgrace to the honor and name of the nation. Not less without excuse had been the war with Afghanistan, where the British had been met with the most determined resistance on the part of all the natives. The Earl of Beaconsfield said it was disingenuous to blame the Government, not so much for what it had done, as for what it had been said it had done. He did not think it necessary at that time to defend the stipulations of the Treaty of Berlin. The Government was seeing to their execution. To the strictures of Lord Granville on the wars in South Africa and Afghanistan, and the alleged atrocities there, he gave an indignant denial. The policy of the Ministers in regard to Afghanistan had never altered. It was not one of annexation, but purely of defense, and, having secured the military frontier, the troops would be withdrawn the moment the Afghans had obtained a ruler under whom they could live and be peaceful. Not more than one tenth of the people were hostile to the British. The Premier further declared that what the Home Rulers wanted would be equivalent to a dismemberment of the United Kingdom, and the man who favored that was false to his sovereign and his country. The Duke of Argyll denounced the proceedings of

General Roberts in Afghanistan, criticised the Treaty of Berlin as giving each of the powers a separate cause of quarrel with Turkey, and the Anglo-Turkish Convention as guaranteeing Turkey against the consequences of breaking its own promises, and charged that Lord Lytton, Viceroy of India, had led the Government in its Afghan policy. Lord Cranbrook replied to the Duke of Argyll, and the motion for the address was adopted. The address was moved in the House of Commons by Colonel Drummond Moray, and seconded by Mr. J. P. Corry. Lord Hartington asked explanations from the Government on various points; first, as to the Greek frontier negotiations, and the progress which had been made in inducing Turkey to adopt the promised reforms. He deprecated any action on the part of England for the repression of the rising liberties of the Danubian principalities, and insisted that the threatening state of Europe should teach the lesson of making the country safe, by concentrating its resources and lessening its responsibilities. He complained that the speech from the Throne contained no reference to future policy in Afghanistan, and argued that the course of events had made it impossible to pursue the policy marked out in the Treaty of Gundamak. He thought the annexation of the Transvaal in South Africa was effected under a mistake as to the views of the people, and might be revoked if that should turn out to be the wisest policy. He hoped the Ministers would take the earliest opportunity for explaining what steps they had taken to meet the distress prevailing in Ireland. The Chancellor of the Exchequer spoke in explanation of measures that had been adopted by the Government on subjects to which the opposition had directed their inquiries. The state of Turkey was such as to cause anxiety, but the Government were striving to bring about a better condition. Under existing circumstances, and in the armed state of Europe, England could not afford to abdicate its position and influence in the council of nations. The policy of the Government as to Afghanistan was not changed. A better hope than hitherto existed of bringing about a South African federation. The Chancellor also related what the Government had done with respect to the distress in Ireland.

In the course of the subsequent debates, Earl Beaconsfield several times announced that the statement that the Government had released Persia from its engagement not to occupy Herat, was not true; and a letter was read from General Roberts denying allegations that Afghan prisoners had been shot for fighting against the British troops. On the 18th of February Earl Beaconsfield, in answer to a question from Earl Granville, said that he was not prepared to say that the tripartite treaty of 1856, by which Great Britain, Austria, and France guaranteed the integrity of the Ottoman Empire, had ceased to exist, but that if

the kingdom were appealed to by the co-signatories of the treaty to act under its provisions, there were certain circumstances he should take into consideration. Lord Selborne said that he considered the treaty as completely inoperative as if it had been abrogated in the most solemn form. On the 20th of February the Duke of Argyll made a speech of more than two hours in length in the House of Lords, in condemnation of the policy and proceedings of the Government in Afghanistan. He was replied to by Lord Cranbrook, and the debate was continued by Lord Northbrook, Lord Hammond, Lord Strathairn, Lord Napier of Magdala, the Lord Chancellor, Lord Granville, and Lord Beaconsfield.

Attention was called in the House of Commons, February 17th, to a placard signed "S. Plimsoll" which had been posted on the walls of Westminster, appealing to the constituents of Sir Charles Russell against his action on the grain-cargoes bill. This was regarded by the member assailed as a breach of privilege, and he moved a resolution affixing that character to it. Mr. Plimsoll acknowledged his responsibility for the paper, made an explanation and apology for his act, and desired to withdraw the words he had used. The resolution of censure was withdrawn, but it was insisted that some notice ought to be taken of the act notwithstanding an apology had been made, and the Chancellor of the Exchequer moved a resolution mentioning the offense, but declaring that an apology for it had been accepted. A debate ensued as to whether the effect of the resolution might not be to make a new rule or to limit the freedom of discussion, after which it was adopted.

The Chancellor of the Exchequer moved, February 23d, a series of resolutions for preventing the obstruction of the progress of business in the House by factious members, which were adopted without a division and made a standing order of the House. They provide that if any member shall have been named by the Speaker or Chairman of Committees as disregarding the authority of the Chair or abusing the rules of the House by persistently or willfully obstructing business, then the Speaker shall put the question—if motion be made, without amendment, adjournment, or debate—that the offender be suspended for the remainder of the sitting. If a member be suspended three times in one session his suspension shall continue on the last occasion one week, and until a motion has been made upon which it shall be decided whether his suspension shall cease, or for how long a period it shall continue; and a member, if he so pleases, may be heard in his own defense.

The army estimates were passed March 1st, including a vote of £4,579,000 for pay and allowances for the land forces at home and abroad. The naval estimates were passed March 8th, embodying a vote of 58,800 men and boys for the service for 1880-'81, and several votes of money.

On the same day, the Government announced in both Houses that as the Parliament would necessarily be dissolved during the year by the expiration of its term of limitation, they had considered it most convenient to hold the elections for the new Parliament at about the time of Easter, the effect of which would be to enable the new Parliament to meet in May. Parliament would then be prorogued and dissolved as soon as the essential measures could be finished. The Chancellor of the Exchequer presented his financial statement March 11th. The total amount of the deficit on the last year was £3,340,000, due in some measure to war expenditure, but largely traceable to a falling off in the revenue. The total cost of the Zulu war, from first to last, had been £5,138,000. The Chancellor estimated the total income of the next year at £81,560,000, as against an actual income for the past year of £80,860,000, showing an advance of £700,000. The actual expenditure of the last year had been £81,153,000. For the coming year he estimated it at £81,486,000. This would leave as between estimated income and estimated expenditure a balance of £74,000. The accumulated deficit—£8,100,000—he proposed to meet by the conversion of £6,000,000 of annuities terminable in 1885, and by Exchequer bills for the remaining £2,000,000. The sum of £600,000 would be appropriated from the new sinking fund, and, £800,000 being added to the fixed sum of £28,000,000 now applied yearly to pay the interest of the public debt, the deficit of £6,000,000 would thus be met in five years. A bill was passed concerning Parliamentary elections and corrupt practices, and a few other pending measures of more pressing importance were disposed of, after which Parliament was prorogued and dissolved by royal proclamation March 23d. The Queen said in her message of prorogation:

I can not part from you without expressing my deep sense of the zeal and ability which, during more than six years, you have consistently displayed in exercising your important functions, nor without tendering to you my warm acknowledgments for the useful measures which you have submitted for my acceptance, and especially for the manner in which you have upheld a policy the object of which was at once to defend my empire and to secure the general peace.

My relations with foreign powers are friendly and favorable to the maintenance of tranquillity in Europe.

I entertain the confident hope that the measures adopted in Afghanistan will lead to a speedy settlement of that country.

I have had much satisfaction in assenting to the acts you have passed for the relief of the distress unhappily prevalent in parts of Ireland; and, trusting that these measures will be accepted by my Irish subjects as a proof of the ready sympathy of the Imperial Parliament, I look forward with confidence to the restored prosperity of their country.

I rejoice to observe the indications of a general improvement in trade, and that the commercial depression which I have had to lament appears to be passing away.

I have witnessed with the greatest sympathy the heavy losses sustained by the various classes connected with the cultivation of the soil, and have viewed with admiration the patience and high spirit with

which they have contended against an almost unprecedented series of disastrous seasons.

I trust that, with the blessing of Providence, a more favorable harvest may be looked for, and that, from the commission which I issued to inquire into the causes of agricultural depression, suggestions may come which will lead to the more profitable use of agricultural land, and to a higher development of this branch of national industry.

The electors of the United Kingdom will be called upon forthwith to choose their representatives in Parliament, and I fervently pray that the blessing of Almighty God may guide them to promote the object of my constant solicitude—the happiness of my people.

The Parliament now dissolved met on March 5, 1874, and had reached the age of six years and nineteen days, constituting it the longest Parliament that had sat during the reign of Victoria, except that called by Earl Derby in May, 1859, which sat thirteen days longer.

The leaders of both parties published their declarations, designed to be influential in the coming elections, immediately on the announcement being made that the dissolution would occur near Easter. The Earl of Beaconsfield wrote to the Lord-Lieutenant of Ireland, stating that the measures respecting the state of Ireland were about to be submitted to the royal assent, and claiming that one of the most difficult problems connected with the government and people of that country had been solved by establishing a system of education open to all classes and creeds. Nevertheless, a great danger distracted Ireland in that a part of its population was attempting to sever the constitutional tie which united it to Great Britain. After declaring that the strength of the nation depended on the unity of feeling which should pervade the United Kingdom and its dependencies, and that the first duty of the Minister should be to consolidate the coöperation of all the parts, the Premier continued:

And yet there are some who challenge the expediency of the imperial character of this realm. Having attempted, and failed, to enfeeble our colonies by their policy of decomposition, they may, perhaps, now recognize in the disintegration of the United Kingdom a mode which will not only accomplish, but precipitate their purpose. . . .

Rarely in this century has there been an occasion more critical. The power of England and the peace of Europe will largely depend on the verdict of the country. Her Majesty's present Ministers have hitherto been enabled to secure that peace, so necessary to the welfare of all civilized countries, and so peculiarly the interest of our own. But this ineffable blessing can not be obtained by the passive principle of non-interference. Peace rests on the presence, not to say the ascendancy, of England in the councils of Europe. Even at this moment the doubt, supposed to be inseparable from popular election, if it does not diminish, certainly arrests her influence, and is a main reason for not delaying an appeal to the national voice.

The Marquis of Hartington, the Parliamentary leader of the Liberal party, carefully indicated the policy of the Government in an address to the electors of northeast Lancashire. Referring to the manifesto of the Prime Minister, he said: "I seek to evade no issue which the Government can raise; but it is necessary

that these issues should be plainly stated, and that others which he has avoided shall be brought before you. I know of no party which 'challenges the expediency of the imperial character of this realm.' I know of none who have 'attempted to enfeeble our colonies by their policy of decomposition.' The present healthy condition of the colonies, and their harmony of feeling with the mother-country, he continued, was owing to their having received their institutions under the guidance of Liberal statesmen, and learned "that entire dependence on imperial assistance for their freedom and defense was not compatible with the dignity of freemen." No patriotic purpose was to be gained by the use of language of exaggeration in describing the Irish agitation for Home Rule. His lordship believed that the demand so described was impracticable, that concession to it would be mischievous, and he had always opposed it and always would oppose it. The Government had treated it with indulgence and indifference when it should have met it with firm and consistent resistance, combined with proof that every just and reasonable demand of the Irish people for equal laws and institutions would be granted. Lord Beaconsfield had claimed that her Majesty's Ministers had maintained the peace of Europe. "But they did not prevent," said the Marquis of Hartington, "even if their policy did not cause, a war in the East of Europe. The ascendancy of England has been claimed in circulars, but it has been surrendered in secret conventions. In the aggrandizement of Russia, and the destruction of the independence and integrity of the Turkish Empire, the declared objects of their policy have been frustrated." No progress had been made toward giving effect to the provisions of the Anglo-Turkish Convention for reforms in Asia Minor, and the Greek question, which disturbed Eastern Europe, was still as far from a solution as ever; but while the policy of the Ministry had failed, the immense responsibilities incurred by the country remained. In Africa, the address continued, "her Majesty's Ministers have drifted into a war which they did not sanction and which they deplore—a war which has brought no honor and no advantage in return for the blood and treasure which have been spent. In Afghanistan they have created a war which has destroyed a nation, the strength and independence of which they declared, in common with their predecessors, to be important for the safety of the frontier of India." And in this they had subjected India to immense loss and expense. "The just influence of England in the councils of Europe," the Marquis added, "is an object which the Liberal party has pursued with at least as much sincerity as, and certainly with more success than, has attended the policy of the present administration. . . . But the influence of England does not rest upon boasts of ascendancy over Europe, irrespective of the objects for which that ascen-

dancy is to be employed. It rests on the firmness and moderation of our conduct, based upon the material and moral strength of our position, and exercised in concert with other nations on behalf of peace, justice, and freedom." The domestic consequences of a foreign policy at once restless and undecided had been stagnation in internal reforms and financial confusion. Had not domestic prosperity and honor been attended to by the predecessors of the present Ministry, the power and influence of England, of which they were the foundations at home, would never have existed to be displayed abroad. The Marquis then mentioned several points of domestic concern which required consideration, but in relation to which nothing serious had been attempted by the Government, and there was no indication that anything serious was intended. The Liberal party, he concluded, "can offer no special favor to any class or to any interest. They can only undertake that, while upholding the power of the empire, securing the safety of our own country, and maintaining its possessions, they will engage in no policy of disturbance or uncalled-for annexation."

The elections for the new Parliament were held during April, and resulted in the return of 355 Liberals, 238 Conservatives, and 62 Home Rulers, giving the Liberals a plurality of 117, and a majority of 55 members. At the election of sixteen peers to represent the peers of Scotland in the House of Lords, April 16th, the Earl of Leven and Melville, and Lord Borthwick were chosen in the place of Lord Sinclair and the Marquis of Queensberry. Mr. Gladstone, who was universally regarded as the real leader of the Liberal party, was returned to the House of Commons by the two constituencies of Midlothian and Leeds. He elected to sit for Midlothian. He gave his view of the situation and of the responsibility of his party in his address to the electors of that borough, saying, "The efforts of the party which now seems likely to attain the full measure of its predominance will, I trust, be steadily and temperately addressed toward establishing the external policy of this country on the lines of justice, equal right, and sympathy with freedom, and toward the direction of the internal government and legislation which, during the last half-century, have done so much to relieve the people, to gain respect for the laws, to strengthen the foundation of the throne, and to consolidate the structure of this great and noble empire." The Marquis of Hartington regarded the result of the elections as rather the expression of the disapproval and condemnation by the voters of the conduct of the Government than of their confidence in the Liberal party; he thought the Liberals knew very well that they had still very much to do in order to establish their claims before the country. A task of pressing importance which they had before them was to secure a condemnation and reversal of the system of foreign policy which

the Government was pursuing. Mr. Gladstone was offered a public reception in London, but declined it on grounds of public propriety, saying, "I am sure that in the eyes of many, and not of our political opponents exclusively, it would be regarded as an attempt, made for the first time, to establish a practice of public rejoicing in the metropolis of the country over the catastrophe of an administration and a political party, and would wound feelings which we ought to respect as well as spare."

On the 21st of April the Earl of Beaconsfield formally tendered to the Queen the resignations of himself and his colleagues in the Ministry. On the next day the Queen sent for the Marquis of Hartington. On the 23d Lord Hartington visited the Queen again with Lord Granville, and afterward Mr. Gladstone was summoned to Windsor and received the appointment of First Lord of the Treasury and Chancellor of the Exchequer. The new Cabinet was constituted as follows: First Lord of the Treasury and Chancellor of the Exchequer, the Right Hon. W. E. Gladstone; Lord Chancellor, Lord Selborne; Lord President of the Council, Earl Spencer; Lord Privy Seal, the Duke of Argyll; Secretary of State for the Home Department, Sir William Harcourt; Secretary of State for Foreign Affairs, Earl Granville; Secretary of State for the Colonies, Earl of Kimberley; Secretary of State for War, Mr. Childers; Secretary of State for India, Marquis of Hartington; First Lord of the Admiralty, Earl of Northbrook; President of the Board of Trade, Mr. Chamberlain; Chancellor of the Duchy of Lancaster, Mr. Bright; Chief Secretary for Ireland, Mr. Forster; President of the Local Government Board, Mr. Dodson.

Earl Granville as Foreign Secretary received the foreign ambassadors and ministers April 30th, and stated concerning the attitude of the new Cabinet in regard to Continental affairs, that the Treaty of Berlin, frankly adopted by the new Government, would be maintained; the Cabinet would enter into no Continental alliance, and would cordially continue the relations with France; it would support the demands of Greece; and it expected to maintain a good understanding with respect to English and French relations in Egypt.

The new Parliament met April 23d. The Right Honorable Henry Brand was elected Speaker of the House of Commons. During the process of swearing in the members of the House of Commons, Mr. Charles Bradlaugh, who had been returned from Northampton, being an atheist, claimed the privilege of making an affirmation instead of taking the oath. The Speaker was not able to determine the question thus raised, since he had grave doubts of the construction placed on the meaning of the Parliamentary Oaths Act of 1866 by Mr. Bradlaugh. The case was referred to a select committee. The House afterward adjourned till May 20th. The committee appointed to consider the question raised by Mr. Bradlaugh,

decided that the oath should not be dispensed with in his case, and so reported when the House met again. On the 21st of May Mr. Bradlaugh came forward and offered to be sworn. A resolution was offered declaring that he ought not to be allowed to take the oath. This was rejected by a vote of 289 to 214. The case was then referred to a select committee, with directions to inquire into the facts and circumstances of the claim of Mr. Bradlaugh to be sworn, into the law applicable to the claim, and into the jurisdiction of the House to refuse it. This committee reported adversely to Mr. Bradlaugh's claim, and the House decided, June 22d, after having debated the question for two days, that Mr. Bradlaugh should not be allowed to take the oath. On the next day, Mr. Bradlaugh again pressed his claim to take the oath. It was denied, and he was requested to withdraw. He declared the order contrary to law, and refused to obey it, and for this was taken into custody. The case excited great public interest, and many meetings were held on the subject, some of which were in sympathy with Mr. Bradlaugh, and others with the Parliamentary majority. On the 2d of July Mr. Gladstone moved a resolution declaring that every person returned as a member of the House of Commons, who may claim to be a person for the time being by law permitted to make a solemn affirmation instead of taking an oath, should henceforth—notwithstanding so much of the resolution adopted by the House on June 22d as relates to affirmation—be permitted without question to make and subscribe a solemn affirmation in the form prescribed by the Parliamentary Oaths Act of 1866, as amended by the Promissory Oaths Act of 1868, subject to any liability by statutes. The resolution was adopted by a vote of 303 to 249, and was made a standing order. Mr. Bradlaugh made the affirmation and took his seat on the next day.

In the opening speech of his canvass at Edinburgh, March 17th, Mr. Gladstone attributed to the Emperor of Austria a disparaging remark concerning himself which his Majesty was said to have made to Sir Henry Elliot, describing Mr. Gladstone as a man who did not approve the foreign policy of Austria, and whom he therefore did not desire to see in power. Mr. Gladstone then reviewed the foreign policy of Austria, saying: "Austria has ever been the unflinching foe of freedom in every country in Europe. . . . There is not an instance, there is not a spot on the whole map where you can lay your finger and say, 'There Austria did good.' I do not of course abandon the hope of improvement in the future; but we must look to the past and to the present for the guidance of our judgments. At this moment, and in the Congress of Berlin, Austria resisted the extension of freedom, and did not promote it." Sir Henry Elliot telegraphed from Vienna, March 22d, that Mr. Gladstone had entirely misrepresented a casual remark

the Emperor had made to him, and the Baron Haymerle, the Austrian Premier, was most anxious that there should be a contradiction in Parliament, or through the press, of the language attributed to his Majesty. In another dispatch the ambassador said that the language attributed to the Emperor bore no resemblance to that which he had really used, and that he had merely made a casual remark on the bitter hostility to Austria lately exhibited by Mr. Gladstone, and added that he hoped nothing would occur to disturb the cordial relations existing between the two countries. Mr. Gladstone after coming into office, May 4th, addressed a letter to Count Károlyi, the Austrian ambassador, saying that he had resolved that he would not, as a Minister, repeat or defend in argument polemical language in regard to foreign powers which he had used individually, when in a position of greater freedom and less responsibility; that he regretted ever having seemed to impute to his Imperial Majesty language which he did not use; that he had no hostile disposition toward any country, and had always wished well to Austria in the performance of the arduous task of consolidating the empire, and felt a cordial respect for the efforts of the Emperor; but that grave apprehensions had been excited in his mind, on evidence which was, indeed, secondary but not hostile, and was the best at his command, "lest Austria should play a part in the Balkan Peninsula hostile to the freedom of the emancipated populations, and to the reasonable and warranted hopes of the subjects of the Sultan." "Your Excellency," Mr. Gladstone continued, "is now good enough to assure me that your Government has no desire whatever to extend or add to the rights it has acquired under the Treaty of Berlin, and that any such extension would be actually prejudicial to Austro-Hungary. Permit me at once to state to your Excellency that, had I been in possession of such an assurance, as I am now able to receive, I never would have uttered any one of the words which your Excellency justly describes as of a painful and wounding character." The publication of this letter, the spontaneous act of the Government, was, it was said, much appreciated at Vienna. The comments of the German papers upon it were various; but the "Cologne Gazette," while considering it humiliating to England, said that it must not be overlooked that the new British Premier indirectly pledged Austria not to cross the frontiers drawn by the Treaty of Berlin. The correspondence was the subject of a discussion in the House of Lords, May 21st, in which Mr. Gladstone's language and act were sharply criticised by several Conservative peers. The Duke of Argyll replied that, while he regretted the speech of Mr. Gladstone, the fears which the Premier had expressed were entertained by a large number of persons at the time. The subject was then dropped.

The Parliament met after adjournment, for

the dispatch of business, May 20th. The Queen's message was read by the Lord Chancellor. In it her Majesty said:

The cordial relations which I hold with all the other powers of Europe will, I trust, enable me to promote in concert with them the early and complete fulfillment of the Treaty of Berlin with respect to effectual reforms and equal laws in Turkey, as well as to such territorial questions as have not yet been settled in conformity with the provisions of that treaty. I regard such a fulfillment as essential for the avoidance of further complications in the East.

In accordance with this view, I have deemed it expedient to dispatch an ambassador extraordinary to the court of the Sultan.

On the last occasion of my addressing you I expressed my hope that the measures adopted in Afghanistan would lead to a speedy settlement of that country. Since that period, the gallantry of my troops has continued to be conspicuous, and the labors of my Government in India have been unremitting. But I have to lament that the end in view has not yet been attained. My efforts will, however, be unceasingly directed toward the pacification of Afghanistan, and toward the establishment of such institutions as may be found best fitted to secure the independence of its people, and to restore their friendly relations with my Indian Empire.

The condition of Indian finance, as it has recently been made known to me, has required my special attention. I have directed that you shall be supplied with the fullest information upon this weighty subject.

I invite your careful notice to the important questions of policy connected with the future of South Africa. I have continued to commend to the favorable consideration of the authorities and of the people in the various settlements the projects of confederation. In maintaining my supremacy over the Transvaal, with its diversified population, I desire both to make provision for the security of the indigenous races, and to extend to the European settlers institutions based on large and liberal principles of self-government.

The Queen then made a reference to signs which indicated some revival of trade, but which had not been attended with any abatement in the depression of the revenue, and continued:

The Peace Preservation Act for Ireland expires on the 1st of June. You will not be asked to renew it. My desire to avoid the evils of exceptional legislation in abridgment of liberty would not induce me to forego in any degree the performance of the first duty of every Government in providing for the security of life and property. But, while determined to fulfill this sacred obligation, I am persuaded that the loyalty and good sense of my Irish subjects will justify me in relying on the provisions of the ordinary law, firmly administered, for the maintenance of peace and order.

The provisions enacted before the dissolution of the late Parliament for the mitigation of distress in Ireland have been serviceable for that important end. The question of the sufficiency of the advances already authorized by Parliament is under my consideration.

A measure will at an early day be submitted to you for putting an end to the controversies which have arisen with respect to burials in churchyards and cemeteries.

It will be necessary to ask you to renew the act for secret voting.

Among the chief subjects which will be brought under your notice, as time may permit, will be bills for giving more effectual protection to the occupiers of land against injury from ground-game, for determining on a just principle the liabilities of employers for accidents sustained by workmen, and for the extension of the borough franchise in Ireland.

The address to the Crown was moved in the House of Lords by Lord Elgin and seconded

by Lord Sandhurst. The Duke of Marlborough regretted the determination not to renew the Peace Preservation Act in Ireland, and said that he considered that nothing had occurred to justify the Government in their resolve. Lord Spencer held, upon a general review of the position of Ireland, that the Government were fully justified in the policy they had adopted. Lord Beaconsfield said that the declarations contained in the royal message as to the policy of the Government partook rather of an official than of a polemical character. He wished to know the precise nature of those active measures which they were told would be taken by her Majesty's Ministers in respect to the Treaty of Berlin. It would also be satisfactory to know, he said, what were the precise instructions given to the special ambassador at Constantinople, because, if he were invested with powers of an unlimited character, he might involve the country in a war without any one being actually responsible for such an event. He had no hesitation in expressing his conviction that, if the policy of the late Viceroy of India were carried out in relation to Afghanistan, it would result in a speedy and satisfactory settlement of the question of that country. Lord Granville vindicated the Irish policy of the Government, which, he said, they had carefully considered, and of which they were prepared to accept the responsibility. He was not alarmed about foreign affairs, but was conscious that there were points which would require great care in their management if serious complications were to be avoided. The object of the dispatch of the special embassy to Constantinople was to secure the fulfilment of certain conditions of the Treaty of Berlin, in relation to which the remonstrances of Sir H. Layard had long been neglected. The state of things with reference to the obligations of Turkey under the Treaty of Berlin was most unsatisfactory, and her Majesty's Government were satisfied that a better position of affairs could be brought about only by the united action of Europe. The address was moved in the House of Commons by Mr. Grey, and seconded by Mr. Mason. Sir Stafford Northcote declared that the Conservative party would support in opposition the policy it had maintained in office. The general tone of her Majesty's speech was of such a character that he could agree in the principles on which the Government intended to proceed. In accepting the Treaty of Berlin as the starting-point for the consideration of foreign relations, they were taking the wise, the only safe course for the country to adopt. The House ought to be more fully informed as to the nature and meaning of the appointment of Mr. Goschen as special ambassador to Constantinople; and he wanted to know what one of the speakers for the Government meant in speaking of "putting pressure" upon the Porte. Mr. Gladstone said that Mr. Goschen would have the powers of an ordinary ambassador. The Treaty of Ber-

lin gave the Government the right to insist upon the fulfillment of its stipulations; but Ministers were too well informed of the gravity of the question to come to a conclusion to put pressure upon the Porte until they were in full possession of all the circumstances which should regulate their conduct. A circular dispatch had been addressed to all the signatories to the Treaty of Berlin on the necessity of urging the execution of the unfulfilled stipulations of that instrument; but it was not intended to lay the dispatch on the table until it had borne its natural fruit in the adoption by other powers of a view conformable to that which her Majesty's Government entertained. In allowing the Peace Preservation Act for Ireland to expire, the Ministers were fully sensible of the heavy responsibility which must rest upon either the renewal or the abandonment of exceptional legislation of the sort.

Mr. Gladstone informed the House of Commons, May 27th, that Mr. Goschen, the special agent of the Government at Constantinople, had been instructed to inquire into the expediency of dispatching agents to the disturbed parts of Roumelia and Bulgaria, to obtain information in regard to the alleged persecutions of Mohammedans, which might help the Government in deciding upon the course it should take. On the next day, Mr. Gladstone acknowledged that in one of his public addresses he had spoken of the Anglo-Turkish Convention as "insane," and added that he could not retract the language, but he would not repeat it, because a repetition of it could only have the effect of disparaging an instrument as to which the country was not free to act. Sir Charles Dilke repeated an assurance that had been given by Lord Salisbury in 1878, that the country was under no engagements to foreign powers for the future, except those that were before the House, but he declined to state whether or not any diplomatic engagements which were not known to the House had been negotiated with any foreign power within the last five years. Secret agreements, he said, were sometimes necessary to meet the convenience of foreign powers, but the Ministry deprecated them.

Lord Camperdown called attention in the House of Lords, June 7th, to the finances of Cyprus. He designated the claim of the Turkish Government to the receipt of revenues from the island as a species of black-mail, declared the financial position of Cyprus intolerable, and remarked that in justice to its people no agreement to pay tribute should have been made. Lord Salisbury suggested that while the Government had imposed no additional obligation to Turkey upon the Cyprites, it had, by increasing their trade and commerce fourfold, considerably added to their means of paying the tribute. Lord Kimberley, representing the Government, remarked, July 8th, that the Secretary for Foreign Affairs was sensible of the difficulties in connection with Cyprus, and

that the whole question in its various branches, including the tenure of the island, would have to be considered by the Government. On the 11th of June Lord Carnarvon called attention to the distressed condition of the Armenians, and recommended the appointment of a Christian Governor-General, who should have the control, for the use of his district, of all or nearly all the revenue raised in that district. Lord Granville admitted that very little had been done to ameliorate the condition of the Armenians, though several commissions had been intrusted with the duty of examining into their grievances and suggesting remedies. The carrying out of the stipulations of the Treaty of Berlin in respect of those people was one of the objects for which he was endeavoring to secure the concerted action of the powers of Europe. Lord Salisbury had little hope of the success of a concert of the powers in bringing pressure to bear upon the Porte. His remedy, which he admitted to be a slow one, would be the action of consular agents in the Turkish provinces in letting in the light of public opinion on the atrocities perpetrated in those districts, and on the misgovernment of the pashas. The only alternative he saw to this was the terrible one of the extermination of the various races of which the populations of those provinces were composed, brought about by the miseries to which they were subjected. The Duke of Argyll called attention to the fact that one of the authors of the Treaty of Berlin had virtually said that no remedy existed for the state of things in Asia Minor, and pointed out that the Porte had undertaken in the treaty to carry out without delay the reforms demanded by the condition of the Armenians. He charged the Marquis with having prevented the insertion of an article in the treaty binding the powers to act together in seeing it carried out, and said that "a part of the political mess to which the present Government had succeeded was the task of reuniting the powers for the fulfillment of the treaty of which the late Government was so proud." The Armenian question was the subject of a debate in the House of Commons, July 25th, when Mr. Gladstone remarked that the concert of Europe was a thing of which the Government took a negative rather than a positive view; the Ministers had spoken rather of the evil that had resulted from disregarding it than of the probability of its continuing in existence. This view was brought out most clearly by the Anglo-Turkish Convention, which, while it had been barren so far as reforms were concerned, had in causing jealousy and ill-feeling been most productive. To a question asked in the House of Lords, July 8th, whether the Government had come to any determination as to the steps it would take in the event of the Porte declining or neglecting to be governed by the decision of the recent Conference at Berlin, Lord Granville replied that it was not the duty of the Government in answer to hypothetical ques-

tions to describe what its policy would be in possible contingencies, and that it would not be respectful to Turkey to make the assumption implied in the question. On the 30th Lord Granville stated that her Majesty had addressed a note to the Sultan, expressing the hope that he would, even at some sacrifice, accede to the unanimous wish of Europe respecting the fulfillment of the Treaty of Berlin. On the 3d of September, Sir W. Lawson spoke in the House of Commons in favor of absolute non-intervention. He deprecated the naval demonstration against Turkey and the course of the Government in acting without consulting Parliament, and urged it to explain, before Parliament adjourned, its position with reference to the Eastern question, and especially to the naval demonstration. Lord Hartington replied that the object of the naval demonstration was to show the Porte that the powers did not mean that the Treaty of Berlin should be set at naught. On the 5th Mr. Gladstone spoke in defense of the policy of the Government with reference to Turkey, and described it as being based upon the conviction that the former policy of allowing Turkey to think that its integrity would be maintained at any cost had led to frightful oppression of its Christian subjects. Sir W. Lawson having expressed an apprehension that the Government would unduly interfere in foreign affairs, he appealed to the antecedents of the ministers as affording the strongest possible guarantees against their engaging upon adventurous courses.

Lord Hartington stated in the House of Commons, June 7th, that the instructions which had been sent to Lord Ripon respecting the war in Afghanistan related in great part to contemplated negotiations of a very difficult and delicate character. The objects of the Government were to bring the military operations in Afghanistan to a close, to keep the communications secure as long as the troops remained in the country, to restrict military operations, and to avoid further collisions with the tribes beyond the limits of the positions occupied, and also to leave behind, when the troops should have retired, something like the prospect of a stable government. All arrangements that had been entered into must be respected, but an arrangement which would make necessary the permanent occupation of Candahar by a large force would not be viewed with favor. Lord Ripon would act upon military advice, and would consider the question of retention or abandonment on its merits, political and military, without being influenced by the fact of the positions having been acquired under the Treaty of Gundamuk, a treaty which must be considered as having ceased to exist. Lord Hartington further stated, July 27th, that considerable difficulty as well as delay had occurred in the negotiations; indeed, Lord Ripon had continued them against the advice of some of his counselors, who had at one time recommended their abandonment. No formal agree-

ment had yet been made with Abdurrahman Khan; he had simply been recognized as Ameer of Cabool, and had been offered such support as he would require to establish his position. No negotiations would at present be entered into with regard to Candahar or the other matters mentioned in the Treaty of Gundamak, which the Ameer had been informed would be treated as separate and independent subjects. The Ameer would not be allowed to have foreign relations with any power except the British; and the Government would not interfere in the domestic politics of the country. In the House of Lords, August 12th, Lord Camperdown asked for the production of the papers relative to the separation of Candahar from the rest of Afghanistan, and expressed an apprehension that that measure, which had so far been attended with unfortunate results, might lead to future troubles. Lord Granville spoke of the difficulty of going into a discussion on that subject at that moment. The Secretary of State for India had authorized him to state that the papers were being prepared for presentation, but it would require very careful consideration to decide what part of the information asked for could at present be produced. On the next day, the Marquis of Hartington, having explained before the House of Commons the military situation in Afghanistan, and remarked that nothing could be more unwise than to interfere with the discretion of military officers in whom the Government had confidence, added that Abdurrahman Khan would not be expected to receive a British envoy, but that the Indian Government would be represented by a native resident.

On the occasion of bringing down her Majesty's reply to the address, Lord Carnarvon, in the House of Lords, May 21st, approved the passages in which the policy of a confederation of the South African colonies was upheld, the intention of her Majesty to maintain the supremacy of the Crown in the Transvaal was announced, and the colonies were promised institutions based on large and liberal principles of self-government. He, however, cautioned the Government against too great haste in organizing those institutions, and against a summary withdrawal of the troops from South Africa, and recommended precautions against the importation of arms, and the cultivation of friendly relations with the Orange Free State. Lord Kimberley held that, although it might have been better if the Transvaal had not been annexed, still, the annexation having been accomplished, and announcement having been made to the Dutch settlers that the measure would not be receded from, it was desirable on all grounds to make it clear that the supremacy of the Crown would be maintained there. The question of the South African colonies was a complex one, and its difficulties had not been diminished since he was before at the Colonial Office; yet he was hopeful that hereafter all of the colonies, and the Orange Free State

also, with which the Government would cultivate friendly relations, would be united in one confederation. On the next day Mr. Gladstone spoke in the House of Commons in complimentary terms of the honor and capacity of Sir Bartle Frere, her Majesty's High Commissioner in South Africa, and observed that, even if it became desirable hereafter to make a change which would involve his retirement, no step would be taken to endanger the prospect of confederation. On the 4th of August the Government stated that since confederation, the special object for the promotion of which Sir Bartle Frere had been retained in South Africa, had failed, it had come to the conclusion that he should be recalled. The Ministers did this with regret, for they could not forget the high personal qualities and distinguished services of the Commissioner.

The Duke of Marlborough inquired in the House of Lords, June 7th, what statutory powers the Government considered to be in force in Ireland which would enable the Lord Lieutenant to send an additional police force into the country for the repression of crime, and to provide for its maintenance at the expense of the locality. Lord Spencer replied that the constabulary acts gave power to repress crime and to charge localities for any outrages committed within certain areas. A bill looking to the relief of distress in Ireland by the provision of appropriations of money to be spent in various works of public improvement, etc., was introduced by the Government in June. In the debate on the second reading of this bill, June 17th, Mr. Parnell said that no measure for the relief of distress would be adequate which did not deal with the tenure in land of the country, and that the assistance which it was proposed to give would not really reach the suffering people. Mr. O'Shaughnessy held that a case had arisen for a liberal grant from imperial funds. The Attorney-General for Ireland pointed out that the main object of the bill was to carry out the policy which had been sanctioned by the late Parliament. Another bill was introduced by Mr. Forster on behalf of the Government, the object of which was to confer on the Judges of the County Courts in certain distressed districts the right to grant compensation for improvements in cases where tenants were evicted for non-payment of rent. This measure was known as the Compensation for Disturbance Bill, and was limited in its operation to the years 1880 and 1881. It was opposed on the ground that it infringed upon the rights of the landlords, and was in effect a concession to the demands of the land agitators. Its friends replied to these attacks that the Irish landlords claimed greater power than existed in England, where, unless the contract contained a clause of reentry, no tenant could be turned out of his holding, solely for non-payment of rent. Another measure, called the Fixity of Tenure Bill, the operation of which would be to extend what is

known as the Ulster tenant-right over the whole of Ireland, was introduced without the concurrence of the Government. The Government deprecated the pressing of this measure as premature and calculated to forestall its action, but declined, in the discussion upon the subject, to make any pledge as to the character of the land act which it intended to bring in at the next session. Mr. Parnell declined to support the bill, because he did not consider it sufficient for a final settlement, and also thought that the Government ought to be allowed adequate time to deal with the question involved. This bill was lost on the first division. In the discussion of the Compensation for Disturbance Bill, July 6th, Mr. Gladstone admitted the exceptional nature of the measure, but insisted that it was demanded by exceptional circumstances. It was intended to maintain, not to invade, the rights of property, and to enable the state with a clear conscience to use its power to enforce the provisions of the law. The insinuation that it was intended to conciliate the partisans of Home Rule was absurd on its face. The course which the House was asked to adopt in constituting a new exception to the land act was justified because the necessity was strong, the situation in some parts of Ireland being equivalent to civil war; because the remedy was carefully adapted and limited to the necessity; and because effectual precautions had been taken against the House being betrayed unawares into the establishment of a dangerous precedent. On the other side, the bill was declared to be a dangerous measure of confiscation. One speaker asserted that it would ruin hundreds of landlords, break up many of their homes, and reduce their families to suffering, without rendering their tenantry more happy or contented. Lord Hartington disavowed all desire to support exceptional legislation without giving the case of the landlords full investigation. Nothing, therefore, would have induced him to approve of this measure but the strong conviction which was entertained by the Irish Government, and those responsible for the peace of Ireland, that something of the sort was absolutely necessary. Mr. Forster said the Government did not intend to say that the peace of Ireland could not be preserved without this bill, but had introduced it because the Ministers wished to be able to enforce the law with a good conscience, and they believed that, if an amendment of this character were not provided, they would have to enforce a law that was not altogether just. The bill was passed to its second reading by a vote of 295 to 217, and was finally passed July 27th and carried to the House of Lords, where its second reading was moved by Lord Granville, August 3d. Lord Granville supported the measure chiefly on account of the increasing number of evictions. He urged that if the House of Lords had not changed the land act of 1870 from the form in which it passed the House of Commons, by striking out the clauses

enabling the judge, on the eviction of a tenant for non-payment of rent, to discuss how far his default had been occasioned by the rent being excessive, no such bill would have been necessary. Lord Grey protested that, even though distress existed, the landlord ought not to be deprived by the law of the means of enforcing the payment of rent, as would substantially be done if the power of eviction were suspended; denied that the landlords had been harsh, or the tenants had done their best to pay their rents; and attributed the increase of evictions to the alarm engendered by the inflammatory speeches of the land agitators. Lord Salisbury depicted land agitation in Ireland as like a wild beast, which one could no more satisfy by concession than he could keep off a tiger by giving it his hand. Lord Cairns asserted that the bill was drawn up with an ingenuity which would make inevitable a collision in every case between landlord and tenant; for the tenants, unless they were different from the rest of mankind, would be impelled to make the claim for compensation in every case. The bill, he said, offered the tenant an easy way of getting a considerable sum of money without paying his rent, and would allow him to retain his land while he was making his claim. While he opposed this bill, he was nevertheless willing to consider a measure for Irish emigration, or one for the extension of tenant-right. Lord Beaconsfield declared that the bill was a prelude to the introduction of a similar measure with reference to English land, and urged its rejection as an act "for which the country would be grateful, and posterity would be proud." The bill was refused a second reading, and was consequently rejected by a vote of 282 to 51. The total vote, 333, was the largest that had been taken in the House of Lords for several years. The bill for the relief of distress was passed in the House of Commons, July 21st, and having been approved by the House of Lords, received the royal assent August 2d.

The Government was again questioned in the House of Commons concerning its intentions with respect to Ireland, August 6th. Mr. Forster replied that, while it deeply regretted the decision of the House of Lords, the Government did not propose to introduce another bill during the present session. He hoped that no need would arise for the employment of the military for any purpose in Ireland, but at the same time it was his duty to state that the Government would protect the officers of the courts of law in the discharge of their duties, while it would also fulfill its duty with the utmost consideration for the sufferings of the poor tenants. On the 23d of August Mr. Forster stated that the Government did not think it would be necessary to ask before the prorogation of Parliament for additional powers for the preservation of peace and the better security of life and property. There was certainly much cause for anxiety in the condition of parts of

Ireland. It was not an apprehension of a rising, for absolutely no fear of a rising existed, but the anxiety was in reference to outrages on individuals. The Government did not, however, consider that the condition was at present such as to warrant asking Parliament for special powers. If it should find, in the course of the autumn and winter, that it could not rely on the existing law, it would not hesitate to call Parliament together for the purpose of securing such additional powers as would be needed to enable it to fulfill its first duty in the protection of life and property. If the outrages rendering such action necessary should have been provoked by harsh proceedings on the part of the landlords, the demand for power of coercion would be accompanied with a demand for measures to put the relations of landlord and tenant on a better footing. (See IRELAND.)

While the estimates for the civil service were under consideration in the House of Commons, August 27th, the appropriations for the Irish constabulary were opposed by the Home Rulers with arguments directed against the constitutionality of the force, against its partly military organization, its armament, and the quality of its officers. It was also asserted that the measure would be inefficient as a means for protecting life and property. Mr. Forster agreed with the Irish members in regretting the state of things that required the existence of such a force, but argued that it was absolutely necessary in the present condition of Ireland. Mr. Bright referred to the important reforms which had been effected in Ireland during the last half-century, urged the necessity of a complete reorganization of the land system, and invited the Irish members to consider whether they were not pushing a good cause too far, and to rely for the reforms which they desired in cooperation with the Liberal party led by a Liberal Government. Mr. O'Connor Power replied that it was impossible for the Irish party to coöperate with any Government which was not prepared to restore the national independence of Ireland. On the 30th of August Mr. Forster was asked by Mr. Parnell whether, in the event of a coercion act being necessary, he would still bring in a land bill. An announcement that he would, Mr. Parnell believed, would produce a strong and beneficial public opinion among the landlords. Mr. Forster replied that he was now more hopeful than ever that there would be no need for a coercion bill. With regard to other legislation, he could only repeat that, if landlords should be found to any extent committing injustice, he should inform his colleagues that he could no longer be the instrument of the law to enforce that injustice. A bill for the registration of voters in Ireland, which had been brought in by an Irish member, and was taken up by the Government and passed through the House of Commons, was rejected by the House of Lords, August 25th. The Irish members, offended by the rejection, undertook to prevent the passage

of the Appropriation Bill through the House of Commons unless a clause embodying the essential features of the Registration Bill were added to it. Mr. Forster, speaking on this question, said that a perseverance in their course of proceeding by the House of Lords might lead many men to think whether some change in the constitution of that body was not advisable and indeed necessary. The amendments proposed by the Irish members were rejected, and the Appropriation Bill was finally passed.

The Chancellor of the Exchequer, Sir Stafford Northcote, made his financial statement to the House of Commons, March 11th. The revenues of the previous year had fallen short of the estimates £2,195,000, to which must be added the deficit of £1,161,000, making a total deficit of £3,356,000. The cost of the Zooloo war, £5,138,000, had been largely paid by the Imperial Government, and the question of how repayments should to a certain extent be made by the colonies was under consideration. The expenditure for the new financial year was estimated at £81,486,000, and the revenue at £81,560,000, giving a surplus of £74,000, which would be increased by the operation of the new scale of probate duties. The revenue was finally fixed at £82,260,000, and the expenditure at £82,076,000. The financial statement of the Indian Government, made in February, was unexpectedly favorable, and appeared to show a surplus. Items were afterward discovered which greatly increased the obligations of the Government, and showed that it would have to meet a deficiency larger than it would be able to cope with unaided without serious derangement to its finances. It was agreed by the British Government that this deficiency should not be imposed on the Indian Treasury alone, but should be met out of imperial funds. Lord Hartington stated in the House of Commons, in July, that the whole amount of the deficiency would be £9,000,000, and that the excess of the charges for the present year over the estimates would be £3,500,000. Mr. Gladstone explained a supplementary budget in committee, June 12th, saying that the Government had been led to consider the financial interests of the country, partly on account of circumstances which it found already in existence, but mainly in connection with other circumstances which had occurred since it came into office. The surplus which had been provided in the original budget had more than disappeared under the £200,000 of supplementary estimates which had become necessary. In addition to this the claim must be considered which might arise in connection with the Indian deficiency, concerning which, however, it was impossible at present to make any definite proposal. Among the causes for which the present Government was responsible was a proposed reduction of the wine duties in the new tariff arrangements with France, which would entail a loss of from £230,000 to £240,000 in the present and £300,-

000 in the next year; changes which were proposed in the malt-tax, causing a further loss of £1,100,000 in the present year, which could be recovered by an addition of one penny to the income-tax. On the other hand, a proposed increase and adjustment of the license duties for the sale of alcoholic liquors would bring an increase of £305,000 in the present and £350,000 in future years. The total amount of the additions to the expenditure side would be £1,533,000, and the additions to the revenue, together with the surplus of £184,000 provided by Sir Stafford Northcote, would amount to £1,914,000, leaving a revised surplus of £381,000.

A bill relating to the law of burials was introduced in the House of Lords, May 27th, by the Lord Chancellor, who remarked that the existing law on the subject was unsatisfactory, and that a speedy settlement of the questions it raised was desirable. He held that burial was a civil right of universal necessity and great importance, but that it was fettered by ecclesiastical provisions which affected a large number of her Majesty's subjects and were antagonistic to the principles of religious liberty. At present there could be no service whatever in the churchyard over the unbaptized and persons who died by their own hands, while persons who dissented from the Church of England could be buried in the churchyards with the service of the Church of England only, if their friends desired any service. The grievance to dissenters was admitted, and it was neither a small nor a diminishing one. The bill he introduced proposed that the person in charge of, or responsible for, a funeral should be at liberty to give notice that the deceased was to be buried without the service of the Church of England; that at any burial under the act all persons should have access to the churchyard or graveyard in which the same should be solemnized, and any burial might be performed, at the option of the person having charge of, or being responsible for, the same, either without any religious service or with such Christian and orderly religious service at the grave as such person should think fit. Disorder at the grave, and any attempt under the guise of a religious service to bring into contempt the Christian religion, or the religion of any denomination of Christians, were declared to be misdemeanors under the act. Clergymen were authorized to perform the burial service of the Church of England in unconsecrated grounds, and to assist in parts of the service in cases where the reading of the whole service might be a cause of scruple to them, and seem inappropriate. The bill was opposed on its second reading by the Bishop of Lincoln, who urged that as the nonconformists no longer founded churchyards, they could not claim to have the control of the churchyards taken away from the clergy of the Establishment. The Archbishop of Canterbury argued in support of the measure that the present were danger-

ous times, when systems were advocated which threatened social and family life; and in such times Christians who revered one common God could not afford to aggravate their grievances. The Archbishop was supported in the debate by the Archbishop of York and the Bishops of Bath and Wells and of London, and the bill was passed to its second reading by a vote of 126 to 101. It was amended by the addition of clauses excluding from its provisions churchyards in parishes where burying-grounds are provided, and enlarging the discretion of the clergy as to the manner in which they should perform the burial service, and was passed to its third reading June 17th. On its second reading in the House of Commons, August 12th, the bill was supported by Mr. Osborne Morgan, who said that by the common law of England, which no one had attempted to alter, every parishioner was entitled to be buried in the parish churchyard. That right was a right in no way depending upon the creed which he professed or the religion of the church to which he belonged. It was a civic and not a religious right. Throughout the country, and especially in Wales, a great grievance existed because this right had not been recognized. The speaker believed that the amendments which the House of Lords had added had a tendency to defeat the purposes of the measure, and urged that they be stricken out. The further discussion turned upon the expediency of striking out the clause requiring that the services should be "Christian"—which, it was urged, established a distinction against the Jewish and other non-Christian religions—and the possibility of scandals occurring in case any other than the authorized services of the Church of England were permitted. The second reading was granted by a vote of 258 to 79. The amendments added by the House of Lords were thrown out in committee; this action was agreed to by the House of Lords, and the bill was finally passed September 6th.

A bill for the protection of occupiers of land against the ravages of "ground-game" (hares and rabbits) was introduced by the Government in the House of Commons, May 27th. Sir W. Harcourt, who had charge of the measure, remarked that it was not intended to deal with the general question of the game laws, but only with their effect upon the relation between landlord and tenant, so far as it bore upon the rights with respect to ground-game. The bill gave the occupier of the land the concurrent and inalienable right to kill all the ground-game on his occupation, and made any contract he might agree to for waiving that right incapable of enforcement at law. It was opposed in discussion by representatives of the landed interest, chiefly with the argument that its provisions infringed upon the freedom of contract, but was passed August 27th. The House of Lords added amendments establishing a "close-time," and limiting the right to shoot to one person on the farm. These amend-

ments were rejected by the House of Commons and receded from by the House of Lords, and the bill was finally passed, September 6th.

In offering a bill for taking the census in England, July 12th, Lord Enfield in the House of Lords said that it had not been thought advisable to collect religious statistics, as the attempt would involve much expense and difficulty, and was not likely to be rewarded with a satisfactory degree of accuracy. Lord Cranbrook objected to the omission of a religious census, which was taken in connection with the census of every country in Europe, including Ireland and Scotland. Lord Bradbourne was glad that the religious element was not to be included, because he thought it was not desirable to draw fine lines between the members of the Church of England and nonconformists. The Census Bill was finally passed without any provision for compiling religious statistics. (See CENSUS.)

An act, which was passed to provide for the safe carriage of grain-cargoes, authorizes the Board of Trade to take precautions as to the manner in which cargoes of corn, rice, paddy, pulse, seeds, and nuts or nut-kernels are stowed, and gives it power to impose penalties for false statements. The object of the act is the protection of persons connected with merchant-shipping and vessels carrying the kind of cargoes described.

Another important measure which became a law was relative to the liability of employers for injuries suffered by workmen while engaged in their service. Another abolished imprisonment for debt in Scotland.

A resolution was adopted by the House of Commons, July 17th, by a vote of 171 to 116, condemning the proposed erection in Westminster Abbey of a statue to Prince Louis Napoleon, son of the late Emperor Napoleon III, to which the Dean of the abbey had consented, as inconsistent with the national character of the edifice. The resolution as originally offered contained a clause declaring the erection calculated to impair the good feeling between England and France, which was struck out. The project to erect the statue in the abbey was abandoned in consequence of this vote.

A resolution was moved by Sir Wilfred Lawson in the House of Commons, June 18th, to the effect that the power of restraining the issue or renewal of license to sell intoxicating liquors ought to be placed in the hands of the inhabitants of the district within which the license would be in force. The mover admitted that his resolution embodied a principle of the Permissive Bill which he had before advocated, but claimed that as a whole it was distinct from that measure. He further remarked that, although he was ready to consider any fair claim for compensation, he did not consider himself called upon to mention it in his resolution. Mr. Gladstone said that the Government would exercise no pressure on the subject in either way. He admitted that legis-

lation which would remove opportunities for temptation would be useful in checking drunkenness. Among the many objects pressing for legislation, he regarded the reform of the licensing laws as an essential part of the work of the present Parliament, and he hoped that the settlement of it would include a reasonable application of the principle of local option. The resolution was adopted by a vote of 229 to 203. Lord Onslow called attention in the House of Lords, July 3d, to the report of the committee of the same House which had been appointed in 1877 to inquire into the subject of intemperance. He declared himself in favor of the principle of local option, and asked the Government what it intended to do in the matter. The Bishop of Carlisle appealed to the Government to carry out the recommendations of the committee for a further restriction of the hours in which the sale of liquors should be allowed. Lord Fife replied that the Government hoped to be able to introduce a measure on the subject at no distant date.

A resolution for the abrogation of the provisions under which American cattle are slaughtered at the port of landing was offered by Mr. Arthur Arnold in the House of Commons, August 8th. The mover maintained, in support of his resolution, that the present system partook of the nature of a disguised protection, by which the English farmer and butcher were benefited at the expense of the consumer. Mr. J. Howard said that, if American cattle were subjected to restrictive legislation, it was the fault of the Americans themselves, who did not take means to prevent the spread of contagious epizootic disease. The question was not one of free trade, but of sanitary regulation. The motion was lost.

Parliament was prorogued September 8th. The Queen said in her speech:

I continue to receive assurances of the most friendly character from all foreign powers. The failure of the Sublime Porte to execute, according to its engagement, a plan which was agreed upon in April last for the determination of the Ottoman frontier lying toward Montenegro, has caused unfortunate delays in the settlement of that question, and the Treaty of Berlin has not yet taken effect in other points of importance which remained open at the commencement of the session. The Governments which were parties to that treaty have communicated to the Sultan their judgment on the means of bringing to a satisfactory settlement the Greek and Montenegrin frontier questions, on the administrative organization of the European provinces of Turkey, and on the principal reforms required in the Asiatic provinces occupied by Armenians. For the attainment of the objects in view, I continue to place reliance on the fact that the concert of Europe has been steadily maintained in regard to the Eastern question, and that the powers which signed the treaty are pressing upon the Sublime Porte, with all the authority which belongs to their united action, the measures which, in their belief, are best calculated to insure tranquillity in the East.

I have not been unmindful, during the few months which have elapsed since I last addressed you, of the considerations which I stated would guide my policy on the northwestern frontier of my Indian Empire. Measures have already been taken for the complete military evacuation of northern Afghanistan, and some

progress has been made toward the pacification and settlement of the country. A renewal of hostilities by the Afghans, under Ayoub Khan, has rendered necessary further military operations in southern Afghanistan. The prompt measures taken by the Government of India for the relief of the garrison of Candahar, and the conspicuous ability and energy displayed by my officers and troops in the execution of those measures, resulting in the brilliant victory recently gained by Sir Frederick Roberts, will, I trust, speedily bring to an honorable termination the war in that division of the country. I regret that it has not hitherto been possible to give you such information on the general state of Indian finance, and the recent miscarriages in presenting the accounts of military expenditure, as you would justly require before entering on a practical consideration of the subject. You may, however, rest assured that I shall redeem my pledge to supply you with this information at the earliest period within my power.

No advance has recently been made in the project of a South African confederation, nor could advantage arise from endeavors to press it forward, except in proportion to the favorable movement of public opinion in that portion of the empire. The general state of affairs in South Africa is, however, on the whole, satisfactory, except in Basutoland, where I trust that a moderate and conciliatory policy may allay the agitation caused by the enforcement of the Disarmament Act.

Her Majesty concluded with reference to the favorable harvest; to the "probable improvement in the condition of the people of Ireland," and to the acts passed by the Parliament, among which were named those on burials, education, the liability of employers, ground-game, the repeal of the malt duty, savings-banks, post-office money-orders, the condition of merchant seamen, and grain-cargoes.

Mr. Gladstone spoke of the course and policy of the Government on the principal questions it had to consider, at the Lord Mayor's banquet, November 9th. For Ireland, it would be the duty of the Government again to examine the land laws, and it would not scruple, if that was deemed necessary, again to call the Legislature to deal with the subject. Anxious as it was to be associated with practical improvements in the laws of the land, it recognized the duty of enforcing the law for the purposes of order as above every other duty. It must first look to the law as it stood, to ascertain what its fair and just administration meant; but the obligation incumbent upon it to protect every citizen in the enjoyment of his life and his property might under certain circumstances compel it to ask for an increase of power and authority, when it would not shrink from its duty. The struggle in South Africa was regarded as one "carried on by means of colonists, and growing out of a policy which has been the result of their counsels in the exercise of their own independent rights, yet still a struggle which we can not but watch with a close and deep anxiety." When the present administration came into office, Mr. Gladstone continued, it found an Anglo-Indian force of about 70,000 men engaged in sustaining the military operations that had been carried on in Afghanistan. It had sought to secure the independence of the people of the

country and to restore their friendly relations with the Indian Empire. It had not been able to accomplish all that was wished, but a part of the country had been restored to a more hopeful condition, and the military force engaged there had been diminished by between 20,000 and 30,000 men. Toward the solution of the Eastern question, the Government had been able to adopt the declaration and to work for the purpose which had been authentically declared on the part of the Government which it succeeded. The late Prime Minister had declared, justly, two years before, that the Treaty of Berlin was a treaty which, if fully executed, promised to confer great benefits upon Europe, and had stated, with truth and justice, that England would not be the power that would shrink from any of the obligations connected with its execution, and had expressed an expectation that, within a very short period, its several provisions would take effect. When the present Cabinet came into office, it found that many of the most important parts of the treaty still remained unfulfilled. It at once declared its intention to endeavor to secure their execution. It had not acted in the spirit of an enemy to Turkey, but as its friend, because, said Mr. Gladstone, "we endeavored to bring it to a policy by which, and by which alone, as we are convinced, it may have a promise of continued existence. . . . This we believe," he concluded, "that for the continued existence of Turkey, of the Turkish power, either to give a chance of that existence, or to justify that existence, two things are necessary: the one, the fulfillment of international engagements; and the other, that the condition of the people over whom the Ottoman power is reigning shall be rendered tolerable by good and equal law."

Lord Granville, speaking at a Liberal meeting in Hanley, November 27th, said that it was painful and discreditable that a want of security for life and property should exist in a part of Ireland; that it was impossible that such a state of things should continue; and that on the meeting of Parliament the appeal which the Government would make to it would not consist in a mere demand for extraordinary powers which might be best fitted to strengthen the hands of the administration in the particular emergency, but should be "for remedies which, while they give her Majesty's Government the fittest means for dealing with present disorder, will also prepare the way on sound principles for the future contentment of the people." In reply to attacks which had been made by Lord Salisbury, his lordship showed that the foreign policy of the Government had been consistently governed by a purpose to secure the fulfillment of the Treaty of Berlin and to maintain the concert of the powers. He believed it had been proved to be possible for the powers in the face of a question of immense importance to agree "to put in due subordination their own direct and personal interests, and unite for the purpose of bringing to bear their

influence for settling the general question." He had dealt with foreign Governments in a frank, straightforward manner. That frankness had been reciprocated, and the demeanor of the foreign representatives with whom he had come in contact had confirmed him in the opinion that "the old saw was true that 'honesty is the best policy.'"

The new session of Parliament was called to meet January 6, 1881.

An inquiry into the railway disaster of December 28, 1879, at the bridge of the North British Railway over the river Tay, Scotland, when the bridge was broken down, and the train with all the persons upon it was thrown into the river, was begun before a commission of the Board of Trade, January 3d. The investigation resulted in the presentation of two reports, both condemning the construction of the bridge, and attributing its downfall to inherent defects. The minority report, by Mr. Rothery, attributed the responsibility for faults of design in the bridge wholly, for faults of construction principally, to Sir Thomas Bouch, the engineer of the bridge. The majority report agreed as to the responsibility of Sir Thomas Bouch, but did not regard it as within the province of the court to express judgment respecting it.

Great anxiety was felt, from and after the 24th of March, respecting the safety of her Majesty's training-ship *Atlanta*, which had set sail from Portsmouth four months before, with three hundred and twenty persons on board, for a cruise in the West Indies. She was an old wooden sailing-frigate, which had been commissioned as a training-ship in 1878, and was considered by the Admiralty sound, stanch, and well officered. Vessels were sent in search of the *Atlanta*, but no clew could be found to her fate, and the Admiralty announced in the month of May that little hope was entertained that she was still afloat. An inquiry was ordered into the fitness of the vessel for the service on which she was employed, the report of which, published at the end of the year, was favorable to the soundness of the vessel.

The Annual Autumnal Congress of the Sanitary Institute of Great Britain met at Exeter, September 21st, under the presidency of Lord Fortescue. Papers were read on "The Sanitation of Ancient and Modern Times compared," on "The Sanitary Condition of the Camps in the Crimea," on "Cleansing Sewers," on "Woman as a Sanitary Reformer," on "The Application of the Teachings of Science to Modern Life," and other subjects. A resolution was passed, to be forwarded to the Minister of the United States, expressing satisfaction at the admirable manner in which the city of Memphis, Tennessee, had been drained.

The Social Science Congress met at Edinburgh, September 29th, and was opened with an address by Lord Reay, who compared the social system of the Continent with that of

England. Addresses were delivered by the Lord Advocate on "Criminal Law Administration," and by other speakers on subjects relating to the drama and education. Sir A. K. Shuttleworth read a paper in the Economy and Trade Department on charitable endowments, in which he pointed out that the income derived from existing charities was wasted and misapplied. In the Health Section, Dr. Alfred Carpenter and Dr. Little discussed the subject of the fogs in London. Mr. Hastings, M. P., spoke of the useful measures of legislation which the Congress had promoted, and expressed the belief that its deliberations would materially assist the Home Secretary in his action with reference to juvenile delinquents.

A conference of members of the Farmers' Alliance, October 18th, adopted resolutions urging the Government to pass a compulsory act for giving tenants security for capital invested in improvements, and recommending the abolition of the law of distress, and measures for securing to ratepayers their legitimate share in county government, and for a fair apportionment of local burdens between landlord and tenant.

A deputation of peers, land-owners, and occupiers called on the Local Government Board early in November, to press upon the Government the necessity of introducing legislation in the next session of Parliament, to enable local action to be taken for dealing with floods and preventing the injury caused by them. The Duke of Bedford introduced the deputation, and the Speaker of the House of Commons urged that as the question was one which affected more or less every watershed in the kingdom, it should be dealt with by a general Government measure. Mr. Dodson, of the Board, admitted the pressing character of the evil, and promised to lay the subject before his colleagues.
